WHILE THE RAIN CAME DOWN.

While the rain came down they staid
In the maple's kindly shade,
Leaning from the ferny shore,
Watched the dappled river floor,
Where the raindrops gayly played.

Every leafy mountain glade
Felt the raindrops' rushing raid;
Lowering storm clouds hovered o'er
While the rain came down.

Laughing, careless man and maid,
With the wide umbrella's aid,
Sheltered from the drops that pour,
Love and youth their happy lore,
Naught cared they, though long delayed,
While the rain came down.
—Georgia Roberts in Boston Transcript.

SAVED THE LEVEE.

For days the river had been rising. The levees above were gone for miles and miles, and the mad waters had swept over the banks, carrying fortunes and even lives before them. On one of the big plantations opposite Shreveport every effort was being made to withstand the flood. Hands were collected from every cabin and recruited from all the adjoining places to strengthen the water soaked levees, which shook on the pressure of a man's foot.

It was almost dusk, but the men who had not rested for days worked with the strength of fresh vigor as the voice of Tom Aiken, the planter, directed them and cheered them on to the task which seemed so hopeless as the water crept steadily and steadily higher. But for the fact that every one was busy with his work, a little negro boy, who suddenly dropped his spade and stole away betwixt the wheels of the big sand wagon, might have been seen as he scurried away around the curve in the embankment.

He ran quickly along for full a quarter of a mile without looking back, down the narrow, slippery road that was left between the cotton rows and the levee. The boy slackened his pace when he became convinced that no one was in pursuit of him, and as he did so he heard the loud, cheery voice of Tom Aiken back at the break, "All work together, boys!"

"Huh? All work together," the boy said. "Yessir, but you bet dis here nigger done tired er workin togedder. Ise gwine to sleep, I is. I an' shet my eyes fur two whole days an nights, an I gwine round the p'int to Aun't Viny's an go to sleep."

In his eagerness to reach the coveted goal the little negro quickened his pace again. It was now almost dark, but his eyes had grown accustomed to the gloom. He could see the curving line of the levee, which seemed to tremble with a premonition of its own inadequacy. He could see all the water pools in the road. His little legs had measured perhaps a mile more when the ominous roar of the river made him stop and peer over the levee at the rushing waters.

As he scrambled up the slippery bank a clod of loosened earth fell heavily into the road below, and through the orifice which it left a little stream of muddy water trickled. The boy caught his breath quickly when the water run over his hand.

"Lordy!" he exclaimed. "Dere's gwine to be a break right here. Lordy! Lordy! what I gwine do?"

He stopped to reconsider. There was still another mile before he could reach the Point, and he knew there were only a few old women in the cabins there, and he could get no help from that source. It was more than a mile back to where the men were working, and he was afraid to show himself there after having run away. Besides there was not a moment to lose. What was to be done must be done at once. The boy knew that a great responsibility rested upon him. If the little opening were not stopped immediately it was only a question of a few moments before the whole levee would be swept away.

He stood up and looked about him. There was no one in sight. He thought he might find a bag of sand dropped by a passing wagon, but there was none. With sudden purpose he turned and sat down over the little crevice through which the water came. The soft earth yielded to his weight, and with his hands and feet he pressed it about him, patting it to make it firm.

The difficulty had been solved without his volition almost. It was only after it was done that he thought of the consequences. He calculated in his unreasoning way that it was 8 o'clock. How long would he have to remain there? For aught he knew till morning. He began to suffer by and by from his cramped position, but he dared not move even the least bit lest the crevice would open again.

He could not tell how time passed. Every minute seemed an hour. He could not hear the shouts of the men below. There was only now and then the hoot of an owl rising above the roar of the water, or the swish as a clod of earth was sucked into the mad current. He wished he had not run away from his work.

He began to get drowsy; his limbs were almost numb. He wondered what would become of him if he should go to sleep. If the waters should rise up over the levee and drown him and ruin the cotton, would it make any difference then that he had tried to save it? He was inadequate to the problem, the like of which has puzzled graver heads than his. The hooting of the owl grew less and less frequent, the swishing of the waters fainter and fainter, the pain in his back easier.

He must have slept some time. Suddenly he was awakened by the gallop of a horse on the road below. He was too weak to move. His voice was almost gone, but as the horse and rider approached he cried out with all the strength he could summon. "Marse Tom!"

Mr. Aiken drew rein quickly and turned his big lantern in the direction of the voice.

"Who is it, and where are you?" he asked, dismounting.

"It's me, boss," answered the boy.

"What the mischief are you doing here, Pete?" inquired Aiken, peering into the boy's begrimed face. "Why, you are almost buried alive!"

"I runned away from back yonder," the boy answered. "I seed the levee er breakin here, so I stopped."

"Why, bless the boy," said Aiken, "you must be nearly dead. What is to be done? Can you stand it till I ride back and get help to fill the break? It will open as soon as you move."

"Yessir, but hurry, boss," answered the boy.

As Aiken turned to remount he heard the sound of boat wheels around the curve and the whistle sounded out hoarsely.

"By George!" exclaimed Aiken, "there's a boat and three more inches of water will top the levee here and then all is lost."

In a few moments the boat rounded the curve and the big lights shone out across the water.

"The Marsden," Aiken said, as he saw the two smokestacks, "with Morton at the wheel; I shall have to fight for it."

So saying he picked up his gun from where he had dropped it when he dismounted and strode on a few paces up stream to meet the boat.

"Steer for the other side!" he called out when the boat was in hailing distance.

"I'm running this machine," responded the coarse voice of Morton, "and I guess the river is free."

Aiken could see the little tongues of water as they overlapped the bank above. If the boat did not turn she would send the water over the levee lower down where the boy was, and he and the whole embankment would be sucked in. There was no time to be lost.

Swinging the lantern above his head so that Morton might see him, he flung his rifle to his shoulder and called back, "Come another foot nearer to this shore and you are a dead man."

Morton knew what manner of man he had to deal with. The wheel reversed, the boat tacked and grazed the opposite shore, which was already submerged.

"All right now, Pete," said Aiken gently, patting the boy's muddy pate. "I'll go on and be back in a few moments."

When they came by and put sand bags in the hole Pete had been covering the little fellow was too weak to speak or to stand, and Mr. Aiken took him up in his arms and himself carried him to the house.

And now Pete does nothing but ride on the back seat of the carriage to open gates for the driver or to carry parcels when Tom Aiken's pretty wife goes to Shreveport shopping, for his "boss" is grateful to the little hero who saved the plantation.—Patience Oriel in Philadelphia Times.

History Rewritten.

It used to be the fashion for orators as well as novelists to show their learning by indulging freely in quotations. They did not always succeed in impressing their hearers, as in the following case, which all boys who are in their Roman history will appreciate:

A certain member of the legislature was discovered to be absent when his presence was sorely needed. An important measure was pending, and although this certain member could not speak he could vote, and in this juncture every vote was valuable.

Accordingly two other trusty members were deputized to hunt up the recreant. They went to his house and were informed that he was "somewheres around the farm." "Somewheres" proved to be a field where he was busily working.

"Well, is this what you're doing!" cried the searching members reproachfully.

"Yes, here I am," said the rural member cheerfully. "You find me, like another Cincinnatus, killing potato bugs!" —Youth's Companion.

Defective Prompting.

The experience I have to relate will have a sound of the grotesque and the exaggerated, but it is true nevertheless. In a mission chapel in a poor and outlying part of the parish baptisms were often performed on Wednesday evenings. The people were for the most part uneducated and unable to read, and had to be prompted in their answers to the sponsorial questions. We were not always particular as to the full number of sponsors, and sometimes allowed the mother alone to "promise and vow." Behold, then, such a case!

I am generally held to speak pretty distinctly; perhaps I was too quick of utterance on this occasion. Be that as it may, when I prompted the mother with the answer, "All this I steadfastly believe," she said deliberately, and in the hearing of all, with no appparent sense of the extreme irreverence and irrelevancy of her words, "All this I take up my sleeve."—Cor. London Tit-Bits.

Greetings in Persia.

With the wild races along the northern border of Persia the customary greeting is "Amaun ust?" (is it peace?) a significant proof of the insecurity engendered by ages of war and outrage. The usual answer is "Insh Allah amaun ust" (please God it is peace), but each party generally keeps his hand on his weapon till a better understanding has been arrived at. The warlike Montenegrins say in a more chivalric spirit when they meet a traveler, "Dobra fotretcha!" (a good meeting).—David Ker in New York Epoch.

Not Unenviable.

Mrs. Gadabout—That Mrs. Hardhead next door doesn't seem to have many friends.

Hostess (wearily)—N—o. I wonder how she manages it. — New York Weekly.

The Sun's Pace.

The majority of recent calculations of the sun's pace place it at about forty miles per second, or nearly three thousand times as fast as an express train. — New York Recorder.

Observation step ladders are to be used in the Belgian artillery, the object being to enable a commander to better direct the fire of his gunners

CATTLE BARONS.

Their Day of Prosperity was Brief, but it was Great While it Lasted.

THOUGHT THEY OWNED ALL TEXAS.

The Man With a Hoe Came Along too Fast for Them.—The Editor's Prediction Fulfilled.

The career of the cow baron was short but picturesque. Ten years ago he thought he owned Texas. He counted his long horns on a hundred hills. He held conventions. Five hundred of him sat down to a $5,000 banquet at Dallas. They drank champagne from big goblets. Diamonds as big as pecans which grow in the Concho country sparkled on the bosoms of the baron's wife and daughters. When he wanted legislation the baron went down to Austin and got it. He shouted "Free grass!" and he called the farmer who moved in and settled upon the water courses of his range "a nester." His cow boys were his feudal following and knew no law but his decrees.

One night near the end of the session of the legislature the barons and their friends entertained behind closed doors. It had been a period of satisfactory lawmaking for the cattle interests. Everybody who was present felt good. A governor who once said that Texas didn't want immigration sat at the head of the table. Speech after speech was made. The cattle interests were eulogized. "The nester" was ridiculed. Such newspapers as had begun to rebel against the arrogance of the barons came in for hard raps, and finally the governor in a spirit of fair play called for the only newspaper man present to defend his craft. Nettled by the sarcastic flings to which he had been listening, the speaker replied, half angrily:

"Gentlemen," said he, "you may have your sport tonight at the expense of the despised 'nester.' You may think you are strong enough to defy the press and public sentiment, but let me tell you one thing. A man with a hoe has poked his nose over your wire fence and is looking at you today. You'll kill him, of course. I know that very well. Tomorrow there'll be two men with hoes looking over that same fence. Kill the two, and tomorrow there'll be four men with hoes looking at you. Kill them, and tomorrow you'll see eight men with hoes in the same place. It isn't in the nature of things, gentlemen, for an acre of land which will raise twenty bushels of wheat to be given up for all time to the possession of the five dollar cow. Mark what I tell you. In ten years the man with the hoe will have you on the run."

The barons laughed. But it was their 'last banquet." They had never heard of 'the man with the hoe" till then. Ten years? The prophet gave himself an unnecessarily long limit. He might have cut his time in two. Five years after the prediction was uttered the baron's reign was over. "The man with the hoe" was a reality. He had a pair of nippers in his pocket and walked through the baron's fences. To-day "the man with the hoe" is everywhere. He is a Texas proverb. As you get off the cars at Fort Worth his picture, ten feet high, confronts you."

THE CATTLE COMPANY FEVER.

In 1878 and 1879 stock cattle roamed over three-fourths of Texas. The ranges stretched from the Gulf to No Man's Land, and from Fort Worth to El Paso. Those cattle were worth eight dollars a head when there was any market at all for them. They were called dogies in east Texas, sea lions down by the Gulf and long horns in the Panhandle. In 1881 the price had crept up to $12.50 a head. Then the cow baron burst his shell. In 1882 these same cattle went to $22.50 a head and held that for two years. There were 10,000,000 of them. Money poured in from the north and east to buy at this advanced price. Cattle companies were formed, more than a hundred of them. Stock was sold right and left. Blocks of it were taken with avidity by men who had never seen Texas and never expected to see it.

To one looking back upon that wild rush into the cattle business, it seems as if a mania must have taken possession of otherwise level headed men. Nobody can tell the amount of capital which flowed in from the north to be invested in cattle. But it never flowed back. Everybody loaded up, and then the prices began to drop, drop, drop. They went clear back to the point from which they had started, and the tenderfoot and his money were parted.

Fast as the baron's wealth waned, his wealth in politics and his prestige in business departed faster. Five years after Dallas had given the baron a $5,000 banquet there was none in the commercial metropolis to do him reverence. Five years after the baron had been shown at Austin by Colonel Bill Sterett the handwriting of "the man with a hoe" on the wall, the legislature had decreed an end to "free grass." The baron was buying or leasing the public land for his cattle to roam over. The despised "nester" had shouldered the hoe and was moving in steady ranks over the ranges to the northwest, to the west and to the southwest. It was a strange transformation.

And there are still several counties to hear from. Some of the surprises that are taking place in this new country are almost laughable. A man came down from the north and discovered that a little way out of Fort Worth there was some land naturally adapted to melons. He named his product the Sylvania cantaloup. He is growing 2,000 acres of Sylvania cantaloups and shipping them to the Rocky mountains. Think of fruit in Texas! If the youngsters who now beset the trains at station after station with baskets of peaches and pears that come around a few years ago, the cowboys would have used the fruit to do the William Tell act.

It was the romance of the cow business which departed with the cattle baron. The reality is still here. John R. Hoxie, who built the million dollar packing house in Fort Worth, says Texas has gained these grain growers and lost nothing in live stock. He had a discussion not long ago with some fellow capitalists who were mourning the supposed decadence of the cattle industry. Mr. Hoxie disputed their forebodings and the assessors' returns, for county after county were examined. "We found," said Mr. Hoxie, "that in those very counties where the most land had been turned into grain growing, live stock had increased instead of diminished."

The explanation is easy. The long legged, racer built steer is a thing of the past in all this region which the grain grower has invaded. A stocky, short horned animal has succeeded to the possession of what grass land is left. And this newcomer, instead of rustling all winter until his ribs show, consumes straw and fodder and cottonseed meal.

Every case of melancholia should at an early date be put into the hands of a competent physician who can have the entire control of it.

TYLER'S HOLDOVER CABINET.

Daniel Webster's Speech and the Reply of the Newly Chosen President.

I had quite a chat some time ago with General John Tyler, the son and private secretary of President Tyler. Said he: "When my father succeeded to the presidency, he continued President Harrison's cabinet in office until he found that they were working against him. His first cabinet meeting was held on the day succeeding the death of President Harrison, and it was perhaps the most remarkable cabinet meeting in history.

"When all the members were present and the doors were closed, Daniel Webster, the secretary of state, arose and addressed my father, saying: 'Mr. President, I suppose you intend to carry out the ideas and customs of your predecessor and that this administration inaugurated by President William Harrison will continue in the same line of policy on which it has begun. Am I right?'

"My father, much astonished, nodded his head almost involuntarily and looked at Mr. Webster with wonder. Daniel Webster straightened himself up at this and continued.

"'Mr. President, it was the custom in our cabinet meetings of President Harrison that the president should preside over them. All measures relating to the administration were to be brought before the cabinet, and their settlement was to be decided by the majority of votes, each member of the cabinet and the president having but one vote.'

"My father was always courteous, but he was also firm. He rose to his feet and looking about the cabinet room he said: 'Gentlemen, I am very proud to have in my cabinet such able statesmen as you have proved yourselves to be. I shall be pleased to avail myself of your counsel and advice, but I can never consent to being dictated to as to what I shall or shall not do. I am the president, and I shall be held responsible for my administration. I hope I shall have your hearty co-operation in carrying out its measures. So long as you see fit to do this I shall be glad to have you with me. When you think otherwise, I will be equally glad to get your resignation.'

"This," concluded General Tyler, "settled the question, and there was no further trouble as to who was the head of the cabinet."—Pittsburg Dispatch.

A Suggestion For Dancing Parties.

The wits of hostesses are becoming more strained than ever in finding gentleman capable of dancing to attend their parties. Ladies nimble and graceful are in abundance, but on the part of men the art of dancing seems to be a vanishing quantity. A lady writes suggesting the organization of an agency similar to those existing in Paris and Berlin, where suitable dancing men could be hired for the occasion. The hired guests would appear at the time appointed armed with guarantees of respectability and fitness for their occupation, be allotted to their duties for the evening and leave at a proper hour, conscious of having done a good night's work and honestly earned a day's pay. Imagine how half a dozen to a dozen dancing men would brighten up a languishing dance! Warranted to dance every item on the programme and to give not more than three dances to any young lady, they would infuse a tremendous amount of spirit into the proceedings.—Dancing.

Fear an Element In Sickness.

That apprehension of catching epidemic diseases assists in spreading them is an old doctrine, in support of which many facts might be cited, and it is only reasonable to suppose that where the reception of contagion is assisted by depression of the system alarm would have that effect. It is, however, the common experience of medical men that especially in surgical cases sanguine have a great advantage over despondent patients, and that to abandon the expectation of recovery is about the worst thing which anybody anxious for recovery can do.

Sir Astley Cooper indeed was always reluctant to perform an operation where the subject to be submitted to it was apprehensive of a fatal result. When patients had made up their minds that they would not recover, they seemed to him to lose their recuperative power.—London World.

Blake's Canadian Oratory.

Mr. Blake is unquestionably a man of great capacity, and he is a ready debater. His utterances, however, have the merits and demerits of transatlantic oratory. He was too diffuse, and he piled word on word in his sentences with needless redundancy. And the sentences! Never yet have I heard such lengthy ones. I sat through three minutes of one; then I withdrew to smoke a cigarette. When I returned, so far as I could learn, the sentence was not yet concluded.—London Truth.

Covers a Multitude of Sins.

Biggs—You say your wife always pins a flower on your coat before you leave home?

"Yes, she has for a month."

Biggs—Well, it shows she thinks of you——

"No, it's because she never can remember to sew on the button."—Chicago Inter Ocean.

A RELIC OF KINGS.

The Beautiful but Deserted Palace of Amber in Northern India.

ERECTED MANY CENTURIES AGO.

Mute Evidence of the Barbaric Splendor Once Enjoyed by a Noble Race of Hindoo Kings.

The renowned and now deserted city of Amber, in northwestern India, flourished with its countless thousands of inhabitants and untold wealth and splendor in the time of the Ptolemys.

It is situated in a mountain nook, about five miles from the present city of Jeypoor, and is one of India's jeweled possessions for antiquarians.

The great Amber palace is built of solid red sandstone and variegated Jeypoor marble and inlaid with costly gems. It has stood for centuries as it now stands, upon an elevated mountain slope overlooking a picturesque lake and surrounded by steep and rugged fortified peaks, with the walled and long since doomed and ruined city below.

The palace is a masterly structure of Hindoo architecture, solid and secure, yet ornamental and beautiful. Entrance is gained through a massive and strongly fortified gate which leads into a spacious central court richly adorned with rare carvings, mighty trees and flowering shrubbery.

The grand diwan-i-am or audience hall is reached from the spacious court by a massive flight of carved marble steps. This hall is a noble example of Raj-utart, with its double rows of shining marble columns supporting a massive entablature, above which are latticed galleries of marble worked in rare designs.

The ceiling is of sculptured freestone, while the floor is made up of huge slabs of polished marble.

It was upon this floor that the ancient kings and nobles of this once royal city witnessed many gorgeous scenes of gayety and cruelty. Here they applauded the royal tilts and sports, and here they reviewed the many fierce conflicts between men and beasts and between royal Bengal tigers and noble fighting elephants in the grand courtyard below.

It was also upon this spacious floor that the kings and queens of this ancient realm gathered together at sunrise every morning for many centuries to witness the sacrifice of a living human being on that huge, black, blood besmeared stone altar in the small royal temple just over there to the right of this marble hall.

Here they would sit on their gold woven rugs and hear the dying moans and see and smell the smoke of these sacrificed victims, in order to appease (as they devoutly believed and believe to this day) the divine Shiva's wrath.

It is here that one may see every morning in the year an innocent goat burned alive as a substitute for a human being as an offering to heaven to appease the destroyer's anger. How very like our early biblical history.

From this hall, echoing with memories both gay and sad, we wander through spacious halls and galleries, elaborately carved apartments, up and down long rows of splendid stairs, through sculptured gateways covered with mosaics and doors inlaid in ivory and precious stones, until we reach the highest terrace in the palace.

This was exclusively devoted to the rajah's personal apartments, contrary to our modern rules of sanitary arrangements, for now we place our servants in the airiest and best ventilated rooms and remain ourselves in the lowest, dampest and unhealthiest parts of our houses.

On our left is the joy mandir, or hall of victory, adorned by panels of alabaster inlaid with flowers in alto relievo and ceiling glittering with mirrored and spangled work, for which Amber was long renowned, and for which Jeypoor, its successor, is now justly celebrated.

Opposite this grand hall of victory is the sukh nawas, or hall of pleasure, with its doors of sweet scented sandalwood inlaid with ivory and its gorgeous paintings of pleasures on earth and in heaven.

Here are groves from which issue cool, clear streams of pure mountain water, which is perfumed and made to run in carved channels the whole length of the marble floor to cool the heated atmosphere and the gay occupants of this hall.

Adjoining this beautiful hall are the sumptuous bathing apartments and the deep, cool pleasure caverns, surrounded by ferns and rare flowers, where the kings and queens of this ancient castle bade defiance to old Sol's burning rays during India's hottest days.

Here they whiled away their happy days amid love and pleasure in an atmosphere rendered sweet by the aroma of costly incense, listening to the strains of Indian music, gazing now and then upon the beautiful girls as they performed in scanty attire—as they do to this day—the famous nautch dance of India.

Next to these pleasure halls and groves are the spacious apartments once occupied by the harem—an indispensable adjunct to all eastern palaces.

It was here that the mighty maharajah, Jey Singh, in the early part of the eighteenth century ruled supreme in this jeweled spot on earth among his hundreds of carefully chosen wives like King David of old.

From every hall and terrace, from every arched pavilion and cavern latticed window of this wonderful old palace, we got glimpses of this picturesque spot, this historic city, surrounded as it is by all that nature and art can do to make it beautiful.

Mirrored in that clear, blue lake below one sees the ancient gilded domes and shrines of many costly temples. There are the noble trees planted so many centuries ago.

It has hitherto been the law in Japan that if a woman was not married by a certain age the authorities picked out a man and compelled him to marry her. The mikado has abolished this usage.

Ajax killed himself with his spear. Jocasta, Antigone, Haemon, Eurydice, Œdipus and many other Greek heroes and heroines died by their own hands.

The Powder of Projection.

The belief in transmutation and in the virtues of the "powder of projection" is to be found more clearly stated in the works of Zosimus of Panopolis, the earliest known writer on alchemy whose authentic works have come down to us, for in his first lesson he exclaims, "How beautiful it is to see the changes of the four metals—lead, copper, tin, silver—till they become perfect gold!" The idea had evidently been developed and the art assiduously cultivated in Egypt since the time of the spurious Democritus, for Zosimus quotes the opinions of many adepts, of whose writings, mostly apochryphal, nothing is known save from his pages.

Hermes Trismegistus and Democritus, Moses and Mary the Jewess, Agathodemon and Cleopatra, the prophet Chymes and the "divine" Sophar are quoted as authorities for the operations to be performed on various minerals, which, after being duly melted, calcined, refined and sublimated over and over, are declared to have become gold or silver.

To these more or less intelligible descriptions of chemical processes Zosimus adds his own commentaries, which he sometimes presents under the form of allegories or visions.—Edinburgh Review.

Narcotic Effects of a California Spring.

Superintendent Stout recently described a wonderful mineral spring that formerly flowed from the mountain side some miles above the Butte Creek House and near the Plumas county line.

This spring was first called to Mr. Stout's attention some years ago while camping in that vicinity by an old prospector, who called it the "chloroform spring." The water which flowed from it did not differ in appearance or taste from the water of other springs, except that it was slightly brackish. It was the effect that followed the drinking of its waters that was remarkable. A small cup would in the course of half an hour render the drinker totally insensible, and he would remain for hours as if dead. But few white men had ever tried the experiment of drinking from it, but those who have done so describe the effect as not unlike that resulting from a heavy narcotic.

To the Indians this spring has been known for generations. They call it the "heap sleep" spring, and it is said that more than one weary red man has entered the happy hunting grounds through the medium of its waters.—Oroville Mercury.

An Anecdote of Thackeray.

On the last night of the year Thackeray was with the family of George Ticknor. The daughters of the house had gone to a party, and Thackeray was sitting for the evening with Mr. and Mrs. Ticknor. About 11 o'clock he arose, and his host inquired:

"You are not going to retire yet?"

"No," was the answer, "for always at the birth of the new year I drink to the health and happiness of my daughters, but I do not wish to keep you up so late."

"Pray stay with us," urged the host, "and we will join you in a health to your absent ones."

When the hour arrived Thackeray took a glass of sherry in his hand, rose to his feet, and said in tremulous tones:

"God bless my motherless girls. God bless them and all who are good to them."

Drinking the wine, he bade his host good night and without another word he retired from the room, leaving his friends in tears.—Chicago Tribune.

A Cat That Put Out a Fire.

Some of our friends have a cat which they esteem very highly.

On a cold winter day Mr. and Mrs. B. went to church, some five miles away, and left the house in the possession of the cat, Tom, who upon their return home rushed out and buried his paws in the cold snow.

Wanting to find out the meaning of this behavior on Tom's part, they examined his paws and found them blistered and burned. They walked into the house and found to their surprise that the carpet around the grate was burned, but the fire had been extinguished. They now took in the situation. A coal had fallen out of the grate and set the carpet ablaze, which had been extinguished by Tom, who had burned his paws in the effort he made.—Cor. New York Recorder.

A Lamb's Ride on a Cowcatcher.

A rather singular incident occurred on the Savannah, Florida and Western railway the other day. It was about 40 miles from Waycross on a through train to Chattahoochee. On the track just in front of the train the engineer, Mr. DuBose, saw a sheep with a young lamb. It was too late to stop the engine, and the train passed on, leaving mutton in its wake. Arrived at Waycross, the engineer descended from his engine and saw the lamb alive and unhurt on the cowcatcher. It had been carried 40 miles without a scratch.—Brunswick (Ga.) Times.

The Use of Shells In Medicine.

Carbonate and phosphate of lime prepared from crab shells, and various other calcareous substances derived from the animal kingdom, such as burned egg shells and oyster shells, were long employed in medicine to remove acidity of the digestive organs.—London Tit-Bits.

SIMULATED GRIT.

How Bill Gillhooly, the Miner, Became the Terror of Bodie.

FIGHTS WITH BLANK CARTRIDGES.

Bulletless Battles That Impressed the Spectators and Won Pots of Money for the Fighters.

When Bodie was in the prime of its prosperity, about 10 years ago, there was among its citizens a wild Irishman noted for his sharp tongue and howling disregard for money or position, writes Sam Davis in The Examiner of San Francisco. When partially primed with whisky, he was fond of mounting a barrel or dry goods box and indulging in a style of rough and tumble oratory which, while it was not as polished as the rounded periods of Bob Ingersoll, was nevertheless certain to draw an admiring audience.

He was finally discharged from one of the mines for some exhibition of freshness that insulted the dignity of the superintendent, and he got revenge by climbing onto a dry goods box that night in front of the superintendent's office and speaking to a large street gathering.

"Och, boys, didn't I know the blatherin upstart when he was packin his dinner basket in the Crown Point at Virginia City and his sister was doin the washin for the Belcher mine? The whole outfit came west on an emigrant car, and meself and some other miners helped scrape the graybacks off the family before they could land in Silver City."

This sort of talk became somewhat monotonous to the superintendent, who was within hearing, and a man who knew his temperament offered to knock the orator off the box for $20.

The money was forthcoming at once, and inside a minute the man who was hired to squelch the talker jumped up on the box and by a well directed swing of his right knocked his man completely out. He fell senseless after being struck and was carried into a drug store by his friends.

When he recovered consciousness, the man who had knocked him off the box was leaning over him and holding his hand.

"Bedad, who was the blackguard who hit me behind the ear?"

"Pat, it was me that did that."

"What for?"

"For $20, and you're in for half. Here's the money."

"Bill, you're the right man in the right place. No other man in Bodie could lay me out like that, and no other would divy up so square. I'll be on that same box tomorrow night with two 6-shooters—loaded with blank cartridges of course—and you can charge 'em $500 to tackle me. I'ave the balls out of your gun, and we'll have a divil of a circus."

The plan worked to a charm. It was announced in the afternoon paper that the orator would speak again at 8 o'clock; that he was heeled and defied any man who wore hair to stop him.

His friend secured the contract of opening up a shooting match, got his $500, and after the other had mounted the box he plowed his way through the crowd, and with his harmless weapons began banging away. The man on the box returned the fire, and the vicinity was rapidly cleared. Then the orator started down the street on the run, covering his retreat with a brisk fusillade of exploding blank cartridges, and amid the smoke of four barking revolvers the two slid out of town, after which they met in a convenient ravine and divided the money. The dry goods box orator kept on his way, heading for Keeler, while the other, whose name was Bill Gillhooly, returned in an hour or so to be congratulated on his plucky work. By common consent he became elevated to the position of boss fighter of the town, and a few days later was offered an engagement by a leading mining company to drive some jumpers off some claims which the company wanted.

He begged for a little time to inspect the lay of the land and then sent an emissary—a man he could trust—to the jumpers.

The matter was soon arranged. The jumpers and Gillhooly's forces were to have a big sham battle and make an equal divy of whatever money Gillhooly could get.

He soon made terms with the company. He was to drive the jumpers off for $1,500—$500 down and the balance after the fight if he was alive. He also stipulated that if he died the company was to bury him and send $1,000 to an eastern aunt. Gillhooly selected the trusted emissary to go with him, and a large crowd gathered to see the fight.

The betting ran high on the contest.

Gill and his man swooped down on the disputed claims, and their firearms began to crackle like bunches of Chinese crackers on the Mongolian New Year's day. Then came a redhot answering fire, and the excitement was at fever heat. For awhile it seemed like the battle of Lexington. Gill and his trusty lieutenant kept right on, emptying their hot 6-shooters and grabbing fresh ones from their belts, facing at least a dozen revolvers, all belching streams of fire and smoke from carefully prepared blank cartridges. When the jumpers turned tail and started for the hills, apparently packing off two wounded men, Gill and his lieutenant were masters of the claim, and the work they did that day made them cocks of the walk in Bodie.

Well, Gill divied up with the miners, and before the week was over the joke got out, as a Bodie miner in liquor is not a close mouthed man.

The Standard company pocketed their loss and had to pretend they enjoyed the joke as well as the rest of the town. They did not crack any wine over it, however.

Gillhooly, the holy terror of Bodie, is now a modest rancher in southern California and one of the quietest men in the precinct.

Francis I of France was struck on the chin with a sharp missile. The wounded part could not be shaved, and following the monarch's suit beards came into fashion, after having been out for nearly a century.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 1 1893

It is not worth while to quarrel with the verdict that restores M. B. Curtis to liberty. It was perhaps the only thing that could have been done under the circumstances. It is not easy to find twelve men who will agree upon a verdict of guilty for a capital crime where there is a remote doubt of the prisoner's guilt. The jurors reason that the murdered man's life cannot be restored by hanging the murderer, and they will only vote to hang when there is no doubt whatever as to the guilt of the accused. But this verdict will add to the force of the demand for a change in the law requiring unanimous verdicts. Leaving out of consideration the opportunities the requirement of a unanimous verdict affords in the way of gain to a single corrupt juror, it is not easy to impress upon twelve minds the proper weight that should be attached to evidence. There was perjury committed in the Curtis trial, but there may be an honest doubt as to the witnesses who perjured themselves. The law requiring a unanimous verdict not only affords a corrupt juror a chance to realize but it gives the honest, obstinate juror a chance to defeat what to nine persons out of ten seem the ends of justice.

The Call's Washington correspondent reports Senator White as opposed to Senator Frye's bill to extend the time in which the Pacific railroad companies may pay their debts to the Government. Mr. White thinks that the present is a good time for the Government to make an experiment in the way of operating a railroad. The stand Mr. White has taken should have some influence on the action of Senate on the Frye bill. California is the State most deeply interested. The Central Pacific under Government control, whether as a leased line or a Government enterprise, would greatly profit by the competition thus afforded. A competing line, one conducted on the principle of serving the people at cost with ligitimate profits, would act as a revelation upon our people.

San Francisco must "get a move on her," and that, too, at a lively gait, for here is New York proposing to hold a great fair in that city in the new Institute building, the largest in the United States outside of Jackson Park, and she proposes to ask for the cream of the Columbian Exposition. New York's immense wealth, her commercial strength, and the backing she will have from the States about her will snow under the pretentions of San Francisco if there is any delay in clinching the bargain with the Chicago exhibitors, which at this time is supposed to be hanging by a thread. We trust that San Francisco energy and shrewdness will avert the danger that resides in the New York threat.

The Kern County Californian says: "Will somebody tell us what earthly difference it would make to the average tax payer if every seal in Behring sea were killed? According to the decision of the arbitrators the United States must maintain a fleet of vessels to patrol that sea, at great expense. All this, in order that a few rich people and more females of the demi monde may have seal-skin sacks to flaunt in the faces of their less prosperous or more virtuous sisters. Suppose the seals should be killed off. Who cares?"

It will be observed that, although the Mid winter Fair Executive Committee is making strenuous efforts to collect enough money to justify it in making a beginning of work on the fair grounds, the Southern Pacific Company does not pay over that promised $50,000. We do not believe the Southern Pacific will ever pay it over.—Report.

Attorney General Hart has declared the Ostrom jute bag law unconstitutional and his decision in the matter is timely. The Prison Directors with this authority may now dispose of the jute-bags on hand and the State of California will no longer be found helping the jute-bag trust.

The war clouds that lowered over Italy and France are said to have disappeared, which would lead the unitiated to believe that the European correspondent is taking a holiday rest. That war cloud was good for a month's work of surmise, speculation and supposition.

Chicago was visited by another great fire last Friday. An immense amount of valuable property met destruction in the flames.

A Steamship Line to Africa.

The first vessel of a new line between the port of New York and sundry ports of southern and eastern Africa has sailed from here with a cargo of machinery, merchandise and lumber. She is a British built, twin screw steamer of 3,000 tons, well adopted to the trade in which she is engaged. The British company to which she belongs owns other steamers of about the same power and tonnage, and it is intended that a vessel of the line shall leave this port every month of the year for trading purposes.

The Worcester, which has just taken her departure, will first touch Africa at Cape of Good Hope, and after entering and leaving the port of Cape Town will proceed northward along the east coast to Elizabeth, East London, Durban, Delagoa bay, Mauritius and such other places as may offer opportunities for trade. The company which has established the line is British, but its ships are ready to transport such American products, goods and wares as can be marketed in eastern Africa and to bring here upon the return trip such African commodities as may be marketable in this country.

We shall be very well pleased to get some better share than we now have of the African trade, which several European countries are desirous of controlling, and we shall be pleased to encourage the Castle company in its efforts to enlarge the exchanges between the two continents. We could wish that it were an American company, that its ships were American, and that its profits, if there happen to be any, were to be divided between this country and Africa.—New York Sun.

Growth of the German Democracy.

In the middle of the confusion and wrangling of other parties the Social Democrats are full of activity and of hope. They have many reasons for their confidence. For some years past the emperor, the political parties, the church, even Prince Bismarck, have coquetted with them more or less, have acknowledged that their aims are often excellent and have promised with here and there a qualifying "but" or "if" to carry them out as far as is humanly possible. They are therefore justified in the hope that voters whose minds have been trained to hear them with attention by this general chorus of approval will be the more disposed to listen to promises which are not qualified by "ifs" and "buts."

Then the Social Democrats are well organized and know both what they want and how they propose to obtain it. These are great advantages to a political party in all countries, but are more particularly so among the Germans, whose natural instinct it is to obey orders and to march in file, even when they are in revolt. It is therefore quite possible that the Social Democrats may double their numbers at the next election, and it will not be surprising if that estimate is surpassed.—London Saturday Review.

A Belgian Sunday Law.

The Belgian postoffice is about to issue what is called a special Sunday stamp.

It will be a 10-centime (2-cent) stamp and at one end will have a little flap. This can be torn off or left intact at the user's will and will carry in French and Dutch these words: "Ne pas livres le dimanche," "Niet bestellen op zontag," which means in English, "The postman is not to deliver on Sunday the letter bearing this stamp."

This novelty is intended to start a popular agitation against Sunday government work in Belgium, which is to be stopped if possible in the future.

It is said that a large number of people will post letters unnecessarily on Sunday mornings in order to give expression to their sentiments.

It will be interesting to hear how many of these stamps are used.—Courrier des Etats-Unis.

A State Without a Militia.

Delaware will soon be without a state militia. This condition of affairs has its origin in the adverse action of the state legislature as to an appropriation needed for the support of the national guard in that diminutive but prosperous commonwealth. As soon as the legislature defeated the militia bill every officer and enlisted man in the admirable and well disciplined little force voted to disband, and they are now engaged in carrying their convictions to a conclusion that is, while personally creditable, most discreditable to Delaware. It may even prove to be dangerously inconvenient, for the posse comitatus is not the power it once was and, in fact, can but rarely be assembled, much less depended upon.—Washington Star.

Mr. Kennan's Serious Charge.

George Kennan, the Siberian traveler, writing on the Russian extradition treaty in The Forum, makes the startling assertion "on the highest authority" that even now "the Russian secret police at St. Petersburg open and read the private letters of the American minister and the members of the American legation." He adds significantly: "It seems to me that a government which makes a practice of opening and reading not only the private letters of its own subjects, but the letters of the diplomatic representatives of a friendly state, is not a government upon whose honor it is safe to rely in a question of extradition."

She Was His Wife.

Alfred Stockham, a resident of Wethersfield, Conn., and his wife and one child went to Hartford to see the circus. After the procession had passed they started up Main street together. A dispute arose between them, and the fellow struck his wife in the face, breaking her nose and felling her to the ground. When arrested and asked why he struck her, Stockham replied, "Why, she's my wife."

The Result of a Dog's Shake.

A fire which destroyed the house of John Downey on Grand island, near Buffalo, was originated in a queer manner. A large Newfoundland dog, which was asleep in the room, shook himself, and in so doing upset a lamp, which exploded and set fire to the house.

A Word to Mr. Carnegie?

Mr. Andrew Carnegie has made a large fortune in the steel business, but is not satisfied. He now poses as a political prophet, but is not entirely a success.

He tells us that the whole English speaking world ought to unite in order to boss the affairs of the planet. Such a combination, he declares, would give us the dictatorship. We should become the arbiters of the world's destiny, "and all like that, you know." Our consolidated navy would be decisive in any controversy, and European nations would be compelled to ask our permission before cutting each other's throats.

There is no reason why we should unite with England either politically, commercially or otherwise. We are quite able to run our own machine, and ask no help from any one. We don't propose to assume the task of controlling Europe. If Germany wants to fight Russia, that is her business. We will stay on this side of the water and supply breadstuffs at a reasonable profit. If France is loading up for a contest, that is not our affair. She is her own master, and we have no desire to take a hand.

If our memory serves us, we were at some pains about a century ago to break off all close relations with England. King George got very mad and swore at us in his characteristic patois, but we brought that stubborn gentleman to terms at last. It is not probable, therefore, that we shall at this late day enter into a "combine" with England which might open up a chance to recover the property she owned before the Declaration of Independence.—New York Telegram.

Helping Out a Medical Authority.

A medical authority says that in view of a threatening plague people cannot be too careful in the selection of the ice they use, as all sorts of disease may be communicated by this medium, but no directions governing the selection of ice are given. In order that the public welfare may be conserved we present a few general rules for the guidance of ice purchasers.

The best ice is always cold, and sometimes a slight moisture may be observed upon the surface. It is devoid of smell and will melt when exposed to a temperature of 110 degrees F. Ice made of water is most desirable. It should be transparent, or nearly so, and should break into fragments when given a sharp blow. Tough ice that will not break is generally adulterated. Avoid soft ice or ice that has been subjected to excessive heat while under process of manufacture.

It sometimes presents a fine appearance, but is unhealthful. Ice more than three days old should not be purchased, as it is liable to turn sour on your hands and will have to be thrown away. After having melted, ice loses many of its virtues and should not be used. It should always be kept in a cool place and at a distance from gas fixtures to avoid explosions.—Washington News.

Beautiful Lectures on Journalism.

Lectures on journalism are becoming abundant. It goes without saying that 19 times out of 20 they are by those who know nothing of their subject experimentally, but know all about it theoretically. And, oh, how beautifully they do talk! But if they'll only take a little hack at it in a practical day in and day out sort of way they'll find that journalism means something else than spider web rainbows and pansy beds, or we'll lose our guess.

We have never known a case where actual experience with book canvassers, committees who want a lot of free advertising in the editorial columns "for the good of the cause, you know," etc., ever failed to leave its impress of stern logic. Those who presume on the duties and responsibilities of journalism and all that sort of pretty talk would see some things at least a little differently if they'd only get down from their high horse and take a hand at journalism themselves.—Milford (N. Y.) Journal.

Where Discipline Is Essential.

It seems to us that we have this year an inordinate number of reports of riotous and obstreperous conduct on the part of students in institutions of learning, especially in colleges and academies, and even in seminaries for young women. Making due allowance for youthful frivolity, we take occasion to say that at all hazards order must be preserved among the students and discipline enforced by the faculty of all educational institutions. When students are suffered to override the rules set up by the faculty, it is to their own disadvantage; when professors fail to apply these rules, it is evidence of their incompetency; when an institution gets a name for disorderliness, it is on the road to ruin.—New York Sun.

Can This Be True?

"No, sir, I'll not pay 35 cents for a small sandwich and 50 cents more for service. That's simply highway robbery," said a New York man to the proprietor of a Chicago restaurant.

"That, sir, is an insult to compare me with a highway robber."

"Yes, you are right. If there were any highway robbers, I would certainly beg their pardon."—Texas Siftings.

World's Fair Expenses For One Day.

A Chicago man gives this schedule of prices for seeing the fair on 60 cents a day:

Cottage Grove avenue car, round trip	10
Admission	50
Milk at milk exhibit	Free
Fresh rolls at yeast exhibit	Free
Buttered crackers at butter exhibit	Free
Total	60

A man said to be 75 years old has entered as a student at Princeton college. He had all his life been imbued with a desire to have a college education, and a legacy has at last placed him in a position to obtain one.

Spain was a republic for nearly two years (1868-70) under the presidency of Emilio Castelar, but royalty was revived. Castelar has just announced his retirement from public life.

ALIAS SUMMONS.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

W. J. HOSKINS, Plaintiff, vs. WILLIAM GREEN and B. F. LEWIS, Defendants.

Action brought in the Superior Court of the County of Inyo, State of California, and the complaint filed in the office of the Clerk of said Inyo county.

The people of the State of California send greeting to William Green and B. F. Lewis, Defendants.

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this summons—if served within this County; or, if served elsewhere, within thirty days.

The said action is brought to obtain judgment of this Court for the foreclosure of a certain mortgage described in said complaint and executed by the said William Green on the 31st day of May, 1890, to secure the payment of a certain Promissory Note dated May 31st 1890, made by the said William Green for the sum of $800.00, bearing interest at the rate of one and one-half per cent. per month, payable semi-annually; and if not paid when it becomes due, to be added to the principal and bear interest at like rate, as described in said complaint on file herein, which complaint alleges that no part of the principal or interest therein has been paid; that the premises conveyed by said mortgage may be sold and the proceeds applied to the payment of said promissory note and interest thereon, and the payment of 15 per cent. of the amount found due the plaintiff as attorney's fees, and for costs of this action; and in case such proceeds are insufficient to pay the same, that judgment be docketed against said William Green, defendant herein, for the balance remaining due, and also that the said defendants, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, claim, lien, equity of redemption, and interest in said mortgaged premises, and for other and further relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said Plaintiff will apply to the Court for the relief demanded in the complaint.

Witness my hand and the Seal of the Superior Court of the County of Inyo, State of California, this 20th day of June, A. D. 1893.

[SEAL.] D. J. HESSION, Clerk.

J. D. Lewis, Attorney for Plaintiff.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF THIRD Township in the County of Inyo, State of California.

L. Wood, Plaintiff, vs. Jesus Encenas, Defendant.

The people of the State of California send greeting to Jesus Encenas, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Third Township, County of Inyo, State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to obtain judgment against you for the sum of $225.86 alleged to be due and owing from defendant to plaintiff upon an account stated between plaintiff and defendant, at Independence, Inyo County, California, on the 12th day of June, 1892, which sum or $225.86 defendant agreed to pay to plaintiff. For costs of suit, as more fully appears by the complaint on file herein, to which you are referred.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of $225.86 and costs of suit.

Make legal service and due return hereof.

Given under my hand this 24th day of August 1893. IRV. H. MULHOLLAND,

Justice of the Peace of said Township.

F. E. Densmore, Attorney for Plaintiff.

Lodge 221, F. & A. M.

- KENDALL'S SPAVIN CURE. -

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied upone fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain Lts, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and alls bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.

Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th, 1893.

COURT NOTES.

Geo. M. Gill, Superior Judge.

WEDNESDAY, August 30, 1893.

People vs. Frank Sorba—Filed peace bond.

Munzinger vs. Albars—Filed notice of P. Reddy of counsel for defendant.

BORN.

CHURCH—At Independence, September 1st, to Mr. and Mrs. A. Church, a daughter.

DIED.

SMITH—At Independence, August 29th, James Frederick Smith, a native of Halifax, N. C. aged 75 years.

Bar Silver closed at 74 yesterday.

P. H. Mack Esq. is expected on to-day's train.

Supervisor Fitzgerald spent the week at Independence.

Constable Murphy visited Lone Pine Tuesday evening.

June Smith of Big Pine spent several days in town this week.

See the notice to creditors of estate of John McFetridge, deceased.

Marshall Naylor is training the Albenton stallion "Patsy" for the fall races.

Small nuggets of gold are brought into Lone Pine frequently from the Beveridge country.

Constable Murphy will sell a quantity of grain at public auction to-morrow afternoon.

The open season for quail begins to-day. Some of the boys have been out and report good success.

J. J. Gann is expected from San Francisco this evening. He came as far as Carson last Sunday.

Mrs. A. W. Eibeshutz, Miss Elsie and Master Eddie have gone to San Francisco on a month's visit.

Mairs' haying crew has gone to Georges Creek to put up the second crop of alfalfa on the Hunter ranch.

An assessment of ten cents per share has been levied upon the capital stock of the Inyo Canal Co.

Dr. J. S. McQueen has been at the Norman house all the week. His dental work gives excellent satisfaction.

It is expected that all the mines on the Comstock except the Savage and Con. Va. will close down this week.

Johnny Irwin and Arthur Smith have returned from their camping trip, both looking much improved from their outing.

Mrs. Louis Josephs, formerly Miss Minnie Harris, arrived at Independence on Monday's train to join her husband. Mr. and Mrs. Josephs will make their home here.

Governor Colcord of Nevada has appointed the requisite number of delegates to the Los Angeles Irrigation Convention and urges upon the people of that State the important results that meeting will surely accomplish.

James F. Smith died on Tuesday at Independence and was buried at the Odd Fellows' and Masonic cemetery on Wednesday. Mr. Smith had reached the venerable age of 75 years and his fatal illness was the only sickness he had ever experienced. His three sons, Ambrose W. H., J. White and Edward Smith have lived in Owens Valley for years. The deceased came to this county from Texas over two years ago, accompanied by two other sons and three daughters. A large concourse of friends followed the remains to their last resting place.

Fair Race Programme.

FIRST DAY.

Trotting, 2-year-olds, free for all colts raised in District; mile and repeat, purse $100—$75 to first, $25 to second.

Running, ¼ mile dash, free for all, $50.

SECOND DAY.

Trotting, free for all stallions owned in District, 3 in 5, mile heats—$100.

Running, 2-year-olds, ¼ mile dash—$50

THIRD DAY.

Trotting, 3:10 class, mile and repeat—$75

Running, mile dash, free for all—$100

FOURTH DAY.

Trotting, free for all horses owned in the District, 3 in 5, mile heats, $150—$100 to first, $50 to second.

In all races entrance fee 10 per cent; 3 or more to enter, 2 or more to start.

In all races entrance fee 10 per cent; 3 or more to enter, 2 or more to start.

A Good Work

Under the caption of "Owens Valley" the *Orchard and Farm* of July 15th contains an interesting and useful article relative to the county generally and particularly to the Bishop creamery. Following are extracts:

"Only a little over a year ago the ranchers in the Valley began to realize that to take advantage of their naturally favorable surroundings they must discard the old and primitive methods so long in vogue and adopt the later and better methods of modern dairying. After inquiring and reading up on the subject they established a dairyman's organization, of which Mr. Cooley, one of the chief instigators of the movement was elected president. Below is a brief summary in Mr. Cooley's own words, in which he relates the development of the new enterprise:

"Realizing that talk alone would never accomplish the end sought, we effected the organization of a stock company, incorporated, put up the coin, built and furnished a modern creamery for the manufacture of both butter and cheese at an expense of about $7,000. The stock was placed at $25 per share, and was mostly taken up by the ranchers. A board of directors, elected from their number, conduct the entire business operations of the creamery, and strictly in the interest of the patrons.

"That a co-operative creamery, conducted on strictly business principles can be made to succeed we have demonstrated by what has been accomplished here in less than one year. Starting in with less than 2,000 pounds of milk per day, the creamery doors have never been closed for a single day, and during May last over 200,000 pounds of milk were handled successfully. And the supply is constantly increasing, while our creamery books show profits beyond our highest expectations.

Such a revolution has the creamery effected. So much more ready money is always in circulation, and the relief from the drudgery of butter-making at home is so appreciated that our dairy-men and stock raisers are increasing their milkers to such an extent that even the facilities of our present creamery will soon prove inadequate.

"In fact, an entirely different feeling prevades the community; outsiders are moving in and making their homes among us. Capitalists are investing, and our people here in Owens valley have, without realizing it, and directly through the enterprise they have shown in establishing our creamery actually created a permanent boom that has banished the cry of hard times from our midst."

On the first page of the same issue of the *Orchard and Farm* is an excellent reproduction of a photograph of Mr. Cooley's herd of short-horns. This is the kind of advertising that pays best. Show to the outside world what we have and can produce here. For several years past articles have been published in the *Herald* and other Los Angeles papers descriptive of Owens Valley, and all have borne good fruit. It is a good and useful work.

Serious Case of Infantile Summer Complaint.

Do not give way so decidedly, neighbor of the *Index*, to the ravages of the green-eyed monster. We have no desire to trespass upon your exclusive ground of sycophant in chief to anybody or anything that will tolerate your peculiar style of servility. To use the vulgar parlance of the *Index* this paper never has and never will have "toadied" to any individual, firm, or corporation, reserving all its efforts to promote every enterprise that promises to result in the public good; while it is a well known fact that the *Index* catered incessantly to a well known polical leader who now lives in another county until it accomplished his defeat in convention. Its editor then worked for the Democratic nominee for the same office and the result materially assisted in his defeat at the polls. It clung to and fawned upon a railroad corporation and the result worked such injury that the management cast it off in disgust and it promptly retaliated by snapping at the hand that fed it. It still, however, jealously guards its sycophantic prerogative. As to making its position understood, there is no doubt in the mind of anybody as to the principle of the *Index*; it is that of rule or ruin. Rather than be superseded as Register of the local Land Office the editor of that sheet has published a series of articles to prove that Inyo county will not be injured by the discontinuance of the Land Office here and that its maintenance is no benefit to the Government. If he cannot rule he would ruin what is a benefit to all. From the tone of the last several issues of the *Index* it would appear that it is about to terminate its sporadic existence and is laboring in the throes of approaching dissolution. That its editor, like a diminutive Sampson, is endeavoring to pull down the pillars of every public enterprise, the new railroad venture, the soda works, the Bishop creamery, the Land Office; in fact, wreak every possible damage before the inevitable end ensues.

Silver Temporarily Defeated.

The Wilson bill for the repeal of the purchasing clause of the Sherman Act came up in the House on Monday and was passed by a large majority. The voting showed how strictly non-partisan is the silver question, Republicans and Democrats voting side by side for and against the bill. Bland's first amendment to the Wilson repeal bill for free coinage at the ration of 16 to 1 was defeated by 126 to 225. The second with a ratio of 17 to 1, was defeated by 100 to 240; the third with a ratio of 18 to 1, was beaten by 102 to 237; the fourth, 19 to 1, was rejected by 105 to 237 and the fifth at 20 to 1, by 119 to 222. Next came the amendment to re-enact the Bland-Allison Act and this was defeated by 136 to 213, and this exhausted the amendments, when the Wilson repeal passed by a vote of 239 to 110, thus placing silver where it was, so far as the House is concerned, after its demonetization in 1873.

The ranchers in this vicinity speak very favorably of the work being done by the Smith Bros. threshing machine. The yield of grain will be larger than usual. In fact, the yield of hay, grain and potatoes will exceed by far the the amount produced last year.

The Independence public school term begins next Monday, A. E. Janvier, principal, and Miss June Scicher, assistant, in charge.

MISCELLANEOUS.

(Official.)

Ordinance No. 49.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Section 7 of Ordinance No. 43, which was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board held on the 8th day of January, 1892, and which said Ordinance No. 43 is recorded in Ordinance Book "B" at pages 89 et seq., and was amended by Ordinance No. 47, by the said Board of Supervisors, on the 5th day of April, 1893, which said amending Ordinance is recorded in Ordinance Book "B" at pages 130 et seq., is hereby amended to read as follows:

Section 7. Every person who at a fixed place of business sells any malt or fermented liquors, wines or distilled liquors, whether on commission or otherwise (except vitticultural productions, when sold by the producers thereof, and fermented or malt liquors when sold by the manufacturer thereof, on the premises on which the same shall be manufactured), must obtain from the Tax-Collector, and for each branch of said business, a license, and must pay quarterly therefor the sum of Forty Dollars. And every such manufacturer of any malt or fermented liquors, who sells the same on the premises on which such liquors may or shall be manufactured must obtain from the Tax-Collector, for such business, a license, and must pay quarterly therefor the sum of Twenty Dollars.

SECTION 2. This Ordinance shall take effect and be in force on and after twenty-five (25) days from its passage.

SECTION 3. This Ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the "Inyo Independent," a newspaper printed and published in the said County of Inyo, at least two [2] weeks said publication to be made said time and before the expiration of said tweety-five [25] days.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

(SEAL)

Attest: D. J. HESSION,
Clerk of said Board of Supervisors

The above and foregoing Ordinance No. 49 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo State of California, at a regular meeting of said Board held on the Eleventh day of July, 1893, by the following vote:

Ayes: Supervisors Frank Fitzgerald, A. C. Freeman, John Wilson, W. H. Uhlmeyer, R. Love

Noes: None.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

(SEAL)

Attest: D. J. HESSION,
Clerk of said Board of Supervisors.

[Endorsed.]

ORDINANCE NO. 49.

Adopted July 11, 1893

D. J. HESSION, Clerk.

Recorded July 11, 1893, in Book "B" of Ordinances, at pages 163 et seq.

D. J. HESSION,
County Recorder.

By J. E. PARKER,
Deputy.

THE SPINNER.

The spinner in the garden slept,
As Day passed through the valley;
Her silent wheel the sunbeams swept,
The spinner in the garden slept,
The brown bees at their labor kept,
Rung clear the song birds' rally.
The spinner in the garden slept,
As Day passed through the valley.

The spinner in the garden wept,
As Night came down the valley;
Her humming wheel the shadows swept,
The spinner in the garden wept;
Her cry was: "If I had not slept!
Oh, wherefore did I dally?"
The spinner in the garden wept,
As Night came down the valley.
—Emma C. Dowd in Youth's Companion.

A LOVER IN STONE.

In Yellowstone National park are innumerable geysers, the waters of which are strongly impregnated with calcareous and silicious sinter, a white substance which instantaneously incrustates whatever it falls upon. Big mounds and craters are formed by it. Travelers place under the streams bottles and other objects they desire "turned to stone," as they term it, and as soon as the sinter hardens carry away their trophies in triumph.

Mr. Cyril Jacques was a morbid, dreamy and downcast young man. With form, fine face and even wealth at his command, he constantly meditated suicide and determined to become a felo de se. He wandered over the world to discover some artistic method of departing this life. He paled at the thought of an inquest over his mortal remains, of accounts in the press and of speculation by his fellow mankind. He climbed Vesuvius and for hours contemplated a plunge into the awful fires below, where his body would never be revealed. He did not fear instantaneous incineration—not that. He conceived that in the invisible world in which he was bound he might desire to gather his mortal elements somewhere, sometime, in the cycles of eternity. Hence, why so utterly annihilate them?

Mr. Jacques sailed to the borders of the great maelstrom off Norway and considered a plunge therein, heavily plated in a metallic armor. Here again he paused and foresaw the decay of the metal and the possibility and absorption of animal life.

He studied aeronautics intently and consulted the world's aerostatic engineers, M. Gabriel Yon, Captains Renard and Krebs, as to the possibility of an airship which would bear him beyond the earth's atmosphere, out into homoloidal space. Again defeat. These great men assured him that, for all his wealth, finite power could not achieve the infinite.

In the year 1870 he read of the first expeditions of Dr. F. V. Hayden into the unknown wilds of the Rockies, of the initiation of the then worldwide respected United States geological survey, of the wonderful geyser regions of Wyoming. Into the northwest corner of this territory he hastened his flight. August was waning when he mounted the terraces of Mammoth Hot Springs and saw the clear blue waters gush from the highest plazza and fall evenly in veilike sheets over the sides, which constantly increased in size. He saw that he had only to sit there to be pushed higher and higher, while a mountain of incrustation broadened below him and reared him about.

But as he watched the transformation of liquids into solids he saw that certain objects at the base of the mound, as fast as they became incased with sinter, were pushed down hill, down toward the valley below. He speculated. He concluded that some time a concussion of steam might explode the mound, and if a body were therein it would become exposed to beasts, men or sun. So he determined to be incased separately and allow his body to be pushed down hill, to become one of the rapidly forming, immense mass of incrustated objects.

Having formed his plans, Mr. Cyril Jacques took chloroform and laid down at the base of the series of plazzas of Mammoth Hot Springs, where the geyser waters fell upon him and in a short time incased his body in hardened calcareous sinter.

While the strange young man was exhausting his life devising aesthetic means of death, Miss Mignonette Favre was leading a dissimilar career of inventing fancies and searching the world for a man who should be a synonym of her ideals so created. In her flights of romanticism she had investigated the wildest noble red man in the deepest of unfrequented deeps, but ascertained that his value set on a woman was less than that of a horse. She studied a widower president, but, if he fulfilled her dream, he did not take kindly to her advances. She went abroad determined to fascinate a great prince, but all the princes she met spoke not of love, but of an annual stipend to become her husband.

In 1890 Miss Favre decided to enjoy the summer in the Yellowstone National park, a tract solely under the jurisdiction of the government, but formerly a part of the then territories of Wyoming and Montana. The a Mammoth Hot Springs hotel suited her romantic ideas. While here she often climbed the plazzas of the great spring. She placed bottles, combs, horseshoes and other objects under the trickling streams and saw them "turned to stone" to her heart's content. While she filled big boxes with a varied collection of these and kindred objects, her ideal in this respect, as in the case of a man, was unfulfilled.

She saw the big heaps of objects incrustated, which seemed to have slid down into the valley, and she was indignant at the government for enacting laws to protect this "avalanche" and making it a misdemeanor to carry any section away. She clambered up and down the avalanche—for such the slanting collection of objects seemed to be—and each day paused before a massive cone of white sinter, the solidity and great beauty of which she admired so much that it became a monomania with her. The cone was about seven feet in length, with a diameter of two feet, and looked as if it were a classic Ionic column.

At least Miss Favre concluded she could not live without the cone. In her frenzied admiration of it she forgot to search for a man of her romance. She hired the stableman to take a trusted force of men, steal the coveted object at night and bear it away to Livingston, Mon., by means of relays of horses and stout vehicles. The men conveyed it by unused paths, avoiding the routes where officials were stationed, and got it safely to Livingston, where it was carefully packed in a long box and shipped to New York at a total cost of $10,000, half of which went to the stablemen.

Miss Mignonette accompanied her treasure, and on her arrival at her superb mansion on West End avenue had it unpacked and artistically displayed in an aesthetic, well lighted upper room which she had converted into a sort of museum for the exhibition of her trophies collected while traveling. Here she spent hours daily admiring her treasure, examining and re-examining the surface, which variously resembled corals and stalagmites, honeycombs and cells. Nor did she tire. On the contrary, so great grew her fascination that at last she was held by it as by a spell—as a bird might be hypnotized by a snake. She would walk and walk around it, sing to it, indite poems in its honor and call it by endearing names.

One day Miss Mignonette read a wonderful account in a veracious newspaper concerning a frog which had been found alive in a marble block. She was startled. What if her cone contained some animal—a bear—a snake—goodness—what? This girl had some sense. She actually reasoned. She felt that if it contained anything the mysterious object must be something higher, nobler than she, to so fascinate her.

Should she smash it and end the mystery? No! Why spoil forever her idol?

Again and again she caressed it, but always one end of it. Suppose the end toward which she was so irresistibly drawn were the head?

Miss Mignonette, after reading the frog story, grew so crazed with the possible romance of the situation that she at last became possessed with the belief that there was a man inside. What if it were true? He could not be dead, no, only in a trance. He must be young and handsome. Yes, he must be the idol of her dreams, for whom she had searched the world. Her future lord had been found at last. Dame Nature had granted her prayer and in the most romantic way ever conceived, yea, inconceivable even to the wildest flighted novelist, had enabled her to find her lover in stone.

She would break the seal, the long seal that had hidden him from the world. She would dress to receive him. There should be no one else present. He should awake from his long dream from the invisible world, should open his eyes on her loveliness, should awake to life and the world in her arms.

She arrayed herself gloriously. Her dark hair was arranged with white bands about it. A simple flowing gown of white enveloped her form, and over it was the faintest white fabric of illusion, so delicate as to deceive the eye. Her brown eyes, large and long lashed, shone with joy. Her feet were incased in tiny sandals. The nails of her delicate fingers shone pink hued, like the shell of a pearl. She was arrayed at last, ready with endearing terms to receive her lover from his case of stone. Incandescent lamps shed a soft, mellow glow over the room, on the cone, enhancing the glorious beauty of the girl.

With a sharp chisel she began to indent a crease on the entire length of the cone. Gradually the crease deepened. Often she placed her ear to the opening, trying to catch some sound, some movement. The opening arrived at a depth where the cone could be split open without injury to the inmate. She inserted several chisels and with a hammer gently began the splitting process.

As the tomb began to open she paused. She was scared. The man would really be as in death. How could she revive him unless he immediately came to life? Suppose he were completely dead. What could she tell the authorities that which they would believe and not convict her as a murderess?

Gradually her courage came back. She would save him somehow. Had not nature granted her prayer and sent her a husband in the most mysterious, romantic fashion? Surely the power which sent him to her to be rescued would enable her to restore him to life. She gave several taps and the cone divided in twain.

In the morning they found her in the museum in a dead faint. She did not revive for many days. Beside her were two halves of the cone of silicious sinter. The occupant, which lay beside her, was the limbless trunk of a dead tree.—William H. Ballou in New York Evening Telegram.

About Sounds at Sea.

A Philadelphia correspondent confirms the statement about distant sounds focused by ship sails. He states that many years ago the late Admiral Goldsborough told him that when he was a subordinate officer he heard the late Commodore Levy, who was executive officer of the United States ship ——, tell his captain one Sunday morning that he was sure they were off Rio Janeiro, because he heard the sounds of the church bells. As they must have been nearly 100 miles from the harbor, the captain sarcastically asked Levy whether he could not "see the rosebushes in front of the houses?" to which Levy quickly responded, "I cannot see the roses, sir, but I can feel their thorns."—Detroit Free Press.

ARTFUL CUPID.

As I went walking down the dale,
Master Cupid ran beside me,
And with many a winsome tale
Laughingly the trickster plied me,
Seeking with his subtle art
Entrance to my guarded heart.

"Nay," said I "'tis no avail."
Yet the little rogue defied me:
"Ah," said he, "I never fail;
None hath ever yet denied me.
Thou shalt see what cunning art
I can practice on the heart."

"Braggart boy! I pass unharmed;
Boasting hath undone thee, stupid."
On I walked, forewarned, forearmed,
Smiling back at Master Cupid,
Vainly with his vaunted art
Seeking entrance to my heart.

As I looked I saw he wept
O'er the sad defeat before him.
Ah, my sentries must have slept
As I bent in pity o'er him,
For the imp of wondrous art
Leaped into my open heart.
—Willis B. Hawkins in Detroit Free Press.

Her Moneymakers.

"Come out and see my moneymakers," said a lady living in the country to a friend from the city who was visiting her. "These," she continued, as they came to a large and well appointed henhouse, "are my 'church hens;' all that I make out of them above expenses is devoted to religious objects.

"The geese you see down there on the pond are my 'poor and needy geese.' They cost little or nothing, and the profits are applied to the relief of the poor and needy. Away down beyond that wood I keep a drove of hogs; 'dress hogs' I call them, because I buy my dresses out of what I make from them.

"Those Alderney cows are my 'theater and opera cows.' I saw four Wagner operas last winter out of the profits of one of them. You see that bed of strawberries? Well, we don't call them strawberries, but 'shoo berries.' I buy all the children's shoes and my own, too, out of the income from that strawberry patch.

"These and many other little money-making schemes I manage myself, without troubling my husband, who works in the city for a not very big salary. Consequently we have a great many comforts and luxuries that we couldn't otherwise have; and I thoroughly enjoy the work too."

Do not this lady's methods suggest a host of little things which other ladies might turn to use as moneymakers and find find health and pleasure in so doing?—Youth's Companion.

Rearing Babies.

Hot weather is generally considered the hardest upon the babies, and in cities the mortality among the infants is often terrible. A word should be said about these little ones that more sense may be shown in rearing them. The great idea among mothers is to have a fat, plump, almost round baby, and the acme of success is then reached. The child is kept fat as long as possible, but the mothers little realize how much fat babies suffer in hot weather. With the exception of the other extreme—the very thin and sickly babies—the mortality among babies is greatest among the very fat.

Recently a foreign physician published a paper in which mothers were advised to follow the cattle breeders in their methods of bringing up good, profitable cattle. The first idea of the breeder is not to produce fat, but to make the young animals put on a large frame and strong muscles. Food that would make bone and muscle rapidly was given for the first period, and only sufficient fattening food is given to keep them in good health. An animal in this condition can stand the hot weather with considerable comfort. After a solid frame and hard muscles are formed the fattening process is very easy of accomplishment; but if all the food goes to fat, the framework is dwarfed and made undersized.—Yankee Blade.

Salt for All Kinds of Aches.

Now is the season for hay fever and colds of all sorts contracted through carelessness or recklessness. If your family physician is not accessible, and you intend being your own doctor, here is a remedy to be recommended. It is no more nor less than common table salt. It is perfectly harmless, always available and has great curative properties. Moreover, it has this great advantage over more pretentious remedies, that if it does not cure it will not kill, and the chances are that it will cure.

If, with your very best boy, you gaze at the stars far into the night, watching the moon until it wanes or goes sailing in the gloaming, the probabilities are that a toothache, earache, neuralgic headache or some other distressing ill will be the result next morning. Applications of a strong, hot solution of salt in water and vinegar act like magic, and before many hours have passed you will forget you have ever had an ache or a pain.

For any kind of a cold that takes the unpleasant form of sneezing and influenza, a vapor of heated salt and alcohol will afford almost instant relief. If a sore throat constantly threatens you, there is no better remedy than a spray of warm water and salt; it is almost a sure cure.—New York Advertiser.

A Woman's Notes.

A very excellent departure in the way of weekly articles has of late been introduced by a leading Englishwomen's journal. Every seven days the wife of an M. P., otherwise known as a member of parliament, writes a brief record of any doings of great pith or moment that are debated by the commons. From her seat behind the grating of the gallery, where women are permitted to view and listen to the lawmakers, this clever woman watches and notes all proceedings, and during those months when parliament is in session keeps her sisters well informed with regard to the nation's affairs. Her letter is written in clear, sprightly English that enables all women to keep pace with political movements without the aid of prejudiced and prosy daily newspapers. Something of this nature is sadly needed for American women, who are so strangely ignorant of political action, not only in Washington, but in their own state's senate, and even the town councils.—Chicago News.

Salti, a Sardinian city, has no police, no clergymen, no doctor, no chapel. Marriages are ratified by a priest or registrar at a parish many miles distant, to which brides and bridegrooms travel in batches to have the necessary ceremonial conducted.

The minute green bodies found on the fresh water polyp have been shown to be vegetable cells which furnish sugar for the animal, while the latter in turn provides them with nourishment.

UNCLE SETH'S ADVICE TO POETS.

The poets what write about nymps an them things,
An driuds an goddesses hain't got no sense—
An sylfs an angels what fly round 'ith wings
'Ithout ever a-stoppin to light on the fense—
They hain't got no idee
Of what po'try sh'd be,
An they don't tech a feller like you an like me.

Fer they talk about gods the old Greeks uster sing,
An goddesses nobody b'lieves in no more;
In a kin of a classical ting-a-ling-ling,
They say the same things we have all hearn afore
In a langwidge so gran
That we can't understan,
An too stylish an swell for a workaday man.

W'y, bless ye, there's po'try in flowers an birds
An courtin an luv an young babies enough
Thet don't hev to hev long academy words
To make a man yell, "Thet's the stuff, thet's the stuff!"
Yes, thet's jest the stuff
Of which any ole duff
Like you and like me can't fill up with enough.

Jest fix up yer songs so us plain folks can hear,
An make 'em some sense fer me an my wife;
Make 'em jingle an gallup 'ith everyday cheer;
Wet 'em down 'ith the joose of the winepress of life!
Fetch 'em up from your heart,
Where all songs orter start.
Let your Pegasus go an climb into our cart!
—Sam W. Foss in Yankee Blade.

Souvenir Spoons.

"Some people are born with silver spoons in their mouths." If it is only a plain, everyday sort of silver spoon, it doesn't count in these fin de siecle days. It must be a souvenir spoon, and no common one at that, or one had better not have been born. This is indeed a time, if not an age, of luxury, and even the poorest people are not contented with the plain usages and appointments of the past half century. It is an age of constant changes, where nothing lasts, and in which anything that is before the public more than a year is considered a matter of ancient history.

The wonder is that with such an existing state of things a fad like that of collecting souvenir spoons should have lasted more than one season, and yet the interesting fact remains that the fancy or fad or whatever you choose to call it of souvenir spoons is just as eagerly followed now as it was five years ago, when first introduced.—Once a Week.

The Death of Cleopatra.

The story that Cleopatra killed herself by allowing an asp to bite her has long been believed, but probably has no better historical basis than the fanciful imagination of a gossipy Roman historian. For some time before her death she made careful preparations for that event and tried many different kinds of poisons on her unfortunate slaves to see which would produce death with the least apparent agony. She probably died by one of these poisons, for she was as adept in such matters as any of the Borgias. No asp was found in her room, and the wound on her breast supposed to have been that of its bite probably had another origin, for her whole body was covered with bruises, where she, in Egyptian fashion, had struck herself with her fists and torn her flesh with her nails in her grief for the loss of Antony.—St. Louis Globe-Democrat.

Golden Silence.

There are times when "silence is golden," but women have the reputation of always ignoring this fact. A minister's wife tells a good story at her own expense which illustrates man's incredulity of her ability to keep her mouth shut under any consideration. Her husband was recovering from a serious illness. The day when the worst was over the doctor smiled, with the remark that all he needed was quiet and spoke of a powder which he would leave. Rising to go, the wife reminded him of the powder "to keep her husband quiet," when to her amusement the doctor turned, and looking her in the face said: "The powder was not for your husband, but for you. He will be quiet enough if he only gets the chance."—Exchange.

The house of commons has met on Sunday 11 times, on various occasions when urgency demanded it. The first time was in the reign of Edward III, the last at the death of George II.

Mrs. Homespun, who has a terrible time every morning to get her young brood out of their beds, says she cannot understand why children are called the rising generation.

Be not affronted at a jest. If one throw ever so much salt at thee, thou wilt receive no harm unless thou art raw and ulcerous.—Junius.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

NOTHING LIKE IT.

40 YEARS OF PAIN CURED. THE CASE.

ST. JACOBS OIL CURES ALL PAIN

N. ALBANY ST., ITHACA, N. Y., Dec. 19, 1881. For over 40 years I have been a victim of rheumatism. I was persuaded to try St. Jacobs Oil. I have used two bottles, and a man more free from rheumatism never walked our streets. My limbs that were once stiff and lame are now as light and limber as in my youth. JOS. EDSELL.

AFTER FIVE YEARS.

ITHACA, N. Y., July 5, 1887. Suffered many years—injury to hip resulting in rheumatism, muscular weakness and contracted cords. Two bottles of St. Jacobs Oil relieved me so that I now walk about and attend to daily duties at 62. I heartily endorse it. JOS. EDSELL.

S. F. N. U. No. 180. New Series No. 31

Woman, according to an Ohio maligner, divides her life into three epochs—birth, marriage and death. She has nothing to say about the first, only half about the second, and after these experiences she wishes for the third.

There is more catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address, F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

"Kyphosis bicyclistarium" is said to be the technical name for the "bicycle riders' stoop."

DECIDEDLY SHAKY.

A trembling hand, an uncertain step, fidgetiness, indicated by restless shifting from one place or posture to another, usually mental annoyance at unexpected noises, are among the indications of extreme nervousness. These seem trifling, but the health of men and women in this condition is "decidedly shaky," liable to be overthrown disastrously by causes which the vigorous might defy. To fortify the nervous system, general vigor must, through the medium of reinforced digestion, and a renewal of an impaired power of sleeping at night, be raised to a healthful standard. A guarantee of this is Hostetter's Stomach Bitters, which re-establishes digestion, bile secretion and the habit of body on a permanently regular basis, thus renewing that bodily equilibrium, which is followed by a gain of strength and nerve tranquility. For kidney complaint, rheumatism, neuralgia, and as a preventive of the first attack or subsequent return of malarial disorders, this medicine is without a peer. Thrice daily take a wineglassful.

No Time for Him—Theodore Thespis—But, my dear fellow, I'll pay you in time. Peter S. Flint—I prefer it in money.

THE BEST OF REASONS.

The reason why ALLCOCK'S POROUS PLASTERS are popular is that they may be relied on to cure,

1. Lameback, sciatica, stiffness or twitching of the muscles.

2. Chest troubles, such as pleurisy, pneumonia, consumption.

3. Indigestion, dyspepsia, biliousness, kidney complaint.

The success, however, will depend upon the genuineness of the plaster used. The popularity of ALLCOCK'S POROUS PLASTERS has been so great that multitudes of imitations have sprung up on every hand. The only sure cure is to get the genuine ALLCOCK'S POROUS PLASTERS.

BRANDRETH'S PILLS improve the digestion.

There are too many people who like to tell bad news.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

TWO KINDS OF WOMEN need Dr. Pierce's Favorite Prescription—those who want to be made strong, and those who want to be made well. It builds up, invigorates, regulates, and cures.

It's for young girls just entering womanhood; for women who have reached the critical "change of life"; for women expecting to become mothers; for mothers who are nursing and exhausted; for *every* woman who is run-down, delicate, or overworked.

For all the disorders, diseases, and weaknesses of women, "Favorite Prescription" is the *only* remedy so unfailing that it can be *guaranteed*. If it doesn't benefit or cure, in every case, the money will be returned.

"German Syrup"

JUDGE J. B. HILL, of the Superior Court, Walker county, Georgia, thinks enough of German Syrup to send us voluntarily a strong letter endorsing it. When men of rank and education thus use and recommend an article, what they say is worth the attention of the public. It is above suspicion. "I have used your German Syrup," he says, "for my Coughs and Colds on the Throat and Lungs. I can recommend it for them as a first-class medicine."—Take no substitute.

DR. GUNN'S ONION SYRUP FOR COUGHS, COLDS AND CROUP.

GRANDMOTHER'S ADVICE.

In raising a family of nine children, my only remedy for Coughs, Colds and Croup was onion syrup. It is just as effective to-day as it was forty years ago. Now my grandchildren take Dr. Gunn's Onion Syrup which is already prepared and more pleasant to the taste. Sold everywhere. Large bottles 50 cents. Take no substitute for it. There's nothing so good.

HERCULES ENGINE Gas or Gasoline

A Positive Power. Requires No Licensed Engineer. Your Wife Can Run it.

PALMER & REY, San Francisco, Cal. and Portland, Or.

No Batteries or Electric Spark.

PISO'S CURE FOR

Consumptives and people who have weak lungs or Asthma, should use Piso's Cure for Consumption. It has cured thousands. It has not injured one. It is not bad to take. It is the best cough syrup. Sold everywhere. 25c.

CONSUMPTION.

Suffered Every Minute

Since I came out of the war, with catarrh in my head, chronic diarrhœa and rheumatism," says Mr. J. G. Anderson, of Scottdale, Pa. "I had pains all over me, my sight was dim, and there seemed to be floating specks before my eyes. The food I ate seemed like lead in my stomach. Hood's Sarsaparilla and Hood's Pills did me more good than anything else. All my disagreeable symptoms have gone."

Mr. J. G. Anderson

HOOD'S CURES

Hood's Pills cure Constipation by restoring the peristaltic action of the alimentary canal.

SOLD BY ALL DRUGGISTS.

DOCTOR Pardee's Remedy, THE GREAT CURE —FOR— INDIGESTION *and Constipation.*

A Regulator of the Liver and Kidneys

A SPECIFIC FOR Scrofula, Rheumatism, Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO., 9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE STATIONARY AND MARINE ENGINES.

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

Write for Catalogue and Prices.

A CITY DWELLER'S WISH.

I love the leaf of the old oak tree,
I love the gum of the spruce,
I love the bark of the hickory,
And I love the maple's juice.

On the walnut's grain I fondly dote,
On the cherry's fruit I'd dine,
And I love to lie in a narrow boat
And scent the odor of pine.

Ah, me! how I wish some power grand
Would invent some single tree
With all these points well developed, and
Would send that tree to me!

I'd plant it deep in the jardiniere
That stands in this flat of mine;
I'd give it the sweetest, tenderest care,
And water its roots with wine.

—John Kendrick Bangs in Harper's Weekly.

ALONE IN THE HOUSE.

It was the 5th day of November—"Guy Fawkes Day" in the old English calendar that hung above the mantel in my maternal grandmother's long disused room up stairs. In this northern home to which we had recently removed, falling heir to it through that very ancestress' will, the dwellers regarded November rather as a winter than an autumn month, and today the wind howled and the rain pattered with a persistency marvelous to behold.

And, as it happened, I was all alone in the house. Father had gone to take his russet apples to market—the apples that I myself had helped to harvest and pack into the barrels—and was not expected home until tomorrow night at the earliest. Jack, my brother, was in Montreal, fitting up the law office which was henceforward to be his abode. Jean, our hardfeatured, crossgrained old servant, had gone home with the "rheumatics," as she termed it, to be treated by a certain ancient Indian herb doctor, and just at dusk fall Peter, our "useful man," had thrust his shock head unceremoniously in at the door.

"I say, Miss Ruth," he had said, "there's plenty of wood and everything's all snug for the night, and I'm goin over to Stephenson's. They're in trouble there."

"Trouble, Peter? What kind of trouble? Is the old man sick?"

But in answer to my query Peter only uttered an indistinct remark and went out, slamming the door behind him.

I stood in front of the fire, looking down at the glowing embers and pondering within myself. The Stephensons, who lived in an old graystone house on the other side of the precipitous glen, had always been a riddle to me. The family was small, consisting only of a crabbed old man, his portentously silent wife, and two tall, ungainly sons, and what on earth they did with the big, echoing rooms, or how they contrived to live, perched like eaglets on the side of the rock, I could not form the least idea. "City boarders," Peter had once grunted out in answer to my persistent interrogations. But if they kept city boarders, why did they not leave these dreary mountain fastnesses when the leaves fell and the dismal autumn fogs gathered above the cliffs? Altogether, there was a certain atmosphere of mystery about these "Stephensons" that aroused all the Evelike instincts of my nature.

While I still stood thinking, a soft tap sounded at the door. I opened it at once, never once remembering that I was alone in the house.

"Ye never oughter'd do that, Miss Ruth," said the well known accents of Mrs. Gludge, Farmer Gludge's buxom wife.

"Do what, Mrs. Gludge?"

"Open the door arter dark, when you're alone in the house, without askin who's there."

"How did you know I was alone in the house?"

"I just met Peter goin to Stephenson's."

"Oh!" said I. "But we don't have tramps around here, Mrs. Gludge."

"I'm not so certain o' that," said the farmer's wife. "Your folks hain't lived here as long as I have. We're just nigh enough to the Canada line to have queer characters prowlin about when ye least expect 'em. And then there's Stephensons."

"What of Stephensons?" I cried, eagerly. "Who is Stephenson, anyway? Do tell me, Mrs. Gludge."

"Well, I declare!" said Mrs. Gludge. "Is it possible, now, that they hain't told you?"

"They have told me nothing," said I.

"Well, it's likely they didn't want to scare you or make you nervous," said Mrs. Gludge. "But, all the same, I think you ought ter know."

"Mrs. Gludge," cried I, seizing her arm, "what is it? Do tell me!"

"It's a private home," said Mrs. Gludge, lowering her voice to a whisper, as though the raindrops and the rustling fir boughs could overhear.

"A what?" I gasped.

"For people of feeble mind," explained the woman, "and lunies," tapping her forehead as she spoke.

I stared at her.

"Then," cried I, "that's what Peter meant when he said that—that"——

"One of the poor creatures has somehow given 'em the slip," said Mrs. Gludge—"an English gentleman from Montreal, as has only been there a few days. Nobody knows just how it happened, but happen it did. My man's gone over with a lantern to help hunt for him; so has Peter."

"He might have told me," I cried indignantly.

"Anyway, I don't think he ought to have left you here alone," said Mrs. Gludge severely.

"But you've come to stay with me, Mrs. Gludge?"

"Bless your heart, Miss Ruth, no! I'm on my way to carry a letter to Mr. Romney's, up the road—a very important letter, with 'in haste' writ on it." (For in addition to her duties as farmer's wife and mother of a large family of little children, Mrs. Gludge helped her husband in the care of the obscure little country postoffice a mile down the road.) "And—by the way, I'd nearly forgot it—I've got a letter for you too. That's what brought me here."

"For me, Mrs. Gludge?"

Instinctively I put out my hand to grasp the treasure, while the woman fumbled first in one and then in another of her pockets.

"It's very strange," said she. "I made sure I had it. I did have it when I started away from home, but now I remember. Just at the foot of Gibb's cliff I took out my handkerchief to tie around my neck, the wind came so keen around the rocks, and I must a pulled it out with that, and everything too pitch dark around me to see. Oh, Miss Ruth, I'm so sorry! Please don't report me, there's a good young lady, or I shall lose my place!"

I swallowed down a great lump of discomfiture in my throat and tried to laugh.

"Report you, Mrs. Gludge?" said I. "Of course not. It wasn't your fault. If you hadn't kindly thought of me, and started to bring it on your way to Romney's, you never would have lost it."

"And quite true," said Mrs. Gludge ruefully, "but all the same I wish hadn't been so thoughtful. I'll send the boys out to look for it just as soon as"——

"Oh, never mind the letter," I interrupted. "I dare say it's only from Jack. Tomorrow morning will do very well for that. But, Mrs. Gludge, you'll come back and stay with me till Peter gets back? Jean is away, you know, and"——

"Yes, my dear, I'll do that," assented the woman, evidently relieved to be let off so easily on the score of the letter. "And it won't be long first. It's only a short half mile to Romney's, if the wind didn't blow so like all possessed."

With a good humored nod she disappeared into the rain and darkness, and I ran back to pile fresh logs on the waning fire. Bank burglars, extradited wanderers, a lunatic at large—with all these possibilities whirling in my brain it is not strange that I lighted a second lamp in order effectually to banish all lurking shadows from the angles of the room, and started nervously when a sudden blast of wind shook the window shutters as if with some imperious hand.

"I'll go up to the garret and bring down some butternuts," thought I, "and then I'll get some cider from the cellar. It will be fun to crack the butternuts and watch the shells blaze in the fire, and Mrs. Gludge will like a drink of cider when she comes back all wet and chill."

Cheered by this happy thought, I caught up a lamp and flew to the garret of the roomy old house where my father had bestowed all the nutty treasures of the autumn woods. Somehow, Priscilla, the cat, had got locked into the garret, and I had to release her from durance vile, and replace a box or two which she had knocked off from the window sill, before I came down, driving her catship before me, with the lamp in one hand and an apronful of butternuts in the other. Through the open keeping room door streamed a ray of ruddy light into the Cimmerian darkness of the hall. I stopped abruptly. Surely I had closed that door when I came out, remembering a certain trick it had of slamming to and fro in windy weather like this. And at the same time a curious consciousness of some human presence near by crept over me like an unseen magnetic current.

Nor was it a false premonition. As I stretched my neck to peep cautiously into the room, I saw seated before the fire a gentleman—a youngish gentleman, pale, black haired, and, as I thought, rather unsettled of aspect. And a decidedly wet and mud bespattered gentleman, whose raiment steamed in the glorious blaze and crackle of the pine logs, as he sat there holding out his hands to the genial warmth.

How had he gained an entrance? Had I carelessly neglected to bolt the big door after Mrs. Gludge's departure? Yes, I must have done so, and that was a proof of how utterly unfit I was to be left by myself. For a second I stood there quailing and quaking, my heart thumping like a triphammer, a cold sweat breaking out upon my forehead, before I decided what to do.

I had never seen a bank burglar, to be sure, but I was pretty certain this white handed gentleman could not belong to that race. And I did not think he acted like any other scoundrel who was fleeing from the rigors of the law. He must be the English gentleman, gone wrong in his head, who had "escaped" from Stephenson's.

I was alone in the house with a maniac; and at the idea my heart beat more violently than ever and the cold drops grew colder on my brow.

With a sudden instinct I decided that there was nothing for it but flight. The worst feature of the case was that I could not get out of the house (be it remembered that Peter had taken away the key of the back kitchen door in his pocket) without passing directly through the room where the escaped lunatic sat basking before the fire. This, however, must be faced; there was no remedy for it, and with one blind rush I precipitated myself through the room, tumbling over the cat and scattering a shower of butternuts as I went, and darted headlong through the door, with an involuntary shriek that might have rent the ceiling, if ever ceilings were rent in that way except in the pages of romance.

Directly into the arms of—Jack, my own brother Jack, who was coming in from the van with a light valise in one hand and a dripping carriage robe in the other.

"Halloo!" bawled Jack, staggering under the blow of my very unexpected appearance. "Why—what the—I declare if it isn't Ruthy!"

"Oh, Jack! oh, Jack!" I screamed, clutching at him like the drowning man at the proverbial straw.

"Where are all the folks? What has become of the stable keys? What have you done with Carleton?" he demanded. But I paid no heed to his interrogatories.

"Come, Jack!" I cried; "come quickly! The escaped lunatic! He's right there in the keeping room! Oh, Jack, I do hope you've got your revolver!"

"What?" roared Jack. "An escaped lunatic? Where the dence has he come from? Has he hurt Carleton?"

He made a spring toward the keeping room, in whose door stood the tall, pale man, straining his eyes out into the night.

"Where is he?" shouted Jack.

"Where's who?" said the escaped lunatic in a pleasant, slightly drawling voice. "It wasn't he! It was a she! And she cleared the floor in a single bound, and—Oh, I'm sure I beg a thousand pardons!"—as he caught sight of me. "But, please, what is the matter?"

In a second my mental vision became as clear as crystal. I saw it all, and I envied Priscilla, the cat, because I could not vanish under the china cupboard as she did, and be gone! I could only blush and hang my head, and stammer out incoherent apologies amid the laughter of Jack and the polite apologies of the friend whom he had unexpectedly brought from Montreal with him, and whose coming had been announced, as it seemed, by the very letter Mrs. Gludge had lost.

That's all. There is no sequel to my story. In real life I have found that stories seldom do have sequels. I had had a dreadful fright, and they all laughed at me at first and made excuses for me and petted me afterward and said "Poor little Ruth!" Father declared that he would never risk such a thing again, and discharged Peter on the spot—but Peter came back to his work the next day just as usual, and he is here still. Mr. Carlton was very nice and apologetic for coming in without knocking to dry himself, while Jack was leading the horse to the barn, but he has not yet fallen in love with me as an orthodox hero ought to do. The genuine escaped lunatic was captured near Stephenson's and taken to Montreal, under the impression that he was the governor general going to take possesion of his vice regency. And just half an hour after we had settled down to the cracking of butternuts and drinking sweet cider that night, a merry group, a sepulchral knocking sounded at the door and Mrs. Gludge's voice was heard proclaiming:

"If you please, miss, I've come to keep you company!"—Shirley Browne in Fireside Companion.

ALWAYS IN PERIL.

Life and Limbs of Brakemen in Constant Danger in Coupli g Cars.

APPALLING MORTUARY STATISTICS.

Both Automatic Car Couplings and Automatic Brakes May be Universally Adopted Some Day.

To the tourist traveling in a luxuriously appointed "sleeper" or parlor car the glimpse of a brakeman on a passing freight train does not often suggest the danger with which his occupation is fraught nor the immediate peril to which he is in close proximity.

To one who has given the matter any thought, however, the constant risks to which a brakeman is exposed in the pursuit of his occupation are indeed very apparent.

Often one has noticed that the top of a long line of box cars was covered with ice such as would afford a precarious footing even on the sidewalk of a city, and here, when the train is running 30 miles an hour against the wind, a walk the length of the train is about as dangerous a passage as can well be imagined, yet the brakeman accomplishes this and more.

In summer the ice and snow and cold are changed for heat and dust. There is, again, the always imminent danger of injury from derailment or collisions and from coupling cars, the latter being the bugbear of the brakeman's life.

The last report of the interstate commerce commission—for the year ending June 30, 1892—shows conclusively that accidents to railroad hands are on the increase, one in every 33 employed being injured in that year. The number killed amounted to 2,660 and those injured to 26,140, the total number of employees being 784,285. Of these 558 were killed and 3,191 injured by jumping or falling from trains; 78 were killed and 412 were injured by overhead obstructions; 303 were killed and 1,550 were injured in collisions; 206 were killed and 919 were injured in derailments, and 415 employees lost their lives and 9,431 suffered injuries in coupling and uncoupling cars. These last figures are sufficient proof that coupling is one of the most dangerous operations in the trainmen's routine, the number killed being exceeded only by those who met death in falling or jumping from trains, while the number injured was greater than that for any other form of accident, amounting to more than one-third of the total injured.

It is a close calculation of time and distance which permits a brakeman to hold the link of the advancing car in one hand, the pin of the other car in the other, and to make the almost simultaneous motions of releasing the link, dropping the pin and stepping aside uninjured before the drawheads have crashed together. It is too fine a calculation for many, and there are numerous otherwise fine specimens of manhood minus a hand or arm, due to an inability to judge this time and distance correctly.

An accident, and one usually attended with fatal result, may occur from the brakeman stumbling over inequalities in the track or the ties—should the road be badly ballasted—while advancing with the moving car with his eyes fixed on the drawhead, or the foot may be caught in a frog or an angle of a side track, and before the man can release himself the car passes over him.

While many of the railroads have adopted automatic coupling gear on a portion, at least, of their new freight cars (the increase of equipment fitted with these devices during the year ending June 30, 1892, being estimated at 53,716 cars), the ordinary type is still in excess. These ordinary cars are now built, according to the tendency of modern railroad construction, of larger dimensions than those formerly used, so that a train made made up on any of our great roads is apt to show a lack of uniformity in its cars. This is another fruitful source of danger. The deadheads—pieces of timber which project from the ends of the cars—are not at the same level, nor are the drawheads. When two cars come together, the deadheads therefore cannot exercise their office as buffers, but pass one under the other, so that the brakeman who has the difficult task of coupling two drawheads at different levels is caught between the colliding cars and is crushed to death unless he is phenomenally lucky or remarkably active.

It is in recognition of this danger that the brakemen on certain roads protested against the partial adoption of automatic couplers, as the cars thus fitted, always of larger dimensions than the cars supplied with link and pin coupling only, are liable to cause accidents when coupled with the ordinary car by hand. For this reason only did the men for whose relief the measure was intended protest against its adoption. It is proposed now, however, that all cars shall be of standard and uniform dimensions.

It has been recognized by inventors that an automatic coupler which would fulfill the requirements proposed would reap a fortune for its designer, and as a consequence the patent office has been flooded with applications for patents on these devices. Hardly a week elapses without one or more of them being granted. It has been stated, I know not how correctly, that the total number issued thus far exceeds 8,000. Of these the greater number have never been given a trial. A few have been adopted only to be discarded, and two or three are now in use.

The first automatic coupler to be extensively used in this country was the "Miller." Its application, however, has been confined—principally on account of its expense and weight—to passenger coaches. The Janney is extensively used on both passenger and freight cars. The Gould and Smillie couplers are now rapidly coming into use.

What the brakemen will consider an improvement of secondary importance, if they consider it important at all, is the forced adoption of automatic train brakes operated by compressed air from the engine, as while reducing the chances for accident it will certainly throw a number of them out of employment by lessening the number of train hands required. As is familiar to all Americans, this is the device which, as perfected by George Westinghouse of Pittsburg made both reputation and fortune for him.

Although one of the earliest in the field, his invention, improved from time to time, is still considered the best. The brakes which have been in continuous operation on passenger trains for the past 15 years are now used on freight trains on western roads where steep grades are frequent. Such roads are notably the Southern Pacific and the Denver and Rio Grande. The adoption of these brakes will certainly lessen the possibility of accident owing to the men falling from car roofs when they are slippery with ice or from swaying, rapidly moving trains. The whole train being under the control of the engineer, the yanking or pulling of the forward part when it has passed a summit, frequently resulting in the fracture of the coupling and the rush to destruction of the rear end, will no longer be possible.—New York Herald.

DOING ERRANDS BY PROXY.

Polly Has Several Bright Ideas and Finds a Use For Her Stick of Candy.

"Mother," asked Polly, "what does to do a thing 'by proxy' mean?"

"To do it by employing another person to do it in your place."

"But that wouldn't be doing it myself," objected Polly.

"People consider it the same thing," said mother. "If I sent Arthur on an errand, and he asked Harold to go for him because his foot was lame"——

"Arthur hasn't got a lame foot," cried literal Polly.

"We must suppose he had, or that he had the toothache perhaps, and Harold went instead"——

"Harold doesn't like to do errands either; he always makes mistakes," said Polly thoughtfully. Polly had her suspicions of sudden attacks of lameness and toothache.

"Well, it doesn't matter. Perhaps he might hire Harold to go by giving him a piece of candy. If he did that, it would be the same as if he had done the errand himself. He would do it 'by proxy.' Do you understand, Polly?"

"Yes'm," answered Polly as she started up stairs.

"I've got all the candy Aunt Kittie gave me," said Polly to herself, "but Arthur hasn't any. Mother didn't know that."

She pulled open her bureau drawer to taste a bit of the candy. It looked very pink and tasted sweet.

"There's Isabella's dress right under it," exclaimed Polly. "I've been wondering where it could be."

She dragged poor Isabella Angelina by her leg from under the bureau and proceeded to dress her.

"Polly!" suddenly came mother's voice.

"Yes'm."

"You must go to the store for me. Bridget is busy, and I want the fruit for my fruit cake."

Polly laid down Isabella Angelina with a sigh.

"I just hate errands as much as Harold does!"

Her eyes fell upon the candy.

"Perhaps," murmured Polly, nodding her head.

She slipped the candy into her pocket and went down stairs with a demure face.

"Yes'm, yes'm. Raisins, currants, citron and allspice. Why don't you say all spices, mother? It's correcter. There's Harold at the gate!"

She ran after him, and mother, busy with her cake, did not hear the little footsteps which presently pattered up stairs again.

Harold brought in the grocer's parcels.

"How's this, my boy? It was Polly I sent to Mr. Slote's. You've brought me the wrong kind of raisins. These are very poor. No currants at all! Citron and one, two, three packages of cloves, cinnamon and ginger, but no allspice!"

"Dear! dear!" groaned Harold. "It's always the way."

He pushed the pink candy farther into his pocket. It wasn't nearly so sweet as it had been.

"Polly!" called mother.

"Yes'm," said Polly's meek voice from behind the kitchen door.

"I sent you on this errand, Polly."

"Yes'm," lisped Polly again, "and I went, mother, just as you explained. I went 'by proxy.'"

Mother kept her face as straight as she could.

"Indeed, Polly; then what am I to do? Here are the wrong articles. If Harold had done the errand, it would be his fault, but if it is you who have done so badly you must be punished for your carelessness. You tell me you did the errand. What shall I do about it?"

Polly considered the situation.

"Well, I did do that errand, mother; I truly did. I did it 'by proxy.' I paid Harold a piece of candy to go for me."

Then a bright thought struck Polly.

"And don't you think, mother, that if I did your errand 'by proxy,' and you have to punish me for doing it wrong, you ought to punish me 'by proxy' too?"—Harper's Young People.

How Men Act at Fires.

Among the funny incidents of the fire in the Agency building was one in which a tenant occupying an office on the third story rushed up through the smoke to his room after his assistants had put everything into the safe. Seeing that this receptacle was locked, he ordered it opened, and swearing vehemently all the while at the indifference of his help, who made a useless attempt to explain, he ran wildly about, gathered up a couple of newspapers, chucked them into the safe, locked it again and then climbed out by way of the fire escape. When the excitement was over and the safe was unlocked, the papers were found to be a week old and had been used to bring up laundry work in.

Another man threw a waste paper basket full of bonds and mortgages from the window, and spent the next hour gathering up his valuables from the surrounding neighborhood.—Buffalo Express.

Dancing Among Savages.

"Dancing," says Tylor, "may seem to us moderns a frivolous amusement, but in the infancy of civilization it was full of passionate and solemn meaning. Savages and barbarians dance their joy and sorrow, their love and rage, ever their magic and religion. The forest Indians of Brazil, whose sluggish temper few other excitements can stir, rouse themselves at their moonlight gatherings, when, rattle in hand, they stamp in one, two, three time around the great earthen pot of intoxicating kawi liquor, or men and women dance a rude courting dance, advancing in lines with a kind of primitive polka step, or the ferocious war dance is performed by armed warriors in paint, marching in ranks hither and thither, with a growling chant terrific to hear."—Popular Science Monthly.

The Triumph of a Nurse.

One of the famous Dr. A——'s best nurses married rather late in life, and her only child was a sickly, puny baby that seemed to have very little chance of living. The mother, however, threw her whole professional and maternal soul into the struggle with constitutional weakness, and the result is a splendid child, who looks as if he had never had a day's illness in his life. "I attribute it all to massage and diet and the most unremitting care," said the mother proudly. "If I had not been trained a nurse, I do not believe I ever could have saved him."—New York Tribune.

Rubber Curtains.

India rubber curtains are now being turned out. At least that is what they are called. As far as the actual process of manufacture goes there are several other ingredients used besides pure rubber. I might mention 5 per cent of pulverized fruit stones, 5 per cent of wool dust, 5 per cent of bleached leather waste, and many other insignificant little items which go to make up these curtains. There is, however, 75 per cent of genuine india rubber in the material by the time it is complete.—Exchange.

RICH IN RUBBER.

Amazon Valley, Where Fortunes Lie in the Sap of the Trees.

SOUTH AMERICA'S EL DORADO.

First Explored by the Spaniards Over Three Hundred Years Ago.—What a Traveler Found.

The great Amazon was described with graphic words and with lantern pictures before the Public School Teachers' association by Mr. Courtenay de Kalb of New York at Harris' academy concert hall. Mr. de Kalb has made two voyages over the valley of the Amazon, penetrating its deepest wildernesses. He returned to this country from a voyage through Central America.

"In the beginning, from the very day in 1516," he said, "when Vincente Yanez Pinzon entered the Amazon, or Maranon, as it was known to him, a glamor of seductive romance began to gather about this river and its mighty forest covered valley. In 1540 Francisco de Orellana came across the Andes, deserted Pizaro on the Rio Napo and sailed down the Amazon to the sea, bringing wondrous tales of the land of cinnamon and gold and of kingdoms of warrior women. The fancies, fed by greed of riches, added tales of glittering unrealities until in 1639 Padre Cristoval de Acuna, after his journey across the basin of the river, boldly affirmed that here was situated that famous El Dorado, which was the Holy Grail of sixteenth century seeking; that here abided the Amazons in the richest splendor the world had known.

"But the fabled El Dorado shrunk from one impenetrable wilderness to another as explorers unlocked their secrets. The Amazons were at length found to be only the mistake committed by Orellana because the men of certain cities did not dress differently from the women, and the Omaguas became known as nothing more than a race of superior savages. The people of the Amazon slowly became disillusioned, but the spirit of indolence, the life of penury, couched in the luxury of gilded dreams, is still their birthright from the past. New forces are working also. The poetry of each new El Dorado is dispelled as soon as found by the brazen jingle of commerce, and the Amazons have found their El Dorado at last—not gold, not diamonds, not barbaric splendor, but that wonderful gum from their forests of rubber trees, whose uses in the art of civilization seem to have no end.

"The center of the rubber producing area of the Amazon is the city of Manaos, 1,000 miles from the mouth of the river, with 28 feet of water at low tide, an important consideration in commerce. There are three lines of steamships to Manaos, one Brazilian line and two English lines, of the latter one being from New York and one from Liverpool. They all receive subsidies, and we have allowed them to obtain a carrying trade on a river that is increasing by leaps and bounds and allowing the trade to become firmly fixed in English shipping lines, whereas, by taking advantage of the mail subsidy bill and seeking these Brazilian subsidies ourselves, we could not only obtain the carrying trade, but would vastly benefit the chances of American merchants and manufacturers in getting control of the commerce of the valley of the Amazon.

"Efforts are being made to establish telegraph communication in Manaos with the outer world, and as soon as this is done it will become one of the greatest centers of trade. Those firms on the ground at the time will of course have the benefit. I tried to get Americans to establish a bank in Manaos several years ago, but no one would venture. England has since done so, and the enterprise has met with splendid success.

"The rubber plant from which the Amazonian gum is obtained is not the variety used as an ornament in our homes and greenhouses. This is a plant from India from which rubber was first extracted. The South American plant, from which the rubber now in use is obtained, is one of the spurge family, or euphorbiaceæ. The rubber exists in the sap of a plant as an emulsion, and many commonly known plants contain rubber which gains its strength and elasticity after exposure to the air or in burning. The common milkweed contains rubber, and the milky substance noticed when a lettuce stalk is cut is rubber. The uses of rubber are increasing enormously in manufactures, and people who are willing to wait for their money can reap immense harvests by planting rubber orchards now in South America. The plants take 12 years to mature, but after that no further planting is necessary, and the orchards yield steadily for from 50 to 75 years. Iquitos, capital of eastern Peru, is an important rubber center, and its exports amount to between $1,000,000 and $2,000,000 a year.

"The Amazon is considered by the bulk of our people as a dismal, interminable swamp, a vast miasmatic basin teeming with every species of obnoxious insects, with a boa constrictor on every bough waiting to seize you in the forests, with an alligator alert to devour you on every sand bank, and a hideous vampire hovering over every sleeper in the night. And yet, after so many decades of assiduous explorations, scientists are in doubt about the vampire's existence. Adventures with reptiles are as exceptional there as in the United States, and alligators are as abundant and voracious in the lagoons of Florida as in Brazil. Neither have I found it a reeking, pestilential morass. It is a valley full of strange delights, which even come down to the sea to greet one at the very threshold. To give an idea of the size of Peru, let me state that of the 4,000 miles of the Amazon's length 2,000 miles flow in Peru and 2,000 in Brazil. The Peruvians I have found amiable in character, and even in the wildernesses I never found it necessary to be armed against the Indians nor to have a guard at night, trusting to their courteous treatment, and in this not being disappointed."—Baltimore American.

Caution In Teaching a Child to Walk.

The culture of a child's physique can hardly begin at too early an age. From the time when the baby begins to stretch his little limbs and to show a desire for activity the mother should begin to plan for movements that will develop the growing limbs and strengthen the pulpy muscles.

Such exercises must at first be of the most elemental character. A great deal of it may be bestowed by the mother herself, who by rubbing the child's body and flexing the arms and legs does her part to aid nature in fitting him for his work in life. As the little one grows older this care must not be relaxed, but it must be accompanied with due caution.—Christine Terhune Herrick in Motherhood.

Queer Laws About Stealing.

In the isle of Man it was formerly the law that to take away an ox or a horse was not a felony, but a trespass, because of the difficulty in that little territory of concealing or carrying them off, but to steal a pig or a fowl, which is easily done, was a capital crime.—New York Evening Sun.

A SCHOOLGIRL'S RECOLLECTIONS.

How Hans Christian Andersen, Author of Fairy Tales, Talked With Girls.

Near by, Countess Sorr sat, beside the tall, kind faced gentleman with whom she had been talking at our entrance. Once, as I watched them, it was evident that they were talking about me, and, catching my eye and seeing my embarrassment, he nodded pleasantly; and when the usual toast to the "Blooming Wreath of Young Ladies" was proposed, he leaned toward me and said, "And to the little buds, also, my fraulein." Deeply pleased and flattered, I asked my neglectful professor the name of my friendly vis-a-vis.

"That is Professor Andersen," he answered, "the celebrated poet."

"Really," said I. "I have heard his name so often. I am sure Helen and Nelly would be delighted to have his autograph. So that is Professor Andersen!" My neighbor was convinced that I appreciated Andersen's celebrity, and as the countess then rose, I heard no more about him at that time.

In the next room the company divided into various groups. Some young ladies gathered around Andersen and begged him for his autograph for their albums. He was very amiable, and told them to send their books to him, as he would be three or four weeks at Sorran; and then, probably seeing from my eyes the deep interest I took in the scene, he came across the room and said, "Now, little one, do you not want me to write something in your album?" I shook my head sadly, and said timidly and slowly, "No, I thank you." He appeared greatly astonished, but also a little amused, and said: "No? Why not, then?"

"Because I have no album; if you only could have asked me day before yesterday, I could have wished for one, for that was my birthday."

"Indeed! The day before yesterday was your birthday? You must allow me to congratulate you now. Would you like me to write you a congratulation? Then on your next birthday (for you seem to be certain your wish will be accomplished) you can put it in your album and keep it in memory of a friend." He held out his hand to me, and as I laid my trembling finger tips in it, he continued: "Do you know that I have the happiness to be the special friend of children? Have I been yours too?" This puzzled me; I did not know what he meant by "Have I been," but I nodded my head and said, "It is very good of you to be my friend, for it is really quite lonely here among so many strange people," and I went on, "Helen and Nelly admire you so much, and now I will too."

"Now, only?" said Andersen, much amused. "Then you did not like the fairy tales?"

This remark puzzled me again, but I concluded that he wished me to give him my opinion on the subject of fairy tales, so I replied decidedly. "Oh, I cannot bear them! I want to know how it really looks in the world, and then"— Here I paused and burst out laughing, a hearty, merry laugh, at the remembrance of a certain sad afternoon when I was a little girl. I was shocked at myself immediately, and fancying that Professor Andersen would consider me only a foolish schoolgirl, I hastened to add in justification, "I will tell you why I hate fairy tales. Many, many years ago"——

"There lived a queen," interrupted Andersen.

"No, no, professor, I was it myself. Many years ago I was reading a pretty story about a little princess who had a wicked stepmother, and the story grew sadder and sadder, and at last I cried so hard that I had to stop reading. My brother was at home then, on leave from the cadet school, and he came straight into the room and said quite rudely: 'Rosa, stop that howling! What is the matter with you?' I showed him my book and sobbed out, 'Oh, the poor princess!' Then Ulrich took the book, and said, 'Oh, that will come all right; let me see,' and he sat down and read a little, and then laughed out loud and showed me that the princess turned into a swan. So of course the story was not true, and all my crying had been for nothing. Then I laughed, too, and I never read any more fairy tales. What was the use? Ulrich said they were none of them true, and since I have grown up I am astonished that I ever believed such nonsense."

The good professor listened to my story with great attention; then he stroked my head kindly with his long, slender hand and said: "You are a little heretic. We must try to convert you. Come up into the library in half an hour and I will read you one of my fairy tales, and perhaps you will pronounce a milder judgment."—Rosa Schmalz in St. Nicholas.

Hunting Miniature Kangaroo.

The only place where I have shot paddymelons was near Lake Wellington, in Gippsland, where they infest the vast expanses of swamp titree. The bush here is so thick that one can hardly force a way through it, and as the paddymelons easily take alarm and spring away like a flash of gray lightning, there is plenty of "pot shooting," and more misses than hits.

One has but to stand quiet a moment and listen to become assured that the woods are fairly alive with these strange creatures. Although seeing nothing, one hears all about a ghostly tap-tap-tapping, as the hopping bodies strike the thick, elastic turf. Now and then a glimpse is caught of a shadowlike animal passing across a narrow opening in the serrated lines of trees. You fire smartly, the smoke hangs in an impenetrable veil against the earth, you hear beyond it a struggle, and forcing your way through the saplings find your game sprawling on the moss—a slender, graceful animal, suggesting at once the deer and the rat, a kangaroo in miniature.

More than once in the day you will chance to bring down two in a shot, for the paddymelons usually run in small droves, and you often question, indeed, whether you hit the one you fired at. The best way to hunt paddymelons is to turn dogs into the thickets, while you walk outside and take shots as the game comes out. There is as much excitement in this as in partridge shooting, for the paddymelons are quick as lightning, and demand an alert eye and a ready hand at the trigger.—Boston Journal.

How Lincoln Looked.

The question of looks depended in Lincoln's case very much on his moods. The large framework of his features was greatly modified by the emotions which controlled them. The most delicate touch of the painter often wholly changes the expression of a portrait; his inability to find that one needed master touch causes the ever recurring wreck of an artist's fondest hopes. In a countenance of strong lines and rugged masses like Lincoln's the lift of an eyebrow, the curve of a lip, the flash of an eye, the movements of prominent muscles created a much wider facial play than in rounded immobile countenances.—J. G. Nicolay in Century.

RIDING A SHARK.

The Wonderful Feat of a Daring Santa Cruz Swimming Teacher.

SPORT WITH A MARINE MONSTER.

The Entire Harmlessness of a Huge Basking Shark Amply Demonstrated to Frightened Bathers.

That a man should take a ride on a live shark's back, apparently with all the delight of a wild cowboy breaking in an unruly mustang, would be difficult to believe unless circumstances were presented to verify it. Such an occurrence has really taken place, however, and at so short a distance from San Francisco that any doubting Thomas can easily satisfy himself by making a personal investigation.

For the past few years the fishermen in the northern part of Monterey bay, near Santa Cruz, have been greatly annoyed by basking sharks. These sharks, while in search of food, often run into the nets of fishermen, and in thrashing about and trying to escape from the meshes which enfold them, tear the nets and injure them so that the fishermen at times suffer the loss of hundreds of dollars. Sometimes a shark struggles about so much in the water as to wrap the nets around it in such a manner that escape is impossible, and the huge fish dies from the exhaustion produced by its wild efforts to get free. To extricate the dead fish from the nets it is sometimes necessary to tow it ashore, and to recover part of the loss sustained in the destruction of the nets the fishermen try out the liver of the shark and obtain a quantity of cheap but profitable oil.

AN OCULAR DEMONSTRATION.

A huge basking shark about thirty or forty feet long became entangled in the nets of some fishermen off Soquel point, about four miles from Santa Cruz. The shark, still alive and enfolded in the nets, was towed by the fishermen in boats to the wharf at Capitola. Its arrival created great excitement among the visitors at that resort. The fact that sharks, any sharks, were near the beach drove hundreds of bathers from the water, and people began to make up their minds to leave the place. No amount of assurance on the part of the proprietors of the hotel or the fishermen that basking sharks were not man eaters, and that many had been caught with no accident happening, could entirely quiet the fears of the visitors, and bathing was almost given up.

Some ocular demonstration of the fact that a basking shark was harmless therefore became necessary. Swimming Teacher Swanson, of the Capitola baths, then determined to give an exhibition with the shark which should convince the most timid. A performance followed the like of which no man ever participated in before. Swanson put on a bathing suit and swam to the wharf where the partially exhausted monster lay, still partly wrapped in the torn and tangled fishing nets. Slowly approaching the gasping yet enraged monster, a whale in size if not in species, Swanson swam close to its side, and then clambered slowly on top, a moderately easy task to accomplish, as the shark lay almost entirely under water. Sitting astride the huge fish like a baby on an elephant, the bold swimmer shouted in triumphant derision at the several hundred people on the wharf, who had gathered to witness the strange performance.

GOT USED TO IT.

His song of success was quickly cut short, for as soon as the lazy shark realized it had gathered something more on its back it commenced to thrash about and threw Swanson off. Women in the crowd shrieked in fear and men held their breath in excitement. It was hardly a minute, however, before Swanson appeared uninjured and laughing outside of the line of foam caused by the shark's struggles. The crowd on the wharf breathed more freely when they saw the man emerge from the seething waters and realized that he had not been devoured, as they expected him to be. The undaunted swimmer again went to the side of the shark, and once more mounted his marine steed. The shark again showed its fear and anger by shaking him off, but not so violently as before. With great persistence Swanson again climbed on to the monster.

What seemed before to the many spectators a most foolhardy act, and but the courtship of certain death, now became a strangely comical sight. Swanson mounted the fish, and the shark becoming accustomed to its queer burden, merely rolled the man off each time he got on its back, simply turning lazily in the water and shaking himself. This was repeated several times, and the large crowd of people who came expecting to see the man killed and eaten departed laughing at the ludicrous ending of the performance. Swanson became the hero of the camp. Bathing was resumed and even more freely indulged in as a consequence of the exhibition, and no one can now be found in Camp Capitola who will admit that they fear a shark, or a basking shark at least.—San Francisco Chronicle.

An Interesting Calculation.

An uptown man, having nothing else to do, thought he would try an experiment, so he turned the hands of a clock in his room the full twenty-four hours of a day, and found it took, with moderate movement, one minute of time to accomplish that task. He then made a calculation of how long it would take him to turn off the full measure of a man's life, which, according to the Scriptures, is "three score years and ten," and found that it would take seventeen and one-half days to turn the hands of the clock to represent seventy years.—Philadelphia Record.

A Bargain.

Small Son—Dot suit fit dot man awful tight.

Dealer—It vas a dight vit, mein son.

"Vy did you zell it zo sheap?"

"I vas avraid I couldn't get it off mit-out tearing it."—Good News.

INYO INDEPENDENT.

EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 8 1893

The Southern Pacific Railway company has mortgaged some of its property located in San Francisco to the Pacific Improvement company for $1,300,000. In other words, Mr. C. P. Huntington and other gentlemen who compose the directory of the the Improvement Company are lending money to Mr. Huntington et al., who compose the Southern Pacific Railway of Kentucky. There is something rather curious in such a transaction, but we suppose the magnates are coming to the rescue of their imperiled property. In view of the fact that the gross earnings of the first six months of the year are a million and the net earnings half a million more than for the same period last year the case is certainly puzzling. One explanation of it is that the Southern Pacific has always been a large borrower on call loans—the sum standing generally at $2,000,000 or more in San Francisco, and such amounts are not to be had there for the asking just now. The falling off in business since the panic swept over the land has been simply appalling

Boston Globe: America is emphatically all right. Why should she not be? Her resources are as marvelous, her prospects as brilliant and inspiring as they were the day before some timorous personage of more or less note, but little discretion, started the ridiculous fad of "hoarding money." It is pleasant to record the fact that that the conditions which brought about a contraction of the currency are rapidly disappearing. If the recent flurry carries any lesson at all for the public, it surely teaches the moral that a man is never more ridiculous than when he runs away from a bugaboo that exists only in his excited and perturbed imagination. When recognized authorities in matters of business and traffic see only a cheery outlook for our multidinous interests, it is the height of the absurd for any sensible man to waste his time by listening to the preposterous prognostications of any casual, irresponsible croaker.

The silver men showed their greatest strength in the vote for free coinage at the present ratio of 16 to 1 For this proposition were cast the voices of 101 Democrats, 12 Republicans, 1 silver and 10 Populists, or 124 in all. Against it were the votes of 114 Democrats and 112 Republicans. Total 226. The Democratic majority against free coinage was thus 13 and the Republican majority on the same side 100, while the Populists and Silver were solidly in its favor.

Senator Morrill talks about the difficulty of finding a market for silver. The difficulty only exists in his imagination. If he and the other friends of Wall street in Congress would abandon their efforts to force the policy of permanent contraction on the United States and give the white metal a show its price would soon go up to $1.29 an ounce. As it is a market seems to be promptly found for all that is produced.

The Irish home rule bill passed the House of Commons by the unexpectedly large vote of 301 to 267. It has gone to the House of Lords, where it will probably fail. But the country will not long tolerate the obstruction of that part of the legislature which represents nothing but its own class. What the Commons wants is what the country wants; and what the country wants it will have.

The Modesto News has quite a journalistic grave yard. It says in a recent issue that it has witnessed the rise and fall of "no less than eight 'long felt wants' in the form of newspapers started in Modesto." It is hard to run out a well conducted news paper that is well established, and that is the situation the News is in.

Chicago had the beginning of another riot last Saturday. It was started by foreigners. This country needs foreighners to assist in developing its resources but it needs none of the anarchistic kind who delight in mobs, riots and bloodshed. Keep those rascals out.

According to the semi-annual report of the Southern Pacific company there was an increase of $400,000 in net earnings. And yet they could not pay their employes their June wages until August.

Arthur McEwen refers to ex-Senator Ingalls as "an animated dictionary in a state of delirium tremens."

Four Sad Summer Deaths.

Four of my friends during the terrible heat of last July died in homes where every convenience was possible, but from which women were absent. With their families scattered in the country these men were forced to remain in the city. In each case the thousand and one little attentions that a man's home receives at the hands of woman were neglected by the servants. Meals were irregularly served and more irregularly eaten; rooms were ventilated just as the servants remembered or forgot them. That terrible week of incessant heat, which we all remember, came and exhausted these men.

Dysentery and kindred summer ills are not far behind a man when he is run down by sleepless nights, harassed by business, living in a cheerless, dismantled, uncared for home under torrid days and stifling nights. In one instance it was a young man in the flush of success, who came home one evening only to die during the night, too weak even to ring for assistance. In another case a man of millions, with his family away at one of the fashionable resorts, succumbed to the heat and was found dead the following afternoon. In the other two cases the blow came not so suddenly, but yet within a week. And in each instance the families knew not that the mainspring of their support were ill until they were dead. Perhaps the presence of mother, wife or daughter might not have staid the hand of death, but who will deny the efficiency of womanly care in sickness?—E. W. Bok in Ladies' Home Journal.

A Great Fish.

There was landed recently at Stromness, Orkney, a halibut of extraordinary dimensions, measuring 6 feet 10 inches in length and weighing no less than 245 pounds. The fish was discovered by two lads who were engaged in hauling lobster creels at the back of the Holms, a distance of about 1½ miles from Stromness pier. It was observed on the sand apparently asleep, and as they had no appliances with them with which to attempt a capture they marked the spot and returned home to acquaint their father.

Armed with a kind of harpoon, to which a line was attached, they went back to the place and found the huge fish had not moved. Carefully watching an opportunity, the father succeeded in planting the harpoon in the back of the halibut. The weapon entered the spine and rendered the fish powerless, but on account of it size and weight it was only after considerable difficulty that it was got on board. It proved a splendid specimen of the halibut and was in a first rate condition. In its stomach was found a variety of small fish, which weighed upward of six pounds. It was at once carefully packed and dispatched by steamer and rail to the London market.—London Field.

Emperor William's Defeat.

The defeat of the German army bill, from whatever point of view it is regarded, is a very serious affair. In the first place it increases, only a little, perhaps, but still increases, the probability of war. The emperor, rebuffed at home, cannot accept any kind of rebuff abroad and will be far more sensitive than before about slight incidents and more inclined to believe that France or Russia is taking advantage of his situation.

Moreover, Frenchmen will think that the internal struggle will weaken Germany, as it would weaken France, and the hope of finding a moment to fight Germany when she is weak is exceedingly keen. Too much must not be made of this danger, because the rulers of France are much better informed than her journalists and can see that a declaration of war would at once reunite the German people, but still it exists and must be recorded. In the second place, it is probable that the rejection of the bill does leave Germany weaker than she should be.—London Spectator.

English Sporting Terms.

We reprint the following from an English paper as a curio in sporting literature: "We learn with great pleasure that Lady Hilda McNeill, young Lord Stradbroke's sister, who since her marriage to a nephew of Sir John McNeill has been living at Rothley Grange, near Loughborough, is rapidly recovering from the nasty fall she lately experienced in the hunting field. Lady Hilda is an accomplished horsewoman, and her spill throws no discredit upon her as a cross country rider. The accident was the result of a cannon, another horse colliding with hers as she negotiated a stiff fence."

Edwin Booth's Tobacco Habits.

Edwin Booth's physical disability is generally ascribed to excessive indulgence in tobacco. The cigars which the famous tragedian smokes are marvels of strength, yet it has been smoke, smoke, smoke from morning till late at night for many years. When he was playing, Mr. Booth used to have his valet stand at night at one of the entrances to the stage holding a cigar and a light, so that as soon as the scene was ended Mr. Booth would have his favorite weed at hand.—Exchange.

Davenport Against Bernhardt.

Miss Fanny Davenport desires to debar Bernhardt from putting on Sardou's latest play in this country, because she produces plays "in an incompetent way." And the vexatious part of it is that it will take two years or more to get it through the Gallic head that this is an American joke. It is annoying to be obliged to protest to Parisians that we believe that in some ways the Bernhardt can give the Davenport points.—New York World.

To Be Seen at Chicago.

Among the many "freaks" offered for exhibition at the World's fair is a hen that always walks backward, a Shetland pony that is so small that her shoes are made from $20 gold pieces, a razor that had been used by George Washington, an Indian prodigy, aged 4 years, who can recite "Thanatopsis," and a garment 400 years old.

LOVE'S SEASON.

In sad sweet days when hectic flushes
Burn red on maple and sumac leaf,
When sorrowful winds wail through the rushes,
And all things whisper of loss and grief,
When close and closer bold Frost approaches
To snatch the blossom from Nature's breast,
When night forever on day encroaches—
Oh, then I think that I love you best!

And yet when winter, that tyrant master,
Has buried autumn in walls of snow,
And bound and fettered where bold Frost cast her
Lies outraged Nature in helpless woe;
When all earth's pleasures in four walls center,
And side by side in the snug home nest,
We list the tempest that cannot enter,
Oh, then I say that I love you best!

But later on, when the siren season
Betrays the trust of the senile king,
And glad earth laughs at the act of treason,
And winter dies in the arms of spring;
When buds and birds all push and flutter
To free fair Nature so long oppressed,
I thrill with feelings I cannot utter,
And then I am certain I love you best.

But when in splendor the queenly summer
Reigns over the earth and the skies above;
When Nature kneels to the royal comer,
And even the sun flames hot with love;
When pleasure basks in the luscious weather,
And care lies out on the sward to rest—
Oh, whether apart or whether together,
It is then I know that I love you best!

—Ella Wheeler Wilcox.

Cheerful Even In Death.

At a dinner some time ago a jolly old astronomer related the following story about a departed friend, Mr. F.:

Mr. F. was such a good natured man that the approach of death itself could not disturb his peace of mind and appreciation of humor. He lay dying, and his poor wife was nearly worn out with anxious watching. She was so tired that by mistake she gave her husband instead of the doctor's medicine a dose from the castor oil bottle. When she discovered her mistake, she was almost frantic. She summoned the doctor at once and awaited his coming with tearful eyes and bitter self reproach. The doctor came and assured her that no particular harm could have been done; that her husband was dying, and medicine could not save him now. Still the poor woman wept and grieved.

The doctor tried to comfort her, but to no purpose. If she had only given the medicine and not the oil, perhaps her dear husband might have got better. She had killed her dear husband—killed her dear husband. The doctor began to argue, when the dying man spoke up: "Never mind, doctor. I've had my oil. Let her have her blubber."—Washington News.

The Story of "David Copperfield."

Some interesting facts connected with Dickens' "David Copperfield" have been revealed by Charles Dickens, the younger. "I have," he says, "my mother's authority for saying—she told me at the time of the publication of Mr. Foster's first volume and asked me to make the fact public if after her death an opportunity should arise—that the story was eventually read to her in strict confidence by my father, who at the time intimated his intention of publishing it by and by as a portion of his autobiography. From this purpose she endeavored to dissuade him, on the ground that he had spoken with undue harshness of his father and especially of his mother, and with so much success that he eventually decided that he would be satisfied with working it into 'David Copperfield.'"

Providing In Time.

Lawyer (who has been called to draft a will)—Ready, sir? What is the first bequest you wish to make?

Dying Millionaire—I bequeath all my property, real and personal, after the satisfaction of just claims against my estate, to the foreign mission board of the —— church.

Lawyer—But you are not going to leave your wife and daughters unprovided for?

Dying Millionaire—Certainly not. I am merely trying to fix it so that when the courts reverse my decision in the matter the money will go where I want it to—by the way, I guess I'll have you draw up the papers for the contest right now.—Exchange.

Easily Mixed.

Agitated Solicitor (at the chemist's)—There's been a mistake made somehow. I meant to give my son a prescription from my doctor this morning, but it seems I didn't. Here it is now in my pocket.

"You certainly gave him the prescription. I made it up for him an hour ago."

"Let me see it."

"Here it is."

"Heavens! That's an opinion from Sir Lyons Silk, Q. C."—London Tit-Bits.

Toothache Cured Quickly.

A European dentist is said to have had great success in curing toothache within five or six minutes, and often in less time, by applying one pole of an electrostatic machine to the troublesome tooth and the other pole to the body of the patient. In 76 cases thus treated by him only three are said to have been unsatisfactory.—Electrical Review.

Infidelity gives nothing in return for what it takes away. What, then, is it worth? Everything valuable has a compensating power. Not a blade of grass that withers or the ugliest weed that is flung away to rot or die but reproduces something.—Chalmers.

In the five or six months of the year during which the sardine fishery lasts something like 600,000,000 of these little fish are caught off the coast of Brittany alone.

It is instanced as one of the curiosities of the memory that people who know long pieces of verse by heart frequently cannot remember their telephone number.

It is a belief of fishermen that the finny denizens of the deep are hungriest and bite most freely during the four or five days following the moon's first quarter.

A curious grass grows in Ceylon, the peculiarity about which is that when it has attained a certain length it takes fire by spontaneous combustion.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF THIRD Township in the County of Inyo, State of California.

L. Wood, Plaintiff, vs. Jesus Encenas, Defendant.

The people of the State of California send greeting to Jesus Encenas, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Third Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to obtain judgment against you for the sum of $225.86 alleged to be due and owing from defendant to plaintiff upon an account stated between plaintiff and defendant, at Independence, Inyo County, California, on the 12th day of June, 1892, which sum of $225.86 defendant agreed to pay to plaintiff. For costs of suit, as more fully appears by the complaint on file herein, to which you are referred.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of $225.85 and costs of suit.

Make legal service and due return hereof.

Given under my hand this 2nd day of August 1893. IRV. H. MULHOLLAND.

Justice of the Peace of said Township.

F. E. Dessmore, Attorney for Plaintiff.

KENDALL'S SPAVIN CURE.

Stockton, Cal., Dec. 19th, '92.

Dr. B. J. Kendall Co.

Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied up one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallnah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece of parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

DIED.

VALENCIA—At Laws, August 31st, Mrs. A. Valencia, a native of Sonora, Mexico, aged 46 years.

Social dance to-morrow evening.

Bar Silver closed at 73 yesterday.

Jas. Jenkins was in town on Wednesday.

Mining location blanks for sale at this office.

Only one week more till the Fair. Are you ready for it?

The Lone Pine school house is about completed and is a fine structure.

John Fishman and wife have returned to Keeler from a trip to San Francisco.

Cattle men are driving out of Monache. Feed has given out unusually early this season.

Charley Moroney visited Independence a couple of days early in the week. Strictly business, of course.

The threshers have been quite unlucky for the past week, having met with a series of breakdowns.

Frank Fitzgerald writes that the prospect in his locality is very good, but that miners and laborers are scarce.

There has been a terrible hurricane on the coast of South Carolina. More than a thousand deaths are reported.

There will be an abundance of winter feed on the range this year. Stock at large are now in splendid condition.

Six horses will leave Independence in a day or two to take part in the races at Bishop during the coming Fair.

Abe Church came over to town last Monday to see his little daughter. Mr. Church is now running on the south end of the C. & C.

A. N. Bell's Oak Creek flouring mill is running to its full capacity. A large quantity of fine flour has already been turned out.

See Hale Bros. new ad. in this issue. If you have not received their new catalogue send your name and address and you will receive one.

The Sierras received the first layer of their winter blanket Wednesday night. The weather in the Valley for the past few days has been quite cool.

Are you insured? A. W. Eibeshutz is agent for the Commercial Union Assurance Company and Henry Rhine for the London and Liverpool and Globe.

Rev. H. J. Winsor has been appointed to the pastorate at Virginia City. Rev. S. W. Albone has been stationed at Independence and Rev. C. L. Logan at Bishop.

To-morrow is Admission Day and the occasion will be celebrated by a social dance in the Agricultural Pavilion. Every body invited and a good time assured.

O. Hampton & Son are hard at work on E. Robinson's new residence. It will be a commodious building of nine rooms and will be quite a desirable addition to the town.

Mr. and Mrs. Richards of Keeler went up over the C. & C. on Saturday. Mr. Richards is on his way to the World's Fair and Mrs. Richards to visit her sister at Red Bluff.

There has been a marked decrease in the number of drummers visiting this county. Members of that fraternity come as far as Carson and telegraph to customers here not to expect them.

Mrs. J. W. P. Laird, accompanied by her son Rollin, went South on Wednesday's train on her way home to Bakersfield after a month's visit with friends and relatives in Owens Valley.

Some time since we received through J. H. Bulpitt a sample of flour from the Bishop Mills now owned by A. S. Kilpatrick. After a thorough test it is found to be fully equal in every respect to the product of the Riverside mills at Reno. Last year a large quantity of wheat was shipped to Reno from this Valley and the produce retured here. This certainly seems poor economy. Mr. Kilpatrick has thoroughly refitted his mill and is turning out a really first-class article.

The Fire Fiend.

Shortly after three o'clock this morning the alarming cry of fire aroused the people of this place. The unusual barking of her dogs aroused Mrs. Charles Houle, and she was the first to discover flames issuing from the building occupied by Dr. I. J. Woodin as office and dwelling, formerly the law office of Reddy & Conklin, and now owned by Lank & Kehoe and the Hannah estate. By the time she arrived at the place the fire was well under way, flames bursting through the roof and front of the building. Her cries soon brought others to the scene, but too late to do anything toward saving either the building or its contents, which were a total loss. The building was a very substantially built redwood structure, and fully an hour elapsed from the time the fire was discovered till it fell a heap of blazing ruins. Fortunately, there was scarcely a breath of air stirring at the time, and the sheets of flame and sparks rose directly upward; otherwise, a serious conflagration would have resulted. The fence was torn down, and the damage confined to the one building, a smaller one about fifty feet away being unharmed. Dr. Woodin was absent at the time, having gone to Saline Valley several days ago. His loss is surely a serious one, as his medical library, surgical instruments and private papers were all destroyed. The building was unoccupied and the doors locked, though nothing could have been rescued in any event. The origin of the fire must ever remain a matter of conjecture. There had been no one in the house for a couple of days, and the destructive flames evidently originated in the interior of the building. The property was a beautiful little place surrounded by locust and apple trees, and was a land mark for many years. The building was insured for one thousand dollars. Doctor Woodin's loss is total.

Fair Race Programme.

FIRST DAY.

Trotting, 2 year-olds, free for all colts raised in District; mile and repeat, purse $100—$75 to first, $25 to second.

Running, ¼ mile dash, free for all, $50.

SECOND DAY.

Trotting, free for all stallions owned in District, 3 in 5, mile heats—$100.

Running, 2 year-olds, ½ mile dash—$50

THIRD DAY.

Trotting, 3:10 class, mile and repeat—$75

Running, mile dash, free for all—$100

FOURTH DAY.

Trotting, free for all horses owned in the District, 3 in 5, mile heats, $150—$100 to first, $50 to second.

In all races entrance fee 10 per cent; 3 or more to enter, 2 or more to start.

Fair Rates.

The following telegrams sent and received to-day are self-explanatory:

To D. A. BENDER, Carson—Do you allow free transportation on exhibits to Fair at Bishop this year as heretofore?

N. RHINE.

To N. RHINE, Independence.—Yes. We will extend same rates and conditions for this year's Fair at Bishop as given for Fair at Independence last year.

D. A. BENDER.

There is no doubt but that excursion ticket rates will be given the same as last year.

Marion Cannon, Representative in Congress from the Sixth Congressional District, has received a terrible scoring at the hands of his constituents for voting for the unconditional repeal bill after pledging himself to support silver to the end. In a resolution adopted at a mass-meeting of Los Angeles citizens he was alluded to as a "second edition of Benedict Arnold."

Bertrand Rhine went to Bishop on Tuesday and left there for San Francisco yesterday. It is reported that he has made arrangements by which he succeeds to the general merchandising business of J. H. Bulpitt. Bert. is an energetic, wide-awake business man and is sure to meet with good success.

Democrats to the number of 101 stood by silver in the recent contest in the lower house, while but 12 Republicans arrayed themselves on the same side. It is only a Republican country editor of the most ancient backwoods type that in the face of this fact would endeavor to manufacture powder out of the silver question for his party's old smooth-bores.

Miss Leora Collins will teach the Camp Independence school for the coming term. S. W. Austin has been engaged at Georges Creek, J. H. Shannon at Lone Pine and H. Clay Hampton at Big Pine. The Independence school is progressing nicely, with a large enrollment of pupils.

About fifteen men are employed in the Fish Spring Mining District and all appear to be doing well. The present low price of silver has the effect of giving gold mining a fresh impetus.

A. W. Eibeshutz

Ordinance No. 49.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Section 7 of Ordinance No. 43, which was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board held on the 8th day of January, 1892, and which said Ordinance No. 43 is recorded in Ordinance Book "B" at pages 89 et seq., and was amended by Ordinance No. 47, by the said Board of Supervisors, on the 5th day of April, 1893, which said amending Ordinance is recorded in Ordinance Book "B" at pages 100 et seq., is hereby amended to read as follows:

Section 7. Every person who at a fixed place of business sells any malt or fermented liquors, wines or distilled liquors, whether on commission or otherwise (except vitticultural productions, when sold by the producers thereof, and fermented or malt liquors when sold by the manufacturer thereof, on the premises on which the same shall be manufactured), must obtain from the Tax-Collector, and for each branch of said business, a license, and must pay quarterly therefor the sum of Forty Dollars. And every such manufacturer of any malt or fermented liquors, who sells the same on the premises on which such liquors may or shall be manufactured must obtain from the Tax-Collector, for such business, a license, and must pay quarterly therefor the sum of Twenty Dollars.

SECTION 2. This Ordinance shall take effect and be in force on and after twenty-five (25) days from its passage.

SECTION 3. This Ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the "Inyo Independent," a newspaper printed and published in the said County of Inyo, at least two [2] weeks said publication to be made said time and before the expiration of said tweety five [25] days.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

{SEAL}

Attest: D. J. HESSION.
Clerk of said Board of Supervisors

The above and foregoing Ordinance No. 49 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo State of California, at a regular meeting of said Board held on the Eleventh day of July, 1893, by the following vote:

Ayes: Supervisors Frank Fitzgerald, A. C. Freeman, John Wilson, W. H. Uhlmeyer, R. Love

Noes: None.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

W. K. MILLER,
Propr.

Be on your Guard.

If some grocers urge another baking powder upon you in place of the "Royal," it is because of the greater profit upon it. This of itself is evidence of the superiority of the "Royal." To give greater profit the other must be a lower cost powder, and to cost less it must be made with cheaper and inferior materials, and thus, though selling for the same, give less value to the consumer.

To insure the finest cake, the most wholesome food, be sure that no substitute for Royal Baking Powder is accepted by you.

Nothing can be substituted for the Royal Baking Powder and give as good results.

A ROMANCE IN CRIME.

How Two Embezzlers Were Brought Back From Brazil.

On the Brazilian steamship Seguranca, which recently arrived at New York from Rio Janeiro, were three uncommonly queer customers. Two were ex-financiers, embezzlers and fugitives—namely, A. A. Cadwallader of Wisconsin and H. A. Botsford of Philadelphia—and the third was Captain C. E. Henry, marshal of the district of Columbia in the Garfield administration, and later a detective in the employ of the American Surety company. He went to Brazil for one man and by a happy accident captured two, or, as he puts it, he went for Botsford and took in Cadwallader for fun.

It is a romance in crime and detective skill. There is no extradition treaty with Brazil, and both men had taken refuge far in the interior, where they thought themselves perfectly safe. H. A. Botsford had been in the employ of Gray, Jenks & Co., lumber dealers of Cleveland, for 12 years and in charge of their branch office at Phil-

CADWALLADER AND BOTSFORD.

adelphia. He had a wife and daughter there and was trusted implicitly. Not quite a year ago they were astounded by receiving a letter from him to the effect that he had been using a little of their money for some time; that recent convictions and severe sentences of small embezzlers had alarmed him; that he had concluded he might as well be hanged for an old sheep as a lamb, and had therefore taken $20,000 and cut for Brazil.

A. A. Cadwallader had been in the banking business for 10 years and had been cashier of a small bank in Philadelphia when late in 1891 he went to Superior, Wis. There he organized a bank in a peculiarly tricky way, plunged into wild speculations, lost money, committed frauds, was arrested and bailed pending an examination, and while on bail fled to Brazil on a steamship which left New York last Christmas. On the same steamship was Captain Henry, going to Brazil for Mr. Botsford, and at the start neither knowing nor caring anything about Mr. Cadwallader.

But the latter made himself so uncommonly agreeable in whiling away the tedious days of passage that Captain Henry decided there was "something in him" (from the detective point of view) and studied him carefully. He gave his name as A. R. Helm, retired man of business, going to Brazil for his health. As soon as Captain Henry reached Rio Janeiro and called on United States Minister Conger for his aid in inducing the Brazilian authorities to surrender Botsford, the minister told him he had received a request to look out for one Cadwallader also. Picture and description were produced, and behold, Captain Henry at once recognized Mr. Helm as the man.

Here was richness. But the first business was to locate Botsford. He had gone far into the interior, to the state of Minas-Geraes, had bought 640 acres of land and set up in a style that filled the natives with awe. He had married a young French girl of good family. He went around with a big knife in his boot and a revolver at his belt and was looked at as a bad man from away back. His home was in the center of his plantation and was on the top of a high mountain. The people of the town told Henry what a bad man he had to deal with, and the captain got 21 soldier police to go with him. They arrested Botsford without any trouble. His young wife fainted and created a scene. She accompanied the party as far as Campenas, when she created another scene, and then she was left behind.

An atrocious murder had been committed near there, and as the Brazilian authorities could find no one else to place the guilt on they concluded it must be the American embezzler, who was, as aforesaid, "a bad man from away back." It suited Captain Henry very well to let them keep Botsford as a murderer while he went after Cadwallader. The latter was found clerking in a little grocery store and broke down completely when arrested, confessing everything. The Brazilian authorities, at the request of the American minister, waived all formalities, and the net result is that in a little over three months after leaving New York Captain Henry returns with twice as many criminals as he went after.

Seldom at Home.

Stranger (on train)—A man in your business can't get home very often, I presume.

Drummer—Home? I should say not. Why, sir, I get home so seldom that I can't remember half the time where I live. Have to telegraph to the firm to send me my address.

Stranger—You don't say?

Drummer—That's straight. Why, one time I was away so long that I forgot I'd ever been married, and I took such a fancy to a pretty woman I met in a strange town that I eloped with her.

Stranger—My! My!

Drummer—Yes, it would have been a terrible thing, but when I called on the firm during my wedding tour and introduced her the old man told me she was my wife before.—New York Weekly.

Not a "Reel Mess."

A party of young men who were off on a fishing excursion on the Ohio river some years ago were joined by an eccentric man skilled as a fisherman known in that region as "Barefooted Sam." He was a good cook and made himself useful in so many ways that his presence, though uninvited, was tolerated by the amateur sportsmen.

One morning two members of the party returned to camp with their appetites well sharpened for breakfast and were greeted enthusiastically by a third man, who said, "You just come along and see the finest baked perch you ever laid eyes on."

They hurried to the table, but saw only a rick of bones, from which every fiber of meat had been taken. Sam was nowhere to be seen. When he returned, no comments were made upon the circumstance, but in the afternoon, when the company were lounging on the bank, Sam drawled out:

"I'd like to have all the fish I could eat, jest onst. I ain't had a mess since Pete Follet ketched that big catfish three years back."

"Sam," remarked one of the group dryly, "I thought you had quite a fair mess this morning. That perch weighed about 10 pounds, I've been informed."

"Oh, yes," replied Sam, with no sign of embarrassment on his placid countenance, "I ate that, but what I mean is a reel, reg'lar mess!"

The company pondered on this remarkable statement in absolute silence for some moments, until at last the man who had caught the perch ejaculated, "Well, I snum!" and nothing more was said.—Youth's Companion.

A Dumb Man's Joke.

Jones was sauntering about at the Academy of Design and chanced to meet a friend, a deaf mute, who was conversing with a companion in sign language. Greeting Jones cordially the deaf mute drew out a notebook and pencil, and after a brief pencil and paper conversation introduced his companion by the same means and shortly after withdrew.

Jones and the stranger discussed the pictures pleasantly for 20 minutes or more, meanwhile covering the backs of sundry envelopes and scraps of paper with their pencilings, when a fourth character in this little drama came upon the scene—a friend of Jones' new made acquaintance.

"Hello, George!" said the dumb man to the newcomer, familiarly. "How do you like the pictures this year?"

"By Jove!" exclaimed Jones in surprise. "Can you talk?"

"Well, I should smile," said the gentleman, equally surprised, as he hastily put away pencil and paper. "Aren't you deaf and dumb?"

"Not by a darned sight," Jones replied, thrusting into his pocket an envelope nearly covered with pencil marks, "but I'll kill Dummy next time I see him!"—Ernest P. Neville in Life.

It Was Postponed.

A prominent gentleman of this city, speaking of dueling, in the course of the conversation told the following: Some years ago there flourished in Virginia a politician who was always getting into trouble. He had been challenged time and again and he always went when called on, for he was game. He never would shoot at his antagonist, however, and luckily escaped being hit. Finally he was called out by a lame man and went of course. The dueling ground lay beside the public road, where a large mile post told the distance to the city. The man with the game leg drew the stand next to this post, and he asked as a favor that he be allowed to lean against it when he shot.

This was granted by his polite antagonist, and the principals were ordered to take their positions, when the other one said: "Gentlemen, I have granted the request of my antagonist to lean against that mile post while he shot, and now I have a favor to ask. Would the gentleman object to my leaning against the next mile post?" This ready wit put everybody in a good humor and the fight was immediately postponed.—Augusta Herald.

Peculiarities of the Carnation.

The peculiarities of the carnation are such that under cultivation it has been made to take almost any character as to color or form of flower desired by the careful cultivator. It has been very popular with one generation of men and equally unpopular with the next. When in favor, the flowers increased in size, and the varieties became numbered by the hundreds. At one time fringed petals were in great demand and were secured, at another the smooth edged petals only found acceptance.

Two hundred years ago the gardeners thought the flowers imperfect if the calyx did not burst, and refractory flowers were knifed into fashion's line. But during the last 150 years the burst calyx has been deemed a defect, yet all efforts to prevent it in large flowers have not been wholly successful.—R. T. Lombard.

He Did Not Get the Passes.

The anecdotes connected with the free list would fill a volume. One day when Nestor Roqueplan was the director of the Opera Comique he was handed the card of a gentleman whom he did not know from Adam and who had called five and twenty times. The visitor was admitted, and very politely but persistently claimed his free passes, which had been suppressed. His grandfather had an opera performed in 1803. Roqueplan asked the visitor to hum an air of said opera. The young fellow could not comply with the request. "Well, monsieur, I am still more ignorant of your grandsire's music than you are, so you must admit that your request is an unreasonable one."—San Francisco Argonaut.

REMEMBER.

Remember, when the dawn sets open wide
Her bright enchanted palace to the sun;
Remember, when the night, the pensive eyed,
Comes dreaming under veils, all silver spun;
When thy bosom beats high with a pleasure supreme,
When the twilight allures thee to brood and to dream;
Hark! the forest profound
Has a voice in its sound—
"Remember!"

Remember me, when fate has drawn our ways
Afar, forevermore afar apart;
When sorrow, exile and the flight of days
Have withered like a flower this breaking heart.
Oh, forget not our parting, my love and its tears!
Love laughs at the malice of space and of years!
While my bosom shall beat
Will its pulses repeat—
"Remember!"

Remember me, when, nevermore distrest,
This heart of mine shall slumber in the tomb;
Remember, when above its house of rest
Softly a solitary flower shall bloom.
Thou wilt see me no more, but my spirit shall be,
Like a sister beloved, forever with thee.
When the midnight is nigh
Thou shalt hear a voice sigh—
"Remember!"

—Alfred De Musset.

THE ABANDONED VESSEL

"Sail, ho! Three points on the port bow," shouted John Tregaskis from the fore-royal yard, where he was repairing the service of the footrope just where it had got chafed in the wake of the mast.

We were homeward bound in the ship Hurkaru from ports on the Madras coast, loaded with sugar in the lower hold and our 'tween decks full of bales of cotton. We had been favored with splendid southerly winds ever since rounding the Cape of Good Hope, and we had touched at St. Helena to put a sailor ashore who was dying of dysentery.

The strong southeast trades were blowing with vigor, and we were bowling off our nine knots an hour with all our stun'sails set to starboard. The wind was just a trifle on the starboard quarter, and we had the weather clew of the mainsail hauled up. All hands were busy tarring down the rigging preparatory to painting ship, for the Hurkaru was a smart East Indiaman, and Captain Gulliver wanted her to be spick and span when she hauled into the London docks.

I was what the owners called a "midshipman," my father having paid fifty pounds premium to them for the privilege of my wearing a brass bound cap, with their house flag on it, and a blue uniform for the few weeks while I was ashore. The rest of the year I cleaned out hencoops, fed the fowls, washed the captain's clothes, kept the steward's books, assisted Sambo, the negro cook and turned the grindstone for "Chips," the carpenter. Every Sunday I was allowed on the poop, and having an old "pig yoke" was allowed to "shoot the sun," working out the latitude by the old 8948 method and invariably getting it wrong.

I used to go aft with fear and trembling with my calculations worked on a slate and hand it to the "old man."

"No wonder I am getting gray and wrinkled," he was accustomed to exclaim, "with such a blue nosed imp as you to work my soul bolt out. Here the ship is in 15 degs. 10 min. south latitude, and confound me if you haven't figured her to the northward of the line. Take that, and that, and that, you young swab. Why in the name of Tartarus of Hades didn't you stop in your father's office slinging ink. You're fit only to eat and sleep. Get out of this!"

On this particular occasion when Tregaskis hailed the deck reporting the sail in sight I was up in the mizzentop setting up the topmast rigging with a "handy billy" tackle, assisted by another "midshipman," who also hailed from London. We were not high enough up to make the strange craft out, but in about half an hour she hove in sight and we could see her plainly. She was hull down and her canvas seemed to be in rags, flapping in the breeze.

"On deck there!" I shouted.

"Halloo!" sang out the captain, who was walking the poop, puffing huge clouds of black smoke out of a mouth that stretched from ear to ear. "What in satan's name do you want now? Can't you set up that rigging without any help? Clap a stopper on your jaw tackle and go on with your work."

"Please, sir, there's a queer looking craft in sight from here. All her sails seem to have blown away."

The old man gave a grunt and came aloft to have a look at her, carrying a pair of good marine glasses slung around his neck. He got on the mizentopsail yard and observed her closely for five minutes. Then he hurried down on deck and told the steward, who called the chief mate, whose watch it was below. Meanwhile he exchanged a few words with the second mate, who immediately afterward roared out in a stentorian voice:

"Lay down from aloft, every mother's son of you, and bring your tar buckets with you."

All hands got down as smartly as they could, feeling very much surprised.

"I wonder what ails the old hunks now?" growled an ancient sea dog, whose grizzled locks hung over his shoulders. "I guess it is some infernal dodge to get extra work out of an honest crew. If he had sailed with some of the boys I used to go to sea with he'd have been h'isted overboard long before this."

Just at this time the port watch came on deck muttering and growling, for it was only four bells in the afternoon watch, and they thought they were safe until 4 o'clock.

We took in all the stun' sails, hauled the mainsail up snug and kept away a couple of points, heading direct for the stranger with the flapping sails, which was now plainly visible from the deck.

The skipper and the mates held a close confabulation on the poop and watched the craft through their glasses.

In a little while we were close alongside of her, heaving to about a quarter of a mile to windward.

She was a three masted topsail schooner. Not a soul was to be seen on her decks. If she had been abandoned it must have been in a hurry, for every sail had been left set. This was evident to the nautical eye, although the canvas hung in tatters from yards and gaffs. She was long and low, and judging from her general appearance must have been very fast. Originally she had been painted black, but only a few patches remained to tell the tale. Sun, wind and sea had left her a grayish white, and as she wallowed in the trough of the sea she looked weird and ghastly and ghostly.

"I tell you that there craft is the Flying Dutchman," said he of the grizzled locks.

"Flying Dutchman be darned," replied a cockney sailor who hailed from Limehouse. "You orter know better. The Dutchman is a full rigged ship and that one is a topsail schooner. Gray hair ain't always a sign of wisdom, judging from the likes of you."

Presently we got the order to lower away the captain's gig, which hung from the port davits just as we had hoisted her up after leaving poor Olsen ashore at Helena. Accordingly we lowered her into the water and she was duly manned by her regular crew of four. I, who am now spinning this yarn, pulled bow.

We rowed right around her, looking for a convenient place to climb on her deck, but finding none we just made fast to the main channels by the painter, and I, being the youngest, scaled her side and jumped over her rail to her deck, just abaft the main rigging. Everything was as neat as ninepence. The ropes were all coiled snugly around the belaying pins and there was no sign of disorder about the decks. I threw over the end of one of the running gear into the boat so that the skipper might hang on to it and clamber up. The old man caught hold of it, and having a lot of low cunning, just tried its strength. It was so rotten that it parted at once. The skipper muttered an oath and looked daggers at me. Finally he climbed up with the help of the painter, and after passing the boat astern, with one hand to take care of her, we proceeded to investigate.

The vessel had evidently been a clipper. Her skylights were beautifully carved and the companionway leading to her cabin was as elegant as that of a yacht. The door, however, was locked. A thick, blue mold incrusted the glass of the skylight on the inside, and the frames would not lift up. The hatchway leading to the forecastle was closely barred and bolted, while the fore and main hatches were tightly battened down.

Captain Gulliver, while cruising around the decks, stumbled across an old rusty iron crowbar, and with this he pried open the doors of the after companionway. He peered down below, and it was dusky and murky as a tomb.

He sang out, "Below there! Is there anybody below?" and then he hesitated as if in a quandary.

This was the first time I ever saw the old man show the white feather.

After a little while he braced up and, seizing the crowbar, broke open the cabin skylights, using, as it seemed to me, unnecessary force in so doing. A mysterious, pestilent odor ascended from the aperture.

"Go down below, Bill," said the skipper to one of his boat's crew, "and see what there is."

"Captain, I'd rather jump overboard and never come up again than go down that there companionway alone," was the reply of the scared sailor, whose timbers actually shivered with fear.

"You wretched coward, you've drank your last tot of grog aboard my ship," roared the skipper as he plunged down the cabin steps.

I followed him at a cautious distance, being far more frightened than he was. The stairs led down into a handsome and lofty saloon, beautifully hung with oriental tapestry. In a mahogany swinging tray above the cabin table were decanters and tumblers of cut glass. Although everything was covered with blue mold an inch thick, it was evident that a careful steward had been accustomed to rule over the destinies of the saloon.

On either side of the main cabin were a number of doors leading into staterooms. The skipper tried the one nearest the stern on the starboard side. It was locked.

"Pass down that crowbar, Bill," said the captain in quiet tones. He no longer put on the air of a swaggering blusterer, but acted as though he was in church listening to a sky pilot.

The crowbar was handed him, and with it he pried open his stateroom door. A strange and startling spectacle was revealed. With her head buried in the cushions of a low couch, on her knees before the image of the blessed virgin, and with her jet black hair hiding her cheeks and descending in raven torrents down her back, was a beautifully dressed woman. Beside her were a breviary and a rosary.

The skipper started back as though he had been shot. The woman actually seemed to hear the "Excuse me, madam, for intruding," he began, but at that moment, realizing that she could not be alive, he took hold of her gently. At his first touch the form collapsed and fell to the floor, the head being separated from the body, and revealing the grinning, ghastly skull of a skeleton.

We all rushed on deck and found the Hurkaru within hailing distance. Twenty sailors were sent on board the strange ship, and it was curious to see how brave we became when reinforced by such a lot of sturdy jack tars. To make a long story short, we ransacked the vessel from stem to stern. In her lower hold we found the skeletons of 250 persons, all in iron manacles. There were just 250 of them, because I and a fellow "midshipman" counted them by order of the skipper.

This accounted clearly for the vessel. She had been a slaver and had been abandoned, though for what reason nobody could understand. She had probably drifted for years off the African coast far out of the track of ships, and this accounted for her not having been reported before. A sudden shift of wind must have wafted her off the land and driven her into the highway of the ocean frequented by homeward bound East Indiamen.

The mystery of the woman was deeper and darker. A brown sheet of paper, with big spots on it, telling clearly of tears, and some faded characters, which looked like Spanish, was found beside her. Nobody could interpret it.

The mate wanted the captain to tow the schooner to St. Helena and sell her for what she would fetch. The skipper, being one of the old school and superstitious at that, wouldn't listen to him. He said he was going to burn her, and burn her he did. A barrel of coal tar and a bundle of oakum judiciously arranged worked admirably, and the poor Africans had a splendid funeral pyre.—A. J. K. in New York Recorder.

Empedocles, the philosopher, threw himself into the crater of Vesuvius. He has had a modern imitator, an Englishman, who killed himself by jumping headlong into the crater of an iron furnace.

A glass factory at Liverpool has glass journal boxes for all its machinery, a glass floor, glass shingles on the roof, and a chimney 105 feet high built wholly of glass bricks each a foot square.

The Yellowstone National park contains a large herd of buffalo—the largest perhaps in existence anywhere—and they are said to be slowly increasing in numbers.

Edison's children by his first wife are familiarly called "Dot" and "Dash," from the characters in the Morse alphabet.

The total value of all kinds of fruits, nuts and vegetables imported in England in 1891 amounted to £8,311,209.

Art Atmosphere In America.

"The art atmosphere that we hear so much about does not exist in America," says an old traveler. "You get a little of it in the cities, to be sure, but it has not affected the people. You find no art in the carving or weaving or pottery making of our rural population. Now, look at this," and he produced a delicate little vase of rich red cloisonne, with a graceful design about the neck. "Imagine an American farmer turning out such a thing as that! Yet I got that of a Japanese in a way back mountain district—a man who had never been to a city, had seen little of art of any sort, except his own, and, in fact, had no communication with the world. In a mountain village in our country you would find a sawmill, or at most a chair factory, but nothing that could pass for an art. But the Americans are the quickest people in the world, and they will come to it in time."—New York Sun.

HOW WE GROW OLD.

The thread that binds us to life is most frequently severed ere the meridian of life is reached in the case of persons who neglect obvious means to renew failing strength. Vigor, no less the source of happiness than the condition of long life, can be created and perpetuated where it does not exist. Thousands who have experienced or are cognizant—including many physicians of eminence—of the effects of Hostetter's Stomach Bitters, bear testimony to its wondrous efficacy as a creator of strength in feeble constitutions, and debilitated and shattered systems. A steady performance of the bodily functions, renewed appetite, flesh and nightly repose attend the use of this thorough and standard renovant. Use no local tonic represented to be akin to or resemble it in effects in its place. Demand the genuine, which is an acknowledged remedy for indigestion, malaria, nervousness, constipation, liver and kidney complaints and rheumatism.

If a lot of little mouses
Are a lot of little mice,
Why are not a lot of houses
Called a lot of little hice?

$100 REWARD, $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of Testimonials.

The fool seeketh to pluck the fly from the mule's hind leg, but the wise man letteth the job to the lowest bidder.

THE NURSE'S DELIGHT.

Every experienced nurse knows the value of a remedy which, without being an anodyne, will relieve soreness of the limbs or stiffness of the joints, and enable a patient to sleep quietly and naturally.

Just such a remedy are ALLCOCK'S POROUS PLASTERS. Placed on the chest or on the back, if necessary cut into strips and placed over the muscles of the limbs, they work marvels in the way of soothing and quieting restlessness. Being perfectly simple and harmless in their composition, they can be used freely, and many a sufferer has thanked them for a night of quiet rest, grateful both to him and those who care for him.

BRANDRETH'S PILLS do not weaken the bowels.

That man has got a good start up the hill of knowledge who can learn a good lesson from another's experience.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Drugists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

PURELY VEGETABLE—

Dr. Pierce's Pleasant Pellets. They're a compound of refined and concentrated botanical extracts. These tiny, sugar-coated pellets—the smallest and the easiest to take—absolutely and permanently cure Constipation, Indigestion, Sick and Bilious Headaches, Dizziness, Bilious Attacks, and all derangements of the liver, stomach, and bowels.

They cure *permanently*, because they act *naturally*. They don't shock and weaken the system, like the huge, old-fashioned pills. And they're more effective. One little pellet for a corrective or laxative—three for a cathartic.

They're the *cheapest* pills you can buy, for they're *guaranteed* to give satisfaction, or your money is returned.

You pay only for the *good* you get.

"August Flower"

"One of my neighbors, Mr. John Gilbert, has been sick for a long time. All thought him past recovery. He was horribly emaciated from the inaction of his liver and kidneys. It is difficult to describe his appearance and the miserable state of his health at that time. Help from any source seemed impossible. He tried your August Flower and the effect upon him was magical. It restored him to perfect health to the great astonishment of his family and friends." John Quibell, Holt, Ont.

DR. GUNN'S IMPROVED LIVER PILLS

A MILD PHYSIC

ONE PILL FOR A DOSE.

A movement of the bowels each day is necessary for health. These pills supply what the system lacks to make it regular. They cure Headache, brighten the Eyes and clear the Complexion better than cosmetics. They act mildly, neither gripe nor sicken as other pills do. To convince you of their merits we will mail samples free, or a full box for 25 cents. Sold everywhere. Bosanko Med. Co., Philadelphia, Pa.

HERCULES

Gas or Gasoline Stationary and Marine

:ENGINES:

Can be Used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

No Delicate Parts to Get Out of Order.

For simplicity and success they beat the world. Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy of intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day.

SUFFICIENCY.

A little love, of Heaven a little share,
And then we go—what matters it? since where,
Or when, or how, none may aforetime know,
Nor if death cometh soon, or lingering slow,
Send on ahead his herald of Despair.

On this gray life Love lights with golden glow
Refracted from The Source, his bright wings throw
Its glory on us, if Fate grant our prayer—
A little love!

A little; 'tis as much as we may bear,
For Love is compassed with such magic air
Who breathes it fully dies; and knowing so
The Gods all wisely but a taste bestow
For little lives, a little while they spare
A little love.
—Gleeson White in Independent.

Nautch Girls on Strike.

At some of the great Hindoo temples in India it is the custom, handed down from immemorial ages, to keep a permanent staff of dancing girls on the premises. These light limbed damsels take a prominent part in the religious ceremonies, jigging it gayly when directed by the priests. In return they not only receive handsome salaries, but are entitled to many valuable privileges, and the place is consequently eagerly sought for by the nautching sisterhood.

Decidedly high spirited and great sticklers for their professional rights, the young ladies brook no priestly interference with their private recreations; so long as they dance gracefully when called upon, they consider that their part of the contract is fulfilled. Unhappily, the demon of discord has entered into this happy family. In an evil hour the priests of a famous temple in the Madras presidency lately determined to reduce the emoluments of their dancing assistants, which had gradually grown beyond all reasonable bounds. But they little reckoned what would follow; within twenty-four hours every one of the fair bevy went on strike, and as a particularly grand ceremony had to be performed just then, to which dancing was a necessary accessory, the holy men themselves had to prance about, much to the edification of pious worshipers.

That one sharp lesson sufficed; in the course of a day or two the retrenchment decree was rescinded, leaving the victory with the fair rebels. The times are certainly marching apace when the spirit of trade unionism thus catches hold of the Indian nautch girl. No doubt we shall hear before long that she is cultivating the methods required to make picketing effective.—London Globe.

Children Who Ride Horses.

The children of Cornelius Vanderbilt all ride well, thanks to the teachings of Carl Nyegaard, commander of the New York Riding club. Gotham's swell instructor in the art of riding. Gertrude Vanderbilt, a sweet little maid of thirteen or fourteen, is already an accomplished horsewoman. She has great confidence and self possession and rides fearlessly. All having Vanderbilt blood in their veins naturally take more or less to horses.

Louise Shepard, the daughter of Colonel Elliott F. Shepard, and of William H. Vanderbilt's daughter Margaret, though devotedly pious and spending a great deal of her time in good works nevertheless found leisure to become an excellent horsewoman, as did also her younger sister Alice.

Adele and Emily Sloan, also granddaughters of the late William H. Vanderbilt, though still little more than children, have all the Vanderbilt fondness for the equine species, and have profited well by a long course of riding lessons. The Twombly children—Alice and Florence—whose mother was Florence Vanderbilt, are too small to ride as yet, but will do so as soon as they are thought old enough to be placed on a horse.—New York Cor. Chicago News.

Has a Long Memory.

A lady who formerly lived in this state, but is now a resident of Ohio, was riding on the East Eighth street cable car, casually glancing at the houses as she passed. In one of the yards she saw a crazy quilt hanging on a line. Instantly she got off the car, and going to the house rang the doorbell and asked if Mrs. Blank lived there. On receiving an affirmative reply she entered and two old friends were soon chatting over old times. She said she had recognized the quilt as one she had seen her friend make in central Missouri eighteen years ago.

A lady had just come from the east bringing with her a crazy quilt, which was so pretty and so hard to make that the east side lady fashioned one after it. This was the one that brought the two friends so unexpectedly together. "I knew that there were only two quilts like that in the world," she said, "and I instantly concluded that this must be yours, although until today I did not know where you lived."—Kansas City Times.

Washington Irving's Nieces.

The Misses Irving, nieces of Washington Irving, now very old and feeble ladies, who have lost all track of the dates and incidents that make Sunnyside so interesting to American students, still occupy the rambling little cottage at Tarrytown. Almost hourly during the summer days visitors drive down Sunnyside lane to learn some new legend of Sleepy Hollow. On the gate post is a sign requesting "persons who desire to visit the grounds to leave their carriages outside." A faithful old housekeeper answers the bell, and usually directs the caller to "Miss Irving sitting on the porch" on the river side of the cottage. The little old ladies refuse to be disturbed, and the worshipers of their illustrious uncle are denied even a peep into the library where the lives of Goldsmith, Washington and Mohammed were written. Ill health has much to do with the general rebuff, but the house is difficult of access, especially if the pilgrimage is made on foot.—New York World.

The English Society for the Protection of Birds has now 950 members, with the Duchess of Portland as president. Their object is to check the slaughter of birds for millinery purposes, and each member is pledged to refrain from wearing the feathers of any kind of bird except those killed for food and ostrich plumes.

Box Office Queries.

Charley Metcalfe was telling some stories illustrative of the box office man's tribulations. "If it weren't for some people's dirty thumbs," said he, "I'd wish the Lord had made me in book form. I don't put in much time in the box office, but the few minutes I am there is enough for a lifetime. The average ticket buyer asks enough inane questions, but what do you think of a man who sticks his head through the window and wants to know the name of a big steamer he saw going down the East river day before yesterday? Well, my boy, that's what happened this very morning, and that's not a 'marker' to the questions some people ask either.

"There's the man who knows everything and wants you to recognize it, the man who knows nothing and proves it, and the woman who is nothing more or less than a perpetually animated interrogation mark. Why, two days ago a man came in and told me all about the piece then being played in the house. After getting rid of him I had to choke off a long breath to inform a fellow that the theater was neither a hotel nor a lodging house. He said he was sorry that he liked the location first rate. Before I had recovered from the fit he gave me, a man with three baskets, four children and a woman walked into the lobby.

"'Be they a-actin or anything inside?' asked the man. 'No, sir,' said I. 'Performance at 8:15.' Then what do you suppose that man wanted? He actually had the stupendous gall to ask me if he and his family couldn't go inside and sit down for an hour or so while they ate their luncheon!"—New York World.

Women and Mice.

"I wish somebody would find something to take the place of the exceedingly stale and silly 'women and mice' paragraph which has been going the rounds of the papers, with divers and sundry changes rung on it, ever since I can remember, and goodness knows how much longer," said a charming little woman as she opened the mousetrap and let two or three of its occupants out into the jaws of a number of hungry kittens. "I wonder who started it anyway? Of course there are women who are afraid of mice, no doubt, but I never saw a woman make herself more ridiculous over a mouse than a certain man did when one of these harmless little creatures scooted up the leg of his trousers.

"I don't imagine any one would feel especially comfortable with any such foreign element meandering around one's preserves; but why 'women and mice' in particular, is what I don't understand. I think there are very few housekeepers but what have frequent occasions to come in contact with rats as well as mice, and, as far as I can see, they seem to survive—at all events, I never heard of anybody dying from fear of them. I suppose that the mouse paragraph must be near akin to that of the mother-in-law. Be that as it may, both are so threadbare and faded and frayed out and bleached with time and hard service that it would be a work of mercy for some benevolent and intelligent paragrapher to get up a new supply of ammunition."—New York Ledger.

An Army of "Poor" Employees.

To look after the city's standing army of dependents and delinquents requires a big official force. There are three commissioners with $5,000 a year each, a secretary who gets $2,300 and a staff of eleven at the central office, besides the superintendent of the outdoor poor and six assistants.

There are 45 employees at the Tombs, including 4 physicians and 4 matrons. There are 31 employees in the district prisons (Jefferson Market, Essex Market, Yorkville and Harlem), 72 employees at the Bellevue hospital, besides 54 trained female nurses, a chemist and 3 assistants, and 66 male nurses and employees.

There is a staff of 13 at the Gouverneur hospital, of 10 at the Harlem hospital, of 130 at the Charity hospital on Blackwell's island, of 82 at the penitentiary, of 42 in the almshouse, of 45 in the workhouse, of 250 in the city insane asylum, of 50 in the Ward's island hospital, of 300 on Randall's and Ward's islands, of 22 at the Hart's island workhouse, of 150 at the Hart's island asylum, of 75 at the Islip asylum and of 18 in the storehouse department on Blackwell's island.—New York Sun.

Remarkable Feat of Strength.

E. P. Kendall gave a remarkable exhibition of his skill and strength with a ten-pound dumbbell at noontime. He matched himself against eight strong men employed upon the grade work about the county court house, and agreed to put up from shoulder to arm's length a ten-pound dumbbell more times than the eight men could. Kendall has a limb which makes it necessary for him to use crutches, and as he is of very slight build the result of the contest appeared to be a foregone conclusion.

One after another the eight men took their places, Kendall keeping time with each one, and after the eighth had dropped his arm from sheer exhaustion Kendall smiled pleasantly and ran up his score of consecutive lifts to an even 1,000. His best score with a twelve-pound bell is 2,600 lifts, and he has a brother who holds the world's championship.—Seattle Press-Times.

Living on Eighty-four Cents a Week.

While on the subject of abstinence in food, may I be pardoned for mentioning that many years ago, when a schoolboy, I tried how cheaply I could live, and found that I was able to get, in summer, everything I required in the shape of good, wholesome food for three shillings six and a half pence a week. Of course I had little meat, and kept principally to fruit and vegetables, which I could buy cheap, as I was near a large town.—National Review.

The phrase, "castles in the air," has been attributed to Sir Philip Sydney, Swift, Fielding, Churchill and Shenstone. It was first used more than 250 years ago by Robert Burton in his "Anatomy of Melancholy."

BREVET WIDOWS.

Spinsters Who Would Have Been Wives but for the War.

A GIRL WHO DESERVES A PENSION.

One Reason Why There are so Many Single Women About Forty Years of Age in this Country.

Last week I went to see my friend the colonel, a Virginian, who was a distinguished officer on the side of the south. Since the war his duties as consulting engineer have taken him all over the country, and, being a close observer, his opinions are entitled to respectful consideration. As we sat smoking on the wide piazza and watching the growing moonlight gradually discovering the grounds of the adjoining mansion, I saw a number of ladies looking eastward and heard them commenting in low, melodious voices on the glories of the night.

"Four maiden sisters," whispered the colonel, and they are the owners and, with the servants, the sole occupants of that fine old mansion."

"It is evident that your wife has unbounded faith in you," I laughed, "or she would not leave you alone in this neighborhood."

"She is a good friend of the widows and she feels that I am quite safe with them within call," said the colonel.

"But I thought you said they were maiden sisters?"

"So I did, and when I said 'widows' I meant widows by brevet. Those ladies are now between forty and fifty years of age. Friends tell me that as girls they were very pretty. They are the best educated women I ever met, but they are neither pedantic nor misanthropic. They are above want. But their husbands were killed"—

"Their husbands killed?" I interrupted.

"Yes, killed in the war, but all of them may not know it. Let me explain. North and south there were killed in battle or died of disease fully 500,000 men, not one-tenth of whom were married. Of the men at the front who bore the brunt of battle fully nine-tenths were under thirty years of age. Now it is a law of nature that every male must have his mate, and every man who is killed or who dies prematurely and unmarried forces some woman in some place to remain single. This subject interests me, and so I have made a study of it. I started out with a theory to account for the number of single women over forty whom I meet with unvarying regularity in the south as well as in the north, and my theory is correct; that is why I call them, not old maids, but 'widows by brevet.'"

"It is true that many of the widows by brevet may never have met the man they might have married had there been no war, but in the great majority of cases they knew the man, for they had been neighbors, friends and schoolmates. I was a single man when in 1861 I took command of my troop at Staunton, Va. Of the 110 men in the company there was not one married. I was then twenty-five and was the oldest man in the troop. Our youngest men were about eighteen, but I was told, and I believe it, that from the captain down every man who rode with us for Bull Run that July morning had a sweetheart and was engaged.

"When the war ended I checked off with a friend the original muster roll of that company. Thirty-one survived. The rest had gone down before the bullet or the more fatal disease of the camp. But that meant eighty girls in and about Staunton whose sweethearts went away to die. There never was a soldier, worth the lead that killed him, that didn't have some woman at home, mother, sister or sweetheart, oftener all three, to mourn his taking off. The bullet seldom stopped in the brain or breast of the man it struck down on the battlefield, but winged its way over river and hill to find its final resting place in a woman's heart. But of all the people who have suffered by the war, the brevet widow most excites my sympathies.

"I know right here in New York state a lady who deserves a pension for her brevet condition far more than do many of the widows of full rank. This lady was engaged to be married to a young man, a member of the Seventh regiment, who belonged to a good family, and who held a position that would have made him rich in a few years had he kept close to business. The day set for his marriage was that on which the regiment marched to Washington. He saw the lady the night before and said he would remain back and join the regiment, she accompanying him, the day after its departure. But her pride and her patriotism were as strong as her love. She said: 'We can wait, Jack, but the danger to the capital will not be postponed on account of our wedding. The thought of standing by your side at the altar has been in my mind by day and brightened my dreams by night ever since you asked me to be your wife, but I feel, Jack, that it is your duty to march with the regiment.'

"The next day she saw him through her tears at the head of his company, for he was an officer, marching down Broadway, up which he was never to return. Jack, as I will call him, was offered a higher commission in a new regiment before the three months for which the Seventh had gone out had expired, and after consulting his fiancee and getting her consent he took it. At the same time the lady went to Washington as a nurse. This was certainly a great sacrifice, but I doubt if the colonel or the nurse looked at it in that way; they simply saw their duty and did it.

"Before the echo of the guns had died out at Sharpsburg, or 'Antietam,' as your side calls it, the nurse was in charge of a hospital that had been established in the village. Among the very first of the wounded brought to that hospital was Jack. He had a bullet in his brain, and so did not recognize his betrothed wife in the nurse, and as she sat by his cot holding his hand that night he died.

"The lady nursed on till the end of the war, when she returned home, aged and heart burdened at twenty-five. The war that made her a brevet widow impoverished her father, whose business had been with the south, but she set bravely to work to help him, and was his principal support till he, too, died, another victim of the contest.

"At present the lady, now in her fiftieth year, lives in a little flat with her helpless old mother. She teaches drawing and writes charmingly for juvenile publications. She wears no medals, has no political influence and seeks no notoriety, yet who will say that that gentle old maid, that brevet widow, is not a more heroic character and has not done more to prove it than one half of the men who have been living on their record since the war? If I had my way about it, that splendid woman should have a large pension."—New York Times.

Ouida has uttered another plea in defense of her favorites—animals. It is called "The New Priesthood" and is a protest against cruelty to animals and especially against vivisection.

War and Law.

The ironclad Merrimac which harassed the Union fleet, and was herself finally disabled by the Monitor, made during her first unquestionable triumphs a victim of the frigate Congress. After the fight had continued for some time, the Merrimac was so fortunate as to take such a position relative to her enemy that the destruction of the Congress became only a question of moments.

Her commander was slain, she had been repeatedly set on fire, and her decks were covered with dead and wounded. She was accordingly run ashore, and there hoisted the white flag.

The Merrimac now sent alongside two tugs to take possession and remove the prisoners, but these were driven back by a sharp firing from the shore.

General Mansfield had directed the Twentieth Indiana to deploy along the beach, behind a sand ridge, and two guns were wheeled into position to prevent the enemy's making away with its prize.

Captain Reed, who was as good a lawyer as soldier, raised a question of military law.

"Since the ship has surrendered," said he, "has not the enemy the right to take possession of her?"

Then General Mansfield uttered one of the shortest and most conclusive opinions on record.

"I know the old ship has surrendered," said he, "but we haven't."

That settled it. Unable to take possession of the prize, the Merrimac opened upon her with incendiary fire and then withdrew. The remnant of the Union crew was brought on shore, and that night, when the fire had reached her magazine, the Congress blew up. That lightning decision had at least saved her crew.—Youth's Companion.

How a Coat of Tar Feels.

People who read of tarring and feathering know that the punishment is a very unpleasant one, but few imagine how terribly painful and dangerous it is. In Wyoming I once saw a man who had been tarred and feathered, and although he fully deserved the discipline I could not help pitying him. Hardened tar is very hard to remove from the skin and when feathers are added it forms a kind of cement that sticks closer than a brother. As soon as the tar sets the victim's suffering begins. It contracts as it cools, and every one of the little veins on the body is pulled, causing the most exquisite agony. The perspiration is entirely stopped, and unless the tar is removed death is certain to ensue.

But the removal is no easy task and requires several days. The tar cannot be softened by the application of heat, and must be peeled off bit by bit, sweet oil being used to make the process less painful. The irritation to the skin is very great, as the hairs cannot be disengaged, but must be pulled out or cut off. No man can be cleaned of tar in a single day, as the pain of the operation would be too excruciating for endurance, and until this is done he has to suffer from a pain like that of 10,000 pin pricks. Numbers of men have died under the torture, and none who have gone through it regard tar and feathering as anything but a most fearful infliction.—Interview in St. Louis Globe-Democrat.

How an Indian War Was Begun.

The Modoc war of 1872, in which so many valuable lives were lost, was begun by the advance of half a troop of the First cavalry. This force rode up to the Indian camp, dismounted and were standing to horse, with probably no thought of being murdered or of any serious trouble. It is reported that while the officer in command was talking to the chief a rifle was discharged by an Indian, either accidentally or as a signal, and that instantly thereafter firing on the troops took place and a number were killed and wounded.

The Indians, about sixty in number taking advantage of the confusion among the troops, retired to their strong hold in the lava beds, murdering every white man en route. In this strong hold they defied the government, massacred a commission composed of prominent men sent to them in peace, and withstood the attacks of 1,300 soldiers for months, and until both food and water gave out.—Colonel E. V. Sumner in Century.

An Old Custom in Durham Cathedral.

A curious custom, and one which we believe is in existence at the present time at Durham cathedral, is for the choristers, clad in flowing white robes to ascend the tower of the cathedral on the eve of the feast of Corpus Christi and sing the "Te Deum." This ceremony is performed to commemorate the miraculous extinguishment of a fire on that night in 1429. According to the legend the belfry was struck by lightning at midnight while the priests were engaged in prayer, and although the fire raged for several hours the bells escaped injury. This, it was said, was owing to the special interference of the incorruptible St. Cuthbert, who was enshrined in that cathedral.—London Tit-Bits.

Value of the Kangaroo's Tail

So important is the kangaroo's tail in his rapid progressed that experienced hunters with guns are accustomed to fire at the point where this appendage joins the body, when, the tail being disabled for its office of balancing, the animal is as effectually stopped as if hamstrung. Hit elsewhere, except with a rifle bullet or at point blank range, the kangaroo is pretty likely to get off.

One peculiarity of the kangaroo is that, after being started up, he very rarely swerves from his course, through which peculiarity he is easily "potted" by hunters, who conceal themselves while a man on horseback drives the herd toward them.—Boston Journal.

Dreamed the Phrase

The precise words of "Coming events cast their shadows before" occurred to Campbell in a dream. He awoke and found himself repeating them aloud, and afterward used them in "Lochiel's Warning," a minor poem of much merit.—Philadelphia Ledger.

FAIRY FINGERS.

How Miss Grace Bates Decorates the Homes of Wealth.

DELICATE TASTE AND ORIGINALITY.

A Penniless Girl's Bright Idea That Brought Her an Independence and a High Reputation.

There is no woman in the country who takes more practical interest in the struggles and trials of untrained girlhood to gain a livelihood than Mrs. Stanford, of California. With a generous heart and a well filled purse it is as easy as it is cruel in the end to help or relieve the wants of that constantly increasing class of gentlewomen who have been taught a little of everything but the useful, and whose self-respect pride is less offended by delicately proffered charity than a suggestion of manual labor.

Mrs. Stanford has the aptitude for discovering what a girl can do, sometimes unearthing unsuspected and undeveloped talent. Now and then a maiden comes along who believes in her own capacity, but is lacking the chance to make use of it. Here is a little story from life that illustrates my point:

A bright and refined looking girl of seventeen came to see Mrs. Stanford one day. Her name was Grace Bates, and she was the granddaughter of Judson, one of the richest men the Pacific coast has ever known, and who made his fortune in Honolulu. There he lived on his magnificent estate like a prince; his children were brought up and educated with every luxury and advantage, and their children in turn were started on the same flowery path. Misfortune, however, appeared with time and pursued the family with such apparent vindictiveness that the millionaires' grandchild at seventeen found herself bereft of male relatives, penniless and with an invalid mother and two infant nieces dependent upon her.

There were some friends of better days who had offered the poor child a home, but she had within her that precious germ of American independence that dies hard. Make a struggle she must. So she went up to the great house that sat on the hill.

"What can I do for you?" asked Mrs. Stanford with sympathy, for she knew the family history and the girl's sore straits.

"Give me just one chance," said the girl eagerly. "I believe I could decorate your house and your table for an entertainment in a way that would please you. I understand color and form. I love flowers as dearly as any Japanese, and can arrange them. If I should fail it would do you no harm. If I succeed, my fortune will be made, for other people will give me orders."

Now a hostess who entertains as Mrs. Stanford does, making novelty as much a specialty as magnificence, would far rather give a big check than run the risk of having her decorations marred; but this is just where the real generosity came in, and Mrs. Stanford hesitated but a second before consenting. The occasion that offered was a large dinner given in honor of a military hero, to be followed by a reception. Wishing to leave her new florist unembarrassed, Mrs. Stanford avoided visiting the apartments in her hands until the work was completed.

"When I did come down to receive my guests," said that lady, "I found the place transformed. The girl seemed gifted with the fingers of a fairy and the imagination of a poet. There were no stereotyped designs, but every plant, every flower carried its effect, and there was so much grace and originality in the arrangement of the table that almost every woman who sat down at it asked me as a favor the address of my new decorator."

So little Miss Bates made her fortune, for orders flowed in, and California orders are not niggardly. All this happened six years ago, and today the young lady owns her own carriage and horses, and her own handsome establishment. Her two little nieces are receiving a thorough education, and the invalid mother has all the relief that science and love can bring her.

When the tour that President and Mrs. Harrison made through the west was first announced, the Stanfords expressed a desire to entertain them, and on the acceptance of their invitation Mrs. Stanford telegraphed Miss Bates to make preparations for the event, and gave carte blanche as to expense. At 7 o'clock on the morning of the day set for the dinner Miss Bates drove to the house followed in wagons by her corps of eighteen assistants, all young girls, clad in uniform, with big white aprons and white caps. They brought with them piles of clean heavy sheets, with which, as if by magic, they covered the polished floors, the Turkish rugs and the embroidery and tapestry of the upholstered furniture.

All day long they worked silently and nimbly, and at 4 o'clock Mrs. Stanford was asked to make a tour of inspection. Pretty girls and snowy sheets had vanished. Only Miss Bates, flushed and a little nervous, was left.

"Are you satisfied?" she asked anxiously.

"Satisfied?" said Mrs. Stanford in speaking of it afterward. "I was speechless."

All the wealth of California's native flora had been called into requisition. Sometimes the flowers were heavily banked to serve as a background for a figure in white marble, sometimes hung in airy garlands from the ceiling, again massed in panels behind some gem of a painting, or lifted their lovely heads from huge bowls of old china or rare crystal.

But it was at the table that Miss Bates displayed her greatest ingenuity. There was, to be sure, a background of richly wrought gold plate and silver in repousse and filagree of Bohemia and Venetian glass, inlaid with enamels or crusted with gems of lace trimmed linen, a miracle of the hand and loom, and of the mellowed light from hundreds of wax candles. Flowers were used sparingly, with their natural foliage. Colors were chosen that harmonized with the precious metals and exquisite glass. Before each guest were bonbonnieres and souvenirs suggestive of the occasion and the state of California.

Miss Bates sent to Mariposa for some bark from the famous big trees. This she had cunningly carved into miniature tubs, highly polished, and lined with a shirring of houton d'or satin, and filled with chocolate bonbons of curious shapes. Tiny facsimilies of Paris hats, decked with native flowers, had crowns that would fly up at a touch, disclosing a nest of dainty comfits.

For each guest there was a gold or silver spoon marked with their initials, and really a souvenir spoon made with designs furnished by the young decorator, and embodying some delicate illustrations of western flora or fauna, with the date and familiar coat of arms engraved in the bowl of the spoon. In a score of other and novel fancies Miss Bates showed her skill and originality, making the table, Mrs. Harrison said, the most perfect in decoration she had ever seen.—New York Advertiser.

Modern Surgery.

The extent to which the body can be mutilated without a fatal result is beyond what most people think. Of course, the removal of the largest limb is a familiar fact; and, indeed, the successive removal of all the limbs would result in nothing worse than inconvenience. But in the same way internal organs may be extirpated. This is facilitated by their duality.

One eye may be taken out and the sight remain practically unimpaired. One kidney may be removed, and the other will make up the loss by doing double work. The case is essentially the same when disease has destroyed the functional activity of a kidney, and therefore a person in that condition need not be without hope.

In like manner, disease may have rendered one lung solid, like liver, and thus functionally useless, and yet the person may live in good health to old age. Could the half consumed lung of the consumptive only heal up the walls of its great ulcer, and the microbes cease to extend their ravages, the patient might, with care, enjoy a long, useful and happy life.

Large portions of the brain may be removed with no injury to life or intellect. Persons have lived for years and been well with bullets in the brain. The liver has been cut in two by tight lacing—the pressure causing an atrophy of the part below—without ending either the life or the folly of the fashionable devotee.

A portion of the intestines has been cut out and the severed ends sewed together, and their normal action and function have not been in the least interfered with. And what seems more amazing, dogs have had their entire stomachs extirpated without impairing digestion.

Recently a man fifty-seven years old had a large portion of his stomach cut out in consequence of a tumor. The piece was nearly a foot square. The dissevered parts were sewed together, and the patient ate a dinner of hash twelve days after the operation and was dismissed cured at the end of three weeks. Five months later he was presented before the medical society—the Royal Society of Physicians of Vienna—wholly well, with no trace of the return of the cancerous disease, and with digestion perfectly performed.—Youths' Companion.

Where Dogs Are Street Cleaners.

Next to St. Sophia we have heard most about the dogs of Constantinople. When we counted 280 dogs in an hour's drive in Damascus we thought we could see nothing that would surprise us in canine numerals. But Damascus does not begin with this city, especially in the old part, as in Stamboul. At times they lined the street, making it yellow and furry for two or three rods. Again, dogs lay stretched, singly, in the middle of the street asleep, and carriages and foot travelers went out of their way to pass them for hours, rather than trouble to move them. Puppies ran about ad libitum, and dear little things they were too.

These dogs are not a fine breed. Their hair is coarse and rough, and their bodies thick and heavy. But they have good, mild faces, gentle eyes, and, as for attacking any one, it seems never to enter their minds. Cats, too, are plenty, and often is seen a happy family of dogs, cats and chickens sharing the street with perfect good nature. The dogs are the street cleaners. At night, when refuse is thrown out from the houses, they have high feasting, and by morning nothing but what can be easily carried away in baskets or on donkey back is left. They belong to nobody, and would live a happy and care free life did they not somehow get many injuries. The howl of a dog sounds every few minutes even in Pera, and it is not rare to see torn ears, bleeding eyes and scratched, hairless skin.—Cor. Philadelphia Ledger.

Good Sleepers.

The author of "Bulgaria Before the War" says that the Turks devote to sleep any spare half hour that may happen to be at their disposal. At night, he says, all his companions would be in the land of dreams within ten minutes, while he lay wide awake and envious.

He continues:

"It has often struck me with astonishment to see the little respect any one in Turkey pays to sleep. When I have been staying in the villages I have often heard the members of the family get up, and after searching about among his sleeping companions, arouse them all to ask where his tobacco was, or upon some equally slight excuse.

"A lad of eighteen would thus wake up his father, a man of sixty, perhaps, two or three times in the night, and yet there would never be an angry word of remonstrance; and when I have snapped savagely at some one for walking into my room and over my body in the middle of the night my snappiness has caused the greatest astonishment.

"Many times I have turned in with natives in the same room with me, and though I was generally tired and my companions not, yet I think I may say I was invariably the last to close my eyes."

Every Man May Be a Vanderbilt.

The life of Commodore Vanderbilt affords singular scope for reflection on the immense possibility of a great business capacity to amass a large fortune in a few years, especially in this country. From being the possessor of a rowboat on New York bay, he rose in sixty years to be the proud possessor of $90,000,000. William H. Vanderbilt, his son, obtained $75,000,000 of this, and largely increased the fortune before his death.

It has been truly said that any fool can make money, but it takes a wise man to keep it. William H. Vanderbilt's ability was signally displayed in keeping intact this great fortune, besides adding easily once again as much more to it. I make special mention of Mr. Vanderbilt because he was not a speculator, in the true sense of that term. He was first and for all time an investor. And every man in this great republic has the privilege of walking in his footsteps.—Henry Clews in Ladies' Home Journal.

Lamb's Cottage.

Although it is now nearly sixty years since Charles Lamb died, the little cottage in which he and his sister resided at Edmonton shows but slight evidence of any external change. Situated a few yards from the railway station, the house, with its gable facing the roadway, its red tiled roof and whitened walls, its narrow doorway and small paned windows, gives the impression of Old World comfort and seclusion. A rowan tree, on the branches of which hang clusters of red berries, stands at the gateway, and its appearance imparts a pictorial attractiveness to the interesting building, which is still known as "Lamb's Cottage."—Pall Mall Gazette.

Against Time.

Business Man (to new amanuensis)—See here, you are writing out my words in full. Why don't you take it in shorthand?

New Amanuensis—You talk too fast.—Good News.

CATCHING HORSES

How the Wild Mustangs of the Plains are Captured.

THE LASSO BUSINESS A MYTH.

A Buckboard, a Corral and Patience Needed.—Following Horses Until They Become Docile.

Of all the sports peculiar to the plains none are endowed with greater attractions, by the imagination of the average youth, than that of catching wild horses.

To make a success of it one must possess an iron constitution, unlimited patience, good judgment and the ability to take events as they come. All that is needed in the way of an outfit is a buckboard and team, three or four saddle horses, a camping kit and enough supplies for twenty days. The wild horse is a great lover of home, and unless constantly disturbed will range in the same locality for years. It is by taking advantage of this trait that the hunters—they always work in pairs—capture them.

The first duty is to locate a band; then find out the extent of their range, their various watering places, study them through a field glass, noting any peculiarity of gait, or any odd colors among them; above all get the correct number. The object of this is to so fix the bunch in mind as to readily distinguish them from others running in the same country.

These preliminaries attended to, the next question is locating the corral. On this a good deal depends. Generally some arroyo or draw that extends well out into the plains is selected. Care must be taken that water is convenient and that there is sufficient growth of timber to hide the inclosure from two sides. The better to resist the frantic efforts of the captives the pen is built in the form of a circle. The posts, deep set, lean slightly inward, and as a further precaution are braced from the outside. Each panel is then bound with green rawhide. Wings made of brush extend out in front for 100 yards.

Whatever undergrowth there may be between is left standing, the more effectually to hide the trap. All evidences of labor in the way of chips and clods of earth are carefully removed. If bars are used instead of a gate they must be placed where they can be quickly thrown into position. Some spot close by, yet out of sight, is selected for a camp, and preparations are made for the start.

Bread sufficient for a few days is baked, coffee ground, and in fact whatever can be done to relieve the hunter of all labor while on the trip is attended to. The next morning one of the partners starts for that portion of the range where obsesvation has shown the band most likely to be.

At sight of the outfit the mustangs huddle together for a few moments, the more wary walking nervously around the others. Then off they go, the stallion always behind, keeping between his charges and the threatened danger. A mile or more away they stop and face around, the leader with arched neck trots back a few yards, paws the ground as he gazes long and earnestly at the strange object plodding slowly toward him. Then, as if he had solved the mystery, he gives a neigh of alarm and the whole band go thundering out of sight.

The hunter notes their course, fills his pipe and settles back for a long ride. There is no hurry here. His is the waiting race carried to the utmost bounds of patience. The chances are he will see nothing of his quarry for an hour or more, and even then it may be only a column of dust far ahead which tells him that the watchful leader has been on guard and again has his harem on the run.

So the morning passes, the mustangs keeping the same general direction in which they started. At noon the team is unharnessed and allowed to graze for an hour, when the chase, if such it can be called, is resumed. During the afternoon, at every favorable point, the glass is used to see whether the pursued are still on ahead. By sundown it is likely the limits of the range have been reached and the band is circling back. The hunter makes camp, waters his animals from the keg, gives them plenty of picket rope and turns in early.

As it is by wearing them out that he hopes to accomplish his end, he is on the move as soon as there is sufficient light to be of any service. The day's work is begun by "cutting for sign." If the trail shows they have returned, he jogs along, keeping a sharp lookout in all directions. If he sees nothing of them he shoves on to the watering place.

Likely enough the band, thirsty from yesterday's run, are ahead of him, and, having drank their fill, are stretched out on the grass that grows thick and soft as a robe around the lake. On the contrary, if the mustanger is there first, so much the better. The team is watered, the keg is refilled and he waits. Nor is the vigil a long one, for that line of animals, strung out in Indian file along an old buffalo trail leading to the water, are the objects of his search. At sight of the buckboard they are gone again, and yesterday's experience is repeated today.

So it continues, with many trials and disappointments, for a week. By that time, if the hunter is up in his business and has had average success, the wild horses are getting footsore. The vehicle is becoming a familiar sight, and they are content if it keeps a mile away.

The man who has been staying in camp now takes a hand in the game. His appearance on horseback is a cause for fresh alarm, but this gradually dies away, and by the ninth day the band can be turned in any direction and the buckboard drops out of the chase. From this time on the partners divide the watches. While one rests the other keeps the fatigued brutes on the move. They are herded within a few miles of camp, and if there is a moon the work continues well into the night. Great care is necessary now to keep the bunch from splitting up and wandering off.

In twelve days, as a rule, they are docile enough to be worked toward the corral, gentle horses being used as a decoy. Once in the wings they are crowded along, and before they realize what has happened the bars are up and their liberty is at an end.

Each animal is thrown and a short chain or forked stick, called a clog, is fastened to a foreleg to prevent them running when turned out. The bold barbs of the plains undergo a woeful change when cooped up in a corral. Viewed at close quarters they are a narrow chested breed, dear at $100 per dozen. They never forget their wild life, and no matter how much care may be bestowed upon them, at the first opportunity they will leave the civilizing influences of the ranch and join the free bands that still roam their native flats.—Cor. St. Louis Globe-Democrat.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 15 1893

It is expected that in the Senate debate on the bill for the repeal of the silver purchase clause of the Sherman act will continue a month longer. Thirty-three Senators are expected to make long speeches, several to occupy two days each. In the Senate there is no rule for limiting the time occupied in debate, and in the absence of such a rule the Senators who favor silver may prevent a vote during the entire session. The gold men are not having such an easy walk over as they expected.

A comparatively few men claim that they alone know all that can possibly be known about finance, and that to them of right should be left the framing of all laws governing the issue of money. This claim of the money kings has been long allowed to them and their servants, and the result is a cyclone of ruin that sweeps over the whole world every few years, and entails as much suffering as war, famine, or pestilence. Either the claim of the money kings to superior knowledge is a lying fraud, or if they possess such knowledge they use it as highway robbers use weapons or burglars use the tools of their evil trade. In either case the people should not entrust such mighty power to a few men whose interest it is to use it only for their own selfish ends.

The utter dishonesty of the gold clique in New York is made more manifest than ever, by the fact that clearing house issues of paper were made to balance accounts, there not being coin enough to meet the needs of business, and that these paper issues are declared to be illegal. Yet all the gold produced in the world is coined into money as soon as possible after it is procured from the ground, with the exception of what is used in the arts. It is evident that the advocates of the entire demonetization of silver are not only willing, but eager, to paralyze every industry, wreck every business and enslave all toilers, if it will add to the ill-gotten gains and enormous wealth of the few men who now own and control the money of the world.

If the title "Great" may be applied to men whose acts affect the lives and fortunes of human beings throughout states, nations, and even the whole world, then John Sherman should be called a "Great" man, one of the "Greatest" that ever lived. The influence of Alexander and other men who have been called "Great" was confined to very narrow limits, compared with that of John Sherman, for his influence is now felt in every community of human beings on the earth. If this world should be enveloped in the vapor of a comet, its inhabitants could not be more generally subjected to the influence of that vapor than they now are to the financial influence of John Sherman. In ages of ignorance comets were regarded with fear and horror as the harbingers of pestilence, war and famine; but evils scarcely less than fear and ignorance imagined from comets now really afflict mankind through the acts of this "Great" man. In the light of better knowledge we smile at those who feared comets; in the better light of history few names will be more execrated than that of John Sherman.

Genius has been defined as the perfection of patience; in this sense few grander instances of genius have been seen than Gladstone's management of the Home Rule bill for Ireland. But the passage by the Commons of this bill is a long step toward the breaking down of class privilege and making the government of England more like that of the United States. Every advance of popular liberty is stubbornly resisted in the House of Lords; this last and most powerful relic of feudal tyrranny and class privilege bitterly resists every advance toward equal rights and privileges for all men. The Lords have never consented to a single measure in favor of the masses till force and fear compelled assent. In the deadly struggle for liberty under the lead of Hampden and Cromwell, the House of Lords had to be abolished in order that free government might be secured. Two hundred years later it was only stern coercion by the Duke of Wellington that forced the Lords to consent to the Reform Bill, and the abolition of the gross abuses that it swept away. Sooner or later the people of England will sweep away the House of Lords and all the hoary relics of ages of ignorance, brute force, tyrranny, class privilege and other relics of barbarism connected with it

Memories of 1871.

On the last week in May each year the French socialists are accustomed to celebrate the "bloody week," which witnessed the downfall of the Paris commune in 1871, the killing of 25,000 of the inhabitants and the exiling of 50,000 others. As early as 1880, under the leadership of Gambetta and the moderate Republicans, a general amnesty was voted, with only five or six exceptions, to the participants of the commune. It is significant also that many of the municipal regulations which the communists demanded were afterward granted by the chamber of deputies.

"Bloody week" began on Sunday, May 21, when the Versailles troops entered Paris by a breach in the fortification wall which the national guards had neglected to defend. They came in by the Bois de Boulogne, and terrible street fights continued daily until on the following Sunday, May 28, Marshal McMahon was in full possession of the city and declared the commune at an end. On May 23 the Versailles troops captured the Central Market halls and threatened General Bergeret, who was stationed at the Tuileries. He was forced to retire, blowing up and burning the Tuileries as he left, but managed to save the Louvre, which some of his followers wished also to destroy. The fighting was mostly done by national guardsmen against heavy odds and resulted in fearful slaughter; hence the week has obtained its name.—New York Herald.

Where Pianos Are Taxed.

Pianos are taxed in Elizabeth and some folk I know are very wrathy thereat. I think that by taxing pianos Elizabeth has placed itself in the very van of Enlightment with the big E, for mark, after all, it is not the instrument but the player thereof that must pay the tax. If the principle that warrants the tax is faulty in any particular, it is in the fact that the tax is not graded according to the skill or want of skill of the player. Had I my way I would tax certain pianos in this city $100 a year, and there are others that I would report to the board of health as nuisances that cried to heaven for abatement. If Paderewski would come to town with a piano or to play on an instrument already here, I would exempt it from taxation.

I bless without mental reservation that law giver whose wisdom devised the tax upon pianos. He should have a monument beside which the figure of Liberty in the bay would be but a pygmy. He has perhaps the maledictions of half the piano torturers in town, but "I honor him for the enemies he has made," for the pianists he has suppressed. I contend, however, that the tax should be assessed not according to the value of the instrument, but according to the skill of the player. The method I suggest would be most equitable, it seems to me, and would go far toward meeting all the expenses of the city government.—Elizabeth (N. J.) Herald.

Theory About Bee Stings.

It is a fact not generally known that if one holds his breath wasps, bees and hornets can be handled with impunity. The skin becomes stingproof and holding the insect by the feet and giving her full liberty of action you can see her drive her weapon against the impenetrable surface with a force which lifts her body at every stroke, but let the smallest quantity of air escape from the lungs and the sting will penetrate at once. I have never seen an exception to this in 25 years' observation. I have taught young ladies with very delicate hands to astonish their friends by the performance of this feat, and I saw one so severely stung as to require the services of a physician through laughing at a witty remark of her sister, forgetting that laughing required breath. For a theory in explanation I am led to believe that holding the breath partially closes the pores of the skin. My experiments in that direction have not been exact enough to be of any scientific value, but I am satisfied that it very sensibly affects the amount of insensible perspiration.—Science.

All Things to All Men.

The late Mr. Broadwater of Montana had the misfortune to be bowlegged, which suggests an anecdote told of Senator Sanders of that state. The senator has always been opposed to Major Maginnis of Montana and has been in the habit of criticising his course with considerable western freedom. "The trouble with Major Maginnis," he said on one occasion, "is that he is all things to all men. With a Republican, he is a Republican; with a Democrat, he is a Democrat; with a Presbyterian, he is a Presbyterian, and, by Jove, with Broadwater he is bowlegged."—New York Tribune.

The After Dinner Speaker.

The after dinner speaker must not talk nonsense and must not talk about nothing. But he must seem to be original, no matter what leisure he may have given to get at the sources—the headwaters of his good things—and he must be brilliant, even though his brilliancies should have been carefully thought out in the dark. Wit is his province more than wisdom, although a dash of the wisdom may be tolerated if it is brought wrapped up in wit and humor, like the sword of Harmodius among the wreaths of laurel. —London News.

Inclosing a Stamp.

When you buy a sheet of postage stamps, do not tear off the blank edge. Instead leave it attached, and when you inclose stamps in a letter turn back a part of the blank paper, moisten it and stick it to the head of your letter. This act will call down blessings upon your head from the editor who is accustomed to receive his stamps loose and fluttering, or, what is worse, irrevocably stuck to the letter.—Writer.

Proof Positive.

"Do you think that marriage is a lottery?"

"Certainly not. Are not love letters allowed in the mails?"—Truth.

(Official.)

Ordinance No. 49.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Section 7 of Ordinance No. 43 which was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California at a regular meeting of said board held on the Monday of January 1892, and which ordinance No. 43 is recorded in Ordinance Book "B" at pages 99 et seq. and was amended by Ordinance No. 47, by the said Board of Supervisors, on the 9th day of April, 1893, which said amending Ordinance is recorded in Ordinance Book "B" at pages 159 et seq., is hereby amended to read as follows:

Section 7. Every person who at a fixed place of business sells any malt or fermented liquors, wines or distilled liquors, whether on commission or otherwise (except wine and fruit productions, when sold by the producers thereof, and fermented or malt liquors when sold by the manufacturer thereof, on the premises on which the same shall be manufactured), must obtain from the Tax-Collector, and for each branch of said business, a license, and must pay quarterly therefor the sum of Forty Dollars. And every such manufacturer of any malt or fermented liquors, who sells the same on the premises on which such liquors may or shall be manufactured must obtain from the Tax-Collector, for such business, a license, and must pay quarterly therefor the sum of Twenty Dollars.

SECTION 2. This Ordinance shall take effect and be in force on and after twenty-five (25) days from its passage.

SECTION 3. This Ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the "Inyo Independent," a newspaper printed and published in the said County of Inyo, at least two (2) weeks said publication to be made said time and before the expiration of said twenty-five (25) days.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

{SEAL}

Attest: D. J. HESSION,
Clerk of said Board of Supervisors.

The above and foregoing Ordinance No. 49 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo State of California, at a regular meeting of said Board held on the Eleventh day of July, 1893, by the following vote:

Ayes: Supervisors Frank Fitzgerald, A. C. Freeman, John Wilson, W. H. Culmeyer, R. Love.

Noes: None.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

{SEAL}

Attest: D. J. HESSION,
Clerk of said Board of Supervisors.

[Endorsed.]

ORDINANCE NO. 49.

Adopted July 11, 1893.

D. J. HESSION Clerk.

Recorded July 11, 1893, in Book "E" of Ordinances, at pages 163 et seq.

D. J. HESSION,
By J. E. PARKER, Deputy. County Recorder.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF THIRD Township in the County of Inyo, State of California.

L. WOOD, Plaintiff, vs. JESUS ENCENAS, Defendant.

The people of the State of California send greeting to Jesus Encenas, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's court of Third Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to obtain judgment against you for the sum of $225.86 alleged to be due and owing from defendant to plaintiff upon an account stated between plaintiff and defendant, at Independence, Inyo County, California, on the 12th day of June, 1892, which sum or $225.86 defendant agreed to pay to plaintiff. For costs of suit, as more fully appears by the complaint on file herein, to which you are referred.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of $225.86 and costs of suit.

Make legal service and due return hereof.

Given under my hand this 2nd day of August 1893.

IRV. H. MULHOLLAND,
Justice of the Peace of said Township.

P. E. DENSMORE, Attorney for Plaintiff.

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ⅓ bottle. I tied up one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a **running from her nose** for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. **I have not seen any** discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March 1893, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th 1893.

Filed decree showing that legal notice has been given to creditors in estate of Schuyler Williams, deceased.

Estate of Henry Evans—Ordered decree of final discharge.

Estate of A. Spencer—Ordered decree of final discharge.

Estate of Wm. Ischinger—Ordered decree of final discharge.

THURSDAY, Sept. 14, 1893.

People vs. T. B. Scovil—Information filed, citation ordered issued. Citation issued for defendant to appear for arraignment at 10 o'clock a. m., Sept. 25, 1893.

MARRIED.

DAVIES—REYNOLDS—At the Reynolds place, near Independence, September 14, 1893, by C. Mulholland, J. P., John Davies to Miss Prescilla Reynolds.

DIED.

PEREGRINE—At Bishop, Sept. 11, 1893, James Peregrine, a native of Pennsylvania, aged 62 years

DONOHUE—At Green Land Ranch, Furnace Creek, Death Valley, Inyo Co., Sept. 4, 1893, James Donohue, a native of Ireland, aged 46 years.

Bar Silver is quoted at 74⅜.

J. J. Gunn has got back to Independence after an absence of several weeks.

The second crop of alfalfa is cut and nearly all in stack about Independence.

S. G. Sneden, Esq., has been here most of the week, attending to legal matters at the Court House.

Fred Holbert brought down two hundred head of beef cattle from Long Valley to Bishop at the beginning of the week.

On Monday Constable Murphy will sell at public auction eight head of horses. The sale will be in front of the Court House at 10 o'clock a. m.

Tom Webb and Frank Whitmore came in last evening from Long Valley. They report that on Wednesday morning there was three inches of snow in the Valley.

Thomas Rhodes, a well known mining man, committed suicide at Los Angeles last Monday. He shot himself in the mouth; the bullet went through his brain.

At the beginning of the week rain at Bishop put the race track in bad condition for the horsemen to train their animals. But the track will be improved for the races next week by this wetting.

Governor Markham in a communication to Secretary of State Gresham, attributes the anti-Chinese riots at Fresno to the dissatisfaction of the people, because the law of Congress was not promptly enforced.

The Bridgeport *Chronicle* says that a boy aged 3 years fell into a tub of water recently and was drowned. The child was the son of John McAllister of Antelope Valley and the accident occurred at home.

As Pittsburgh and other great manufacturing centers in the east, business is rapidly recovering from the recent collapse. The result is entirely an artificial scare, brought on to influence Congress to legislate as they wished.

R. Dockter reports the death of James Donohue at Death Valley as follows: Jas. Donohue arrived at the Borax Company's ranch about 4 p. m., Sept. 4th; about 5 p. m. took a bath; 6:30 p. m. ate a hearty supper; talked and joked until a little after 9 p. m. when he went to bed, appearing in good health. About 9:50 p. m. got up, took a drink of water, and in ten minutes died. The parties at the ranch pronounced the cause of death heart disease.

What Owens Valley Produces.

An orchard, nothing in rural life is more pleasing to see. About Independence just now the orchards are delightful to visit. Elijah Robinson, John Baxter, Lank and Keboe, Mrs. Lewis, C. A. Walter and other fruit growers are busy gathering and packing such fruit as would win admiration anywhere. It is worth a long journey to visit the orchard of S. A. Densmore. Apple trees loaded to the ground with such apples as would be hard to match by searching the world over. From palest green to dark crimson, all shades of color are seen. For size, flavor, firmness and freedom from blemish of any kind, these apples cannot be excelled. Pear trees are loaded with fruit as thick as pears can stick upon the branches. The nectarines and peaches are nearly all gathered, but enough yet remain upon the trees to show what excellence these fruits attain. But none of the trees are so beautiful to the sight as the plum and prune trees. The fruit hangs upon these trees in clusters like grapes. Some are like great rubies, and seem to glow with the deep rich fire of that gem; others are of a purple color, richer than any robe that ever royalty was clothed with. Mr. Densmore is drying and packing the prunes now as fast as he can get help to pick the fruit. The varieties are chiefly French, German and Hungarian prunes, and those already packed surely cannot be excelled anywhere. If any one wants to know what fruit can be grown in Owens Valley a visit to the orchard of Mr. Densmore will be found satisfactory; any one who finds pleasure in a beautiful sight will be satisfied there also.

The Opportunity Should Not Be Lost

At Los Angeles extensive preparation is making for the Irrigation Congress to assemble there on October 10th. This will be the best opportunity ever open to Owens Valley to make a display of its products. If proper steps are taken here to have Inyo county well represented, no part of Southern California will profit more from this Congress. Representative men from Eastern States and from foreign countries will attend the meeting, and will make careful inquiry about localities for investing capital and establishing colonies. Inyo county can offer more good land, greater abundance of water, variety of products and a more healthful climate, and where more property can be secured for a given amount of capital than any other region so closely related to Los Angeles. With these great natural advantages a proper representation at the Congress ought to result in advantage to the county.

A Birthday Party.

Last Saturday a party was given to celebrate the fourth birthday of Harry Mack. Invitations were issued, and over forty children attended. The party met at the Masonic Hall soon after one o'clock. Music was provided, and the little ones had a jolly romp till called to refreshments at the home of their little entertainer. Ice cream without limit, cake of many kinds, fruit and lemonade in abundance offered such attractions as are most relished by children. When all were satisfied they returned to the Hall and were amused with music and games till evening shades gave notice it was time for little folks to go home. The unrestrained, natural and hearty enjoyment of the children afforded rare pleasure to their entertainers and the older people who were taking care of them.

Fair Race Programme.

FIRST DAY.

Trotting, 2 year-olds, free for all colts raised in District; mile and repeat, purse $100—$75 to first, $25 to second.

Running, ¼ mile dash, free for all, $50.

Running, 2 year-olds, ½ mile dash—$50

THIRD DAY.

Trotting, 3:10 class, mile and repeat—$75

Running, mile dash, free for all—$100

FOURTH DAY.

Trotting, free for all horses owned in the District, 3 in 5, mile heats, $150—$100 to first, $50 to second.

In all races entrance fee 10 per cent; 3 or more to enter, 2 or more to start.

More Los Angeles Visitors.

W. R. Wynn and J. H. Alderson of Los Angeles were at Independence this week. Like all other visitors who have been here from Los Angeles the past few months, these declared Owens Valley to be a far finer country than they had been led to expect. They visited orchards about Independence and declared the fruit to be far superior to any they had seen elsewhere in the State. Apples, pears, prunes and peaches excited their especial admiration, and both declared that if the fruit could be sent by rail direct to Los Angeles the demand would be virtually unlimited. Mr. Wynn is an old friend of C. Mulholland they having been neighbors in Lassen county, this State, many years ago.

Coals To Newcastle.

At the beginning of the week a band of horses passed down the valley to Lone Pine. There are two hundred and fifty head of animals, and the owner says he will send them by sea to Guatamala, Central America. The general impression hereabout is that in Central America horses are of so little value that it would be little better than total loss to take them from here to that country; but the owner of this band says he was in Guatamala not long ago, came back and bought these animals in Nevada, and knows he can realize a fair profit on the venture.

The Reno *Gazette* says a scheme is on foot to annex Utah to Nevada and strongly opposes it. The *Gazette* says if the scheme should succeed the capital would be removed to Ogden or Salt Lake, and in that event urges the people of Western Nevada to petition for annexation to California. If a fraction of the millions taken out of the Comstock had been applied to develop the agricultural resources of Nevada and to promote manufactures the State would be populous, prosperous and progressive.

The Secretary of State for Mexico has notified the United States Secretary of State that a distinguished citizen of Mexico has been commissioned to represent his government at the Irrigation Congress at Los Angeles.

The miners of the Comstock refuse consent to a reduction of one dollar a day from their pay. They show that at several mines much more money is paid to officers of the companies than to all the working men employed.

A breeze from the north on Tuesday evening shook large quantities of pears and apples from the trees about Independence. Both fruits are so fine and beautiful it is a pity they could not be sent to market fresh, but they will make the finest of dried fruits.

On Sunday J. H. Alderson and W. R. Wynn, both of Los Angeles, started a band of one hundred and fifty head of horses toward Los Angeles. The animals were brought from Nevada about three months ago, and were kept pasturing at Georges Creek until started for Los Angeles.

Professor Davidson, who has charge of the party making a survey of the line between our own State and Nevada, says the new survey will make no material change in the line now established, and very few people will be affected. At least two years work will be needed to complete the survey.

James Peregrine died at Bishop last Monday and was buried next day. He was a native of Pennsylvania, aged about 62 years. A few weeks ago he was seriously hurt by falling from a mowing machine when cutting alfalfa at his place near Laws station; he was taken to Bishop for medical treatment, but remained in a helpless condition till the end.

All the stalls at the Bishop race-track were occupied by race animals last week. On Monday I. H. Mulholland arrived there from Independence with four horses to enter for races; comfortable quarters were promptly provided for him in the town by kind friends, and no effort was spared on their part to make everything pleasant for him.

Yesterday Miss Prescilla Reynolds was married to John Davies. The ceremony was performed at the home of the bride a few miles south from Independence. Being less than a year since the death of the bride's father no invitations were issued, and only the members of the family were present. The many friends of Miss Reynolds at Independence, who have known her since childhood, join in hearty wishes for the happiness of herself and husband.

At Fresno mobs have killed at least two Chinamen; beaten several others severely, and destroyed some property. These outrages will be seized upon in the East to create sentiment against the Geary Act. For all damage done to life and property the government will have to make compensation. Honest effort is now being made to carry out the Geary law, and every act of outrage against the Chinese will embarrass the State and Federal authorities. There is no excuse for rioting and all found guilty of it should be severely punished.

Of all yet published about the Fair at Chicago we have not seen anything to equal the September number of the *Cosmopolitan*. The illustrations are beautiful, and give a far better idea of the buildings than would be possible by any written description. The number contains twelve separate articles on different features of the Fair, all written by eminent persons. One of the articles is by ex-President Harrison, and, while short, is one of the best articles of the series. The September number of the *Cosmopolitan* would be of especial value to all young people and will be carefully preserved and referred to in coming years by most persons who are fortunate enough to own copies. The number costs but 12½ cents. Address, Cosmopolitan Publishing Company, Sixth Avenue and Eleventh Street, New York.

None but Royal

Baking Powder is absolutely pure. No other equals it, or approaches it in leavening strength, purity, or wholesomeness. (See U. S. Gov't Reports.) No other is made from cream of tartar specially refined for it and chemically pure. No other makes such light, sweet, finely-flavored, and wholesome food. No other will maintain its strength without loss until used, or will make bread or cake that will keep fresh so long, or that can be eaten hot with impunity, even by dyspeptics. No other is so economical.

If you want the Best Food, Royal Baking Powder is indispensable.

Happiness Not Purchasable.

I wish that every man and woman who is convinced that money is the most desirable of all possessions could know a poor creature whom I see almost every day. She is the wife of a man reputed to be worth $10,000,000. Whether this figure is or is not correct I have no means of knowing, but I am certain that, like the young man in the Scriptures, he has great possessions. There is nothing which money can secure that this woman may not possess, and yet I scarcely know of any being whose life is more despicably poverty stricken. She is no longer young, and age and its constantly nearing goal—death—are full of terror for her.

In such high value does she hold the worthless, ragged remnant of her life that she will not ride in a carriage lest it be endangered. As the world, venal as it is supposed to be, refuses to pay continual homage to her one desirable possession, money, she finds no pleasure in the society of her kind. Failing to understand that such power as she possesses is but a trust, she has abused it with a prodigality that has resulted in placing her, as it were, in a desert of unloved loneliness. Morning, noon and night she sits in the effortless desolation with which wealth has environed her.

The milk of human kindness, if it ever existed, was long since eliminated from her nature, and effort for others does not enter into her calculations. The gratification of appetite is her one activity, and the monotony of each day is varied by the ordering, at some swell hotel or restaurant, of an elaborate meal, including iced champagne, and the eating of it alone. I will admit that this is a somewhat extreme case, still it is a faithful demonstration of the fact that happiness is a condition which is not purchasable.—Chicago Post.

A Pent Up Longing.

The well known fact that "out of the abundance of the heart the mouth speaketh," was amusingly illustrated a short time ago at a large and fashionable hotel on the North Shore. A thunder shower which came on early in the evening increased to violent proportions, and was accompanied by a gale of wind which shook the house and caused considerable alarm among the guests. Many of those who had already retired to their rooms came out into the corridors, while the gentlemen hastened about assisting in closing windows, fastening doors, etc.

A sudden blinding flash of lightning followed by a heavy crash of thunder, proved too much for the already overwrought nerves of one member of the fair sex. Rushing from her room she precipitated herself into the arms of a gentleman who happened to be passing down the hall at that moment. "Oh, save me!" she cried. "The house will be struck, I know it will."

Mistaking her in the dim light for a married friend of his wife, he disengaged himself somewhat hastily from her clinging arms and said dryly: "There is not danger, madam. But why do you not go to your husband?" "I haven't any, I haven't any," she sobbed hysterically. "Oh, I wish I had." The gentleman who tells the story says that the pent up longing in the tone in which the last five words was uttered was a revelation in itself.—Boston Gazette.

Sea Sickness on Land.

We have seen several cases this summer of obstinate nausea, brought on by sailing, where, under a hot sun and tossing about on a rough sea, the patient has felt "uncomfortable," but not actually sick, but on arriving at home has experienced the distressing symptoms of sea sickness, without the consolation of knowing that the trouble will be over as soon as he reaches terra firma. Headache and a little fever generally accompany such bilious attacks—for such they are—the hot sun and the "churning" having proved too much for a sensitive stomach. A mustard plaster, applied as hot as can be borne, is an excellent remedy; this, with a drop of camphor in a teaspoonful of water, given every fifteen minutes, will generally check the nausea, and followed by a "liver pill" at night may often prevent a troublesome illness of several days. This "land sickness" is a curious thing, and is not at all uncommon. Many persons feel decidedly uncomfortable after an ocean voyage, who experience no illness whatever "on board ship," and it is always safe to take a little laxative medicine after leaving the vessel as a preventive as well as a cure.—New York Tribune.

The Graceful Girls of Siam.

The Siamese girls are the most graceful women in the world. Their joints are very supple, and a part of their education is made up of bending their joints back and forth to make them so. They are all short haired, and when young they are as plump as partridges and as straight as the palm trees of their own beautiful land. As they grow older they become wrinkled and ugly, and the most of them ruin their teeth from chewing the betel. Only the fewest of them are educated, and I don't think that they would be happy in our high, French heel shoes, and they would die if bound in our corsets and crinoline.—Frank B. Carpenter's Letter.

Points About a Course In Laundering.

The establishment of a laundry course at Pratt institute makes it possible for the young housewife in Brooklyn or those under her to do away with the terrors of a Monday that is usually intensely blue. The course may be taken in three months and consists of historical notes concerning laundry work, the location of the laundry, its appointments and the care of them. A preliminary lesson also teaches the proper classification of the articles to be laundered as the housewife divides the white pieces into table linen, bed linen and body linen, and the colored pieces, such as flannels, calicoes, etc. The theory of washing comes next and includes a talk about water, washing soda, soaps, bleaching powders, bluings, with tests of the last three articles. The different methods of removing stains come under this head. In the practice work that follows the pupils scald, rinse and blue bed linens and towels.

Next comes the theory of sprinkling, stretching, folding and ironing, and a talk on the history and preparation of starch. The practice work that follows takes up starchmaking, the treatment of table linen, body linen and handkerchiefs, shirts, collars and cuffs, and the making and use of cold and boiled starch. The care of underwear, silk, merino and flannel, is followed by lessons on washing and ironing prints and hosiery. Clear starching is taught by itself and includes the laundering of infants' dresses, fancy handkerchiefs, laces and embroidery.

Lessons are also given in the washing and ironing of crewel and colored silk embroidery. Unless in cases where the articles need to be ironed before they are dried, those washed in one lesson are ironed in the next. Visits to factories where bluing, starch and soap are made are a feature of the course.—New York Post.

What Becomes of Many Dresses.

Luxury and extravagance in woman's dress have undoubtedly reached an excessive pitch, not only on account of the costliness of the fabrics used, the daintiness of all accessories, but because fashionable ladies—and those who ape them—decline to wear the same costumes more than three or four times. An apparently inconsistent result has arisen from the plethora of feminine wardrobes—the dealers in secondhand clothes, the insidious traders who leave mysterious documents in your letter box vaguely addressed "to the lady of the house" and who promise inviolable secrecy about transactions, including the purchase of any article from false teeth to diamonds, are at present distinctly on the increase and, moreover, on the high road to fortune.

There is hardly a wealthy woman now belonging either to the aristocracy or plutocracy who does not one time or another, vicariously or directly, dispose of the garments which she has not the inclination to wear out. Of course furs, jewelry and laces find a market in establishments far removed from secondhand shops; a great number of first class houses undertake to offer really good articles of the above kind to their regular customers and to sell them for a commission agreed upon with their clients. But the average woolen or silk frock, the velvet or cloth mantles, the millinery hardly worn are, with the out of date underclothing, sent to well known dealers, who carry on an extensive export trade and realize large profits. It is there that the needy provincial actress, the would be fashionable middle class, provide themselves with the finery so dear to their vanity and in another sense too dear for their scanty means.—London Letter.

Eggs Bigger Than Those of the Ostrich.

In the museum of the Academy of Sciences at Paris, the British museum, London, the National museum at Vienna and in several smaller institutions for the advancement of science there may be seen specimens of birds' eggs which are almost as large as a two gallon jug. The lineal measurements of these giant eggs, which were laid by the epinornis, an extinct and gigantic feathered monster which formerly inhabited Madagascar, make an ostrich feel ashamed of herself. The cubic bulk of these eggs is eight times that of the egg of "the silly bird of the Sahara," which makes each of them equal in point of capacity to 150 hens' eggs.

The first discovery of these interesting relics of past times was made by the captain of a merchant vessel, which had stopped at a port on the northeastern coast of Madagascar to trade with the natives. During the stay at the point mentioned the curious vessels used by the natives for water vases attracted the captain's attention. Upon investigation it was found that these odd utensils were in reality gigantic eggs cut in halves. Upon questioning them in regard to the bird that laid the eggs and the place where they were procured the captain was given to understand that the bird itself was unknown, but that the eggs were found in a sand bank some distance away in the up country.

An offer to purchase all that could be procured soon resulted in the discovery of several fine specimens, all of which fell into the hands of Isidore G. St. Hilaire, the French naturalist. These were distributed around among the museums mentioned.—Philadelphia Press.

Dishwashing at the Fair.

Every housewife who goes to the fair will want to see the dishwashing department in the Machinery hall. The dishwashing machines are operated by girls and are used in cleaning the tableware of the many restaurants on the grounds. The plant cost $50,000. The dishes are washed in huge revolving horizontal cylinders. Inside these cylinders on the outer edges of the wire cages the cups and saucers are placed. Outer revolving attachments carry warm water up and dash it against the soiled dishes, which are afterward dried by heat.—St. Louis Republic.

Antelopes and "Tumble Weeds."

I was sitting in a passenger car looking out over a stretch of prairie land in the great Arkansas valley. The day was windy; indeed, a ship captain who sat next to me said it was "half a gale," though, judging from the way the wind shrieked past us, I should not have thought of using a fraction in describing it.

Suddenly a number of elegantly shaped, slightly built animals appeared in the distance and rushed toward the moving train. The wind, the antelopes—for such they proved to be—and the train engaged in a race, in which the antelopes for a short time held their own, but what most astonished me was that the antelopes were pursued by great gray balls, some of which were from four to five feet in diameter.

Not one of our party could imagine what these were, never having heard of anything of the kind. We watched the curious sight until the locomotive and the wind left the antelopes and the pursuing balls far behind us. To increase our interest, however, many more such balls could be seen on the windward side of the track, piled up against the wire fences and in ravines and gulleys along our onward route.

I afterward learned that what our party saw were known to the plainsmen as "tumble weeds," and to botanists as the Cycloloma plalyphylium. It belongs to a genus of plants that grow in a thick, globe shaped mass of twigs and small branches, attached to their roots each by a small stem, which in the fall becomes dry and brittle, and, as the autumn winds sweep over the prairie, these stems break off and the tumble weeds go bounding away, scattering their seeds as they go.

Antelopes and jack rabbits, grouse and prairie dogs are put to flight, cattle are stampeded and the roadbeds clogged by these flying masses of brushwood.

Language of Elephants.

The language of the elephant is as well understood by the East Indians and those who have to do with the large animals as if the communication was made in their own tongue, though curious to tell, the sounds in India and Ceylon have different meanings imputed to them. When enraged the elephant utters a shrill cry through the trunk, which may be taken as a warning.

A sportsman engaged in hunting elephants had approached a large tusker when he found, to his chagrin, that he had dropped his ammunition, so that he could only lie concealed and feast his eyes upon the huge animal. His disappointment was partly compensated by observing the large elephant informing the rest that danger was lurking near them. Communication was made in the following way:

The tusker was feeding and moved slowly around until he suddenly came below the concealed sportsman, when, with its wonderful scent, it immediately recognized the presence of an enemy. It stopped feeding, raised the tip of its trunk cautiously, then in a low, suppressed, but penetrating tone uttered with its lips the word "prut," repeating it so that it sounded something like the twittering of a bird. The sound would hardly have been noticed had not the sportsman been near at hand, but it was immediately understood by the herd, that moved quickly but silently away followed by the sentinel.—St. Paul Dispatch.

Simplicity of Carlyle's Life.

There was in Carlyle a certain arrogance of intellect that grew with years, and often asserted itself in fashions that he himself felt to be grievous. This has been mistaken for arrogance of heart. But arrogance of heart he never had. In sympathies and manner of life he remained to the end much of the simple peasant. Seldom a year passed, of the eighty-five that he lived, that he did not spend a month or two among the Scotch heaths and peat bogs in or near his humble boyhood home.

There, nearer than anywhere else, his restless soul came to the attainment of that peace and composure which it was quite capable of nowhere. To the end his own poor, toiling, uneducated kinsmen continued the dearest people on earth to him, and rarely came a payment from editor or publisher that, whatever his own necessities, he did not share it with some of them. Had they been stupid I am not sure that he would not at times have shown them scant mercy, but their humbleness only bound them the closer.—E. C. Martin in Scribner's.

Training for Modern Life.

Every man ought to know what kind of a universe he is in, what his relations to it are, what and where invariable conditions are imposed, what in the nature of things is possible and what impossible, within what limits all his achievements must be, and hence what ideals he may consistently cherish that his work may not be in vain. It hardly needs to be said that neither literature nor art nor history nor theology can acquaint a man with these. Only science can do it—science not as a mass of facts, but as a body of relations.

If there be anything that the ordinary man is markedly deficient in, and which the best schooling has not added to his mental equipment, it is his failure to see the necessities of relation. Exercises in logic and the study of mathematics have been supposed to qualify a man to be logical, but if by this is meant that for every effort to be explained an adequate cause must be assigned, then most men are unequal to the occasion.—Professor A. E. Dolbear in Popular Science Monthly.

The Waffle Man.

A man with a tray of hot waffles stands in City Hall park almost every night from about 6 to 8 o'clock. He seldom says a word to the passers by. Any person with a fondness for waffles can procure one by putting a nickel on the tray. The queer old peddler was quite crusty a few nights ago because a customer asked him for change out of a quarter of a dollar. Looking fiercely at the owner of the quarter, the waffle man said, "There's change on the tray. Help yourself."—New York Times.

Many Thousands of New Words.

The progress of invention and discovery and applied sciences is constantly adding new words to our language. The words and phrases under the letter "A" in Worcester's Dictionary are 6,963; in Webster's, 8,358; in the Century, 15,621, and in the Standard, now in process of publication, 19,736.—Philadelphia Ledger.

The Oldest Retail Merchant.

Mr. Matthews, who is over 80 years of age and still actively engaged in conducting his large store on Fulton street, Brooklyn, is probably the oldest retail merchant in the United States.

A CONVENTION FOR GREAT BRITAIN.

An Experience of Forty Years Ago Recalled by the Home Rule Bill.

It is 40 years or more since I received a visit in Worcester, Mass., from a young Englishman who has since risen to high distinction. He was glad to hear me talk on American politics, and I enlightened him as I could.

Among other things I told him he must stay in Albany long enough to see the convention which was remaking the constitution of the state of New York. And I said he would be interested in seeing in session at the same time the legislature of New York, carrying on its business under the old constitution at the same time when the convention was making another. I said that if the French had understood our system and had a separate convention to make the constitution, with a separate parliament to govern France, they would have done better, for this was not long after their revolution of 1848.

My friend looked at me with surprise and said that what I proposed was impossible. He said that one of the two bodies must be superior in authority to the other. The other then would either refuse to act or would act merely to register the decree of a higher power.

So I began all over again, as you do with such people, and explained again that the business of making a constitution is one thing, the business of governing a state or nation is another. You might as well say that while you were sailing a ship the seamen should occupy their leisure in making a steam engine for her as to say that a legislative body fit for one business should turn to making a constitution, which is quite another business.

In fact, there is a sort of risk in letting the legislature make a constitution, for if it has that power another legislature can unmake it, and then nothing is really constituted.

My friend listened to me with the courtesy of an English gentlemen, and then with the solidity, or stolidity, which they sometimes show he said: "What you propose is impossible. One body must have control over the other." And so I bade him goodby—on one of the hottest days of this century. And he took the train to Albany to see the next day, as I suppose, the constitutional convention and the legislature of New York sitting and working in the same city at the same time—to see his impossibility made possible.

I have never seen him again, except in his seat in the house of commons, I being in mine in the gallery.

I do not know if he is in the house of commons now, or indeed if he is living. If he is, I wonder if he ever "harks back" to that day in Albany, for the house of commons is working at that same well nigh impossible undertaking, which has brought France such misery so often, and which America never attempts—that is, the house of commons is trying to be a constitutional convention. The regular legislation of Great Britain is neglected because the house is revising the constitution. And the revision of the constitution limps and is hindered because the house is trying to carry on legislation at the same time.

Now, constitution making is one thing, and legislation is another.

In this matter of home rule Great Britain is fond of studying American experience and Hungarian-Austrian experience and other federal experiments. Why will they not try our habit of calling a "constitutional convention," which shall have nothing to decide but the change in the constitution? In three months' time, according to Mr. Gladstone, our federal convention struck off a constitution involving more political wisdom than any other work of the same time. Why will not Great Britain do a like thing in three other months?

The house of lords will refuse to pass the present home rule bill. The way is then open for an act of parliament which shall call a constitutional convention to act on that subject and on no other. This convention can meet in the recess of parliament. Its work will not in any way interfere with that of parliament. Men will be willing to sit in it who would not or could not be chosen to parliament. Jurists will sit there, close students of politics, and men of affairs quite outside of political lines would sit in it. Party lines would govern the choice of delegates in part, but not exclusively. Noblemen and commoners would sit in the same house.

And it is quite within the possibilities that such a constitutional convention would make a plan for home rule which would satisfy England and Scotland and Wales and Ireland.—Edward Everett Hale in New York Recorder.

ODDS AND ENDS.

The gatling gun was the work of Gatling, 1861.

One sun by day, by night 10,000 shine.—Edward Young.

Talk little and well, and you will be taken for somebody.

An Afghan saying runs thus: "A woman's wisdom is under heel."

The New York clearing house was established in 1853, that of Boston in 1856.

The bones or tombs of over 200 giants have been found in various parts of Europe.

The Chinese have a flower which is white at night or in the shade and red in the sunlight.

A will written with a pencil on a shingle was once admitted to probate in the United States.

The light of the firefly, or "lightning bug," is produced by a genuine animal phosporescence.

The fata morgana, or sea mirage, is most perfect at the straits of Messina, between Italy and Sicily.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

THREE TROUBLES.

3 Three things which all workingmen know give the most trouble in their hard-strain work are: Sprains, Bruises and Soreness.

THREE AFFLICTIONS.

3 Three supreme afflictions, which all the world knows afflict mankind the most with Aches and Pains are: Rheumatism, Neuralgia and Lumbago.

THREE THINGS.

3 to do are simply these Buy it, try it and be promptly and permanently cured by the use of ST. JACOBS OIL. CURES ALL PAINS.

Somehow it is awfully hard to believe that a hero can be made out of the man next door.

HOW WE GROW OLD.

The thread that binds us to life is most frequently severed ere the meridian of life is reached in the case of persons who neglect obvious means to renew failing strength. Vigor, no less the source of happiness than the condition of long life, can be created and perpetuated where it does not exist. Thousands who have experienced or are cognizant—including many physicians of eminence—of the effects of Hostetter's Stomach Bitters, bear testimony to its wondrous efficacy as a creator of strength in feeble constitutions, and debilitated and shattered systems. A steady performance of the bodily functions, renewed appetite, flesh and nightly repose attend the use of this thorough and standard renovant. Use no local tonic represented to be akin to or resemble it in effects in its place. Demand the genuine, which is an acknowledged remedy for indigestion, malaria, nervousness, constipation, liver and kidney complaints and rheumatism.

Revenge is sweet on the surface, but frightfully bitter toward the core.

$100 REWARD, $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of Testimonials.

A RUBICON.

If this were made love's Rubicon
This stream our lingering footsteps cross,
The other side love's haven won
Beyond the reach of wreck and loss;
If this divide the land that lies
Behind us dark with mysteries
Of joy once known and woe once borne
From heaven whose golden gleaming morn
Will kindle day that never dies,

What voice will tell us if this stream
Be very water, clear and sweet,
Of Eden meadows, where we dream,
Did pass the primal lovers' feet;
Or, if instead it hide the power
To burn and blister, the dread dower
Of Phlegethon that flows from hell,
And every ripple ring the knell
Of souls that meet their dying hour,

And yonder land that looks so fair
Be not more bright than ways we left,
The ancient fears and phantoms there,
Once gained of glamour seen bereft,
And vain remorse and doubt throw gloom
On winding paths where blossoms bloom
So sweetly from this distance spied,
And dark o'er all that landscape wide
Our wasted days' descending doom?
—Lily Thicknesse in London Academy.

A Peculiar Kind of Headache.

This distressing condition of pain in megrim is most invariably confined to one side of the head and is distinctly localized in the frontal (above the eyes), temporal or occipital (above the nape of the neck) region. There is perhaps no form of pain more frequently encountered by the physician in his round of labor. It is an affection common in all climes, and neither height, depth nor atmospheric conditions confer immunity from the attack to those who are predisposed to it.

The fresh, cool fragrance upon the mountain top, the peaceful hush in the valley and the foam of the mad sea offer life giving and renewing properties sufficient to calm the most painful throes, but megrim never yields nor is held back by such as these. It is hereditary. It commonly shows itself the thirtieth year of age and subsides in later life.

Digestive disturbances were commonly supposed to be the causes which excited the attack. So, too, nervous exhaustion and nervous irritation were believed to be active factors in precipitating an attack. The best medical authorities now say the chief and most frequent cause of megrim is an abnormal condition of the eye or its appendages.—Philadelphia Record.

All That Is Left of a Magazine.

A few years ago a man started a weekly magazine, subscription $2 a year in advance. In order to increase the circulation he gave with each subscription a lot of land in Florida. It was a genuine offer. The land was bought and cut up in town lots, 25 feet by 60, and a deed signed by a commissioner for the state of Florida was delivered with every lot. An Ohio man took 75 subscriptions on the condition that a square in the new town be named for him. A woman in Tennessee offered to take 100 subscriptions if the town were named for her.

The plan had not been working for more than a month when the government authorities put a sudden stop to it on the ground that it was a swindle. The privileges of the mails were denied to the publishers, and the publication had to be abandoned. All moneys were refunded, and the only relic of the magazine is a piece of ground of 150 acres near De Funiak Springs. Each lot given away cost the publishers 17 cents.—New York Tribune.

Ostrich Plumes.

In each wing of an ostrich 26 long white plumes grow to maturity in eight months. In the male these are pure white, while those of the female shade to ecru or gray. The short feathers are plucked for tips, and each wing furnishes 75 of these. The tail feathers are of a deep old ivory color, and 65 of these have a commercial value. In a plucking at the Coronada ostrich farm 300 feathers were obtained from one bird, which, when curled and dressed, will be worth $65. The female ostrich lays 70 eggs a year.—Chicago Mail.

The Word "Creole."

A creole, strictly speaking, is any person born in this country of foreign parents. Because the word is from the Spanish criollo, a child, the use of it has been restricted, first to children of foreign parents born in Louisiana, and second, to children of Spanish or French parents born in Louisiana, and then in the north the word has been perverted so that it is believed to imply some strain of negro blood in a person to whom it is applied. It does not imply anything of the sort.—New York Sun.

A Satisfied Patron.

A grimy tramp came up to Passenger Agent Dowling of the Burlington yesterday and asked:

"Are you paying for feats?"

"Not yet. What have you done?"

"Well, I've rode all the way in from Denver on a brakebeam of one of your passenger cars, and for a ticket to Chicago I'll give you an affidavit of the smoothness of your track and let you photograph me."

He didn't get it.—Omaha World-Herald.

Maori Children and Lovers.

Betrothal of Maori children was common among people of high birth. If no betrothal, there was generally a lot of talk and squabbling, every one in the tribe thinking he had a right to interfere, till at last the young couple, if lovers, would flee to the bush until their living together was agreed to.—Popular Science Monthly.

Water In the Mexican Gulf.

Those who declare that the earth is gradually drying out and that within a few centuries every drop of water will have disappeared from our planet will find some consolation in the announcement that the water line has risen one foot all around the gulf of Mexico since 1850.—St. Louis Republic.

In rural England the blossoming twigs of willow which our children call "pussy willows" are often used in churches on Palm Sunday as the only available branches which have yet begun to show proofs of returning life.

It was to the tobacco trade that Glasgow first owed its importance to the world of commerce. This trade began in 1707, and 70 years later we find Glasgow importing more than half the tobacco consumed in Britain.

Paper is the best chest protector, and men whose work exposes them to drafts find a sheet of newspaper under the vest an effectual protection from cold.

Philip, the duke of Burgundy, spent much time in contriving trapdoors in his house and grounds to souse unwary strangers in water beneath.

Jealousy sees things always with magnifying glasses, which make little things large, of dwarfs giants, of suspicions truths. —Cervantes.

SAVED BY INDIAN BOYS.

The Defeat of a Marauding Tribe of Sioux by Brave Young Crows.

Captain H. J. King, of Chamberlain, S. D., is one of the best known Missouri river steamboat captains in the west, having been running on the upper river constantly for the past twenty-eight years. The captain is a good story teller, and while speaking of the early Indian troubles on the upper river told how the valor of a body of Indian boys turned the tide of battle.

In August, 1875, the steamer Katie P. Kountz and other steamers were unable to proceed to Fort Benton, their destination, on account of the extreme low water, and were compelled to discharge their cargoes at Cow Island, 120 miles below Benton. The cargoes consisted mostly of government supplies for the military posts in the upper country. A company of infantry was sent from Fort Shaw to guard the supplies, and while in camp some 800 Sioux came in and attacked the guard camp, which had been re-enforced by some Crow Indians.

The Crows at once sallied out and engaged the Sioux in combat, but were soon defeated and driven back into camp. The Crows then sent a runner to their village for re-enforcements. The re-enforcements arrived in due time and they again made an attack upon the Sioux, who once more defeated them, and the Crows were compelled to retreat to their white allies, who had fortified themselves behind the boxes and barrels of supplies.

After the second defeat the news was soon received at the Crow village, and the squaws promptly armed all the boys between the ages of ten and eighteen—about 200 in all—and sent them to the assistance of their fathers and relatives. Upon appearing in view of the besieged camp, dashing along with whoop and yell, the Crows rushed out on their swift little ponies and attempted to stop the boys and prevent them from entering the battle, but they might as well have tried to stop a cyclone.

The boys scattered out and eluded their elders and immediately attacked the large body of Sioux. Seeing their young men hotly engaged in battle with the hated foe was too much for the old warriors, and uttering their fierce battle cry they went to their assistance, and the battle between the Sioux and Crows became general. Notwithstanding the bravery of the Sioux, they were unable to long withstand the fierce attack of the Crows, and soon began to retreat up Cow creek, a small stream that enters the Missouri near the spot where the battle commenced.

A week after the fight Captain King arrived there on the steamer General Meade, loaded with private cargo, and owing to the same cause that stopped other boats from going farther up the river found it necessary to remain there, and the captain and party went to Benton by pony to make arrangements to have the freight brought by the steamer transported overland to that point. In going to Benton their road lay along the entire length of the battle ground, and the terrible havoc wrought by the Crows and Sioux could still be plainly seen. Dead Indians, dead ponies, blankets, war implements, etc., were strewed over the entire eighteen miles where the running fight had taken place. In fear of their own scalps none of the party lingered long enough to collect any of the relics.—Chicago Mail.

Extraordinary Counterfeiting.

Perhaps the most surprising curiosities in the treasury scrapbook are proofs of certain plates which appear to have their surfaces scratched and battered to the utmost possible extent. The plates were those of the famous 7-30 bonds, executed by Charles H. Smith and printed by Charles Brockway, which were the occasion of a great lawsuit against the government. Such works of art were they that no question of their genuineness was raised until Jay Cooke & Co. forwarded $84,000 worth of them to the treasury here for redemption. Although Mr. Casilear declared them counterfeits, it was claimed that they must have been printed from the original plates made by the treasury, and on the strength of that assumption suit was brought by Jay Cooke & Co. against the government. The cause was lost by the plaintiffs, however.

Smith was the most remarkable forger that ever lived. For twenty years, while leading a life of the utmost apparent respectability, he produced counterfeit after counterfeit of the most marvelous character, both of notes and bonds, from $50 to $1,000. Probably not less than $1,000,000 of imitation money of his manufacture found its way into circulation. It was only through the discovery of his association with the notorious plate printer, Brockway, himself a marvelous expert in his line, that Smith was arrested in 1881 in Brooklyn. Thus was broken up one of the most dangerous combinations against the national finances that has ever existed.—Washington Cor. St. Louis Globe-Democrat.

Those "Dear Dead Girls."

The most beautiful of all the epitaphs of a tender kind is one to a Roman girl called Myla. It is so simple and direct and frank that it might have been written by Catullus. I must not attempt to translate more than a few lines:

"The deep tomb holds you now unconconscious. You can't get angry now and leap upon me, and show your white teeth in sweetly playful bites."

So the inscription ends, and one feels that though Myla was not what she ought to have been, though she had never worn the yellow bridal veil, yet there was one man who really loved her and was sincerely sorry when she died.

There is another interesting epitaph on a girl who, like Myla, had died young. She is represented as lamenting her hard lot.

"Oh, pleasant light of day!" she begins. "Oh, pleasant joy of living!"

She tells that she had been a slave, and, with not unpleasing play on words, she begs for blessings on the mistress who set her free and gave her a place in the family vault.

Then she continues: "And you, O youth, whom the Phyrgian land brought forth—lament me not! Your kindnesses were pleasant to me while I lived, and now are pleasant to my ashes."—Cornhill Magazine

Fairies in All Countries.

Below I give a list of the names by which the fairies have been known in the various countries: Fairies, elves, elle folks, fays, urchins, ouphes, ell maids, ell women, dwarfs, trolls, horns, nisses, kobolds, duendes, brownies, knecks, stromkarls, fates, wights, undines, nixies, salamanders, goblins, hobgoblins, poukes, banshees, kelpies, pixies, perls, dijinns, genii and gnomes.—St. Louis Republic.

Half the Proceeds.

A singular case came to light recently of an old time contract in Saco. A man leased a farm of a Saco man and was to give half the proceeds. At the end of the year the man's wife came down to Saco and brought two cats as the Saco man's share.—Augusta (Me.) Journal.

A HELL ON EARTH.

Experiences of Two American Seamen in Siberian Prisons.

THE KNOUT AND WHIPPING BOARD.

Exhibitions of Atrocious Cruelty.—Men and Women Flogged for Failing to Salute Officials.

The disclosures of life in Siberia by George Kennan were rejected as false by many Americans because they could not believe such things possible, but two American citizens have recently escaped from Siberia with evidence which chills the blood.

These men—Paradyce and Wilson—were sailors on the sealing schooner Mary H. Thompson, which was driven by a storm to the coast of Saghalien island last July. The two went inland for fresh water, and the schooner was driven away by a storm. The two sailors were directed to a Russian station by the Indians, and on reaching it completely wornout were at once clapped into irons as spies! They received a pound of black bread and half a pound of raw salt beef per day, and in a wretched condition were driven to Carasock, the principal seaport.

"When we arrived at Carasock," says Paradyce, "we were taken to the prison, in which a dozen men were confined. The place had not been cleaned out for months and smelled horribly. Some of the men in it had been there for three years and had worn a heavy ball and chain all the time. They were nearly naked and were covered with vermin. All of them had one side of their heads shaved, and they looked more like beasts than men. That night we got a piece of black bread and a cup of water, and we had to sleep on the bare floor.

"One of the men was lying in a corner groaning, and I soon discovered that he had that day been given 60 lashes with the knout for not saluting an officer as he passed. The poor old man's back and hips were literally cut to pieces. Every other man in the room had been flogged within a month, and there were horrible wounds on all of them."

THE KNOUT AND WHIPPING BOARD.

Wilson could speak the Swedish language, and in this horrible place they found a Swede who acted as interpreter. They had to write separate accounts and stand a long examination separately, each answer being translated from English to Swedish and thence to Russian. Of course some trifling discrepancies were found, and so they were told that they "had not cleared themselves and must remain until the next spring." Every Wednesday all the 6,000 prisoners were mustered, 400 of them women and girls, to witness the floggings.

The first day Paradyce saw it seven prisoners, six men and a woman, were the victims. The men were ordered to strip, and then one of them was seized by half a dozen soldiers and dragged to the flogging board. This is a stout plank 16 inches wide with one end resting on the ground and the other supported by two legs so that it reclines at an angle of about 45 degrees. To this the victim was securely strapped, and then the convict who did the flogging stepped to the front.

The knout, as often described, has nine leathern thongs on which sharp brass cleats or buttons are riveted here and there. The executioner brings it down with a sharp slanting blow which cuts the flesh into scores of bloody furrows. One of the men died under the lash, but the horror of horrors was to come. Paradyce says:

"Then came the woman. The poor creature was soon about to become a mother, and as she was led past the governor she threw herself at his feet and begged that he would postpone the flogging until after her baby was born. Her appeal was in vain, for the governor replied that the laws made by the czar must be obeyed, and she was ordered to strip. The woman gave one look at the sea of faces around her, and then, with the assistance of one of the soldiers, removed her clothing.

"Like the men, she was stripped naked and strapped to the board. At the third stroke she became insensible and remained so until the full 50 lashes had been administered, when she was taken from the board and carried to the prison hospital. Three hours afterward she gave birth to a dead baby. This I learned from the Swede, who visited the hospital every day. The woman's body was in tatters."

And this was only the beginning of horrors. Paradyce declares that in some cases the young women and girls, especially those of good families and accused of nihilism, are handed over to the common soldiers to be dealt with at their will. Twice the two Americans narrowly escaped flogging for not saluting an officer as he passed. They found one prisoner to be a Turk of high rank and a relative of the sultan, captured during the last war with Turkey and supposed by his countrymen to be dead. They succeeded in smuggling a message from him to the Turkish minister in China.

At length Paradyce and Wilson were sent before the governor of Saghalien island, who ordered them forwarded to the main land of Siberia, and after many days of terrible suffering the gang of which they were members reached Kara. They were fortunate enough to fall in with a negro named Colcord, a telegraph operator, who spoke both languages fluently and gave them valuable assistance and instructions. When they were tried at Kara, the interpreter also assisted them greatly. The Russian authorities there happened to possess some rudiments of common sense and humanity, and their innocence was made apparent.

Still they were not free till heavy bonds were secured from English and other gentlemen at Vladivostock. Thence they took ship for Shanghai, where Wilson at last accounts was still in hospital suffering with scurvy caused by the diet in Siberia. Paradyce in a few weeks recovered sufficiently to ship for San Francisco, where he wrote out his case to be laid before the government. The foregoing is a very brief summary of it.

Theaters in Paris in 1800.

An industrious and amusing writer, M. Gustave Isambert, has taken the trouble to go over a file of old newspapers in an endeavor to find out precisely what people were doing—in Paris, at all events—when the last century was drawing to a close. One thing with which he has been struck is the extraordinary taste of the French people a hundred years ago for theatrical entertainments. It might have been thought that, with their king practically a prisoner, the Parisians would have had little inclination to frequent places of amusement. As all readers of French history know, the theaters were legion, owing to the restrictions which had only just been removed, and which had for so many years secured a practical monopoly to two favored houses.

So numerous did the playhouses become that a satirical piece on the subject was produced, under the title of "The Thousand and One Theaters." Our own famous horse rider, Astley, had a house in the Faubourg du Temple, called "Astley's Circus." Owing to the excited state of public opinion at this time, the newly acquired liberty of the theaters was a source of considerable embarrassment to the government. Political satires, thinly veiled, were the rage, and the flight of the king and his arrest at Varennes was followed by a whole crop of plays, avowedly based upon that important event.

At one house, situated in the very heart of the aristocratic Faubourg St. Germain, a military spectacle called "The Arrival in Paris of the Saviours of Their Country" was given, and the two men, Drouet and Guillaume, who had been instrumental in arresting the king, were publicly crowned on the stage with laurels. The minister of the interior, Cahier, issued a sort of protest against the manifestations to which such entertainments gave rise, but he was powerless to prevent them.—London News.

An Ostrich's Queer Food.

Among many visitors one day there came two young men who seemed bent on sport. One of them was smoking, and the other bantered him to feed his cigar to the ostrich—a hen. He took his knife from his pocket to cut the cigar in two, but before he could do so the ostrich reached over the fence, took the knife from his fingers and swallowed it. The two young men then ran away, thinking they had killed her. Noticing the commotion, I approached the others in the crowd of visitors and inquired the cause. They told me in great trepidation, as though a great injury had been done.

I told them that the bird was all right, and, to prove it, offered to let her swallow another knife. One was quickly handed out, and she disposed of that also. Then, to establish the wonderful gastronomic vigor of the species, I held out a few small screws in the palm of my hand, and she gobbled them up like corn. Afterward, during the following fortnight, I permitted her to swallow screws, as indeed I had often done before, to show people that the bird would eat anything that took the eye.

Three weeks laters she escaped the corral and broke her leg while the attendants were trying to recapture her. Of course she had to be killed, and upon opening her stomach I found a few small bits of bright steel, which I could see had been parts of the screws, but all the sharp edges had been ground off by the stones and gravel in the stomach. I found no traces of the knives whatever, and I am satisfied that they, as well as the screws first swallowed, had been entirely digested—or partly eaten away by the powerful gastric juice, and partly ground up by the stones and gravel. —Interview in St. Louis Globe-Democrat.

Not That St. Paul.

There is a growl about St. Paul which comes from a young comedian named Phil McFarland, who has purchased Daniel Sully's play, and is starring in the part of Daddy Nolan. Years ago he was a member of the St. Paul baseball team, and while looking through his trunk preparatory to "taking the road" for the season he ran across a photograph of himself, bat in hand and clad in a St. Paul uniform with "St. Paul" printed across the breast. As a curiosity he mailed it to a pretty Irish girl of his acquaintance to whom he pays much attention, and she proudly stuck the portrait on her mirror. A few days later her mother, a very devout old lady, happened to enter the room and saw it.

"Cordaylia!" she called out as it met her eyes.

"What's it, mother?" asked the girl, coming in.

"Who's ben makin game of you, girl? That ain't St. Paul. Share, an don't I know St. Paul, bless him?"

"Oh, no, mother; that isn't St. Paul," replied Cordelia, "that's a ball player."

"Wurra, wurra," exclaimed the good old lady, raising her hands in horror, "pwat will thim ball players be afther doin next?" —Chicago Post.

The Best Investments.

Keep a bank account.

When you have saved $100 or $200 or $500 look about for a good investment. Do not take up this or that scheme at a venture, but examine it carefully, and if you see your way clear, put your money into it. Real estate is usually a good investment. More money has been made in real estate than you could estimate in a day. A first mortgage is, in nine cases out of ten, safe. But take advice on the subject before you invest. Go to some good conservative man and get his views. I should advise the same course if you should put your money in stocks or bonds or railway shares. In fact, I should urge before you invest a penny that you get the best counsel on the subject to aid you in taking the right course.

If your first investment prospers, by careful management and by always being on the alert you can increase your fortune by reinvesting your profits.—Henry Clews in Ladies' Home Journal.

He Used to Be a Walker

One of the unique figures down town is a well built, energetic man of medium stature and traces of gray in his hair. He flits briskly in and out of banks, brokers' offices and lawyers' libraries. A quarter of a century ago he was the most noted pedestrian in the world. His great walk from Portland, Me., to Chicago gave him fame everywhere that newspapers were printed. And there never was a squarer or fairer walker than Edward Payson Weston. He still retains some of his old grace and elasticity, which serve him admirably in his present modest calling of general solicitor and collector. He performed a prominent part in the raising of the money for the Washington memorial arch.—New York Times.

Confirmation.

Fair Visitor—Have you seen Mrs. Giltedge since her return from Europe? She brought the loveliest set of ermine you ever saw!

Mrs. Parvenu (sniffing)—She always did have low tastes! The idea of buying a set of vermin! Just like her.—Pittsburg Bulletin.

IT IS HARD WORK.

A Reporter Must Labor Incessantly and in Many Roles.

PREPARING A "SPECIAL ARTICLE."

Great Tact Necessary in Interviewing.—A Good Memory Required for One to be Successful.

Of the many millions of people who read the newspapers how few stop to consider the amount of work that any article of importance represents! The idea that news flows into the editorial rooms of a paper as water flows down hill is not correct. Every scrap of news means labor—labor to gather the first fact, labor to verify it and find other facts necessary to make the story complete, and labor to write, edit and print the story. An article on some timely subject, and not strictly news, also means labor. For instance, a reporter is told to write a story on rapid transit. He does not sit at his desk and draw on his memory and imagination, no matter how excellent both may be. He goes out and hustles.

He calls on the commissioners having the matter in charge. He obtains their views. He goes to the engineers and obtains expert opinions on the feasibility of the proposed plans. He goes to the railroad men and asks their views on the practicability of the project. He goes to lawyers and takes advice on the legal obstacles to be overcome. He visits Wall street to learn if capital is ready. He consults the traveling public and business men as to their needs. When he has done all this and read up on what other cities have accomplished he writes his story. He weaves his facts together systematically, building up his article as a lawyer builds up his case in court, so that a clear idea of the whole matter is conveyed to the public—his jury.

In gathering his information he receives much assistance. The lawyer advises him on the legal points without a fee and without even a mention of his name in the article unless it is necessary to back up an important opinion. If the article has a medical bearing the views of a specialist or a leading physician are obtained without expense. The physician may have a dozen patients with fat fees awaiting him, but he stops to put the newspaper man right on the medical side of the question. The bank president cheerfully gives his time to throw light upon a financial problem.

WHEN HE INTERVIEWS.

The importer rushed with business pauses to discuss a subject from the commercial standpoint. Experts on every branch of the subject are ready to give their views to the papers, but the collection of all this data requires more hustling than the general public gives the reporters credit for.

Gathering the material also requires brains. The mental caliber of the reporter shows in every interview. Men prefer talking about what interests themselves. The reporter must draw out what interests the public. To do this is no easy task. Ministers talk politics and politicians talk religion when an interview is requested.

To pin these men down to the point at issue requires more tact, ingenuity, perseverance and ability to read men's characters and to draw out their thoughts than can be told in a big book. Some men decline to talk unless the reporter takes shorthand and will pledge his word that the interview will be printed verbatim. Many of these men talk so slow that a reporter taking long hand would be tired waiting for the next word.

Others—and this is particularly the case with women—will only give utterance to long, involved sentences, treating subjects from an exalted standpoint if notes are taken in their presence. Such an interview published verbatim would sound like a southern darky's oration. After the note book is closed these people unbend and talk rationally. If the reporter knows his business he throws away his notes and writes out the latter part of the conversation, omitting many things that should never have been told him.

The reporter suppresses nearly as much as he publishes. He goes out to cover a murder. He plays detective and unearths many things that are news to the police. He reports to them and keeps the public waiting a day or two that the ends of justice be not defeated. He is ubiquitous. He works on every clew. If the victim is unidentified and the name "John Smith" is found on the body he runs down every John Smith in town until he finds which one is missing.

If there are rumors of an impending financial crash in Wall street the reporter visits the banks and houses said to be involved. He talks with their officers, he sees the bank examiner, he interviews leading bankers, and from a mass of conflicting statements he gives the public a clear idea of the situation. Confidence is restored or a panic precipitated by his pen.

All our big daily papers have reporters who are experts in different lines of work. Each man knows how to get information quickly and accurately, as well as how to write under the direction of editors, who marshal them as a general marshals his troops. They go out, gather every item of information that is obtainable, write their articles and hand in their copy.

Careful copy readers edit the matter and write the head lines—an art in itself. When in type the proof is submitted to the editor and the paper is made up. All this work requiring care, accuracy and thought is done with a rush. The great American public reads its bulky newspaper in the morning with complacency, oblivious of the great amount of work that the closely printed pages represent.—New York Recorder.

The tail of the beaver gave the hint for the trowel of the mason.

All animals whose habitat is the arctic regions turn white in winter.

On the railways in France passengers are sold cooked snails in packages.

An English Club Man's Expenses.

The life of an English club member, with, say, $1,500 to $1,800 a year, involves economies that to the average American would be impossible, if he knew that by going to work he could earn as much more. It means lodgings in some quiet street at considerably less than similar lodgings would cost here, breakfast at the lodgings, a luncheon somewhere else and dinner at the club or at the house of a friend. It is possible to dress decently on very little, so that the young man is able to dine at the club the year round; if need be, to have his little run in the country, his cruise on a friend's yacht or his fishing in the Highlands or in Norway.

It is common in London clubs of the quiet kind to provide a table d'hote dinner at 3 shillings or 3s. and 6d. The diner may have in addition for 30 or 40 cents a pint of excellent claret. Most of the diners at clubs of very good standing seldom go beyond the table d'hote and its pint of claret. Even men in comparatively easy circumstances are content with this, and anxious that the meal shall be kept within 5 shillings. Something better is often provided for a guest, but if one member of small income dines with another at the club or elsewhere, a return dinner becomes a matter of obligation.

The economies of such a man excite no scorn or surprise. His case is too common. He has deliberately accepted life at $1,500 a year, and the average Englishman sees nothing discreditable in such acceptance, or in the voluntary idleness of a man, perhaps of education and brains.—San Francisco Argonaut.

Wonderful Minute Shells.

There is a sand bank at Connemara, on the west coast of Ireland, that is the Mecca of every curiosity seeker who is fortunate enough to know of its existence. As a general thing sand banks are not a great attraction, but in this particular case the attractive power is not in the sand itself, but in the millions of extinct miniature shells which are almost as numerous as the grains of sand with which they are intermingled. The largest of these little wonders is smaller than the smallest pinhead, and some of them so minute that they can easily be put through the eye of a common sewing needle, yet each is as perfect as the pearly nautilus, the spider shell, the sea urchin or any other marine oddity.

They are of all shapes and forms imaginable. One will have the perfect outlines of a minature basket, another will look like a fairy's tobacco box, while a third needs no effort of the imagination to give it the form of a bottle. The flashshells of Ceylon and Australia are the only living representatives of these conchological wonders. Naturalists who have examined the Ceylonese flashshells say that each is filled with a tiny bit of jellylike substance, which of course is the animal itself, but which is so infinitesimal that no distinction can be observed between head and heart, mouth and stomach.—St. Louis Republic.

Food of the Screech Owl.

The little screech owl, well known in most parts of the country, is indefatigable in its work of destroying mice and insects. It may often be seen at dusk hovering about barns and outbuildings, watching for mice or skimming along the fields and along hedgerows in search of grasshoppers, crickets and beetles. Many birds of this species have taken up a residence in the cities, having learned to feed upon that most destructive nuisance, the English sparrow. In winter rural residents often notice the tracks of mice, which form networks in the snow, crossing and recrossing, passing in and out of walls and stacks, tending to show how active these small rodents are when most of the world sleeps.

Occasionally such a track stops abruptly, and while the observer is trying to read more of the history written in the snow his eyes catch the faint impression of a pair of wing tips near where the trail ends, and instantly he is made aware that a tragedy has been enacted. Screech owls also feed on chipmunks, shrews, moles and occasionally bats. During warm spells in winter they forage extensively and store up in their homes quantities of food as a provision against inclement weather.—Boston Transcript.

Instinctive Fear In Birds.

The instinctive fear of death manifested by birds is shown by the following: A canary died, was buried, the nesting establishment broken up, the surviving mate removed to a new cage, and the old cage thoroughly cleaned and put aside till the following spring. Never, however, could any bird afterward endure being placed in that cage. They fought and struggled to get out, and if all in vain their efforts they moped, huddling close together, thoroughly unhappy, refusing to be comforted by any amount of sunshine, companionship or dainty food. The experiment was tried with foreign birds, that had not been in the house when the death occurred and could not therefore have known of the event by observation. But the result was always the same. For the future that cage was haunted.—Popular Science Monthly.

Craft of Warlike Old Redskins.

A ship's officer who has spent much time on the St. John's river, Florida, thinks that he has solved the problem as to the origin of the shell mounds that occur along that stream. The river twists about in an extraordinary way, so that in many places the view along the water extends for only a few rods, but he finds that a tall object or the smoke of a fire shown from the top of one of these mounds could be seen from those next below and above.

He believes, therefore, that these eminences were Indian signal stations, by means of which the natives were able to announce the approach of a hostile force along the river, as the Greeks signaled the news of the fall of Troy to their home cities by lights on the mountain tops that were repeated from peak to peak.—Military Times.

Do Not Eat Too Much.

Do not eat too much. It is better to eat too little. The rule to get up with an appetite, though hardly an inviting one, is not without reason. Habitual repletion is much to be depreciated. If people would or could always attend to these simple directions, the benefit to health would be enormous. The gain in economy, too, would be greater than many of us think.

It is astonishing how little food a man requires to do hard work and remain in health, if that food is proper in quality and properly taken. Improper food improperly taken is not only to a great extent wasted, but will in the end lead to serious disaster. —Boston Courier.

Smooth Faces Getting to Be Common.

There are signs among the youngest of young men that the smooth face is returning. It is growing perceptibly more common than 10 or even 5 years ago, particularly among men under 30 or less, and it would not be surprising if mustache and beard disappeared once more, as they have in the past.—Philadelphia Press.

HE MORALIZES.

A Gambler Who is Now on his Uppers Waxes Reminiscent.

WAS ONCE A PRINCE OF BACCARAT.

How Handsome Billy Deutsch Won $140,000 at a Sitting in Paris.—Vicissitudes of Vice.

"Billy Deutsch is back in New York, sick and on his uppers."

Such was the information recently given out at the clubs, and the young fellows said, "Humph! no news in that." But only a few years ago this same Billy Deutsch was flinging money around by the thousands, and in 1885 his clothes, his carriage and team, his black mustache fancifully curled and his general elegance were the envy of all the fast set. In Paris and elsewhere in Europe he played with stakes of 50,000 francs or more. Now he owes 600,000 francs in Paris alone and as much in other places and claims that twice as much is owing to him, but his debtors, as usual, will not pay.

He was born in New York 48 years ago, and very early in life made money in the theatrical business and by speculating. He went to Paris in 1881 with fully $125,000 and was steered against a game. But the rest must be told in his own words:

"I was introduced into the Franco-American club and was initiated into the bewitching game of baccarat, which I played with varying success, but never with the idea of steady playing, as I was forced to travel all over Europe on business. It was in 1884, while in Paris, that I had an inspiration that I could win. I felt this inspiration because my small stakes invariably brought me large winnings.

"Luck was with me. I won every time I played. In three months I won $125,000. With that money I traveled through Europe. I took my horses and servants with me, buying everything in sight.

"On July 25, 1885, I went into the Franco-American club with $50—all I had. I got dinner, and with the remaining $30 I tried my chance at the game. In an hour I lost every penny. Just as I quit Lorillard Spencer, John Garcia and another came in. We sat down to a game of whist. I won 30

francs from them, playing on credit. I owed for drinks and cigars and threw down a 10-franc piece. I put the 5-franc piece change in my overcoat pocket. I threw down the remaining 20 francs on the table and lost it. I went out broke to go home. In buttoning up my overcoat I felt a piece of money in my change pocket. It was the 5-franc piece.

"I went back and threw the piece on the table. Won. Let it lie. Won again. Sometimes I would let two or three deals go by. Every time I played I won, and generally I played my whole pile. I quit $140,000 winner."

As Deutsch told the story of his run his face lighted up and his eyes brightened. He rose from his chair as he spoke.

"I played on every day for 32 consecutive days, barring Sundays," he continued. "I won almost every time. On Aug. 23 I won $12,000. That was the last day I played. An Englishman and a Spaniard owed me money. We had a row and I swore I would never play there again. I sailed for America and got here on Sept. 10, 1885. I brought my horses, carriages and servants with me. I lived at the Hoffman House and staid here until Nov. 12. I brought over with me about $600,000 and took back $400,000. I lost the difference in Wall street and on dinners and friends.

"I was broke again in France in less than six months. On April 5, 1887, I was penniless. But my credit was good, although eventually I had to go to the wall. When that time came, I simply wrote an article for a Paris newspaper and closed it with this: 'Having neither the time nor the disposition to bid goodby to each individual friend and creditor, please tell them for me that in the event of their desiring to know about my financial or physical welfare they can write to me at the Hoffman House in America.'

"Where a man has a real passion for gambling it is far worse than the passion for drink. A man will stoop lower to gamble than to drink. Besides, the drunkard is irresponsible after a few drinks, and the gambler must have his wits. For a few coppers a man can get a drink, but for the gambler—a dollar? What is it? Gambling works up the brain, the eyes, the nerves—all. I am not preaching. Gambling is a disease—the hardest in the world to cure, harder than consumption.

"Just to show that a gambler will stoop to anything, will steal legitimately by borrowing and never repaying, take the case of a cousin of Prince Barbarina. He was in Paris with us in 1885. He used to borrow 1,000 francs and repay it the next day. Finally his luck went dead away. He borrowed from the king of Servia's son, then borrowed from me to pay him, borrowed from another man to pay me, and so on. But that had to stop. One day he came to me and asked for 50 francs. I refused him. He said he was hungry. I knew he wanted the money to gamble. Finally he got down to 5 francs. I gave it to him and started out. I forgot my cane, and when I went back for it he was gambling. He won 3,000 francs off that dollar."

Well, to sum it all up, Billy went to smash in 1887, came up again and had $150,000, lost it all and is now in the sanitarium dying slowly of phthisis. The physicians say his only hope is in a change of climate, and he is trying to collect what is due him, but so far his sporting friends do not remit, and so Billy Deutsch, worth $600,000 in 1885, must die in poverty.

Make a cotton flannel covering for the broom to use in "brushing up."

Silence may give assent, but doesn't favor the request for any larger loan.

SEX RELATIONSHIP.

A CALM AND DISPASSIONATE VIEW OF "THE WOMAN QUESTION."

The Future of a Nation's Prosperity Depends In Great Part on the Marriage Relation—Lessons Drawn From the History of Ancient Greece and Rome.

The rights and wrongs of women are now debated with a vigor and virulence which increase every day. Those who demand for women not only all the privileges which men possess, but also continued exemption from their responsibilities, would carry the principle of female emancipation to a point which has aroused opposition on the part of many who in every great question of the day are admittedly leaders of the party of progress. While the contest rages as to whether women are to know, say and do everything that the coarsest of men can, or, on the other hand, be kept completely in the background, people are apt to forget what is really the crucial point of the whole question.

They forget that the position of women, and of men, too, for that matter, is inseparably bound up with the relationships between the sexes known as marriage; are apt to forget the importance of that relationship not only to individuals, but to the state; are apt to forget that too rigorous a subjection of women may bring us near to barbarism, too great an emancipation may lead to that corruption which has so often in the world's history been the outcome of a civilization which has not placed due restraint on the passions and impulses.

The prosperity of a country depends on the proper maintenance of the relations between husband and wife quite as much as on its outer strength, and however great and powerful a country may seem to be, if these domestic relations are unhealthy, if the wife has not her place in the social polity, that country is rotten to the core, and its complete decay and demoralization are inevitable. Speaking generally, there are four aspects or ideals of the status of the wife—four ways in which her position is regarded by men.

There is the method of the barbarian, that of the oriental, that of western civilization, that of corrupt civilization, which last is practically the degraded form of the third. The barbarian regards his wife as a mere slave—a squaw to cook his food, carry his burdens, submit to his ill usage. The oriental sees in his wife a plaything to gratify his passions, to be kept in the strictest seclusion, and to be treated altogether as a brainless being; regarded by him, in fact, so far as any respect is concerned, much as the squaw is regarded by the savage.

From the third point of view the wife's position is very different. True, she is the mother of her husband's children; true, she has duties to perform which her husband would disdain; true, her husband is the head of the family, and she bears his name. But with all this she is looked upon as her husband's equal, is the sharer of his counsels, his intelligent partner and has a right to expect from him the fidelity which in the case of the savage or the oriental is so one sided.

The credit of placing this view of married life before mankind has been claimed by Christian writers for their religion. But although we must admit that Christianity has done much to improve the position of woman, yet the high ideal which we have termed that of western civilization existed in a very strong degree in ancient Greece, still more strongly among the Romans and the nations of western Europe, whom they conquered and civilized long before Christianity was preached, and the noble qualities which we admire in those races may often be directly traced to the influence of wives and mothers.

But high as is this ideal, history shows that there are dangers which threaten those societies where it prevails; danger the outcome of that very civilization which it has done so much to perfect. Luxury, prosperity, too great liberty, want of mutual respect and continual striving after new sensations are too apt to destroy that wholesome state of things which has been the palladium of every great nation, and we too often have examples of the fourth ideal, which, though springing from the third, is so distinct from it that it deserves to be classed by itself. Where a wife is no longer content with taking her share in the battle of life, no longer content to recognize the fact that there are things which it better becomes the woman to do than the man, and vice versa; when she insists on aping and sharing the follies and vices of the man, on casting from her that modesty and reserve which are woman's greatest charms; when she spurns maternity and domestic duties as trivial or monotonous, then indeed the marriage state must fall into disrepute; then the fatherland must surely suffer.

It was this which led to the unspeakable horrors of imperial Rome; it was the unsexed women, their profligacy only equaled by their audacity, who were responsible as much as Nero and Domitian themselves for the downfall of Roman civilization. Otho and Silius would have been impossible but for Poppæa and Messalina. In latter times, too, and even in Christian countries, where the marriage tie was in theory held so sacred that if duly celebrated it could only be dissolved by death, we have seen a state of things as bad.—Westminster Review.

Mustaches and Beards.

Englishmen only a generation ago had such a detestation of mustaches and beards that the practice of shaving all hair off their face down to their mutton-chop whiskers was all but universal. From one extreme our clean shaven fathers plunged into the other, and beards and mustaches rapidly became the fashion. The fashion has of late years again been modified. Beards are less common, but the mustache is cultivated in England as widely as on the continent.—London Standard.

A SAVAGE CANARY.

One of the Very Latest of Wild Stories About Well Known Animals.

So many stories have been told recently of battles between tigers and snakes, wildcats and elephants, eagles and alligators and codfish and wild hogs that the following accurate description of an encounter between a tomcat and a canary bird cannot fail to be interesting:

The tomcat and the canary were the property of an animal dealer on the west side who has long had a reputation for veracity. The canary was noted for its fierceness. It is a female bird about 3 years old with bright yellow feathering. The tomcat is quite white, with four legs, and weighs—or rather weighed—about 12 pounds.

During the morning it was noticed that the canary seemed unusually savage. She paced up and down her cage in a great rage, gnashing her teeth and glaring at the poor cat, toward whom it turned out she had developed a fierce antipathy.

The keeper secured the door of the cage, as he thought, firmly, but during a paroxysm of temper the canary smashed the fastening and was free.

What a moment! The unfortunate tomcat gave a cry of terror and looked around for some means of escape, but there was none, the door of the room in which the carnivorous animals were kept being locked.

The proprietor of the menagerie could do nothing. Spellbound he watched the uneven contest, fearing all the time that the fury of the canary bird would be expended on himself.

With a piteous moan the wretched tomcat felt the talons of the canary bird sink into his head. He raised himself and tried to fight her off, but the bird parried his every blow and fiercely pecked at his eyes.

Once the cat seized the bird in his paw, but she got away from him in a moment with the loss of only one feather. She returned to the charge and rendered one of the cat's eyes blind with her sharp bill.

The fight had lasted five minutes, and the cat had all the worst of it. He was panting, and every now and then rolled over exhausted, uttering pitiful cries. Though he was valued at $100, the keeper of the menagerie, who was armed with a sword and a shotgun, did not dare to interfere to save him. The blood of the canary was up, and she meant to slay the cat.

It was not long before the awful work was accomplished. The bird by an adroit movement common to canaries when in conflict with quadrupeds rendered the poor Thomas cat quite blind. Then, at her leisure, with a series of fierce jabs, she penetrated his brain, and he rolled over completely dead.

The loss was trembling for his own safety, but it now seemed that the savage instincts of the canary had been satisfied, for with a jaunty air she regained her cage and began to warble a song of victory.

It meant life or death to shut the door, but the brave boss crept courageously up to the cage and succeeded in accomplishing this feat. Then he ran out into the street and fainted. The nerve pressure had been too great for him.—New York Herald.

The Value of a Little Thing.

In a little volume of lectures by Henry Irving, just published, is a story which illustrates the actor's motto, "While trifles make perfection perfection is no trifle." "This lesson was enjoined on me when I was a very young man," he says, "by that remarkable actress, Charlotte Cushman. I remember that when she played Meg Merrilies I was cast for Henry Bertram. It was my duty to give Meg Merrilies a piece of money, and I did it after the traditional fashion of handing her a large purse full of coin of the realm, in the shape of broken crockery, which was generally used in financial transactions on the stage. But after the play Miss Cushman said to me: 'Instead of giving me that purse, don't you think it would have been much more natural if you had taken a number of coins from your pocket and given me the smallest? That is the way one gives alms to a beggar, and it would have added to the realism of the scene.' I have never forgotten that lesson."

Noah Left the Ark on April 29.

Saturday, April 29, is the day marked in all ancient calendars as being the one on which Noah and his family quitted the ark after having withstood the siege of the great deluge. The day is marked in all ancient calendars, especially British, as egressus Noae de arca; the 17th of March, the day upon which Noah, his family and their great floating collection of natural history specimens set sail, being designated in the same class of early printed literature as introitus Noae in arca, "the day of Noah's entrance into the ark." Why these days were chosen as the ones upon which the supposed embarkation and debarkation were made are enigmas which the antiquarians have not yet solved.—St. Louis Republic.

Women and Comic Papers.

A man said the other day that in riding out and in daily on a suburban train for years he had never yet seen a woman buy one of the comic weeklies, though they sold by dozens to the men travelers.

It would be interesting to know what kink is missing from the female mentality which deprives her of this boon, for it is nothing short of a boon to be able to see the funny side of life. It helps over many hard places and lubricates many creaking joints in domestic machinery.—New York Times.

A Mighty Deed.

The Rev. Mr. Lanks (solemnly)—My young friend, are you not aware that a youth who smokes cigarettes will never accomplish anything in life?

Young Jackey Napes—Aw, don't feel yourself! I set fire to a theater with a cigarette once and burned up an entire "Uncle Tom's Cabin" troop.—Brooklyn Life.

DIVORCE IN BURMAH.

An Original and Exhaustive Method of Settling Family Troubles.

In Burmah, as in civilized Europe, suspicion often disturbs the family circle, but instead of filling lawyers' pockets and giving society papers highly spiced paragraphs the following effectual mode of divorce procedure is adopted: The family relatives on both sides are called in—even distant cousins living a long way off—and many are the long journeys made in jolting bullock cars, and many the animated discussions by the cigar puffing circle of relatives squatted ceremoniously on the bamboo matted floors.

If an amicable settlement can be obtained thus—and very difficult it is to smooth down the quarrels, as a rule, for the Burmese are a spirited race—the elders or patriarchs of the village or district are called in, and after the circumstances are explained arbitrators are appointed from among them, who proceed as follows: Two candles—wax if possible, but generally rushlights—are selected of equal length and thickness, and being simultaneously lighted are placed on the table if the establishment boasts of one; if not, on the floor.

This is done with the greatest gravity, care being taken that neither party has any advantage over the other in the shape of drafts through doors and crannies, and that all present are seated at sufficient distance to prevent their breathing from affecting the flame. The gradual burning down of the flames is then watched with breathless and solemn silence, which culminates as one or the other of these slowly burns down and splatters out its life in the waters of the basin in which it is fixed.

A deep "Ah!" a guttural sigh of relief, greets this termination, and if it be the husband's candle that burns out first he and his relatives walk slowly out of doors, solemnly and silently, leaving his better half in possession of the goods and chattels contained therein. If the wife's candle expires first, she and hers do likewise, and with a small present to the judges and umpires the divorce is completed.—Chicago Herald.

Advance in the Value of Pictures.

At the sale of the art collection of the late Mme. Demidoff, once a famous actress of the Theatre Français, a comparison of prices with those obtained at the auction of the Didier collection in 1858, from which most of the paintings, etc., brought to the hammer were derived, is most instructive as showing the wonderful variations in the value attached to masterpieces of art. Thus "The Four Seasons" (Prudhon) brought 80,000 francs, against 33,500 francs in 1858; a portrait of Mme. de Sombreval and of her son (Nattier), 40,520 francs, against 3,000 francs; a portrait of Rembrandt (by himself), 40,000 francs, against 4,000 francs; "The Rainbow" (Th. Rousseau), 17,500 francs, against 4,700 francs; "A Riverside View" (Bonington), 17,500 francs, against 4,200 francs; "The Reconciliation" (Fragonard), 16,200 francs, against 1,500 francs; portrait of Mlle. Olivier (Greuze), 15,600 francs, against 3,500 francs; portrait of a Monk Confessor (Rubens), 12,800 francs, against 2,000 francs; "A Forest Landscape" (Diaz), 12,500 francs, against 3,000 francs. On the other hand, a few works by Prudhon and Decamps were knocked down at prices far below those obtained in 1858, and a portrait of a girl by Velasquez, presumably his daughter, was sold for 10,000 francs, against 15,100 francs at the Didier sale.—London Telegraph.

Roses All the Year Round.

Splendid as the blooms of the June one are, we want roses all summer long, hence have to look to the teas, Chinas, Bourbons and similar ones to give them to us, and they won't disappoint us. Summer roses, as we call them, bloom from first to last, giving us their smaller, though sweet scented, flowers until freezing weather comes. When the cool nights of fall come, they make a glorious display of flowers, allowing of the cutting of many a bouquet. The well-known Bermosa, Louis Philippe, Malmaison and Agrippina are members of this class. Other good representatives are Appoline, Edward Desfosses, Louise Odier, Bougere, Caroline Marniesse, Homer, Gloire de Dijon, Mme. de Vatry, Souvenir d'un Ami, Marie Ducher and Sombrieul. These are all hardy in this latitude with but little protection, and in many places with no protection at all.—Joseph Meehan in Pittsburg Dispatch.

The Growth of a Metropolis.

Things seldom seen in New York nowadays: A runaway, a man trying to ascertain where he is from the sign on a lamppost, sheep or steers being driven to slaughter houses, a man carried on a stretcher, girls selling newspapers, boys sweeping crosswalks, advertisements pasted on the curbstones, a torchlight parade, a chowder party keeping step coming home, a goat south of Fifty-ninth street, an omnibus on the west side of town, a barber shop in the second story of a building, or a woman as ready to take pennies in change in a street car as to give them for fare.—New York Sun.

Asking the Wrong Party.

"Some of you," said a political orator, "remind me of Johnny Blain, who undertook to break the yearling bull, and to make sure he did not get away tied the rope around his waist. The breaking process angered the yearling, and he split a crack in the atmosphere toward the swamp. Johnny only hit the ground in the high places. In their mad career they passed a neighbor, who yelled to John, 'Where are you going?' 'Blanked if I know,' he replied as he sailed through the air. 'Ask the bull.'"—Northwest Magazine.

Not a Paying Occupation.

Hicks—What a chance for a fellow to grab these women's pocketbooks that they hold in their hands so temptingly!

Wicks—Excellent, as you say. An industrious thief might snatch scores of 'em every hour and make as much as half a dollar a day.—Boston Transcript.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF THIRD Township in the County of Inyo, State of California.

L. Wood, Plaintiff, vs. Jesus Encinas, Defendant.

The people of the State of California send greeting to Jesus Encinas, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Third Township, County of Inyo State of California, and to answer before the Justice at his office, in said Township, the complaint filed therein within five days (exclusive of the day of service) after the service on you of this Summons—if served within the Township in which this action is brought, or, if served out of said Township, but within said County, within ten days; or within twenty days if served elsewhere.

The said action is brought to obtain judgment against you for the sum of $225.86 alleged to be due and owing from defendant to plaintiff upon an account stated between plaintiff and defendant, at Independence, Inyo County, California, on the 12th day of June, 1892, which sum of $225.85 defendant agreed to pay to plaintiff. For cause of suit as more fully appears by the complaint on file herein, to which you are referred.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of $225.85 and costs of suit.

Make legal service and due return hereof.

Given under my hand this 24th day of August 1893.

IRV. H. MULHOLLAND,
Justice of the Peace of said Township.
F. E. Densmore, Attorney for Plaintiff.

Lodge 221, F. & A. M.

- KENDALL'S SPAVIN CURE. -

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.
Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent **Spavin** of 12 months standing. I removed it with ½ bottle. I tied upon the foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a **running from her nose** for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 38-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy Place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallnah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispiciada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and a half chains (12 1-2) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12) and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South six eight and eleven twentieths (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, Sept. 16, 1893.

Estate of Alexander Spencer—Decree of final discharge.

Bar Silver is quoted at 74¼.

No news from the Fair at Bishop.

The weather has been very pleasant for the past week.

M. H. Bush and E. Spencer, of Big Pine, were in town on Wednesday.

J. D. Lewis, Esq., came down from Bishop on Tuesday returning next day.

Local news are scarce, none at all in fact. Every day has been Sunday in Independence since the Fair begun at Bishop.

The Deputy-Sheriff informs us that since the exodus of our County Officials for the Fair at Bishop peace and harmony prevail in our model burg.

We are informed that Mr. Eibeshutz's horse, Frank, received the first premium as a roadster and also landed first money in the 3:10 class at Bishop yesterday.

It is estimated that the output of silver for the present year will be fifty per cent less than for the year before. This will also cause a large deduction from the gold output.

Quite a number of our townspeople are attending the Fair at Bishop, in fact, only those who are so unfortunate as not to afford or not possessing the necessary remaining at home.

George D. Craig, of San Bernardino, is visiting his brother, C. W. Craig, of the *Index*. Mr. Craig has just returned from an extended visit to the World's Fair at Chicago, and reports it the biggest show on earth.

Supervisors meet next Monday for the purpose of levying tax for the ensuing fiscal year. The tax rate may be reduced to $1.80 on the $100; if so, this will be an important reduction considering the State increase of 144-10 cents over last year.

Rise in the price of lead is causing a slight improvement in mining in Montana and Colorado. Mine owners want to give employment to miners during the coming winter so that wives and children may be provided with the necessaries of life.

Affairs in the County Clerk's office, since the fitting of the new vault for county records, have assumed a shape of good order and system. Under Clerk Hession's present arrangement any paper or record can be referred to in a moment, he having brought "order out of chaos."

From official sources Revenue Collector Quinn of San Francisco calculates that in the past thirty years the Chinese in this State have earned over all expenses the enormous sum of $810,000,000. The Collector thinks that all of this vast amount of money was sent to China.

The planing mill at Bishop has been moved from the original site to a location about one hundred yards farther north. The property was recently sold by Mr. Shelley to G. Albright, formerly of Candelaria. Hampton and son moved the building very successfully.

Webb Walker and his brother Eli were up from Olancha at the beginning of the week. Eli reports heavy crops of alfalfa about the south end of the Lake; the yield is greater than ever known before in that locality. The crop of apples, pears and plums is very heavy, but peaches and nectarines were short.

Pat Keyes is doing well over in Beveridge, on the east side of the Inyo range. Some days ago A. J. Wren brought in two pounds of gold that Pat had cleaned up. Wren says that the ore being sent to the arastra when he left the mine was yielding one hundred dollars a ton. Seven hundred pounds of ore are worked each day; two men get out the ore and deliver it at the arastra; one man attends to the machine and a fourth takes care of the motive power—mules and provides fodder for them.

The anniversary of Mexican independence was not celebrated with as much festivity as usual at Lone Pine. All day Saturday there was a marked absence from the streets of the festivity that used to make the town so lively on that anniversary. The chill of the Ohio iceberg froze the genial current in the souls of the children of the sunny south. A ball at night was well attended and under the influence of bright eyes, soft stillness and the night and touches of sweet harmony, pleasure resumed her gentle sway and the enemies of silver were forgotten for a time.

How Does Wheat Do!

The above question has been asked by parties interested in getting information about Owens Valley. In answer the following instance is given: From a tract of ten acres, E. Robinson at Independence this season took one hundred and sixty-five sacks of clean wheat. Each sack weighs one hundred and thirty-five pounds, being a total for the ten acres of 22,275 pounds. This is a fraction over thirty-seven bushels per acre. The land has now been cropped twenty-one years in regular succession, corn, potatoes and other crops being alternated with wheat. This piece of land is no better than thousands of acres about Independence, and the yield this year will not more than average with that of other places in the victory. The wheat was irrigated twice. We have known Mr. Robinson to gather over fifty-one bushels of clean wheat per acre from a tract containing seventeen acres, but this was far beyond an average crop.

House Burned at the Fort.

Monday night at about 11 o'clock the residence of Mrs. Margaret Lewis, at Fort Independence, was totally destroyed by fire with all its contents. The only occupants of the house at the time of the fire were Miss Millie Turner and Albert Lewis, Mrs. Lewis being in Independence and George Lewis at Bishop. The fire started in the kitchen portion of the house, and when discovered by Miss Turner, who was roused by the roaring of the flames, had made such headway that she had barely time to awaken Albert and make her escape from the burning building. The building and its contents are total loss, there being no insurance. The loss to Mrs. Lewis is very severe. The building used as a hospital, about 70 feet distant was saved, there being no wind at the time and large locust trees between that and the burning building.

Fair Race Programme.

FIRST DAY.

Trotting, 2 year-olds, free for all colts raised in District; mile and repeat, purse $100—$75 to first, $25 to second.

Running, ¼ mile dash, free for all, $50.

SECOND DAY.

Trotting, free for all stallions owned in District, 3 in 5, mile heats—$100.

Running, 2 year-olds, ½ mile dash—$50

THIRD DAY.

Trotting, 3:10 class, mile and repeat—$75

Running, mile dash, free for all—$100

FOURTH DAY.

Trotting, free for all horses owned in the District, 3 in 5, mile heats, $150—$100 to first, $50 to second.

In all races entrance fee 10 per cent; 3 or more to enter, 2 or more to start.

There was no lack of interest in the races at Bishop this week. The boys were not as flush of money as usual, but they bet horses, cattle, mules and jacks on the result. Mining shares, Independence water stock, saddles bridles and spurs, everything that could be used to back opinions was put up as long as a taker could be found. The boys of Owens Valley are ever ready to go their whole pile on a horse race.

R. Decker, of Panamint, was a visiter at the County Seat during a portion of the week. He reports the mines in the Death Valley country as looking promising, and says that while the miners of that section are not taking out a great deal of ore, owing to the low price of silver, yet they continue prospecting and getting their mines in shape, hoping that the future may have something better in store for them.

MISCELLANEOUS.

Ordinance No. 49.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Section 7 of Ordinance No. 43, which was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board held on the 5th day of January, 1892, and which said Ordinance No. 43 is recorded in Ordinance Book "B" at pages 89 et seq. and was amended by Ordinance No. 47, by the said Board of Supervisors, on the 5th day of April, 1893, which said amending Ordinance is recorded in Ordinance Book "B" at pages 166 et seq., is hereby amended to read as follows:

Section 7. Every person who at a fixed place of business sells any malt or fermented liquors, wines or distilled liquors, whether on commission or otherwise (except vinicultural productions when sold by the producers thereof, and fermented or malt liquors when sold by the manufacturer thereof, on the premises on which the same shall be manufactured), must obtain from the Tax-Collector, and for each branch of said business, a license, and must pay quarterly therefor the sum of Forty Dollars. And every such manufacturer of any malt or fermented liquors, who sells the same on the premises on which such liquors may or shall be manufactured must obtain from the Tax-Collector, for such business a license, and must pay quarterly therefor the sum of Twenty Dollars.

SECTION 2. This Ordinance shall take effect and be in force on and after twenty-five (25) days from its passage.

SECTION 3. This Ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the "Inyo Independent," a newspaper printed and published in the said County of Inyo, at least two [2] weeks said publication to be made said time and before the expiration of said twenty five [25] days.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

(SEAL)

Attest: D. J. HESSION,
Clerk of said Board of Supervisors

The above and foregoing Ordinance No. 49 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo State of California, at a regular meeting of said Board held on the Eleventh day of July, 1893, by the following vote:

Ayes: Supervisors Frank Fitzgerald, A. C. Freeman, John Wilson, W. H. Uhlmeyer, R. Love.

Noes: None.

R. LOVE.
Chairman of the Board of Supervisors of the County of Inyo, State of California.

TELEGRAPHING A DIAGRAM.

How a Chart Showing the Plays of a Football Game Is Sent by Wire.

The principle of transmitting outline pictures by telegraph has been ingeniously applied to the illustration of football matches in newspaper reports. An enterprising New York paper supplemented the report of a football game by charts on which the course of the ball was shown at certain points of the contest by an apparent tangle of lines. The method of telegraphing these charts is quite simple and perfectly accurate. The original chart is made by a reporter, who stands on the field of action. He has in front of him a sheet of paper divided into very small squares, and from the center of the sheet he starts his pencil in directions corresponding with the flight of the ball.

Every change of direction in the course of the ball, either through the air or when it is carried by hand, is minutely recorded by the lines on the original chart, and in order to show when it was kicked and when it was carried broken and solid lines are used. After the game is finished the story told by the chart is prepared for the telegraph wires. At the end of each and every vertical and horizontal line on the chart is an English word of three letters, and if any word is taken on each of the two sides and the two corresponding lines are followed to their junction the two words selected will represent the point where the two lines meet and no other.

In this way all the points on the chart representing the change of direction in the ball's course can be translated into a code and in this form is telegraphed to its destination. At the office of the newspaper receiving the message is a sheet of crosslined paper exactly similar to that used by the reporter on the field. The first two words of the telegram are taken, and the junction of the lines represented by them is found and marked with the point of a pencil. The next two words are similarly followed out and the junction point of their lines marked.

These two pencil marks are then joined by a straight line, which shows the direction of the ball from the starting point to the first deflecting point. The whole dispatch is translated in this way, and the result is an exact reproduction of the original chart.—Pittsburg Dispatch.

The Time of Dinner.

The time at which the principal meal is taken is not within limits of such great importance if certain essential conditions are complied with. The selected hour should be adhered to, for the stomach acquires the habit of getting ready at the usual time—if it is disappointed, either the appetite fails or indigestion follows. The food last taken should not have been too recent, nor should there have been too long a task. The diner should not be overtired; otherwise the stomach shall share in the general exhaustion.

If the stomach has been fatigued by efforts to digest too recent a meal or by too long abstinence or partake of the general exhaustion of its proprietor, it would be unable to form the juices necessary for digestion. To his principal meal a man should bring his body fresh and vigorous and a stomach refreshed by rest after having done work within a reasonable short period. Dinner should never be bolted and hurried over. The food should be well masticated.—Boston Courier.

Sleeping Car Visitors.

There are probably not many travelers on the railroad who know of the "visiting" clause in the rules of sleeping car companies. In the Wagner rules it is provided that "passengers who have purchased berths will not be prohibited from inviting friends en route to share their accommodations. For persons so invited the regular form of berth check will be issued, punching out the cipher and writing the word 'visitor' plainly across the face of the check. This rule does not admit of an invitation being extended so that more than two persons occupy one berth. On trains where there are two or more cars of this company visiting will be allowed between the passengers who have purchased accommodations in either car, provided inconvenience is not done to any of the other occupants of the cars."—Philadelphia Record.

Taking Up the Dust.

Neat Housekeeper—Have you dusted this parlor?

Domestic—Yes, mum.

Neat Housekeeper—Well, it doesn't look so. Dust it again and breathe hard while you're doing it.—New York Weekly.

Quick Shooting.

"Have you any idea how fast a man could shoot a pistol in the border days?" said J. W. Delany, a Montana ranchman. "Take the time when Doc Hamilton, the notorious bad man of Colorado, killed Sheriff Harrity in Denver. Hamilton had been wanted for several killings and was dead shy. When he turned a corner, he'd walk away round near the edge of the pavement. Afraid somebody would get the drop on him if he turned too sharp, you know.

"One day he was in a hurry, however, and ran around a corner and looked square into a Winchester held by Harrity.

"'Well, Doc, I've got you,' says Harrity.

"'You've got too strong a hand, Harrity, and I can't call you,' says Hamilton, taking it cool and easy as you please.

"'Yes, full house, Doc. Guess you better travel on in front.'

"Hamilton was standing with his umbrella on his hip, leaning on it. He looked the sheriff square in the eye. Mind you, the rifle wasn't four feet from him and leveled straight for his head. Just as Doc started to move a runaway horse came down the street. Involuntarily Harrity glanced in that direction. Doc saw his eyes waver for an instant, pulled his gun—you see he had his hand on his hip—and shot Harrity stone dead before he could pull the trigger of his rifle."—Washington News.

The Snake Nut of the West Indies.

A nut which should be classed with such wonderful vegetable productions as the "vegetable worm" of China, the "vegetable fly" of Australia, and other plant oddities of that ilk, is the snake nut of Demerara. This paradoxical vegetable is said to also grow in some parts of Cuba and British Guiana, the first specimen in the British museum having been sent from the latter country. These remarkable nuts vary in size, some being as large as a goose egg, others not larger than a walnut. The kernel of each and every one does not simply "bear a close resemblance," but is a perfect counterpart of a boa constrictor, lying coiled up as if asleep—the head, general taper of the body, spots and everything being true to life.

When the kernel is yet unripe, it may be unwound or uncoiled and straightened out. In this state, although it is then without the spots, the resemblance to the body, fangs, scales and tail of a reptile is simply extraordinary. Those who can overcome the natural aversion to tasting such a thing declare that the nut is one of fine flavor, being equal in every particular to the cream nut or the English walnut.—St. Louis Republic.

Fine Quarters on the Ocean.

"There is sumptuous traveling to be had on the Atlantic," said Elliot C. O'Beirne of Manchester. "You can come across from Southampton to New York for $20 in the steerage of a steamer, or you can make the journey in a suite of rooms that will cost you $700. The City of New York, now the New York, of the new American line, and its sister ship, the Paris, each has four suites of staterooms on the upper deck, with three rooms in each suite, and it is for one of these suites that you must put up $700. The ceiling and sides of the bedroom are padded. The upholstery is beautiful, and instead of a berth there is a brass bedstead, so arranged that the motion of the ship is to some extent overcome. A private dining room, where all meals are served, and a private bathroom complete the suite. You could not be more luxuriously placed in any first class hotel in this country, though you would perhaps get a little more room to swing Indian clubs in for your $120 a day."—St. Louis Globe-Democrat.

Right and Left Handed.

It is curious to notice the vagaries of humanity in cases where no hard and fast line has been already drawn. Although most right handed persons put on their coats left arm first, a considerable percentage thrust in the right first. Soldiers fire from the right shoulder, but sportsmen are found who prefer the left. In working with the spade a proportion of right handed men grasp the spade with the left and push with left foot and right hand, though when using an ax the same individuals would grasp farthest down with the right.—Chambers' Journal.

A Feejee Death Custom.

When any one dies in the Feejee islands—man, woman or child—a whale's tooth is placed in the hand of the corpse, the missile to be thrown at the tree which stands as a guidepost to point out the road to heaven and the one that leads to hell.

People Who Take Offense Easily.

In this world there are a certain class of individuals who roam about with a chip on their shoulders, daring others to knock it off just for the luxury of indulging in a first class quarrel. To the gentle mannered, sweet dispositioned ones this seems a very questionable sort of enjoyment, yet to some a wordy war or a full fledged feud constitutes the chief excitement of their lives.

These people always have a quarrel on hand. If it isn't a family affair, then outsiders must suffer. They are quick to take offense, both in public and private, and have no scruples about expressing themselves on paper when they haven't a chance to do so verbally. It is this penchant for writing letters that helps to keep them continually in hot water, as the black and white characters are decided evidence against them even after their anger has had time to cool.

Now, if there were any sense in this sort of conduct, there would be some excuse for it, but there isn't, and, moreover, it makes you doubly unhappy to be always on the cuts with some one. You may pretend not to care, but you do just the same, and though pride and temper keep your spirits up for a time in your secret heart you wish you had not been quite so ready to quarrel.—New York Commercial Advertiser.

A Connecticut Poet.

There is a movement in Connecticut to erect a monument to the memory of the poet, James Gates Percival. He was a peculiar man and had all of the poet's idiosyncrasies. On one occasion he was invited to meet a number of gentlemen in New Haven, who were in their turn notified that they were to have the pleasure of meeting the poet. He was to be, in fact, the honored guest of the evening. They were all on hand, but Percival did not put in an appearance. Allowance was made for his utter indifference to the passing of time, and up to midnight he was expected.

At last, as morning drew near, deeming it certain that the poet had forgotten the invitation, the guests went home and the host put up the bars and went to bed. At about 2 o'clock in the morning he heard some one at his front door, went down, asked the object of the call and found that it was Percival. The astonished host let the poet in, and the latter blandly said that he had inferred from what had been said that there were to be others present. The host told him that the others had all gone home. The poet expressed regret and settled himself down for a good smoke and talk, which kept up, to his host's embarrassment, till the sun rose.—Boston Transcript.

General Vallejo and Fremont.

When the destiny of the province of California hung in the balance, and England and Russia, as well as the United States, eagerly held out hands for the prize, General Vallejo unhesitatingly gave his adherence to the stars and stripes. Fremont doubted and imprisoned him, but soon set him free.

One day during that imprisonment a young American officer, doubtless a spy sent by Fremont, rode up to the family residence in Sonoma, and offering to Mrs. Vallejo an English and an American flag asked in Spanish, "Senora, which of these do you prefer?"

The lady looked at him a moment as if to read his purpose; then clasping the American flag to her bosom she kissed its folds and said: "This is the flag my husband has taught me to love. It is the one he wishes to see wave over his beloved California."

The officer smiled, and bowing gracefully to all present took his departure.

A lady who stood watching the courteous American as he rode away turned to Mrs. Vallejo and said, "No es Oso" (That is no Bear), meaning that is not one of the Bear Flag party.—Emily B. Powell in Harper's.

Bad Manners In the Use of Words.

The laws of common courtesy hold in the use of words as well as dishes. As unconsciously as you turn the handle of the pitcher in passing it should you turn the handle of your sentence and present your thought right side up. You would not toss the book you are asked for across the floor and leave your brother to pick it up. Why toss your answer in similar hit or miss rudeness?

It is not rudeness of manner to which I refer, but the rudeness of not making your sentence at least neat. The most admirable and affectionate of persons will fill your ears with a thousand needless words that do but conceal their meaning, or make some noncommittal reply which forces you to repeat your question.

A very large part of the misunderstandings in life, with all the sin and sorrow resultant, is traceable to this same carelessness, this stupidity, these inexcusably bad manners, in the use of words.—Charlotte P. Stetson in Kate Field's Washington.

A Cheeky Customer.

"I had a unique but tantalizing experience the other day," said a clerk who works in a Kansas City hair store. "A man came into our place and asked to look at some false beards. Of course he was accommodated, and he spent over an hour going over the lot, trying them on and examining himself in a glass. He took up my time, and after he had examined everything in that line in the store he thanked me and said he was considering whether to raise a beard or not and wished to see how he would look in the different styles."—Kansas City Star.

Deaths Due to Bad Milk.

Five thousand little graves are dug each year in Philadelphia for babies, and 5,000 little headstones are yearly set up over their graves, all due to deaths traceable to the diseases which spring from wrong feeding. In the overwhelming majority of instances the poor food of which these babies die is bad milk, diseased milk or skimmed milk. Death's heavy harvest of little babies in Philadelphia is rendered possible by the absence of a sound milk law.

The Origin of the Fan In China.

The origin of the fan in China is said to have sprung from the following incident: A royal princess, very beautiful, was assisting at the feasts of lanterns, her face covered with a mask as was usual. The excessive heat compelled her to remove it, and in order to guard her features from the common gaze she moved it quickly to and fro in front of her face, thus simultaneously hiding her charms and cooling her brow. The idea was at once adopted throughout the kingdom. Catharine de Medici carried the first fan from Italy ever seen in France, and in the time of Louis XIV the fan, covered with jewels, was worth a small fortune.

He Croaked Too Soon.

He was a type of the aggressive, "I-told-you-so" croaker who gloats over human misfortune simply because the world insists on going on in the old way and ignoring his advice. A look of triumph came into his little gray eyes as he caught sight of a sheet of white paper pasted on the door of a big Washington street building at noon yesterday. There was something written on the sheet in a fine hand. The little old man halted, took off his hat, mopped his brow, waved his hand toward the sheet of paper, and said in a loud tone of voice to a couple of men standing by:

"That marks the beginning of the end. I predicted it long before the ides of last November. But the blind, unthinking people had their way. They sowed the wind, and now they will reap the whirlwind."

A crowd of 100 people had gathered, and the little man became oratorical.

"We are on the brink of national ruin. National credit is irretrievably gone. The air is filled with the crash of mighty banks and great corporations, and the hum of industry is stilled in the land. Cobwebs are forming on the idle looms, and the rust accumulates on the miner's pick and shovel."

The crowd by this time numbered 1,000 people, all demanding to know what was going on.

"The savings of how many poor people have been swept away in this crash. Can any one tell me?" shouted the orator. "Let us see whether this little paper, fraught with sorrow for thousands of people, will tell us the true reason for this failure, which is only the forerunner for hundreds more."

The little man adjusted a pair of steel bound spectacles to his nose and read this notice, while the crowd waited in breathless silence:

> A few desirable offices in this building for rent at reasonable figures. They can be seen on application to the janitor.

The orator slunk away just as a policeman made a grab for him.—Chicago Times.

He Preferred to Retain His Coat.

Here is a story about Prince Engalitcheff, the handsome Russian, who, being at all hours of the day one of the best groomed young men in all Chicago, is always a welcome guest at the big palaces along the avenues. In the matter of dress the prince is a sort of fashion plate that the young men of the town delight to copy, and it is in connection with his very faithful following of the sartorial fashions that this rather amusing story is told.

Attired in one of the very long frock coats, coming down almost to one's ankles, and that now constitute "the proper caper" for young men of fashion in the afternoon, the prince called the other day at a very swell Michigan avenue mansion, the chief ornament of which is a young lady who, while she has more than once been reported engaged to be married within the last year, still lends hope to her host of adorers by refraining from an actual dip into the matrimonial sea. The prince entered and was warmly welcomed by the young lady and her mamma. The latter after a minute or two asked cordially, "My dear prince, won't you take off your coat?"

Much too well bred to express surprise, the prince merely declined the invitation, and the conversation proceeded.

Presently the elder lady, oblivious of the nods and winks sent in her direction by her charming daughter, repeated the invitation: "Prince, you must be frightfully warm with that heavy coat on. Pray remove it. You will be much more comfortable."

The prince looked just the least bit embarrassed as he replied, "Excuse me, my dear madam, but if you please I will r-r-retain it."

It was not until the noble caller had left the house that the daughter explained to her doting parent that the prince had not worn an overcoat.—Exchange.

Always Breaks the Crystal.

"I have been told," said Mr. Dubois watching the great steam hammer in the rolling mill, "that a good hammerman can break the crystal of a watch with that 30 ton hammer."

"Yes, sir," said the hammerman, "it can be done."

"I should like to see it," said Mr. Dubois eagerly, feeling in his watch pocket.

"I can do it, sir," replied the man.

"And will you?" replied Mr. Dubois, drawing out his watch. "Come, I am anxious to see it tried."

He laid his watch on the great anvil plate. The hammer rose to its full height, and the next instant all its ponderous weight, with a crushing force which shook the ground for an acre round, came down on the watch.

"There, sir," said the hammerman, "if you don't believe that crystal is broken, just step down and you can see it sticking to the hammer."

Mr. Dubois swallowed a whole mouthful of lumps and gasped before he could speak: "But I forgot to say," he exclaimed, "that it was to break the crystal without injuring the watch."

"Oh, yes," said the hammerman, "yes, I know. I have heard that rubbish myself, but it's all gammon. I don't believe it. But you can break the crystal any time."

"Harris, the composer of 'After the Ball,' will make over $100,000 out of his song before it gets through its run," said a music dealer. "I know this for a certainty, for I have figured with him on the matter. Harris, unlike many other composers, realizes that the only way to make money is for the composer to publish it himself. He learned from the experience of others. The composers of 'Listen to My Tale of Woe' and 'The Song That Touched My Heart' would have been wealthy men on these two productions alone if they had had the foresight to take out copyrights in their own names.

"Take an instance in Pittsburg. In 1868 Henry Kleber composed a piano piece, 'The Rainbow Schottisch,' and gave it to a publisher who agreed to pay a royalty. The piece had a great run—over 1,000,000 copies being sold—and it is running well yet. Instead of receiving $300 a year royalty, as he has every year since the publication, Mr. Kleber might have made his fortune on this little piece. Harris produces a copy of 'After the Ball' for 4 cents. He makes 15 cents clear on each copy sold to music dealers."—Pittsburg Dispatch.

ST. JACOBS OIL

The Great Remedy for Pain.

Cures all the Aches and Pains of Man & Beast.

ODDS AND ENDS.

Oliver Cromwell was the son of a brewer.

Quicksilver was first used in the arts in 1540.

Opie's father was a carpenter and cabinet maker.

"God Save the Queen" is sung in nearly 20 languages.

Machines for setting type were invented by Mitchell in 1854.

Audiences are not permitted to applaud in Russian theaters.

EXPENSIVE ECONOMY.

Some people begrudge the little money that an ALLCOCK'S POROUS PLASTERS costs, and then when they are racked with pain from a lame back, or from the soreness arising from a cold, they will spend any amount of money to relieve the pain. If they only had one of these world-renowned plasters on hand they would be saved a vast amount of suffering and be considerably richer. At the first sign of stiffness of the joints apply one of these plasters without any delay. The soreness will be greatly relieved at once and soon disappear entirely. It will be money saved to have them on hand, to say nothing of the comfort they bring.

BRANDRETH'S PILLS contain no irritating matter.

Last year her hair was white as snow,
Now black locks are her brow adorning,
But at the change don't wonder so—
Her husband's dead and she's in mourning.

$100 REWARD, $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of Testimonials.

Address, F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

The clamor kept up by the silver States proves they are not by any means disposed to rest on their ores.

HOW WE GROW OLD.

The thread that binds us to life is most frequently severed ere the meridian of life is reached in the case of persons who neglect obvious means to renew failing strength. Vigor, no less the source of happiness than the condition of long life, can be created and perpetuated where it does not exist. Thousands who have experienced or are cognizant—including many physicians of eminence—of the effects of Hostetter's Stomach Bitters, bear testimony to its wondrous efficacy as a creator of strength in feeble constitutions, and debilitated and shattered systems. A steady performance of the bodily functions, a jaded appetite, flesh and nightly repose attend the use of this thorough and standard renovant. Use no local tonic represented to be akin to or resemble it in effects in its place. Demand the genuine, which is an acknowledged remedy for indigestion, malaria, nervousness, constipation, liver and kidney complaints and rheumatism.

When a Parliamentary division ends in a free fight, both the eyes and nose are apt to have it.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Wheat never reaches the age that it won't take a drop now and then.

DOCTOR

Pardee's Remedy,

THE GREAT CURE

—FOR—

INDIGESTION

and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism,

Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO.,

9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE

STATIONARY AND MARINE ENGINES.

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE,

ECONOMICAL,

SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

JULY AND DECEMBER.

She is standing in the twilight,
With her plighted hand in his,
And the darkness falls upon them;
Ah, they need no light, I wis.
Oh, but they twain love so fondly,
Other loves and lives may die,
But their troth shall be eternal!
Crickets chirp—'tis in July.

Orange blossoms shed their perfume,
Holly decks the chancel walls,
Gently now the swelling music
In melodious rhythm falls.
Fashion's throngs crowd nave and transept.
Soft! Her wedding day! December:
But another's wooed and won her.
Snowflakes fall. Does she remember?
—J. W. Shwartz in New York World.

A CAPE HORN INCIDENT.

On a December morning, in the year 1883, a mail steamer, homeward bound from a New Zealand port, was approaching the meridian of the Horn, but on a parallel more southerly than it is now the custom of steamships to take in rounding that stormy, ice girt, desolate and most inhospitable of all headlands.

December in those distant regions is midsummer, and the weather of that morning was as fair and still as a breezeless April day in this country; but the swell of the vast tract of ocean ran ceaselessly—reminiscent respirations of a giantess whose conflict with the heavens is eternal and whose breathing pauses are very few and far between indeed. Over this long, dark blue, westerly swell the great metal fabric went sweeping in long, floating, launching curtseys, whitening the water astern of her with a mile of milk white wake.

The frosty sun, whose beams in that sea have something of the silvery brilliance of the electric light, flashed a score of constellations out of the gilt and glass and brass about the steamer's bows and quarters and decks. A number of passengers were pacing the long hurricane platform. Far away on the starboard beam, poised starlike upon the keen blue rim of the ocean, was an iceberg—a dash of crystal line light against the airy sky that out there, low down, wore the delicate hue of the opal. Otherwise the ocean swept naked to its confines, a plain of rich, deep blue, with the heave of the swell shouldering the morning glory under the sun as it ran, and making that part of the deep magnificent with flowing light.

The chief officer was on the bridge; the first breakfast bell had rung and the captain, smart as a naval officer, in buttons and lace trimmings, quitted the chartroom and joined the mate to take a look around before going below. This skipper was a man of eagle sight, and instantly on directing his eyes over the ship's bow he exclaimed:

"What is that black object yonder?"

The chief mate peered, and the captain leveled a telescope.

"A ship's boat," said he, "and seemingly full of people."

The boat, when sighted, was some three or four miles distant, and the speed of the steamer was about thirteen knots. In a few minutes the alarm in the engine room rang its reverberatory warning, sending a little thrill of wonder throughout the ship, so rarely is that telegraph handled on the high seas.

"I count eight men, sir," cried the chief mate, with a binocular glass at his eye.

Again the engine room alarm rang out; the pulsing that for days had been ceaselessly throbbing through the long fabric languished, and in a few minutes, to another summons of the metal tongue below, ceased and the great steamer floated along to her own impetus slowly, and yet more slowly, till the boat was within the toss of a biscuit off the bow, with the passengers crowding to the side to look, and sailors and waiters and steerage folk blackening the rail forward.

The occupants of the boat consisted of eight wild, hairy, veritable scarecrows of men, dressed in divers fashions—Scotch caps, yellow sou'westers, sea boots, toil worn monkey jackets and the like.

"Boat ahoy!" hailed the captain as she slowly washed alongside. "What is wrong with you?"

A fellow standing up in the stern sheets cried back in a strong Yankee accent:

"For God's sake, sir, take us aboard! Our water's almost given out, and there's nothing left to eat."

"Look out for the end of a line," bawled the captain. "Are you strong enough to get aboard without help?"

"Ay, sir, we'll manage it."

A rope was thrown, and one after another the fellows came swinging and scraping and scrambling up the clean side of the steamer. The passengers crowded around and gazed at them with curiosity and pity. Their sympathetic eyes seemed to find famine painfully expressed in the leathern countenances that stared back through mats of hair.

"We must let your boat go," said the captain.

"Can't help it, sir; thankful enough to be here, I reckon," answered the fellow who had called from the stern sheets and who acted as spokesman.

"Anything belonging to you to come out of her?"

"Nothing, by the Etarnal! Let her go, sir. If sailors' sea blessings can freight a craft, she ain't going to float long."

The boat was sent adrift, the engine bell rang out, once more the great mail steamer was thrashing over the long, tall heave of the Cape Horn swell.

"How came you into this mess?" inquired the captain.

The man who had before spoken made answer:

"We're all that's left of the crew of the Boston bark George Washington. She was a whaler, a hundred and eighty-four days out. It were four days ago. I was the first to smell fire some while arter 2 o'clock in the middle watch."

"It wanted ten minutes to six bells," exclaimed a man, and a general, emphatic, hairy nod following the interruption.

"I was the first to smell fire," continued the other, "call it what hour ye like. I gave the alarm, and all hands turned to with hoses and buckets. But there was a deal of oil in the hold, and the ship's planks was thick with grease besides, and that gave us no chance. By 10 o'clock in the morning the flames had bursted through and was shooting up mast high, and then we calculated it was time to look to the boats."

The others stood listening with hard, solid, leathery faces, generally gazing with steadfast eyes at the speaker, but sometimes glancing askant at the captain and the crowd of others which stood round.

"There was a tarnation ugly sea running," the man went on, "and the wheel being desarted the ship had fallen off and lay in the trough, and the lowering of the stern boats, whalemen though they was who had the handling of 'em, cost our company of twenty-eight souls the loss of all hands saving them as stand afore ye."

"A bad job! a measly, cruel, bad job!" here broke in a long jawed man whose brow and eyes were almost concealed by a quantity of coarse red hair.

"Well, us eight men got away in the boat," proceeded the spokesman, "bringing along with us nothin but a small bag of bread and about six gallons of fresh water. We're been a-washing about since Tuesday, and now, the Lord be praised, here we be with a chance of getting something to eat, and what's more pleasurable still to our feelings, the opportunity of comfortably tarning in."

A murmur of pity ran among the passengers, several of whom were ladies, and there was more than one somewhat loud whisper to the effect that the captain ought really to send the poor creatures forward at once to get some breakfast instead of holding them, starving and dry with thirst, in talk. The eagle eyed skipper, however, asked several questions before dismissing them.

"Since by their own confession the fire gave them plenty of time to escape from the bark, how was it they had left her so ill provisioned as they represented?"

This was most satisfactorily accounted for. Other inquiries of a like nature were responded to with alacrity and intelligence. Every sentence that one or another of them let fall was corroborated by the rest. Their tale of suffering indeed in the open boat was almost harrowing, and the captain, with the first note of sympathy that his voice had taken, ordered them to go forward, adding, that after a good hot meal had been served them they might turn in and sleep for the rest of the day wherever they could make a bed.

At the breakfast in the saloon nothing was talked about but the American whaler that had been consumed by fire, the dreadful drowning of some two-thirds of her crew, and the miraculous deliverance of the survivors from the inexpressible perils and horrors of an open boat in the solitude of the stormiest part of ocean the wide world over. A benevolent gentleman proposed a subscription. Before the luncheon bell was rung a sum of thirty pounds had been collected. The incident was a break in the monotony, and when the eight men reappeared on deck during the afternoon they were promptly approached by the passengers, who obliged them to recite again and yet again their melancholy story of maritime disaster.

On the morning of the third day, following the date of this rescue, a ship was sighted almost directly in a line with the vessel's course. As she was neared she was seen to be rigged with stump or Cape Horn topgallant masts; she was also under very easy canvas, which gave her a shorthanded look in that quiet sea. Great wooden davits overhung her sides, from which dangled a number of boats. She presented a very grimy, worn aspect, and had manifestly kept the sea for months. It was observed by the chief officer, standing on the bridge of the steamer, that the eight rescued men, who were looking at the sail ahead along with some of the crew and steerage passengers, discovered several symptoms of uneasiness and even of agitation. Suddenly the stripes and stars, with the stars inverted, were run aloft to the peak end—a signal of distress! The engines were "slowed" and the steamer's head put so as to pass the vessel within easy hailing distance. A man aboard the bark stood in the mizzen rigging.

"Steamer ahoy!" he roared through his nose.

"Hallo!"

"I have lost a boat and eight of my men. Have you seen anything of her?"

The captain, who had gained the bridge, lifted his hand.

"Bark ahoy!" he cried. "What bark is that?"

"The George Washington, whaler, of Boston, 184 days out."

The captain of the steamer controled a sour grin.

"How came you to lose your boat and the men?"

"They stole her one middle watch and sneaked away from the ship."

The captain of the steamer uttered a laugh.

"We have your men safe here," he shouted; "glad to learn that you are not burned down to the water's edge, and that the rest of your crew look brisk considering that they are drowned men. Send a boat and you shall have your sailors."

Twenty minutes later the eight whalemen were being conveyed to their bark in one of their own boats, most of them grinning as they looked up at the line of heads which decorated the steamer's sides; and indeed there was some excuse for their smiles, for among them they were carrying away the thirty pounds which had been subscribed for them. It would be interesting to know what their skipper said when he learned that they had lost a fine boat for him; but ocean mail liners have to keep time, and the steamer could not wait to send a representative on board the whaler to report the many elegancies of Boston sea dialect which we may reasonably assume embellished her skipper's rhetoric.—W. Clark Russell in Wit and Wisdom.

The Film In Glassware.

The interesting fact has been developed in the case of table glass that the much admired iridescent film is slightly soluble in water, and what is left of it easily yields to the solvent action of caustic soda, while it is not affected by the action of strong hydrochloric acid. When the solutions in water and in caustic soda are examined it is found that these solvents have taken up sodium, sulphuric acid and carbonic acid, and the portion of the film that is insoluble in the acid can only be silica, even the spectroscope failing to reveal the presence of lime.

The iridescent film is also said to be usually associated with one side only of the glass, and must be formed during the final heating of the ware, being probably caused by the action of the sulphurous acid which exists in the burning gases, this action upon the surface of the glass, forming sodisulphate and silicate. The latter is afterward decomposed, when free silica separates out in an amorphous form, and this is that portion of the film which resists, as above mentioned, the action of the hydrochloric acid and is dissolved by the caustic soda.—Philadelphia Ledger.

Bloodhounds in Texas.

The bloodhounds in this county and all parts of Texas are doing the greatest amount of good imaginable. How readily the housebreaker, the petty midnight thief, the prowler, the eavesdropper, the murderer, the incendiary, the burglar and all others bent on malicious mischief to person and property can be trailed up by the sleuthhound. Let all beware who contemplate raids on poultry houses, melon patches, cornfields and unprotected homes, etc. The thought of the bloodhounds prevents many a theft and other depredations upon personal property. The assassin, the thief bent on malicious mischief may well take a second thought on the fact that he can be traced to his hiding. The blood hound is an excellent institution and he is here to stay. Every good citizen is willing to be taxed to keep a fine pack for the use of our officers.—Nacogdoches (Tex.) Star.

AT THE BIG FAIR.

Soldiers from Foreign Lands on Dress Parade in Jackson Park.

QUAINT MINATURE OF OLD VIENNA

The Largest Hammer in the World.—A Room Full of Cuckoo Clocks. Donegal Castle.

There may be a war started at Jackson park before the fair is over. Tommy Atkins is there in several varieties and is to be seen in what are sure to become rival shows. One of them is only intended to exhibit the different varieties of Tommy and what he can do, while the other is an aggregation of military specimens from "the five greatest nations on earth." Tommy is almost sure to break out and look for fight if his qualities have not been belied by his veracious historian, and the fact of his representing rival if not hostile camps will be likely to act as the chip on the small boy's shoulder.

A series of individual rows would be likely to be followed by a battle between the different corps, and if the Chicago police were not alert enough to stop it before British gore once again reddened American soil there is no knowing just what international complications might ensue, particularly if some of the others of the "five greatest nations" should get mixed up in it. Then if some one should go over to the big menagerie in Midway plaisance and let loose a few of the lions, tigers, panthers and other animals there might easily ensue a general slaughter.

Before then it would perhaps be as well to see what we can of the British soldier, for the chances are that if he ever comes to this country again it will be with his fighting clothes on, and we shall hardly have as good an opportunity to examine his uniforms and accouterments. Here are the Life Guards, mounted on black horses and clad in flashing cuirasses and helmets with long white plumes. Their tight, white skin breeches run into boots that reach half way up the thigh, and their hands are hidden in white buckskin gauntlets that reach half way to the elbow. The Royal Horse artil-

OLD VIENNA.

lery wear blue jackets and tight blue trousers with red and gold trimmings and long boots. The Grenadiers wear scarlet jackets, dark blue breeches, bearskins and top boots.

The rifle brigade has a uniform of dark green and black astrakhan shakos. The Highlanders have black and green tartan kilts, red and brown stockings and ostrich feather bonnets with white plumes. The Irish Fusileers wear a scarlet uniform much like the Life Guard, with a bearskin shako. The Royal Irish Lancers carry lances and wear dark blue jackets slashed with scarlet, dark green breeches, long boots and plumed helmets. The Royal engineers wear red jackets and trousers, Blucher boots and helmets. The medical staff wear dark blue jackets and trousers and white helmets and the cross of Geneva on their left arms. The Eleventh Royal Hussars wear red breeches, dark blue jackets with gold facing, long boots and coonskin busbies with white plumes.

The English soldiers of the opposition camp comprise 25 of the famous Twelfth lancers. Kaiser Wilhelm has a detachment of "Pottsdammer Reds," France a delegation of 25 chasseurs, Russia a company of Cossacks and the United States a detachment of the famous Sixth regiment. Added to these is a heterogeneous collection of vaqueros from Mexico, Bedouins from Arabia and cowboys from everywhere. It will thus be seen that there is ample material to begin the war we have suggested as possible, and it is to be hoped that no one will be so careless of consequences as to tread on Tommy Atkins' toes.

"Old Vienna," as the Austrian village on the Midway plaisance is called, has a fourteenth century quaintness peculiar to itself. Its main entrance gate is an exact reproduction of the original gate of the Austrian city and bears the legend "A. D. MDCLIV." Austria's crown and eagles are to be seen in most of the department buildings and ornament all the Austrian pavilions in the Manufactures building, where the empire makes a great show.

Under the gallery in the German space, adjoining that of Austria, little rooms have been made between the girders, and each is occupied by some particular line of goods. One is entirely devoted to cuckoo clocks made in the great Black Forest, and not less than 40 different varieties are shown. An adjacent room has a collection of the tall old clocks of our grandfather's days, and another is fitted to represent a cozy corner in a library, the shelves being all hand carved, and a handsome seat of embossed leather being set in the corner.

Donegal castle and the Irish village are as interesting for the lessons they teach as for their picturesqueness. Mrs. Ernest Hart, the patroness of the enterprise, is the lady who devised the scheme of co-operative industries that enabled the poverty stricken inhabitants of Donegal to become self supporting and turned their dilapidated village into a thriving town, with model cottages and money making industries.

The model of the Bethlehem 125-ton steam hammer, the largest in the world, looks very like solid iron, but is built of wood and staff. It is placed in the Transportation building because it forges so many steamship shafts and cranks. The original strikes with the force of 125 tons and weighs 2,386 tons, and two years were spent in building it.

The Illinois state building, or, as Chicagoans love to call it, Memorial hall, is the largest and most costly of the state buildings and occupies the best site on the grounds. It commands a good view of the waterways and most of the big buildings, and looking down the lagoon one can catch a glimpse of the peristyle nearly a mile away. If the programme as at present arranged is carried out, there will be a grand feast of oratory and music on May 17 at the dedication of the building.

Scientific Teaching.

Science teaching should be progressive and should start at the foundation—as, for instance, in the building of a house. The first stuff is concrete, which is lime and gravel. To make lime, limestone or chalk is needed, also fuel to quicken or burn it, requiring the description of wood, the growth of plants and the process of combustion. Coal, ashes, cinders, breeze, follow. The formation of clay, marble, granite, sandstone and plaster comes next. In this house will be needed iron, lead, zinc, tinplate. Then glass, glue, whitewash, putty. These materials should be handled by the pupil and the processes shown by means of apparatus.

No philosophizing should as yet be done. About here introduce him to the truly awful revelation that in all the universe, as far as can be learned, there is but a limited number of prime stuffs—the elements. Now fire, flame, water may be carefully studied. Charcoal, peat, gas, matches and their substances come successively. Then the papering, painting, glazing, varnishing. Furnishing would embrace numerous manufactures and processes.

The next division would concern the person, with chapters on clothing, food, washing, writing, reading. Clothing includes the textile fabrics; food, the manufacture of bread, which would be an intellectual epic poem, explaining the growth of wheat, the nature of yeast, the relationship between the constituents of wheat and the body. The study of life and a flower is more elevating than the most subtle game of whist ever played.—Chicago Post.

Have Pity For Bashful Men.

Girls, do not laugh at the mistakes of the bashful man or boy. You have no idea how your innocent mirth wounds him, and there is no use in making anybody unnecessarily miserable. No matter how much a little woman of the world you think yourself now, you can remember certain episodes in your past career that make you grow warm from head to foot just to think of at this far away date.

Even though today your manners are as nearly perfect as possible and your deportment at all times correct, you can undoubtedly remember a time when to enter a room that held strangers was an ordeal that you would have avoided if you could have done so without shocking the proprieties that in those days seemed such fearful bugbears. Can you not remember feeling that every eye was fixed upon the smallest details of your attire with harsh and irritating criticism in the glance, and for the time being your feet and hands seemed to have assumed most unusual proportions, and though in other places you knew perfectly well what to do with them they on this occasion became unmanageable, and you felt as though you were all hands and feet?

Isn't the memory of the mocking smile or the titters that went around at your expense as hard to bear in memory as it was in reality? Therefore refrain from making fun of the bashful men.—Exchange.

Overeducation.

"It is now asserted by many that a man can—or a woman, either—be overeducated," said T. E. Harper. "People meet so many cads and cranks who are 'educated' that they have really begun to assert that a person may be overeducated—know too much. Good old American horse sense will outgrow this idea soon, I know. It isn't education that is troubling the cads and long haired cranks. It isn't knowing too much that is troubling any one. It's the simple fact that a minor knowledge of a hundred arts and sciences has succeeded in bewildering these people."

"They run to this meeting, and that 4 o'clock Spencer class, and this 2 o'clock class for the study of Ibsen, and that evening class for the instantaneous acquirement of a supreme knowledge of the German master works until they have become befuddled. They don't actually know what they are doing, and so they gather about and talk on a dozen subjects, only to make some poor striving soul imagine that he doesn't know anything at all and that they are supreme. As a matter of fact, they are wasting their time, and so is any one else who listens to them."—St. Louis Globe-Democrat.

Our Great Country.

It has recently been discovered that on American soil the sun never sets. The British have for years sung a song in glorification of the fact that the sun never sets on the soil of that clime.

But, lo! now comes the stars and stripes, which are never out of sight of the sun. The exact situation of the geographical center of the United States is a surprise to any one who has not given the subject careful attention. The most eastern point of the United States is Quoddy head, Maine, the western, Attoo island, Alaska; the most northern, Point Barrow, Alaska; the most southern, Key West. The center of the quadrangular figure formed by uniting these four points is located at crossing of 55 degrees north latitude and 110 degrees west longitude, about 420 miles north of the north line of Montana. It is also true of the United States as of Great Britain that the sun never sets on our territory, for when it is 6 p. m. on Attoo island, Alaska, it is 9:36 a. m. of the following day at Eastport, Me.—Exchange.

America's First Recorded Eclipse.

The first observations of an eclipse of the sun taken by American astronomers were made on Long island, Penobscot bay, on Oct. 27, 1780. On that occasion a party from Harvard college, headed by Professor S. W. Hollis, LL. D., having obtained the consent of the British general who was in command of Castine, landed at Bounty Cave and made the house of one Shubael Williams their headquarters. The totality of the eclipse was visible only at Penobscot bay and vicinity, a fact which would make such an event one of great import even today. It is but justice to add that the observations made by the Harvard scientists were very successful, notwithstanding the fact that their instruments were very crude and inaccurate.—New York Press.

Wrote His Will on His Own Body.

There lately died in Mexico a miser of the name of Monecke. His relatives were unwilling that his body should be interred, as he had tattooed his will over his chest with some red pigment instead of using pen and ink. The court decreed that the remarkable "human document" should be copied and the representation duly attested in the presence of witnesses. This was done, and the court pronounced the queer will genuine.—St. Louis Republic.

The Seer of Charing Cross.

The seer of Charing Cross road, London, was often visited and consulted by the late Prince Consort, Lord Lytton, Charles Dickens, George Eliot, Lord Beaconsfield and many other notables. The seer of Kings Cross also became quite famous through his predictions relating to the celebration of the queen's jubilee, in which he foretold the failure of the anarchists' plots and the injuries that befell the Marquis of Lorne.—Edgar Lee in Arena.

TYPES OF BAD MEN

The Real Thing is Well Counterfeited by the Plat d Ar icle.

HARD TO TELL THEM APART.

In Experimenting One is Liable to run up against the Wrong One.

'Bad men in the west break into two classes," said a gentleman, late of Silver City, "the sure enough and the imitation bad man. One is a killer and the other simply blusters. The two sorts look alike, talk alike, garb themselves in big hats, belt guns on their hips, swear and guzzle and follow each other's suit from first to last, for which reasons it is hard to tell the real thing from the counterfeit. The only sure way of distinguishing the true, solid silver bad man from the plated fellow is to test them as fast as presented.

'Russian Bill, who, in the early eighties was a rustler in the valley of San Simon in Arizona, and a singularly industrious horse and cattle stealer of that shadeless region, was an imitation bad man. He was a great talker, and—hear him tell it—had filled more graves than an epidemic. It is doubtful, however, if he ever drew human blood, and the other rustlers similarly regarded him as a man of no courage. It turned out a case of the magpie and the peacocks with the Russian though, for one evening the impulsive denizens of Shakespeare, A. T., took Bill's word for it and incontinentally hung him de bene esse.

'The Russian had company, though, for they stretched another gentleman, time and tree the same, yclept Sandy King. There was no discount, however, on King. One could have taken a brace and bit and bored clear through him and struck nothing but clean strain game. King and Russian Bill were together on the occasion of their apprehension and taking off, and were decided specimens of the two types of bad men.

THE NAME OF BILL.

'Bill, as a name, has been the property of a good many of the fighters of the west. Frequently some affix or prefix went with it to keep the blood bedewed Bills from getting all mixed up. There have been a Curly Bill, a Wild Bill, a Navajo Bill, a Buffalo Bill, a Poker Bill, a Cheyenne Bill, a French Bill, an Antelope Bill, a Russian Bill, a Broncho Bill, a Canadian Bill, a Monte Bill, a Butcher Knife Bill and Bill Bonney, or Billy the Kid, that I have known of.

"Cheyenne Bill was and is one of the false killers referred to, and always trying to 'run a blazer' upon some tenderfoot and scare him to death. Raton, N. M.—pronounced 'Rahtoon'—does not, as a community, rise early of a Sunday morning, and as I once, back in 1883, came out of the hotel in the still and early hours of that holy day, I heard a voice over on the next street raised to a point between a threat and a command. My attention was at once attracted, and getting out where I could see I found Cheyenne Bill in slow but threatening pursuit of a reluctant tenderfoot who had come in on the train the night before. What the row was about I didn't know.

"'Stop whar you be, or I'll pull on you!' commanded the vaporish Bill in a fierce tone, his hand on his six-shooter and following along after the stranger some two rods behind.

'To give the tenderfoot his due, while he kept walking away from Bill, he appeared more disgusted than scared, and while he said nothing and did not turn on his would be captor, nevertheless he received his orders to halt with becoming contempt, and kept straight on.

BILL AND THE TENDERFOOT.

'Except for my presence, Cheyenne and his victim had the town to themselves, Jack Hixenbaugh, the marshal, and the rest of the citizens being sensibly in bed. I had seen a Chinaman run Cheyenne around once over in Trinidad, and knew there was no more to be feared from him than from the last calf on the range, and shouting over to him I so informed the person from the east and advised him to go after the doughty Cheyenne and pull his head off. The tenderfoot had about made up his mind to do it anyhow, and my vote settled it. He turned and started for Bill, whereupon that person at once lost all his valor and fled briefly.

'The tenderfoot caught up with him, however, and eased his surcharged soul by three or four forceful and very meritorious kicks. This seemed to do both Bill and the shortnorn a world of good, and the former avoided the fifth by plunging up a stairway. The tenderfoot wanted to charge after Bill and kill him completely, but I urged a different view and pointed out the fact that Bill took his gun with him and that if he found himself cornered he might shoot.

'Curly Bill was another of the riotous and desperate sort. His range in 1881 and 1882 was southwestern New Mexico and eastern Arizona. No one knew where Curly Bill hailed from, but if there's truth in Scripture, where he was going was plain to all. He was reputed, when I saw him, to have killed nineteen men, and had the air of one who was looking hard for a chance to make it a score. Curly Bill has found his grave somewhere out in the arid wastes he patroled, as nothing has been heard of him for some time."—Kansas City Star.

One day in a chat with a friend he said to me: "Has it ever occurred to you that when old age deprives you of much of your present ability to earn a living you will be obliged to look to your friends for support, or else become a charge at some one of the charitable institutions? I confess I am neither a money maker nor a money saver, but "it is dollars to doughnuts" that the person who thus twitted me of my weakness simply echoed as he did so the general plan which he, in the cold blood of middle age, is counting on as his resource when he shall get too old to be indispensable.—Detroit Free Press.

Kindness Among Drivers.

A very commendable spirit of Freemasonry that finds many different methods of expression prevails among the drivers on New York's busy thoroughfares. You might not believe this if you ever witness the antics and hear the forcible language of these men during one of the innumerable blockades that make pedestrianism on the down town streets difficult and often dangerous.

But it is so, and requires very little to bring it to the surface. A companion in distress meets with any amount of practical sympathy.

I stopped one evening recently to witness the unsuccessful efforts being made to extricate an old wagon loaded with iron from one of the many ruts that cut up Broadway where temporary surface car tracks have been torn up and no pavements relaid. The horses attached to it was of the variety known as a "has been," and seemed constitutionally tired. The entire turnout, including the driver, looked disreputable, and as I approached appeared to be anchored for the night.

Just then one of the natty, brightly painted and handsome rigs of a big express company came rattling up the street, evidently on the way to the stables for the night. The driver drew up his fine team when he saw what a plight his disheartened contemporary was in.

"Get out that rope," said he to his assistant on the rear of the huge van.

Soon they had one end of a length of line made fast to their own rear axle and the crosstrees of the wagon behind. The expressman mounted again to his high perch, chirped to his horses and they "snaked" the little truck out onto solid ground "in a wink." Then casting off the towline the agile assistant swung on behind, and the handsome turnout rolled rapidly away without waiting for thanks to make up lost time.

Similar sights to this are often witnessed by people whose business calls them down town. It is said by judges that the drivers of the express vans are the most expert in the city.—New York Herald.

A Story of Artemus Ward.

Mr. William Winter says that one evening he and Artemus had been attending a gathering of literary friends, and about 3 o'clock in the morning they started down Broadway on their way home. When they reached the old Jones House, now demolished, Artemus insisted upon entering. They found a solitary night clerk there, who was barely able to awake sufficiently to receive them.

Ward said, "Is this the Jones House?" and he said it very solemnly, and when the clerk informed him that it was, Ward, straightening himself up and assuming a manner of grave importance and mystery, said:

"First of all I want a bottle of gin. Can it be negotiated for?"

The clerk produced it, and then Ward, still maintaining his manner of heavy mystery, said to the clerk, "Is the proprietor in?" Yes, he was in, but abed. "It is very important that I see him," continued Ward, "in fact, of the utmost importance."

So the clerk went off to arouse the proprietor, who some ten minutes later came down in his night shirt, pair of trousers and slippers over his stockingless feet. Ward seized him impressively by the hand, and then, with the manner of great mystery, led the astonished Jones to a corner, and bending to his ear said in tones which would have done Edwin Forrest credit, "Sir, I have called to impress upon you the sublime and awful fact that eternal vigilance is the price of liberty. Let these words sink deep into your heart, sir!"

Jones seemed overcome with astonishment, so that he was not angry, and Winter and Ward walked out of the hotel arm in arm. Just as they reached the sidewalk Ward turned back and handed Jones his card. Years after, when Mr. Winter happened to be at Jones' place, he saw the card framed and hung up conspicuously in the office.

A Young Woman's Performance.

As the Cincinnati, Hamilton and Dayton train stood in the sheds Friday morning a young woman on the platform was talking to an elderly woman who leaned out of the car window. When the train started the two women clasped hands, and the younger walked along the platform looking up at the one in the car window and unmindful of where her feet were placed.

"That's mighty reckless!" exclaimed Patrolman Raftery, with a wild stare.

"Yes, if she makes a single misstep she will be killed!" gasped Station Master Rogers.

"I'm buying pools that she will get hurt," remarked a blond drummer as the train increased its speed.

"Good gracious! What does the woman mean?" said Rogers, starting toward the east end of the depot, for the train was under rapid headway and the young woman was on a keen run, still grasping the hand from the window. Faster went the train, until it seemed impossible for her to escape being hurt. Just as Meridian street was reached she gave a spring.

Rogers started to run.

Raftery did the same.

The blond drummer dropped his cigarette with a smoky and vile smelling thud.

Twenty people gazed in open mouthed wonder.

As before stated she gave a sudden spring, and kissed the face in the car window, waved goodby with her hand and coolly walked up the street.

"I'm dashed if one man in a hundred could do that and live to tell about it," exclaimed Rogers, as he mopped the perspiration from his brow with a bundle of waste.—Indianapolis Journal.

Danger in a Potter's Life.

While the potter's life is a pleasant one compared with many other mechanical vocations, being surrounded with a sense of the beautiful and an artistic instinct which goes far to make his existence happy, it is unfortunately brief. The business is one of the most unhealthy in the world. Potters commence work about eighteen years of age, and at thirty-five perceptibly begin to decline. The average trade life of the pressers is seventeen years and of the kilnmen fourteen and a half. Pulmonary diseases are common among the slipmakers, turners and jiggermen. The revolving molds keep a cloud of clay dust about the workmen which they cannot avoid inhaling.

In many factories the clay is mixed in damp cellars, which increases the liability to colds. Hollow ware pressers stand while at work, and are obliged to stoop a great deal, the size and weight of the molds makes their work laborious, and the rapid motion agitates the dust to the injury of their throat and lungs. The sagger makers are liable to overstrain their muscles in placing the saggers in the kiln. An ordinary sagger when filled with ware weighs from 50 to 100 pounds, and after about twenty years of lifting such weights the workmen begin to decline. In the decorative departments there is danger of lead poisoning from the dry coloring matter.—Chautauquan.

LIQUID AIR.

A Scientist Explains his Wonderful Chemical Discoveries.

PROFESSOP DEWAR'S EXPERIMENTS.

Probably the Greatest Investigations of the Century.—Gases Reduced to Fluid State.

The Pall Mall Budget of London published an interview with Professor James Dewar on what is represented as being 'a great scientific discovery," that of making liquid air. Introductory to the interview the article says that "his liquefactions of permanent gases and the use of vama to preserve great cold mark one of the most important chemical discoveries of the century." It is held by scientists that any gas may be liquefied if the pressure and cold may be obtained and a vessel of sufficient strength to withstand the great pressures.

Of the gases that may be liquefied carbonic acid gas has been found to be the cheapest and readiest made, and while it has been known for many years that it could be liquified it has generally been so prepared only in small quantities for scientific uses. The use of compressed air as a motive power has presented many difficulties, the principal one being its bulkiness; hence large vessels must be used in order to get a sufficient amount of motive power, and it is hard to make these strong enough and at the same time light in weight.

As a motive power it is used at a pressure of from 600 to 900 pounds. But if Professor Dewar has discovered an economical and ready way of liquefying it, it will tend to solve a problem in carrying a motive power in storage bulk that will be of great benefit to the students in this line. In the talk with the representative of The Pall Mall Budget, he says:

'Well, I don't think there's very much to say, because I've told all I have to tell about the matter in my two lectures, but I do believe there's a great deal more to be learned about the subject. You see, at present we've got these gases down to 210 degrees below zero, and the lowest possible temperature is 274 degrees below. If we could get some 30 degrees lower down, we might liquefy hydrogen. Hydrogen has never been liquefied in a free state yet.

'Now, it's a strange thing that air can be made into a homogeneous fluid. You would think, as oxygen can be liquefied at −182 degrees and nitrogen not until −192 degrees, that as you made the air colder and colder the oxygen would become liquid first and then the nitrogen. I saw that prediction made in a standard work only the other day. Now, I dare say, you will ask why the oxygen don't come down first."

Stepping quickly back to the desk Professor Dewar took up a pencil and began to draw with rapid strokes on the back of a letter. The diagram when it was finished looked more like the law of diminishing returns turned up on one side than anything else that I am acquainted with. While he drew he rapidly explained how the influence of atmospheric pressure on the different volumes of nitrogen and oxygen in air makes them boil almost exactly at the same temperature. As he made each point he frowned a little, drawing up the wrinkles between his eyes. "Now, that, in the old theological days, would have been taken as a providential dispensation. The strange thing is that when liquid air evaporates again they are under the same pressure, and the nitrogen goes off first, as you would expect.

'Ozone can be liquefied by acting on the vapor given off from liquid oxygen by electricity. It is a splendid dark blue color, almost as dark as indigo. Ozone has not the same molecule as oxygen, and the electricity breaks up three twos into two threes. That is the secret of it. The queer thing about liquid ozone is that when it goes back into gas again it explodes. You wouldn't think it, but it is stronger than dynamite as an explosive. It's simply because the ozone goes back into the molecular form of oxygen so fast. The force that comes from the electricity makes it explode without meeting with any outside body. It's a tremendous explosive.

"We have discovered that liquid oxygen acts as a lens. It is so transparent to heat, so to speak, that even at 182 degrees below zero you can focus heat on it from one side and light a piece of paper by it on the other. You know that's just what happens in the earth. The sun's heat gets focussed on to the earth through the lens formed by the vacuum of space, which is so cold that it hasn't any temperature at all—absolutely zero."

Professor Dewar gave a lecture on "Liquid Air" at the Royal institution in the presence of the Prince of Wales, the Duke of York, Lord Salisbury and other notable persons. He showed that by the withdrawal of heat the air is converted into a liquid with total loss of chemical properties, incapable of supporting combustion, or of entering into combination even with phosphorus and sodium, while certain physical properties remain. The conversion of oxygen into ozone was also described, and the retention by oxygen of its peculiar optical properties at the lowest temperature was demonstrated by the very dense and well defined bands of its spectrum. In ordinary conditions oxygen shows no unreasonable thermal absorption, but at low temperature its thermal absorptive power becomes manifest.

Considered Music a Drawback.

I have known some excellent people who contended that music was a dangerous art, and even so intelligent a man as the late Dr. J. G. Holland, the editor of The Century, contended that skill in piano playing or violin playing was rather a drawback to a young man than otherwise. What would Dr. Holland think of the prosperity of the dozen or more music conservatories that have sprung up within the last ten years? And in many of the classes there are almost as many boys as girls. And in the west there is scarcely a town of 5,000 inhabitants which has not its conservatory.—New York Epoch.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 29 1893

The Representative of Russia at the Irrigation Congress at Los Angeles will be M. Constantius Comodzinsky. He is now in the State with a corps of assistants inspecting irrigation works for his government.

It is beyond dispute that in California the great mass of the people are rapidly becoming estranged from the church. It is equally clear that this estrangement is caused by the preference which most ecclesiastical bodies show for Chinamen, and their fanatical opposition to all laws for restraining Chinese immigration.

The Santa Fe since the road first entered California has been in high favor with the people. An order has been issued to all foremen in every department of the road in Southern California directing them to discharge all Austrians, Italians and Huns and not to employ any of them under penalty of losing their positions. Unemployed Americans will take their places on the road.

Mr. Geary has introduced into Congress a bill that provides for the suspension of immigration for five years. It is high time that such a measure should become a law. American Consuls in Europe report that the worst class of people who ever entered the United States are now entering it by tens of thousands every week. Most of them are ignorant and filthy, many of them are paupers and criminals, and all of them are undesirable. When our own citizens are idle by the hundred thousand, not one of these worthless hordes, the offscourings of Europe, should be suffered to set foot on American soil.

The World's Fair authorities have conferred a distinction upon California and other parts of the Pacific slope of far higher value than any number of medals, diplomas or premiums. They decided that it would be very unfair to allow any farm products raised under natural rainfall to be judged in competition with products raised by irrigation. It was apparent that if such competition were allowed all the premiums must go to the products of irrigation. This is the most important recognition yet given to the superiority of irrigated lands over lands dependent upon rainfall. It is a world wide acknowledgment of the fact that the former is so superior to the latter as to admit of no comparison of products either in quantity or quality. This action of the World's Fair authorities is certain to attract the attention of thousands of farmers to California.

An effort is being made in Congress to change the law requiring $100 worth of work to be done on mining locations each year. The miners have for twenty years complied with the law willingly and made no complaint, but since silver has so greatly declined in value, the law works a hardship upon them. Many of them are not able to spend the cost of the annual work, as they are earning nothing from their claims. It is proposed to change the term of the assessment year from January 1st to October 1st of each year and to extend the time for doing the assessment work for 1893 from December 31st 1893 to September 30th 1894. Under the depressed condition of silver mining this is a reasonable request and should not be refused. Silver miners should not be regarded as on a par with counterfeiters and smugglers or as a class against whom oppressive laws should be rigidly enforced.

Hundreds of destitute men are swarming into the southern part of the State over the Santa Fe and Southern Pacific railroads. These men are not worthless tramps but laborers who have been thrown out of work by the silver mines being shut down. This ruin has been brought upon that part of the nation which was the most prosperous by men who claim to know all about finance. This small class of capitalists dictate the financial policy of this great nation and cause more misery than the march of an invading army. No treason can be worse than this. These hundreds of workingmen will not tamely sit down and die of hunger with plenty of food in sight; and it will be a serious question how to provide for them. It is not likely they will quietly lie down by the wayside and die of hunger while Chinamen are employed in field and orchard. Sooner or later there will be an outburst of indignation among these victims of greed. If it could fall upon the heads of the scoundrels in Wall street and their tools in Congress there would be little to regret.

A Great Salt Lake in Siberia.

The great salt lake at Obdorsk is 4 miles wide and 17 miles long, yet except in a few places it is solidly roofed over with a deposit of salt which is getting thicker and thicker every year.

Our guide, who is an old man, said that he could remember when the salt crystals first began to gather upon the surface of the water. Year by year, owing to the evaporation of the water, the crystals became more numerous and then caked together till this great roof formed.

In 1878 the water beneath this salt crystal roof found an underground outlet into the River Ob. This lowered the lake's surface about three feet, leaving that distance between the water and the roof.

Looking down through one of the openings made for the purpose in the roof, we saw a low sided small boat. Our guide put me at a time into the boat. We lay flat on our back and looked up at the curiously beautiful salt ceiling overhead. We propelled the boat by pushing with our hands against the irregularities of the roof.

The guide held a long rope attached to the boat to prevent our going too far and getting lost—a thing he said it was easy to do.

Many springs surround this lake. Their water flows over the roof and evaporates there, and thus continually adds to its thickness. After many years the springs will probably become choked with their own deposits, and then the whole will gradually become covered with earth, and so a great salt mine will be formed—a treasure for the Siberians hundreds of years to come.—Cor. Geographical Magazine.

People Who Whistle.

"Most people look upon whistling as a nuisance," said Herbert C. Sutliffe, "but there is no doubt that a whistling man has a good deal to recommend him. I have a friend who is a warden in a large penitentiary, and he states that in all his long experience he never knew a habitual whistler condemned to a term in the institution, and he says, moreover, that although the rules as to quiet and order are frequently broken he never remembers to have heard an attempt at a musical whistle within the terrible looking walls of the institution. Whistling seems to be the natural safety valve of good spirits and satisfaction, and the grumbling man couldn't whistle if he tried.

"I had a man to work for me once who was a model in every respect except that he kept my teeth constantly on edge by a series of whistling solos of anything but a cheerful character, although the good man was evidently trying to reproduce the latest operatic hits. I broke him of the habit by continuous scolding, but the man became so idle and indifferent in consequence that I was very glad to encourage him to resume a habit which at first had given me so much annoyance. I try to get out of the way when the spirit moves him to announce in whistling tones some important or romantic event, but I am perfectly certain that as long as he whistles he will work as hard as his hands and arms will let him."—St. Louis Globe-Democrat.

The Trouble With a Cold.

"What's"

"I got an awful cold," replied Colonel Morney.

"Have you"——

"Yes. I have. I have polished my bronchial tubes with 'Conlin's Consumption Coughine.'"

"No, but have you"——

"Yes! Course I have. I've had some grease rubbed all over my throat and chest, and I"——

"But, I say hold on, have you"——

"I tell you there's nothing I haven't tried. I took a hot bath, drank a pint of boiling lemonade and rubbed my hide almost off with Mustang liniment, but"——

"Now, Enter! Have you"——

"Yes, I have. Tried them all, but they're no good. Why, I'm sick!"——

"That's all right, but have you"——

"Have I what?"

"Have you time to go over to Clyma's and have something?"

"Why the deuce didn't you talk reason at the start?" responded the colonel. "I'm with you."—Exchange.

Colors of Sapphires.

Sapphires have of late years become fashionable gems. The blue of the sapphire is very seldom pure or spread over the whole substance of the stone. Sometimes it is mixed with black, which gives it an inky appearance, sometimes with red, which, although imperceptible by daylight, yet by artificial light gives it an amethystine appearance. Two sapphires which by daylight may appear of the same hue often differ extremely in color at night. If the stone be held in an ordinary pair of forceps an inch beneath the surface of very clear water, the parts of the stone colored and uncolored will be distinctly apparent. This remark applies to all other gems.—Cincinnati Enquirer.

The Poverty of Printed Language.

"God will keep up his end of the row if you give him a chance." That was the language used by Moderator Craig in his sermon, which had direct reference to the controversies before the general assembly. As it appears in print the sentence requires an expository note. Whether the word "row" rhymes with "how" or "hoe" becomes an important question.—Washington Star.

Strength of the Horse.

A horse can draw on the worst kind of earth road about four times as much as he can carry on his back. On a good macadamized road he can pull 10 times as much; on a plank road 25 times as much, and on a street railway 58 times as much.—Chicago Journal.

Beware of This Road.

Dora—What road did you travel over?

Clara—The North Southern railroad, and I'll never patronize that line again either. Their caramels are horrid.—Good News.

THE IMPRISONED ROSE.

We heard Hilary this morning, and thought
A song like this would suit the poet's lay,
For music's art is his, and he can weave
Its memories of the past, and he recalls the tale
The innocent night-bird sang at vesper-fall
Pedesma is thrown. His joyous third
And natural pledges are now all in hail,
How different from the notes when, wild and free,
Pouring his happy greetings to the moon
And pleasure seemed the business of his days!
No light lay, he; yet were minuets in his ways
When he trode o'er the lawn in pride of state
Or filled the air with nobly-toned song.

—Edward H. Cranmer in New York Sun.

Not Big Things Only Excite Wonder.

It is not always the things of gigantic proportions that excite the greatest curiosity. Mastodons, elephants, whales and other creatures of monstrous size are and have been wonders indeed. So, too, are the pyramids, the great cathedrals, towers, monuments, etc., the great Corliss engines, the 16-drive wheel locomotive and other triumphs of mechanical skill. But while this is true beyond question, how about the wonders revealed by the microscope and the work of the deft fingered artist, D. A. Vr. Meer, who painted a landscape on the side of a grain of wheat? By the use of a strong microscope only could the wonders of this minute painting be distinguished.

Yet when a good glass was brought to bear upon what appeared to be a spot of variegated paint upon the side of the wheat grain all was changed into a beautiful landscape—a forest, a mill at the side of the river, a miller climbing an outside stairway with a sack of grain upon his back, a tall cliff at the side of the mill and a winding road along which some peasants were trying to drag a refractory pig!—St. Louis Republic.

Gloves to Rule Husbands and Lovers.

The revival of light kid gloves for wear with walking dresses rather a blow to the thrifty minded. Those who have a limited dress allowance have delighted in the convenient black kid or brown suede, which could be worn quite a number of times without showing signs of being weatherbeaten in any way. But light gray, pale lemon and the new horrific green are soiled in an hour when worn with sealskin, dark cloth or serge. Fortunately four or six button length does very well at present, but there are some indications that in the season sleeves will be short and gloves long. If so, light kid will be atrociously extravagant, even though they will not soil so readily when worn with light colored gowns.—Cor. Chicago Herald.

Marrying by a Formula.

The woman that took part in a late marriage at Newcastle, England, had a mathematical formula to guide her. At 16 she married a man of 32. At 20 she married again and chose a man of 40. To complete the series, she saw at 42 marry a man of 84. Her first husband was a Quaker, the second a Catholic and the present one a Protestant. If she lives much longer and is determined to go on with her mathematical matrimonial ventures, she will have to advertise in the want columns for a centenarian and specify a new religion as one of her provisions.—Atlanta Constitution.

The Wardroom "Boy."

The wardroom "boy" on board a man-of-war is often spoiled as many of these be seaves, but the old fashioned title and form of address stick to him. Wardroom boys usually are colored men or foreigners. When a Haytian or Jamaican negro is obtainable, he is regarded as a catch. This character still of the Jap. The latter seems to understand by instinct to remember a multitude of details without effort and obey promptly and without question.—Philadelphia Ledger.

Living in the Suburb.

It was several months ago that McTavish, who had never lived in the suburbs, moved with his family out to West Noltown. The other day one of the old residents said to him:

"Well, Mr. McTavish, how do you like West Noltown?"

McTavish sighed slightly and then said, "The peceeful man is merciful to his subarbs!"—Cincinnati Enquirer.

Good Luck Another Term.

Lobbyist (confidentially, displaying roll of bills)—Of course money is no object. What we want is to have this bill passed.

Alderman (indignantly)—Bribe me? No, sir! I am really in favor of the passage of the bill, but—but—I'll just hang my overcoat here in the hall before going in.—Truth.

A Friendly Hint.

Postoffice Clerk—See here, boy! No living mortal can read the address on this envelope you just handed in.

Boy—Well, if this 'ere postoffice department wants fine handwritin', why don't you keep better pens at these desks, say?—Good News.

The population of the Kingdom of Spain, as reported in last census, taken six years ago, was 17,550,060. As the population is nearly stationary the count for this year would be about the same as that of the year in which the census was taken.

As Japan was the first nation to have her exhibit completed for the World's Fair, Major Handy says that that country is the most advanced, businesslike and newspaper sort of nation in the world.

Celluloid is becoming quite popular for numerous fancy articles. It comes in several shades of the delicate colors and is an inexpensive material. The thin transparent sheets are the prettiest.

Alabama boasts a woman who was struck by lightning seven years ago, has never spoken since, and whose eyes grow luridly brilliant at the approach of a thunder storm.

In positions of the sketch the old time negro still lingers, preserving toward the white race the exact relations of 40 years ago, for an outward deference goes

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF THIRD Township in the County of Inyo, State of California.

L. Wood, Plaintiff, v. Jesus Encinas, Defendant.

The people of the State of California send greeting to Jesus Encinas, Defendant:

You are hereby required to appear in an action brought against you by the above named Plaintiff in the Justice's Court of Third Township, County of Inyo, State of California, and to answer the complaint filed therein, within five days (exclusive of the day of service) after the service on you of this Summons—if served within the Township in which this action is brought, or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to obtain judgment against you for the sum of $225.86 alleged to be due and owing from defendant to plaintiff on an account stated between plaintiff and defendant, at Independence, Inyo County, California, on the 12th day of June, 1892, which sum of $225.86 is the sum agreed to pay to plaintiff. For costs of suit, as more fully appears by the complaint on file herein, to which you are referred.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of $225.86 and costs of suit.

Making inquiries and due return hereof.

Given under my hand this 25th day of August 1893.

IRV. H. MULHOLLAND,
Justice of the Peace of said Township.
F. E. Densmore, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of John McFarlane, deceased.

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of John McFarlane, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at the office of P. W. Forbes, Esq., in the Court House, at the town of Independence, the same being the place for the transaction of the business of the said estate in the County of Inyo, State of California.

H. H. HOWELL,
Administrator of the estate of John McFarlane, deceased.

KENDALL'S SPAVIN CURE.

Stockton, Cal., Dec. 15th, '92.

Dr. B. J. Kendall Co.

Gentlemen:—Having read one of your Treatises on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with 3 bottle. I tied up one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a single blister across the hock or spavin until the hock or spavin got very warm, with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death to and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the South-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 18.10; thence northeast following the meandings of the so-th Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo as the same appears by the official plat of the said town of Independence, now on file in the office of the county Recorder of said Inyo county, having been the residence of said John A. Hallhall, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Plata Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura, State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12) and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range Twenty-one (21) West, San Bernardino Base and Meridian, running thence south six degrees and twenty-seven (6 27-2) rods; thence east twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the south east quarter, and the North west quarter and the No the east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range Twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing and will be received at the residence of the undersigned in Georgia Creek, Cal., and may be left at said place, or at the office of the District Attorney in Independence, Cal., or delivered to the Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court, deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th, 1893.

COURT NOTES.

Geo. M. Gill, Superior Judge.

MONDAY, September 25.

People vs. T. B. Scovil—Trial set for November 7, 1893.

Julian vs. Julian—Decree of divorce granted and plaintiff permitted to resume her maiden name.

DIED.

ELDRED—At Bishop, September 23, 1893. John Eldred, aged 33 years.

Bar Silver is quoted at 74½.

Burt. Rhine returned from Bishop on Wednesday.

The Board of Supervisors will meet in regular session next Monday.

Mr. and Mrs. George Neal went south on Wednesday on their way to their home at Mojave.

J. J. Gann came in from Modock yesterday. Mrs. Gann is expected from San Francisco to-day.

Emmons Spencer Esq., El and Fred Crooker were down from Big Pine early in the week on land business.

John Fiebman came up from Keeler yesterday. He reports very dull times for merchants since the silver mines have been closed down.

Abe Church took a 'lay off' last Monday and has spent the time with his family at Independence. He will take hold of the throttle again on the C. & C. road to-morrow.

Hans Meyer received a severe shaking up Wednesday night. He was on his way home to Georges Creek when his horse stumbled, throwing Hans and falling upon him. There are no serious injuries, however.

J. R. Eldred is erecting a building at Big Pine to be opened as a meat market. The growing business of the town renders a market necessary. Mr. Eldred is to be joined in the business by his brother-in-law D. W. Pitman.

Sam Tyack of Bodie is at Independence. Mr. Tyack runs the Syndicate mine at Bodie. He attended the fair at Bishop last week and came on down the Valley on Monday. He has been looking about mining prospects for the past few days.

The Supervisors this week fixed the tax levy at the rate of $1.80 for State and county taxes. It is gratifying to the people and highly creditable to the Board of Supervisors to have the finances of the county so managed as to make this reduction possible.

The Comstock miners have held an election on a question of reduction of wages. The proposition was rejected by a very large majority. It is not at all unlikely that this may lead to the closing of every mine about Virginia City, and that would effect the total ruin of a town that once had twenty thousand inhabitants.

It is reported that Elias Blake has sold his farm near Big Pine to Los Angeles parties, the price named being $8,000. The farm contains 320 acres; there are thirty-five acres in alfalfa, a small orchard of apple and other fruit trees now in bearing, a comfortable dwelling and other improvements. There is a first-class water right and an abundance of water.

The Sorba mine near Darwin has been sold to Los Angeles parties. The exact price is not made public but it is certain that the parties selling the mine have made a nice little fortune. It is worth note that it is only from Los Angeles that parties come here to invest money in land or mines. Since last Spring there has not been a week without some intending investors or settlers from that locality being in the Valley.

A. W. de la Cour Carroll came up from Lone Pine on Wednesday. Mr. Carrol is taking many photographic views of the mountains and different parts of the Valley the intention being to use them to illustrate descriptive articles in magazines. Mr. Carroll has no expectation of ever receiving one cent for his labor in making these beautiful pictures; the work is intended solely to benefit the country.

The Odd Fellows Lodge of Independence gave a social last evening at their lodge-room to which a general invitation had been given. A short literary and musical programme was rendered, followed by refreshments. Afterwards the party adjourned to the Agricultural Pavilion and danced until 1 o'clock. It is proposed to repeat the affair on the last Thursday of every month and judging from the perfect success of last evening the next occasion will be eagerly looked forward to.

The Fair

By far the most interesting exhibit at a fair is the people themselves. Fairs are not intended merely to exhibit farm products, live stock, minerals or manufactured articles; but to educate and stimulate to improvement. In a word, they help bring better knowledge, higher aims and greater happiness to human beings. We are a frontier community far from any great center of population; but it is safe to say that in the most populous part of this or any other State, no more orderly, well behaved, cheerful and good natured crowd of people could be gathered together than met at Bishop last week. During the whole week not even the slightest quarrel was seen, and though bar rooms were crowded every evening not an angry word was heard nor a single case of drunkness visible. In fact the bar rooms had more the appearance of being pleasant club rooms, where decency, order and good manners prevailed. The first fair of this district was held only seven years ago, and the exhibits this time show a marked improvement in quality over any previous fair. In every department it was evident that each exhibitor had aimed to produce something better than had ever been shown before. It was not quantity but quality that was aimed at. This is the way to success. Any one who has attended a citrus fair at Los Angeles knows how beautiful are the displays of oranges and lemons. But there is a uniform sameness of color that makes impossible the delightful variety of color seen at Bishop last week. The apples, pears, plums, prunes, grapes and other fruits, if they could be shown at Los Angeles would excite more admiration than the display of citrus fruit. In live stock the display this year was far better than any former exhibit. Very rapid improvement is being made in horses, and animals were shown that would bear comparison with any like exhibit made elsewhere in the State. The same is true of horned cattle, and cows were shown whose yield of milk very nearly equals the highest record made at the Chicago fair. Altogether the fair was a gratifying success.

North end of Owens Valley.

Those who see a healthy baby every day do not realize how rapidly it grows. Only after lengthened absence is increase of stature and weight fully appreciated. It is the same with growing towns and new settlements. The fair at Bishop last week brought visitors who had not seen the town and surrounding country for a year or two, and to these the steady march of improvement was very apparent. The environs of Bishop afford far more pleasant drives than any other town in the county. On all sides land is being cleared of sage brush, enclosed, sown with alfalfa, wheat, oats, barley or corn or seeded with other crops. Shade trees are planted there more than any place else in the county, and already long stretches of well shaded roads make lively drives. From the elevated plateau about four miles south of town is as lovely a view of sylvan country as can be found in the State. Only a few years ago that great plain was a brown desert, dreary and barren. Now the eye ranges over a wide expanse of alfalfa fields, the beautiful bright green being a delight to look upon in contrast with the land still unenclosed and in its original desert state. Wisely did the settlers plant trees extensively; and now from the point of view indicated the whole country for several miles west, north and south of Bishop is richly wooded. Without those groves of trees, no matter how highly cultivated the land might be, the country would still retain much of the original desert aspect. Improvement at any part of Owens Valley benefits the whole; and the people in the south end of the Valley found as great pleasure in the improvement they saw at the north end as the people of that locality themselves, and wish them a hearty Godspeed in their steady advance.

Delighted With the Big Fair.

At least one Californian is delighted with the World's Fair. Mr. W. M. Richards, station agent at Keeler, in a letter to this paper says: "The World's Fair at Chicago is immense; it exceeds all expectation. I have just returned from a three weeks visit there and was surprised at not finding Inyo county represented as a county at the California State Building. The parties in charge of the State Building informed me that no application had been made from Inyo for space to exhibit and wondered why it was so. Inyo county should wake up and make a showing as a county, even if only a small one; say two or three glass cases full of fruit, grain, etc. The Southern counties of California, outside of Inyo, were grandly represented and advertised. The California building is a grand affair. On Admission Day California at Chicago was 'strictly in it.' The State has made a glorious impression at Chicago and beyond all doubt men and money will be attracted to the State."

New Gold Fields.

W. K. Miller of Lone Pine returned some days ago from the new placer mining camp forty-five miles east of Mojave. In a letter he says: "While there I saw one nugget that was worth over one thousand dollars, another worth sixty-five dollars and a number ranging from twenty to forty dollars. Everything about the mines looks very favorable. About one hundred men are at the camp and more are going in every day. I have put on a stage line to the mines connecting with the Keeler & Mojave stage line at Red Rock station, so that parties going from Mojave or Keeler to the mines can go direct without loss of time." This stage line will prove a great convenience, as before it was established the only way to reach the mines was by private conveyance.

About Big Pine.

So far as money is concerned Big Pine is the most prosperous town in the county. The gold miners about Fish Spring are doing well. They work in small parties of from two to four or five, and every week they are taking out gold enough to make big pay, and nearly every dollar of it goes into Big Pine. Aside from this, the town is the center of one of the finest bodies of land in the Valley, and this year crops of fruit and all kinds of farm produce are abundant. The borax works in Saline Valley also bring a good deal of business to the town.

SUPERVISORS' PROCEEDINGS.

MONDAY, September 25, 1893.
7 o'clock p. m.

At above named time the Board of Supervisors of the County of Inyo, State of California, met in special session pursuant to law for the purpose of levying tax and fixing apportionment thereon for the fiscal year 1893-4.

Present, Supervisors A. C. Freeman, John Wilson, W. H. Uhlmeyer and Chairman Robert Love, presiding.

Absent, Supervisor Frank Fitzgerald.

County Auditor's exhibits showing the receipts and expenditures and all financial transactions of the preceding year were submitted and filed.

The rate of apportionment to the County School Fund being under consideration and a divisement, on motion of Uhlmeyer, seconded by Wilson,

Ordered: That out of the total tax levy to be made and fixed the rate of 30 cents be apportioned to said fund.

Ayes:—Uhlmeyer, Wilson, Love.

Noes:—Freeman.

Upon motion of Supervisor Uhlmeyer, seconded by Wilson, it was unanimously

Ordered: That State and County taxes for the fiscal year beginning July 1, 1893, and ending June 30, 1894, be and are hereby levied at the total rate of one dollar and eighty cents ($1 80) upon each one hundred ($100) dollars of taxable property in said County of Inyo, as assessed, to be collected and apportioned to the respective funds as follows, to wit:

To the State Fund	$0 576
General Expense Fund	32
County School Fund	30
Hospital Fund	05
Bond Fund	25
Bridge Fund	054
Salary Fund	05
Road Fund	20
	$1 80

Upon motion of Uhlmeyer, seconded by Wilson, it was unanimously

Ordered: That pursuant to assessment made on the 7th day of August, 1893, by the State Board of Equalization, the Carson and Colorado Railroad be and is hereby assessed for the year 1893 as follows:

For the length of 74 25 miles at valuation of $2137 14 per mile, aggregating $158,683

That the number of miles of said railway and the pro rate valuation thereof being in the various school districts are as follows:

Station	6¾	miles	$14,425 67
Bishop	4	"	8,548 56
Warm Springs	8	"	17,097 12
Big Pine	7	"	14,959 98
Fish Springs	14¼	"	30,988 54
Minton	7½	"	16,028 56
Independence	4½	"	9,617 13
Union	7	"	14,959 98
Lone Pine	15	"	32,057 44
	74¼		$158,683 00

On motion of Freeman, seconded by Uhlmeyer,

Ordered: That a special tax be levied and collected upon all property assessed in Bishop School District for the current year at the rate of twenty-eight (28) cents per each $100 of valuation, to be placed to the credit of said school district bond fund.

On motion of Uhlmeyer, seconded by Freeman,

Ordered: That a special tax be levied and collected upon all property assessed in Big Pine School District at the rate of fifty-two (52) cents per $100 of valuation to be placed to the credit of said school district bond fund.

Upon motion of Uhlmeyer, seconded by Freeman,

Ordered: That a special tax be levied and collected upon all property assessed in Fish Springs School District at the rate of twenty (20) cents per each $100 of valuation, to be placed to the credit of said school district bond fund.

On motion of Uhlmeyer, seconded by Freeman,

Ordered: That a special tax be levied and collected upon all property assessed in Independence School District at the rate of fifty (50) cents per each $100 of valuation to be placed to the credit of said school district bond fund.

On motion of Freeman, seconded by Uhlmeyer,

Ordered: That a special tax be levied and collected upon all property assessed in Independence School District at the rate of thirty (30) cents per each $100 of valuation to be placed to the credit of the Teachers' Fund of said district.

On motion of Wilson, seconded by Freeman,

Ordered: That a special tax be levied and collected upon all property assessed in Union School District at the rate of thirty-six (36) cents per each $100 of valuation, to be placed to the credit of said school district bond fund.

On motion of Wilson, seconded by Freeman,

Ordered: That a special tax be levied and collected upon all the property assessed in Lone Pine School District at the rate of forty-five (45) cents per each $100 of valuation, the same to be placed to the credit of the said school district bond fund.

Claims for mileage and per diem were presented, approved by the District Attorney, and Auditor directed to draw warrants on Salary Fund therefor as follows:

Supervisor Love	$20 70
Supervisor Freeman	18 00
Supervisor Uhlmeyer	15 00
Supervisor Wilson	10 80

W. K. MILLER, Propr.

California State Analyst.

Royal Baking Powder is Superior to all in Purity and Strength.

"For purity and care in preparation the Royal Baking Powder equals any in the market, and our test shows that it has greater leavening power than any of which we have any knowledge."

W. B. Rising

Prof. Chemistry, University of California,

Analyst California State Board of Health, etc., etc.

No careful housekeeper can afford to use any baking powder but Royal.

The Vigilantes and Ballot Box Stuffers.

Notorious ballot box stuffers and other desperate characters were a curse to California. Every one admitted it, but no effective action had been taken against them. In many cases they held the polls at election and attacked, maimed and terrified those voters who were opposed to their friends. If arrested, such was the dread they had inspired and so great their influence with the courts that conviction was almost impossible. This immunity from punishment increased their insolence and violence, and it was evident that no reform could be made while they remained in the state. What was to be done with them? They could not be hanged; they would be a source of expense and trouble; safe and satisfactory imprisonment was plainly impracticable.

It was therefore suggested that if, after fair trial, the charges against them were proved, no course would be so satisfactory and safe as banishment, with a warning never again to return under pain of death. This was adopted and a blacklist was made of all these notorious characters. Evidence was collected and orders were soon given for the arrest of these men wherever they could be found in the state. They were tried, convicted, sentenced and deported, many of them as first class passengers, by sailing ships and steamships, at the sole expense of the committee, and in a style far above their deserts. This was not appreciated, but flattered and exalted them to the belief that they were important personages and had suffered great damages, and they brought suits against the committee.

Singularly, or perhaps naturally, these suits were only brought by those who were best treated. Those who were shipped in the steerage never brought suits and were never afterward troublesome.—William T. Coleman in Century.

Sentenced Notwithstanding.

M. de Freycinet was a man of fine character and ability. Before he became a politician he was a skillful engineer. When he was president of the judicial council a man who was accused of helping tear down the Vendome column, in 1871, was brought before him. The man confessed his guilt, but pleaded that he was young and fanatical at the time, and that he had been drawn into helping pull down the column by his pride as an engineer in arranging scaffolds and ropes to accomplish the feat.

"You are a criminal," said the minister, severely. "You insulted the history and the glory of the country in destroying that column. But"—he reflected a moment—"how did you do it? As a question of engineering I should like to know"— "Oh, it was very simple," replied the accused; and he sat down at a table, drew a plan, and calculated lines, curves and angles, while the minister bent over him, following the work with intense interest. As it went on, however, Freycinet shook his head, shrugged his shoulders and smiled, and when it was finished took paper and pencil and said, "That isn't bad; but you might have done it much more easily and economically."

Then, in his turn, covering the paper with curves, angles and calculations he proved that twice as much time and money as were necessary had been expended. "However," he concluded severely, "you were guilty of high treason against the nation and must pay the penalty." The engineer did not escape a light sentence, but he had much satisfaction in replying, "Ah, monsieur, did you not just now say that it had cost me too much already?"—San Francisco Argonaut.

The Intruding Turk.

The "Turkey" of diplomatists and map makers means, not the land of the Turk, but those lands—Greek, Bulgarian, Servian and Albanian—in which their enemy the Turk is still encamped. On no spot of Europe, on no spot of the coast of Asia, is the Turk really at home. He is everywhere a foreign intruder, a burglar who has thrust himself in the houses of other men. While other conquests have in time changed into lawful possessions, either by the conquerors assimilating the conquered, or the conquered assimilating the conquerors, the Turk remains as much a stranger in Europe as he was when he first came in, more than 500 years back. And so it must ever be as long as the Turk remains a Turk; for no Mohammedan ruler can, without casting aside the precepts of his own law, become what a ruler is bound to be toward the subjects of other religions.

It is his first duty as a Mohammedan to keep men of all other creeds—the Christian in Europe, the fire worshiper in Persia, the Hindoo in India—in bondage to the men of the dominant faith. He therefore cannot reform; promises of reform made by the Turk are in themselves worthless. They are nowhere carried out, unless when the Turk is afraid to break them under the eye of more powerful Europeans. To talk of a "Turkish government" is therefore a mere diplomatic conventionality. There is no "Turkish government." The object of a "government" is the protection of its subjects, and that the Turk does not give. The so called "Turkish government" is an organized system of brigandage, with a chief brigand called a "sultan" at its head.—Edward A. Freeman in Forum.

Hardiness of Peaches.

Over 200 years ago the Spaniards introduced the peach tree into Texas, and seedlings were raised from these continuously until a race has been produced which appears to be entirely free from all diseases which seem to be connected with trees raised in other sections. Seedlings from these old Spanish peaches raise plants which, side by side with the others, last a number of years free from all disease, while those introduced from the north are short lived and soon disappear. There is no doubt from these facts that whole races may become enervated from some peculiarity in the method of cultivation or from conditions of climate.—Meehans'

A REMARKABLE ESCAPE.

A Would Be Suicide's Miraculous Deliverance From a Horrible Death.

Idleness, domestic infelicity, desertion by his wife, dissipation and long illness summarize the troubles of Joseph Glasgow, who tried to end his miserable life in an unusual and awful manner in Cincinnati recently. He was a cabinet maker and had been married but a short time. He got out of employment, and his domestic

SPRANG HEADLONG FROM THE BRIDGE.

trouble commenced. Though he was not able to get along happily with his wife, he loved her, and when she deserted him he began to drink heavily. Soon he became seriously ill and took to the use of narcotics, including morphine. He cared not whether he lived or died. In fact, it soon became evident that he preferred death.

He was ill, very ill, for many weeks, but at last became able to go about and then decided to end his troubles at once and forever. The awful novelty of the method he selected for ending his life is a sufficient indication of the frenzy to which brooding over his troubles had driven him. He went down to where the Freeman avenue bridge crosses the railroad tracks and looked in both directions for an approaching train. None was in sight, and he paced up and down the bridge anxiously waiting. Finally an outbound Baltimore and Ohio train approached, and he mounted the railing of the bridge. As the train came thundering on he plunged headforemost from the bridge. He intended to throw himself in front of the engine, but waited just an instant too long. Instead of meeting the horrible fate he had planned for himself, his body struck the concave side of the engine boiler, glanced off and rolled into the mud at the side of the track.

Those who had seen Glasgow make the terrible leap and rushed to the spot expected of course to find him a crushed and bleeding mass. They found instead that, though he was badly bruised and his nose and face crushed and lacerated, he had few bones broken, and recovery was possible.

MET THE DEATH OF ABSALOM.

An Indiana Farmer, Riding a Mule, Caught by the Hair and Hanged.

The fate of Absalom was duplicated in the case of Jedediah Blanton, an old farmer who lived alone near South Bend, Ind., working his farm alone, doing his own cooking and washing and seldom exchanging a word with any one for weeks at a time. He wore clothes of the style of 50 years ago, and his hair was long and hung about his shoulders. It was Blanton's custom to go to town about twice a year to dispose of his farm produce and lay in a stock of provisions. He was last seen alive on his way home from one of these semiannual visits, when he was riding his little old mule, which bears the name Beelzebub.

Three days afterward Beelzebub was seen cropping the young grass from the roadside about a mile from Blanton's cabin, says a correspondent of the Philadelphia Times. On catching sight of the approaching stranger, Richard Leeson, Beelzebub trotted off at once toward the thicket which marked the boundary of Blanton's land, but, seeing that Mr. Leeson did not follow, returned and again went toward the thicket, looking back at the gentleman, who presently suspected that the mule was trying to induce him to enter the wood, and at last he did so.

Presently he came across the dead body of the eccentric old farmer, whose hair, having caught in the branches of a thorny bois d'arc, held him suspended in the air. His neck was found to be broken, and it is supposed that, riding through the thicket, his hair caught by the thorns and had jerked him from the saddle, breaking the neck, as he hung by his entire weight. About him were scattered the provisions he had bought in town, and in his pocket was found his purse, containing nearly $1,600 in paper money, which proved that he had not been disturbed since being killed.

Knowledge In Animals.

Most people going into a dark room that they know are by muscular sense guided exactly to the very spot they wish. So people who have the instinct of locality may wander over a moor exactly to the place they wish to reach without thinking of where they go. There may be no mental exercise connected with this. I have known a lady of great intelligence who would lose her way within half a mile of the house she had lived in 40 years. This feeling about place belongs to that part of us that we have in common with the lower creatures. We need not postulate that the animals ever show signs of possessing our intelligence. They possess in common with us what is not intelligence, but instinct.—A. J. Mackintosh in London Spectator.

A Jersey City man devotes himself to the collection of doorknobs, old and new, and claims a museum numbering over 3,000 samples.

The man who studies constantly on one subject—tries to be perfect in that—is never overeducated and never will be.

IN THE QUEEN'S NAVY.

Routine Life on Board of One of Her Majesty's Men-of-war.

The Victoria disaster impressed upon the public the tragic possibilities of naval life even in times of peace. Certain prizes are annually competed for by the various gun crews of a man-of-war. The target is merely a large canvas screen stretched upon spars and set upright on a sort of raft. A line is marked off by two buoys at a certain distance and parallel to the target. All being ready, the ship steams along this line, the "fire" being sounded after she passes the first buoy and the "cease fire" as she passes the second. Afterward she steams back, and so on, backward and forward, each gun crew firing as many shots as it can in one course. The prize is decided by the highest number of hits.

Except in those few men-of-war in which space allows of a cabin being set apart for a smoking room, votaries of the fragrant weed are restricted both as to the time and place of its consumption. In corvettes and smaller ships the officers' smoking place is usually under the break of the poop. In the large class, having a main or battery deck, it is, as a rule, in the afterpart of the battery. The men either smoke in the forecastle or in the forward part of the battery. The time set apart for smoking are generally from noon till about a quarter past one, when the marine drummer beats a long roll on his drum as a signal to "out pipes," and again from after evening quarters till "lights out."

One night, or in some ships two, a week is usually fixed at the commencement of a commission for the entertainment of guests at a dinner. Generally Thursday or Friday is chosen. Then the wardroom or commissioned officers' mess on board of her majesty's battleships presents such a scene as this: The serious part of dinner is over, the wine has just been passed round, and the president rises in his place and offers a toast. All drink the toast, while the band stationed outside strikes up the national anthem.

Whether expected or not, the shrill pipe, followed by a stentorian "Clear lower deck" roared down the hatchway at once produces a sudden turmoil, which to an outsider would certainly appear to be "confusion worse confounded." But this is far from being the case. Every man knows his station and makes for it instantly; hence the rush and clatter of hundreds of feet along the decks and up the ladders as officers and men, seamen and marines, in obedience to the summons hasten to their posts are the most orderly business possible. All fall in in readiness for the evolution, whether sail drill, "out boats" or the now just dying out "up" or "down topgallant masts," once considered one of the most important evolutions on board a man-of-war.

A very different scene follows. One afternoon a week, usually Thursday, is marked by the cessation of all drills, etc., that Jack may have a chance to keep his wardrobe in serviceable condition. Jack Tar gets more pay than Joe Marine, his shipmate, and has to keep himself in uniform clothing, materials for which he can "take up" or purchase on advantageous terms from the ship's stores. There is a ship's tailor, but a great number of blue jackets are most excellent tailors themselves. Both smart and well fitting are the suits of blue and white which they turn out.

Once a month comes pay day, and Jack is as ready for it as any man. Tables are set up on the main deck, and here sits the paymaster. Before him appears a flat drawer in which lie the coins. By his side we note an assistant clerk with the pay list. As each man's name and the amount due to him are called he steps up to the table, and the precise amount is placed in front of him. If a blue jacket, he usually sweeps it off into his cap. As each man receives his pay he walks off by the opposite side of the deck, and if of a thrifty disposition he has an opportunity of at once making a deposit in the savings bank table established on the starboard side.—Black and White.

Good Manners In Children.

It is no wonder that there are so many ill bred men and women in the world when one sees the lack of pains taken by parents to instruct their little ones in forms of table and social etiquette that are so easily taught to the pliable infant mind, but which, left unnoticed, are soon supplanted by actions that become bad habits in a very short time.

It is no unusual sight to behold a child drinking from its saucer with no word of admonition from the mother or nurse who sits near by. A thirsty little one will drink from a cup in which there is a spoon, and in later years will see no harm in continuing the practice. Many a child eats with his knife, and yet how easily could the fork or spoon be substituted in its place if the parents gave but a tiny bit of attention to this branch of their children's education.

Selfishness is fostered so easily through a lack of watchfulness. The gentler courtesies that count for so much are not instilled in childhood, and in later years the man or woman is regarded as a bore. Good clothes are not everything. Even good health is not the one point desirable in a child's makeup. Good manners should be added to health and attire in order to gain a perfect ensemble that counts for so much in the world's judgment.

No one can estimate how great a factor in life is the possession of good manners. They are the open sesame to the best of society. They are the hall mark of the gentleman or lady, but they must be acquired in infancy.—New York Telegram.

A Question For Information.

A clergyman in Scotland desired his hearers never to call one another liars, but when any one said the thing that was not true they ought to whistle. One Sunday he preached a sermon on the miracle of the loaves and fishes, and being at a loss how to explain it he said the loaves were not like those nowadays; they were as big as some of the hills in Scotland. He had scarcely pronounced the words when he heard a loud whistle.

"Wha is that," says he, "ca's me a liar?"

"It is I, Willie McDonald, the baker."

"Well, Willie, what objection have ye to what I ha' told ye?"

"None," said he, "only I want to know what sort o' ovens they had to bake those loaves in?"—New York Ledger.

The Early Hebrew Writings.

The Scriptures were first written on skins, linen cloth or papyrus and rolled up as we roll engravings. The Old Testament was written in the old Hebrew character—an offshoot of the Phoenician. It was a symbol language as written, having no vowels. The consonants were only written and the vowel sound supplied by the voice. The words ran together in a continuous line. After the Hebrew became a dead language vowels were supplied to preserve usage, which was passing away. After the Babylonish captivity the written Hebrew was modified by the Aramaic, and schools of reading taught the accent and emphasis. Then came the separation of words from each other, then division into verses.—St. Louis Republic.

The Throne Saved by Oysters.

Oysters once played an important part in English history. One of the objections of George I to the throne of England was that he could not find in all England oysters to his liking. He grumbled at their queer taste and want of flavor and threatened to return to Hanover. As the departure of the king might lead to the return of the Stuarts, his ministers devoted themselves to finding out which sort of oysters the monarch liked. On discovering that he was fond of stale oysters no time was lost in procuring some with a good strong rankness about them. The king smacked his lips and consented to remain on the throne.

She Took the Cigarette.

When a belt line car was coming down Virginia street yesterday afternoon, a solemn looking young man was the sole occupant of the rear seat. Just as the Seventy-fourth armory was reached two beautiful young women signaled the car and walked out into the roadway. One was a tall blond with brilliant blue eyes and golden hair, and the other a brunette of magnificent figure. Both wore fluffy white dresses, and both were exceedingly fair to look upon. Every seat in front of the one which the solemn young man occupied in solitary state was crowded.

"Well, Lil," said the blond, "I guess we've got to get in here."

"That's the smokers' seat," replied Lil.

"There isn't any other," contended the blond.

"I don't like to get in where men smoke," said the brunette, pouting.

"Hurry up, ladies, if you want this car!" broke in the conductor, and the two women climbed aboard.

The solemn young man looked them over with a great show of interest. He had just lighted a cigarette, but out of deference to his seatmates he threw it away.

The blond giggled. "Seems kind of queer to be riding in the smokers' seat, don't it?" she asked.

"I don't think it's queer," replied the brunette.

"I mean it seems as if we ought to be smoking."

The solemn young man looked up. Then he dove down into his coat pocket, fished out a new package of cigarettes, broke the stamp and handed it politely to the blond.

She shrunk back as if frightened. Not so with the brunette. She reached over, took the cigarettes, put them in her handbag, smiled a smile that was so bright it shamed the sunlight and said: "Oh, thank you! We'll smoke them after we get home."

And the solemn young man doesn't know yet whether she was stringing him or not.—Buffalo Express.

"Who Can Tell What a Baby Thinks?"

Not very long since a rich Boston woman went to a well known charitable institution to find a child for adoption. She was fond of children, and having none of her own determined to take some tiny orphan into her heart and home and rear it with every advantage that money could procure. Her quest was a difficult one, as babies, though numerous, were not all that fancied painted when properly investigated, but at last fortune favored her, for a beautiful, healthy baby boy was shown to her by the matron of one of the best "homes" in the country. The infant completely charmed this would be mother. Physically he was sweetness and goodness and beauty combined, and so, after all the necessary steps were taken, the little waif was conveyed to a house of luxury. But his heart was broken.

He would not look at the lady, who tried in vain to comfort and amuse him. Tears rained from his great blue orbs, screams and howls distorted his cherubic mouth whenever she approached him. In short, he scorned the kindness of every member of the family and dismayed the poor lady by this frenzied exhibition of his distress. After two days' struggle the baby was returned to the "home" as unconquerable and a hopeless case.

And now comes the strange part of the story. Another woman, but in ordinary circumstances, also desired to adopt a child, and this refractory bit of mortality was shown to her. To the astonishment of all concerned, the baby received her advances with evident content, and half an hour later he departed for an adopted home for the second time, but crowing and smiling like a little Trojan, the new mother considering she had secured a prize, much flattered by the preference that had been shown her by the youngster.—Philadelphia Ledger.

$100 REWARD, $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of Testimonials.

Bingos—Your wife doesn't go in for dress reform, then? Bangos—I should say not. She won't wear a thing that's made over.

HOW WE GROW OLD.

The thread that binds us to life is most frequently severed ere the meridian of life is reached in the case of persons who neglect obvious means to renew failing strength. Vigor, no less the source of happiness than the condition of long life, can be created and perpetuated where it does not exist. Thousands who have experienced or are cognizant—including many physicians of eminence—of the effects of Hostetter's Stomach Bitters, bear testimony to its wondrous efficacy as a creator of strength in feeble constitutions, and debilitated and shattered systems. A steady performance of the bodily functions, renewed appetite, flesh and nightly repose attend the use of this thorough and standard renovant. Use no local tonic represented to be akin to or resemble it in effects in its place. Demand the genuine, which is an acknowledged remedy for indigestion, malaria nervousness, constipation, liver and kidney complaints and rheumatism.

Some women are so ingenious that if they are given a ribbon they will immediately build a bonnet around it.

PLASTERS.

If you are thinking about buying a plaster, remember that you will place it upon your body and cannot get a plaster that will be *too good* for you.

ALLCOCK'S POROUS PLASTER is the *best* plaster made. Your druggist may have some other plaster on his shelves which he is anxious to get rid of, or else some worthless imitation purchased at a low price for the purpose of substitution. Do not accept his "Just as good," plea, insist upon having the genuine. ALLCOCK'S POROUS PLASTER has no equal.

BRANDRETH'S PILLS can always be relied upon.

The average farmer's boy leaves no stone unturned except the grindstone.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

IRREGULARITY. Is that what troubles you? Then it's easily and promptly remedied by Doctor Pierce's Pleasant Pellets. They regulate the system perfectly. Take one for a gentle laxative or corrective; three for a cathartic.

If you suffer from Constipation, Indigestion, Bilious Attacks, Sick or Bilious Headaches, or any derangement of the liver, stomach, or bowels, try these little Pellets. They bring a *permanent* cure. Instead of shocking and weakening the system with violence, like the ordinary pills, they act in a perfectly easy and natural way. They're the smallest, the easiest to take—and the *cheapest*, for they're *guaranteed* to give satisfaction, or your money is returned. You pay only for the *good* you get.

"German Syrup"

Regis Leblanc is a French Canadian store keeper at Notre Dame de Stanbridge, Quebec, Can., who was cured of a severe attack of Congestion of the Lungs by Boschee's German Syrup. He has sold many a bottle of German Syrup on his personal recommendation. If you drop him a line he'll give you the full facts of the case direct, as he did us, and that Boschee's German Syrup brought him through nicely. It always will. It is a good medicine and thorough in its work.

Pimples —AND— *Blotches*

ARE EVIDENCE That the blood is wrong, and that nature is endeavoring to throw off the impurities. Nothing is so beneficial in assisting nature as Swift's Specific (S. S. S.) Clean, no ashes, smell or dirt.

No engineer is necessary; they are easily managed.

Their economy for intermittent power is beyond question.

No battery or electric spark to care for.

No double or false explosions, so frequent with the unreliable spark.

The workmanship is the very best.

Our ignition tubes are a success; they explode every charge of gas which enters the cylinder.

Just light the burner, turn the wheel, and it runs all day.

For pumping outfits for irrigating purposes they run all day without an engineer.

For hoisting outfits in mines they have met with the highest approval We give estimates on the entire plant.

Hercules Marine Engines for Launches, Schooners, Tow Boats, Etc.

A MOTHER'S DEFENSE.

Dead! my wayward boy—my own—
Not the law's! but mine—the good
God's free gift to me alone,
Sanctified by motherhood.

"Bad," you say; well, who is not?
"Brutal!"—"with a heart of stone"
And "red handed." Ah, the hot
Blood upon your own!

I come not with downward eyes
To plead for him shamedly;
God did not apologize
When he gave the boy to me.

Simply, I make ready now
For his verdict. You prepare—
You have killed us both—and how
Will you face us there?

—James Whitcomb Riley.

Collecting Chinese Coins.

"The earliest Chinese coins that I have heard of," said Consul Bedloe, "date from the dynasty which ruled from 255 to 207 B. C.

"From that time until today these useful little coins have been used by every monarch, no matter whether he was an emperor of the entire country or king of one of the petty principalities into which from time to time the Chinese empire was broken. There have been over 1,200 occupants of the various thrones, royal and imperial. In addition to these regular issues, if such they may be called, there have been special issues from time to time and also special local issues. A wealthy mandarin in Canton is said to have the finest collection extant, containing 25,000 specimens of different kinds."

The cost increases as you go backward in time. The cash of this century can be secured at their nominal face value. Those of the eighteenth and seventeenth centuries bring from 1 cent to 10 cents each. Those of the Han dynasties bring $100 each when in fine state of preservation.—Philadelphia Bulletin.

Artificial Maple Sugar.

Decoctions or extracts of the wood or bark of trees are frequently used for flavoring sirups or sugars. Different extracts differ in taste. The hickory tree, it is said, yields an extract that will impart the flavor of the maple, and Daily's method of producing artificial maple sirup of sugar is as follows: Make an extract of hickory bark or wood by allowing water to percolate through the same. The bark or wood may be ground, or sawdust therefrom used. Hot water may be used, or the material boiled in water. The strength of the extract may be increased by increase of the quantity of the wood or bark. To one gallon of hot or boiling sugar sirup add, say, three tablespoonfuls of the hickory extract. It is said the effect of the extract is to produce a flavor that renders the sirup indistinguishable from genuine maple sugar. If the sirup is boiled down, a sugar resembling maple sugar in taste is produced.—London Public Opinion.

Poverty and Clothes.

One marked difference between the very poor in the English cities and the corresponding class in American towns is that the latter buy their clothing of tailors and manufacturers, and therefore get it new, while the English poor, and particularly the English women of low estate, prefer the castoff finery of "the quality" that is sold at the secondhand shops. The result is that the American laborer and his wife make a better appearance in their cheap but simple and suitable garments than the London navvy or hawker, with a shiny, ill fitting broadcloth, and his wife in a garish hat with broken feathers and unfashionable, not to say bedraggled, skirts.—New York Sun.

Thackeray In Conversation.

Mr. Sala says that when Thackeray was not in "a tetchy temper caused by extreme physical anguish" he was one of the most delightful talkers it is possible to imagine. "There were very few subjects indeed on which he could not talk and talk admirably. He was as proficient in the French and in the German as in the English language. He was never tired of discoursing about books and bookmen, about pictures and painters, about etchers and engravers and lithographers, and, moreover, he was a born wit and a polished epigrammatist."—New York Tribune.

An Anecdote of Ben Wade.

"In the early winter of 1861" bluff Ben Wade, the Ohio senator, is credited with saying, "When Chief Justice Taney was ill, I used to pray daily and earnestly that his life might be preserved until the inauguration of President Lincoln, who would appoint a Republican chief justice, but when I saw how complete his recovery was and how his life was prolonged I began to fear that I had overdone the business!"—Chittenden's "Personal Reminiscences."

Defining a Kleptomaniac.

Teacher—What is a kleptomaniac?

Pupil—One who steals things for which he has no use.

Teacher—Very good. Can you give me an illustration?

Pupil—Charley Jones says my sister has stolen his heart, and Lil says she has no use for it.—Boston Transcript.

The habitual care of the hair should include a thorough brushing as well as combing. Much soap and water are not needed. Combs which have teeth with sharp or split edges should be avoided.

The temple of Diana at Ephesus was 425 feet long, 225 broad and with statues and columns innumerable. Of this magnificent structure not a trace remains, even of the foundations.

Man is marvelously made. Who is eager to investigate the curious and wonderful works of omnipotent wisdom, let him not wander the wide world around to seek them, but examine himself.

The motion of the earth around the sun is 68,305 miles an hour, over 1,000 miles a minute, or 19 miles a second.

Slave ants and working ants have lost their wings through being kept entirely to a life on the ground.

A FAMOUS QUAKER MAIDEN.

Dolly Madison's Youth and How She Met Her Distinguished Husband.

Dolly was the second of the six children and was named after her mother's aunt, Mrs. Patrick Henry. She was a bright, pretty child, whose interesting chatter and winning ways won hosts of friends.

Her parents, who were members of the Society of Friends, in accordance with their religion, denied their children all ornaments and accomplishments save those of "a meek and gentle spirit."

Until she was 12 years old Dolly lived quietly in the country and attended the village school where most of her education was received. Every morning before starting out her sunbonnet was sewed securely under her chin by her careful mother and with the addition of a white linen mask to still further protect her complexion and long gloves she trudged along the country roads to the schoolhouse, a grotesque little figure.

Very fond of pretty things, her grandmother, with whom she was a great pet, often made her presents of old fashioned jewelry, which, not being allowed to visibly wear, she sewed into a little bag and wore around her neck under her gown.

Her father was one of the first of his sect in Virginia to become doubtful of slavery, and his scruples finally led him to liberate his slaves, sell his plantation and remove to Philadelphia. Here he engaged in business, but as his efforts proved unsuccessful after several years the family became very much reduced in circumstances.

In the meantime Dolly had been growing daily in grace and beauty. At 19 she was tall and slender, with a "delicately oval" face, well formed features, a "dazzlingly fair" complexion and blue eyes of "much sweetness under her demure Quaker cap."

John Todd, a wealthy, good looking young lawyer of the same religion, soon fell a victim to her charms and made her an offer of marriage which she declined, saying she never intended to marry. Hearing of her refusal her father, who was ill at the time, immediately summoned her to his side and told her it was his greatest wish to see her well provided for before he died, that it would make him very unhappy if she persisted in her refusal, so like a dutiful daughter she reversed her decision and became the wife of John Todd.

Her marriage proved to be a very happy one, but after the brief space of three years her husband died, and she was left a widow at 22. Rich and very attractive, she had many admirers.

James Madison, at that time considered an unreclaimable bachelor, chanced to see her one day while she was out walking with a friend and was so much impressed with her beauty and grace of bearing that he did not rest until he had obtained the promise of an introduction.

A few days later she met him at her own house, and in the first interview captured his heart. She wore on this occasion a gown of "mulberry satin, with a silk tulle kerchief over her neck and on her head a dainty cap, from which the curls would escape."

An engagement soon followed, and in September, 1794, Mrs. Todd, accompanied by the enamored Madison and several friends, left Philadelphia for Harewood—her sister's estate in Virginia—where the marriage ceremony was to take place. The journey occupied a week, but the weather was delightful, and it was accomplished without incident.

Friends and relatives from far and near were assembled to greet the bridal party, and many of them remained for days after the wedding to keep up the festivities. For momentos of the occasion the girls cut the mechlin lace from Mr. Madison's shirt ruffles, and amid showers of rice the laughing bride and groom drove off to spend their honeymoon at Montpelier.

The close of the year found them back in Virginia, where, at her husband's request, Mrs. Madison laid aside her Quaker dress and for the first time in her life began to enjoy society.—New York Times.

A Scathing Reply to a Bishop.

At a clerical meeting the subject of the separate mode of administering the communion came up. One of those present said that when there were a large number present at the celebration he often preferred to give the exhortation to several persons together, as it made the feast more of a communion than when each was isolated from his fellow worshipers by the separate mode of administration. Bishop Wilberforce, with sarcastic mien and tone, replied, "I understand you, Mr. Eardley, to prefer administration by wholesale?"

Mr. Eardley rejoined, "My lord bishop, when the divine founder of the feast, addressing the 12 apostles, said, 'Drink ye all of the cup,' I do not think that even Judas Iscariot would have dared to sneer at him as a 'wholesale administrator.'" The bishop's usual readiness deserted him, and he had nothing to say.—San Francisco Argonaut.

A Girl's Taste For Exercise.

Miss Lena Tuttle of Connecticut is amusing herself by clearing a farm and cutting down cedar trees, for which task she is receiving the plaudits of admiring editors. It seems to be a matter of taste. Different people have different minds. A great many women make themselves useful in a great many ways. Miss Tuttle likes to chop wood—a very invigorating and health producing exercise. It amuses her and doesn't hurt the neighbors. Miss Tuttle, if she marries at all, will perhaps espouse a man who will be able to wash the dishes and attend to the knitting, and thus harmony and domesticity will be established.—New York World.

Gladstone's Way of Saying "No."

The verbosity of Mr. Gladstone is proverbial, but it has never been more markedly put in evidence than when, wanting to answer a querist with a negative, he used these words, "I must reply with that brief and simple monosyllable—'No.'"

YOUNG CRIMINALS

Children Whose Atrocious Deeds Have Made Them Famous.

A CHICAGO DESPERADO AGED TEN.

He Robs a Street Car Conductor and Shoots a Policeman.—A Boy Stabbed By Young Hoodlums.

What has got into the boys? This is a question that parents, lawyers and students of social science have to ask with emphasis at least once a year when some new atrocity is perpetrated by mere children. And the puzzling feature of it is that the most cruel, causeless murders and mutilations are perpetrated in the centers of highest civilization—at any rate in the oldest states, where education and religion have apparently done their best.

There was Jesse Pomeroy, for instance, who tortured and murdered children in a way almost too horrible to describe. There was little John Jeski of Manchester, N. H., the 12-year-old son of Polish Jews, who systematically tormented children and tried to murder at least one. There were the two little fiends who drowned a boy in the East river, New York city, a year or two ago. And now there are the children who beat, stabbed and almost murdered little Randolph, the 13-year-old son of John Brisben Walker, editor of The Cosmopolitan, in New York.

The prominence of the father and the heroism of the victim make this case one of peculiar interest. Randolph is a fine, manly looking boy and of course fairly well dressed, as his parents are well to do. There is a crowd with headquarters in the neighborhood of his home who call themselves the "Happy Home gang," and for some reason peculiar to boys—probably because he was well dressed and rejected their advances—they decided to "douf that Walker dude."

The rest is quickly told. As he issued from a candy store one evening seven of them assailed him. He fell, badly wounded, and the gang ran away. He was carried into a drug store with his clothes splashed with blood. "I guess I am stabbed," he said to the clerks. He looked weak, but kept up courage. "Am I going to die?" Randolph asked the doctor. "Because if I am I want to send for my father and mother," he added. The doctor assured him he would be all right.

It turned out that the boy was stabbed just above the stomach, and that had the knife gone an inch higher it would have pierced his heart. As soon as he was assured of recovery he begged that the boys should not be arrested or punished, and his father earnestly joined in this request. The police raided the hoodlums' "clubroom." There they found a rope ladder, whisky bottles, brass knuckles and other articles of like description. All this among boys ranging from 10 to 14 years old.

Only a few days before Randolph Walker was stabbed a 10-year-old boy, Vincent Shevlin was convicted in Chicago of highway

VINCENT SHEVLIN AND HIS MOTHER.

robbery. This child and two men took possession of a street car, and while the men held Thomas Gamble, the conductor, Vincent "went through" his pockets. Gamble tells the rest of the story thus:

"Just then a policeman entered the car and grabbed one man. Shevlin ran past me, and I heard a shot fired. Then the driver stopped the car and helped the policeman, while I grabbed Shevlin and took the revolver away from him. Then we got them out on the street, and Shevlin got one hand free and struck me in the face with a knife. Here is the scar. The struggle in the street attracted another officer, and with his aid Shevlin and the man Powers were locked up. The other man escaped before the officers arrived."

So the little rascal came very near being guilty of murder. An examination showed him to be utterly incorrigible and one of a family of criminals, and so he will be consigned to the reform school till he is 21.

Such cases puzzle lawyers and doctors alike. All old readers remember Jesse Pomeroy of Boston, who tortured and mutilated many children and murdered at least two before he was 15. He cut the throat of Katie Curran and hid her corpse in the cellar of his mother's house. Months of search and inquiry failed to reveal a trace of her, but on April 22, 1874, the corpse of little Horace Millen was found in the marshes near South Boston most shockingly murdered. The crime was traced to Jesse Pomeroy, and then he confessed to the murder of Katie Curran, and her remains were found in the cellar.

Governor Alex H. Rice remarked with a grim humor that here was one case at least in which no woman petitioned for a pardon. Every woman in Massachusetts (his mother excepted) wanted Jesse hanged, and the case finally cut some figure in politics. Neighbor women had a good deal to say about the fact that Jesse's father worked as a butcher for six months or so before the boy was born, and that the family being poor and the times hard she often assisted her husband in his work. It almost raises a smile to read what they said about her "helping to butcher" calves and seeming to like it, but if the reader draws conclusions he must do it at his own risk.

Jesse was condemned to death and his sentenced commuted to imprisonment for life. He is now in the state prison, 33 years old and totally blind—the result of a gas explosion caused by an attempt to escape—but he has never exhibited repentance or remorse. Such cases are not uncommon in history. Blackstone tells of a boy of 8 who was hanged for arson and a girl of 13 who was burned for murdering her mistress. The youngest white person hanged in the United States was 18. Of course it was in New Jersey. A negro boy of 17 was recently hanged in South Carolina.

JEROME JACQUIN.

Ouida has a dog cemetery at her home near Florence in which are buried all her favorite "barks," of which there has been a considerable number.

Riding Home Without Money.

The "bright young man" must be set down as being as full of resources as his much quoted sister, the "bright young woman."

One of the former escorted one of the latter the other evening to a theater. He is a young law student with more brains than money at the present writing, and he frequently counts pennies in making an estimate of expenses. On the evening in question he did so with such scant margin that a call for a quarter to pay for checking umbrellas more than exhausted it.

A sly search of his pockets just before they went up on the elevated station to take the train home produced only one 5-cent piece. It would never do to proclaim his dilemma to his fair companion. He could neither beg nor borrow the other nickel at that time and place, and for a moment he was desperate.

Then he took a chance. As they were about to pass the ticket window he let the young woman precede him, and when he reached his hand through, saying, "Two, please," he left his solitary coin and his pocketknife in front of the ticket seller. That functionary glanced up quickly, took in the situation and without an instant's hesitation passed out the two bits of pasteboard.

Everybody was satisfied. The agent had a good knife for a trifling sum, the future barrister had escaped a mortification, and the young woman remained blissfully ignorant of the whole transaction, as it was desirable she should.—Her Point of View in New York Times.

To a Would Be Medical Student.

A correspondent who signs himself "Duffy" asks, "Will you please inform me if there is a medical school in New York in which the lectures for the first year are given in the evening or any time after 3 p. m?"

Duffy, you and dozens of other "would be doctors" think you can study medicine in the happy go lucky way the law pills study law—lectures in the afternoon; office work in the morning. You must give up that idea at once. Medicine requires 25 hours out of 24, and more on Sundays and holidays. The lectures in every medical school are given when the professors and lecturers can find time for them. They're given in the morning and in the afternoon and the evening, and some of the private "quizzes" begin at 10.30 or 11 p. m. and stop in time to get ready for breakfast if you dress quickly. Now, Duffy, if you ask because you think medicine is a snap like these afternoon law schools, you'd better keep out of it, but if you can stand the pace and ask simply because you're ignorant, why, go ahead, and with good health and hard work you may get your license to "kill, kill, kill, kill, kill!"—New York Sun.

A Lifelike Stone Camel.

One of the most curious rock formations in the world is to be seen in Arizona. It is a short distance east of the stage road between Tucson and Oracle and stands on a knoll several feet above the surrounding sand hills. When first seen, the effect is startling, and the mind has to get over a shock before the peculiar object can be comprehended. It is a most perfect representation of a camel and is formed of one piece of granite.

This curiosity is of colossal size, but perfectly proportioned. It is about 60 feet high and is very white and smooth. There are very few fissures on the surface, and they strangely are in the proper places to form features. The only real projection from the surface is exactly placed for an eyebrow. The two humps are plainly to be seen, and the neck is curved beautifully.

The rock is really a solid piece rising from the ground, but the effect of legs is produced by a clump of dark colored brush that grows beside the stone. The white stone shows plainly at both sides of the brush, and the effect of the legs is unmistakably produced.—Philadelphia Record.

Carrying Good News.

During the siege of Vicksburg an important artillery position had been assigned to a battery commanded by Major Schwartz, a German attached to General Grant's command. Late in the day while Grant was in his tent receiving dispatches from the front a German orderly made his appearance earnestly inquiring for "Zhineral Grant." After much parley his hearers, being convinced that his business with the general was important, admitted him to the latter's tent, where he made the announcement, "Schwartz's battery is took!" "Well," said the general calmly, "did you spike the guns?" "What?" shrieked the little German, "spike dem guns? Dem new guns? Vy, it would schpile 'em!" "Well, what did you do?" said Grant impatiently. "Vy, we took 'em pack again, by tam!"—Life.

Meanness In the Chaste Dove.

Cases of meanness are not numerous among the animals. A surprising one is the innocent dove, which sometimes hides under her wings food for which she has no need simply to deprive her companions. The sense of property is manifested in the competition for prizes, as in the struggle for the female or for food, rank, territory or nests. The dog distinguishes the property of his master and even discriminates between objects belonging to different members of the same family.—Current Literature.

Youthful Condescension.

The Father (sorrowfully)—Your absorption in social gayety grieves me. At your age such a life had no fascinations for me.

The Son (condescendingly)—At my age you probably lacked the fascinations which I inherit from my mother's side of the family.—Pittsburg Bulletin.

New York Versus Chicago.

A funny outcropping of Chicago's ambition is the practice of the papers of always referring to this city as "New York, N. Y." It just tickles a Chicago man to pretend that no one would know which New York was meant unless the abbreviation of the state was given.—New York Tribune.

PRETTY WOMEN.

Where the Beautiful Females of the World are to be Found.

AN OLD TRAVELER'S OBSERVATIONS

All Countries Can Boast of Lovely Women But the Beauties of Sigh are Incomparable.

The St. James' Gazette finds that we live in the most beautiful age of the world.

It strikes me, when I come to regard this theme, pen in hand, that to enumerate the plain women of the world would be an easier task than to reckon up the beauties. On that point an old traveler would speak without hesitation—if he kept his eyes on the civilized races, at least. It might be difficult to compare the ugliness, respectively, of a female Bosjesman and a Mosquito Indian squaw, for example. But he would pronounce at once that the Russian is the plainest woman he has seen in Europe—unless, indeed, the Greek of Greece should be put before her—one must be careful not to say Greek unqualified, for in the islands and the Turkish ports, where some faint traces of Hellene blood survive, handsome women abound.

It becomes more and more the fashion for wealthy members of this, the true race, to keep a house in the capital, and Athens can show a galaxy of loveliness during the winter, no doubt. But I was a summer visitor for two months, and in that time I beheld but one face that could be termed even passable; the girl proved to be Hungarian. It is not quite so bad as that in St. Petersburg—where also I resided out of the season—because the czar was there, and very many ladies of the court have mixed blood.

But plainness is certainly not characteristic of Slavs in general. Polish women rank among the most beautiful in Europe, so, I have understood, do Czechs. The Croats hold their own, and as for the Dalmatian Slavs, I have often felt inclined to declare that they have no rivals. In riding once from Cattaro to Cettinje, I found the lower stretches of that tremendous mountain road thronged with women and girls of the lowland—on pilgrimage perhaps.

It seemed to me, struggling through the crush, that every young woman there was charming, and there were hundreds of them. A sad contrast are the Montenegrins, at the summit of that ladderlike road. The sex in Tchernagora has many fine qualities, and even virtues, I believe, but all of the masculine cast. In fact, those maids and matrons would pass for rather fine young men elsewhere—sufficiently good looking men, too, in a rough way, if they would only wash; but, regarded from the feminine point of view, they are indescribable failures. If the Russian woman resembles a tame bear, the Montenegrin is a "grizzly" of the Rockies.

Further down that same most interesting and delightful Adriatic coast, one learns that the Greek of Greece, who is Albanian, of course, must not be regarded as representing his ethnic stock fairly in the matter of good looks. I have never visited the Ghegghe Albanians. That is an experience for which I long beyond all others to be obtained in Europe. But doubtless their women are superbly handsome, as travelers assert who have had better luck than I. For theirs is not a case parallel with the Montenegrin; they are not savages, and the one sex bears its due proportion in beauty to the other.

A dozen young girls, in their long blue house dress, were gathering these odds and ends together in a heap. They showed no alarm at my appearance in the doorway, but pressed together and stood in a little throng, gravely staring. The action and the look had a curious resemblance to the behavior of mountain sheep under like circumstances. If I had approached the resemblance might have been carried farther, perhaps, for mountain sheep charge promptly when cornered.

One would not expect more than two or three good looking among a dozen English girls. It is my strong impression that every one of these was tall, fair, rosy, blue eyed and pretty; several were beautiful. The Ghegghe women must be among the loveliest of Europe, if they be as much superior to the Tosk as the men certainly are. But Albanian good looks vanished by migration to Greece.

The true Hellenic blood, however, has left its trace all through the Balkan peninsula. Even in Greece, they allege, there are a few secluded districts where the divine beauty of old survives; and I incline to credit it, for in the Evzone battalions, recruited among the mountain youth, perfect faces of the classic cast and tall, supple figures proportioned like that of the Apollo may be seen sometimes. The most famous of those Hellenic refuges is a valley in the neighborhood of Cape Matapan containing 200 households, among whom, as enthusiasts declare, all the gods and goddesses of Olympus and all the finest statues of antiquity may be matched.

In Servia and Bulgaria also one notes a girl here and there whose regular and graceful beauty is quite startling among her dull and stolid kinsfolk. I make no doubt that this is an example of "throwing back," as fanciers say; the Hellenic blood asserting itself again. Roumanian good looks are deservedly renowned, but that is an Italian type.

Of Circassians I have nothing to say. Not seldom nowadays one meets them in the bazaars of Stamboul, in the Valley of Sweet Waters, or even, in carriages of course, passing along the Grand Rue of Pera, almost as lightly veiled as a prudish Christian beauty. But whenever I have been able to observe them, their faces were so plastered with white lead, or something as opaque, that one could as easily judge the features of a clown at Drury Lane.

Most persons who have visited Egypt may be surprised to hear the Coptic reckoned among the most beautiful of races. But those who took part in the scurry to Cairo after Tel-el-Kebir had a unique opportunity of judging. Coptic women of the better class are at least as much secluded as their Moslem sisters, or were under the old state of things.

Briefly, speaking from a very wide experience, my impression is that the most beautiful women of the world are the Sikh—that is, the highest average of regularity in feature, charm of expression and symmetry of figure is observed among them. But perhaps one must be an old traveler to disregard complexion. I have got so far as to think the golden bronze of the Sikh girl at least as agreeable to the eye as our lilies and roses.—An Old Traveler.

Herennius, the Sicilian, showed signs of madness and was confined by his friends. Determined to thwart them he beat his brains out against a post.

A Tamil proverb expresses the idea that tears in woman are not so bad after all: "A weeping man and a smiling woman are not to be trusted."

Brown's Queer Bee Tree.

Joseph Brown, who works in the lumber woods near Galeton, Pa., came into town and got William Squires to go with him to Bald Hill to help him gather the stores from a bee tree he said he had discovered on his way in from the woods.

"I heard the bees buzzing in the tree while I was five rods away from it," Brown said, "or I wouldn't have discovered it."

The men took with them three patent pails to hold the honey, an ax to cut the tree down, and a lot of sulphur to burn in the hollow for the purpose of smothering the bees. Brown led the way to the tree, but they could not hear the humming. The tree was hit with the ax and the humming struck up immediately and so loud as to startle the two men. They found near the bottom of the trunk a hole where the occupants of the tree had made their entrance and the sulphur fire was started there, and its stifling fumes went up into the hollow tree. For a time the buzzing inside was terrific, but gradually grew fainter and fainter as the sulphur had its deadly effect and finally ceased entirely.

"Now we'll cut her down and gobble that stock of honey?" said Brown.

The tree was chopped down, and when it fell and displayed its hollow interior the two bee hunters were not only surprised, but disgusted. Instead of layers of rich honey they were greeted by the sight of a tangled mass of rattlesnakes, which had been suffocated by the sulphur fumes. The snakes had chosen the hollow tree for their winter home. There were fifty-eight large rattlers and eight blacksnakes, a puff adder, and three copperheads in the collection. The noise Brown had thought was the buzzing of wild bees was made by the rattling of rattlesnakes in chorus as he was passing. Brown and Squires will get about two gallons of oil out of the rattlesnakes, which will net them at least $100, so their queer bee tree will pan out a good day's work after all.—Cor. New York Sun.

Buried Cities of New Mexico.

"New Mexico and Arizona offer as great a field for archæologists as do the lands where the empires of ancient days flourished," said W. P. Metcalf, of Albuquerque, N. M. "An expedition left Albuquerque only a few days ago to seek for treasure which traditions say is to be found at Gran Quivera, 100 miles from that city. Before the pilgrims landed at Plymouth Rock there were flourishing settlements of white men along the Rio Grande. Coronado, in his history of the explorations made as early as 1540, wrote of the seven cities of Cibola, describing them as of fabulous wealth and magnificent beauty. The ruins at Gran Quivera are believed to be the ruins of one of those cities.

"Coronado told of abundant gold and treasures in all of these cities, and many expeditions have explored about Quivera. The ruins indicate that a large city stood there. The limestone walls mark out the sites of palaces, monasteries and churches. A curious thing is that no water can be found for fifty miles around the site of the old city, although treasure searchers have honeycombed the land trying to secure a supply of water. No treasure has ever been found there, but the belief that it is located there antedates any traditions of the Mexicans or Indians. Just what prospects induced the last expedition to start out I do not know."—Chicago Tribune.

Chicago's Highest Buildings.

The highest building in Chicago at present (and one which is not built on the new Chicago construction system) is the Auditorium. Its loftiest point is 296 feet above the sidewalk. The Fair building, now almost completed in one section, measures 241 feet to the coping, and it is possible that it will be carried higher—to sixteen or eighteen stories. The new Masonic temple will measure, over all, 274 feet. This is constructed entirely on the new system. The Ashland block measures 210 feet to the coping; the Woman's temple, whose topmost stories are now being finished, towers 266 feet from the ground; the Manhattan, 198 feet; the Monadnock, 194; the Henning and Speed block, 192; the Abstract building, 190; the Chamber of Commerce block, 180; the Home Insurance, 178; the Tacoma, 175; the Northern hotel, 174; the Rookery, 164; the Owings block, 161; the Rand-McNally, 148; the Chicago Opera house, 135, and the L. Z. Leiter building, 133 feet.—Harper's Weekly.

The Last Mourner.

In May, 1890, there died at Perignat (Ain) a retired captain of artillery named Lesgourgnes, knight of the Legion of Honor. His dog, a spaniel, answering to the name of Black, accompanied the funeral procession to the cemetery of Izernore. Ever since the date of interment Black has walked the distance of nine miles which separates Perignat from Izernore, climbed over the wall of the cemetery, and gone to lie down on the grave of his master every day at the same hour. Neither the stone throwing of the village children nor the efforts of passers by to draw off his attention have prevented the accomplishment of his self imposed task. For the last sixteen months Black has performed this daily pilgrimage in all weathers.—La Tribune de Geneve.

Telegraph Statistics.

According to statistics furnished at the last annual meeting of the Western Union company, messages have increased from 5,879,282 in 1867 to 59,148,343 in 1891. The receipts during the same time have risen from $6,568,925 to $23,034,326. The average tolls for messages have decreased from 104.7 in 1868 to 32.5 in 1891, while the average cost to the company of each message has been reduced from 63.4 to 23.2.

Quick Photographs.

The latest achievements in "instantaneous" photography have been the making of twenty-four different pictures of a dog during the interval between its leaving and alighting on the ground in the action of jumping.—New York Recorder.

BUNCO METHODS.

A Farmer's Unprofitable Experience With Green Goods Men.

TAUGHT AN EXPENSIVE LESSON.

He Thought He was pretty Sharp But the Rogues were too Clever for Him. Robbed of Everything.

When the Boston boat arrived here a few days ago, there came ashore with other passengers a man who inquired of the writer whether or not a certain stage due to leave in the early afternoon had departed. He was told it had. Then he asked the scribe to get a team and take him to his home, saying he had no money, but would settle when he arrived at his abode. As the man was well known, the peculiar request was complied with and soon we were on our way to a well known Penobscot county town not far from Bangor. During the ride the man explained just how and why he came to be short financially, and thereby hangs a tale which has a moral for everybody who thinks to grow rich suddenly and without work.

This man had taken $400 and with it had gone to New York, where he hoped to buy for $350 $4,000 in bills which were to appear as well as the genuine, and, in fact, were alleged to be printed from Uncle Sam's plates. He was fleeced to the "queen's taste," as he put it, but he allows the story to be told on promise that his name shall be kept secret.

As he tells the story he arrived in New York via a morning train from Albany, reaching the Grand Central about noon. With his new stiff hat set firmly upon his head, with about $380 of his $400 dollars carefully stowed away in an inside pocket and the hotel card closely grasped in his hand, he took a Third avenue elevated train and rode down the island and finally appeared at the hotel office, where he secured a room.

He did not have long to wait. He had given his right name all the while, and it also appeared upon the hotel register. The same name has appeared before the word "Selectman" in his native town. Soon there came a gentle tap at the door, and he answered it.

"Ah! Good day," said the newcomer. "Is this Mr. Blank?"

"Why do you ask?" answered the cautious man from Maine.

"That's all right. You have come on business. I am A. 22. Who are you?"

"I am A. 22 too," said the sharp man from Maine. "Come in."

There entered a dapper, businesslike man having a pleasant face, from the sides of which grew long, luxuriant mutton chops. He was not over five feet five and did not weigh over 100 pounds. He looked as inoffensive as a schoolgirl, and had there been any suspicions of fraud or violence to come in the breast of the great double fisted fellow from the Pine Tree state they would have been dispelled at the sight of this little man. There was no rush on his part to get down to business. Finally he was told the hotel was used only as a place in which to meet; that there were other customers at the "office" ahead of him, and so one hour was passed in strolling about the park in front of Castle garden and along West street, not far away. It was then proposed to go to the "office," the New Yorker saying he would go back to the hotel later and settle for the room.

An old building upon a corner was entered and two flights of steps taken. During the walk the Maine man had given his companion to understand he was ready to take $400 worth of goods if like the sample, and he endeavored to impress upon the seller the fact that he was not to be taken in and done for.

The New Yorker was pleased to hear that, and had no doubt that the acquaintance so auspiciously begun would be more firmly cemented in the future, and lots of other stuff like that did he inject into the conversation.

A room was reached and entered. It was fairly well furnished, and at one corner of it there was a closet. At a desk sat a pale young man, seemingly weaker than the guide who had come from the hotel. There were some books and papers scattered about, and the sickly young man was tearing in pieces one and two dollar bills. He did not work fast. Some of these bills were shown the newcomer, and then the party got down to business.

The Maine man thought he had better take the bulk of the goods in tens, for he reasoned there was no more risk run in passing a ten than a one. He was shown a package said to contain 100 tens. He counted it and found the correct number. The money looked good all the way through, and later he bought four of the packages. These were put into a bag.

The Maine man clutched this and then gave up $350, and at this moment a burly fellow entered the room, locking the door behind him. The Maine man grew nervous, but he felt better when the newcomer informed all that one of Inspector Byrnes' men had been "nosing" around all the morning and was then in the building. It was thought that he was not "onto" that room, but it was conceded that all had better lay low for awhile.

The sickly young man gathered his torn bills and hastily thrust them into the grip of the man from Maine, the dapper chap with the mutton chops pulled some samples from his pocket and burned them at a stove, while every now and then the burly one peered into the hall, occasionally making a short trip about the building. It was then about 4 o'clock. The dapper man said he should vacate that night, but he was bound to see his friend out of town.

For further security he quietly did the little bag up in paper, so that it looked something like a package of pears or peaches, and he told the man from Maine to give him five dollars. With this he sent the last comer to the Fall River line, where a ticket to Boston was secured for three dollars and a stateroom for two. Ticket and key were brought back and then all secretly left the building.

Inspector Byrnes' man was pointed out, and the dapper man told the Penobscot county man he should never again use that office nor go near the hotel. The man with the $4,000 was seen on board the boat, nor was he left alone until the last bell was rung. With quiet expressions as to more business in the future, and wishes of good luck to come, the dapper New Yorker departed, and as the boat shot out into the North river the man from Penobscot hurried to his stateroom to study his new purchase.

The bag seemed the same bag which he had held in his hand when the breathless messenger announced the nearness of the inspector's man, yet it was not the same. There was a bundle of green stuff inside, but the torn bills thrust in by the sickly young man were missing. Yet the other bundle looked all right, but it was only paper having for edges imitations of genuine bills.—Bangor Cor. Lewiston Journal.

Surveyors at work on the Gila river in New Mexico claim that they have discovered a mountain of pure alum a mile square at the base and 3,000 feet high.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, OCTOBER 6 1893

The confession of George Sontag is sufficiently explicit to gain for him another twenty years of penal servitude—ten for his participation in the crimes specified and ten for betraying his friend.

The Examiner felt so proud of the roasting given it by the interior Democratic press that it paraded the record of its shame befors its readers on Saturday. It was tickled almost to death at receiving any notice whatever from the "hayseed papers."

The Sacramento Record Union advises that the various counties provide themselves with rock breaking machinery, and the establishment of a stone pile. It would then have all the able bodied prisoners kept at work breaking stone for Macadam with which to make good roads.

The Kansas people are economizing these hard times in many ways. In one town the congregations of seven churches have agreed to unite and employ one preacher and worship under one roof. The other six preachers will be turned loose to hunt other flocks and pastures.

About this time we may expect reports from the training grounds of the pugilists to the effect that each is ready "to fight the battle of his life." This to the iniated will not effect bets; all the pugs who have entered the ring in the past century have been able to do that, but only about fifty per cent seem capable of fighting for their patrons' money.

San Francisco seems in need of reform in many particulars, but her greatest need lies in the line of her abortion doctors. The papers are continually filled with the most harrowing crimes committed by these inhuman fiends. Since she has elected one of cheir number a Coroner of the city, and narrowly missed twice making him Mayor, a semi-respectability has seemed to attach to the brutish fiends. The abortion doctors, ladies' side entrances, and the dynamite fiends should be driven from the city.

The fact that Van Alen has not yet got his appointment is calculated to call particular attention to the sum he is said to have paid for a foreign mission. Many of our contemporaries seem to think that $50,000 is not enough with which to purchase the place he is after, and some of them point to the circumstance of Mr. Wanamaker's $300,000 paid to the Republican fund for which he received nothing more than the Postoffice folio.

It is evident that California is to be overrun with unemployed people this coming winter. They are coming into the State from every quarter, not by twos and threes, but by the hundreds daily. What to do with these people threatens to be a serious question. California has but few manufactures, and the farm work of winter does not require any great number of workingmen. It looks as though the counties and cities will have to inaugurate public work of some kind to prevent a vast amount of misery and crime.

The Republican organs and the political trimmers are charging that the administration is not endeavoring to enforce the Geary law. Now comes the New York World and charges the reverse. It says, "Attorney General Olney is busying himself with the enforcement of the Chinese deportation act. He has ordered his subordinates to carry out its cruel and unjust provisions so long as there is a dollar of money available for the purpose." It is strange how differently people look at things.

Congressman Cooper of Texas proposes to submit the question of free coinage to a popular vote. He would have the Governors of the several States call elections to be held on the first Monday in November, at which each voter shall cast a vote for or against free coinage. There would be a certain moral force in the verdict rendered at such an election. As the issue would not be complicated with any other the sense of the people would be fairly expressed. In an ordinary Presidential election there are so many issues that the people can hardly be said to have spoken clearly on any one. The silver issue was obscured in he last election both by the tariff and the force bill.

MONEY ... per week, and more after a little experience. We can furnish you employment, and will teach you free. You work in your own locality, wherever you live. Both sexes, all ages. We start you. No risk. Can work in spare time, or all the time. Full information FREE. TRUE & CO., AUGUSTA, MAINE.

When Learning Was Despised.

Abraham Fabert, who in the seventeenth century became a marshal of the French army, lived in an age when learning was despised and mere animal courage won the plaudits of court and people. "The king has no need of philosophers in his armies," said one who knew the signs of the times. "He wants soldiers, stirring, active and resolute men. Debaters are only useful in the schools."

It was at this period that the Marquis of Cramail, at a critical moment, addressed his rear guard, imploring them not to ride away from the field, and his eloquence was at once destroyed when some one cried:

"Why listen to him? He has written a book!"

"I mend my pen with my sword," said a noble of the time to a poet, and the retort was prompt:

"Then I am no longer astonished that you write so badly."

But young Fabert, who became a private at the age of 14, was determined to master all the branches of his profession from the simplest to the most complex. He fulfilled all his practical duties perfectly, and at the same time studied with unfailing zeal. He taught himself the rudiments of geometry, fortification and drawing. He read history, studied German, Spanish, Italian and Flemish and was always eagerly seeking to improve his knowledge of geography.

"This," he used to say, "is as necessary to an officer as arms are to the soldier."

The result was that when France needed the service of a trained mind and well disciplined will Fabert was at her service. Moreover, he was the first marshal who rose from the ranks.—Youth's Companion.

A Commencement Costume.

A pretty commencement gown may be made of white embroidered muslin, the tiny flower being done in white, and upon close examination proving that it is a forgetmenot. The skirt, which is full and round, just barely escapes the floor. At the foot it is finished with five narrow "milliner's folds" of white satin. A quarter of a yard above these are three narrow folds, and a quarter of a yard above these is one. The bodice is round and belted in with a broad, white satin belt laid in fine folds like those on the skirt. Just in front, where it fastens, are four white satin ribbon bows knotted in the square style, so that they look like forgetmenots themselves.

The gown is open at the throat, turned over in very broad revers, faced with the muslin and outlined with Irish lace, that has the stitches necessary to keep it in place hidden under folds of the satin. The sleeves are very high puffs of the satin, reaching quite to the elbows, and below them fall frills of Irish lace. The gloves are white undressed kid, and the fan is a white gauze one. The slippers are white satin and the stockings white silk. The hair is parted in the center, drawn back and arranged low on the neck in a loose knot.—Isabella Mallon in Ladies' Home Journal.

A Napoleon of Literature.

The man was as thin as a rail and had the cadaverous look of a poet out of a job. At least that's the way he appeared to the editor as that gentleman raised his eyes from his work to see what it was shuffling across the floor toward his desk.

"Good morning," said the visitor.

"Good morning," responded the editor.

"You are the editor," said the visitor inquiringly, half in doubt. "Yes, I know you are. I can always tell an editor by his intellectual expression. I have here, sir, an article for the press."

"Prose or poetry?" queried the editor, not regarding the flattery.

"Both, sir; a combination effort, I may say."

"Ah, you must be a genius?"

"Well, sir," and the visitor plumed himself, "I am considered by my friends a Napoleon of literature, sir."

The editor didn't like that a little bit.

"Um," he said, looking him over. "Um, I didn't know you were a Napoleon, but I knew you were a bony part of literature. Anybody could see that with half an eye."—Detroit Free Press.

The Government of Spain.

The government of Spain is a limited monarchy under the constitution which was drawn up and proclaimed in 1876. The power to make laws belongs to the cortes, which consists of a senate and a house of deputies, the senators numbering 360 and the deputies 431. The senators are of three classes—those holding office in their own right, those nominated by the crown and those elected by the civil and ecclesiastical corporations of state. In the election of deputies all male Spaniards may vote under certain restrictions, and deputies are elected in the proportion of one deputy to every 50,000 souls of the population. Both houses of the cortes meet every year, and the ministers are responsible thereto.—New York Sun.

Went After Dinner.

Patrick—It's poor advice ye've been givin me. Didn't ye say th' best toine to ask a mon a favor was afther dinner?

Bifkins—I certainly did.

"Well, Oi wint to ould Buffers wid th' schmallest koind av a request, and he refused. It was afther dinner too.

"Are you sure he had had his dinner?"

"Faith it's little Oi know about ould Buffers' ingoin's and outcomin's, but Oi had moine."—New York Weekly.

Getting Points From the Savage.

It is said there is a tribe in Africa where speakers in public debate are required to stand on one leg and are not allowed to speak longer than they can stand in that position. With all our boasted civilization we discover every now and then points in which savages surpass us.—Exchange.

The Great Difference.

"There is not much similarity between our ways of earning a livelihood," said the dentist to the paint manufacturer.

"No," admitted the manufacturer, "there is not. I grind colors while you cull grinders."—Indianapolis Journal.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent will be added to the amount thereof; that all taxes may be paid at the time the first installment as herein provided is due and payable.

J. S. GOLDMAN,
Tax-Collector.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of J. F. Beale, an Insolvent Debtor.

J. F. Beale, having filed in this Court his petition, schedule and inventory in insolvency, from which it appears that he is an insolvent debtor, the said J. F. Beale is hereby declared to be insolvent. The sheriff of the county of Inyo is hereby appointed a Receiver to take possession of all the estate, real and personal, of said J. F. Beale, insolvent debtor, except such as may be by law exempt from execution and of all his deeds, vouchers, books of account and papers, and to keep and to care for and dispose of the same until the appointment of an Assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent or to deliver any property belonging to such insolvent, to him or to any person, firm, corporation or association for his use; and the said Debtor is hereby forbidden to transfer or conceal any property, until the further order of this Court, except as herein ordered.

It is further ordered, that all the Creditors of said debtor be and appear before the Hon. Geo. M. Gill, Judge of the Superior Court of the County of Inyo, in open Court, at the Court-room of said Court, in the County of Inyo, on the 11th day of November, 1893, at 11 o'clock a. m. of that day, to prove their debts and choose one or more Assignees of the estate of said debtor.

It is further ordered, that the order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as said paper is published before the day set for the meeting of Creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 5th, 1893.
P. H. MACK, Attorney for Insolvent.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF THIRD Township in the County of Inyo, State of California.

L. Wood, Plaintiff, vs. Jesus Encenas, Defendant.

The people of the State of California send greeting to Jesus Encenas, Defendant:

You are hereby required to appear in an action brought against you by the above named Plaintiff in the Justice's Court of Third Township, County of Inyo state of California, and to answer before the Justice at his office in said Township, the complaint filed therein within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought, or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to obtain judgment against you for the sum of $225-86 alleged to be due and owing from defendant to plaintiff upon an account stated between plaintiff and defendant, at Independence, Inyo County, California, on the 12th day of June, 1892, which sum or $225 86 defendant agreed to pay to plaintiff. For costs of suit, as more fully appears by the complaint on file herein, to which you are referred.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of $225 86 and costs of suit.

Make legal service and due return hereof.

Given under my hand this 2d day of August 1893.

IRV. H. MULHOLLAND,
Justice of the Peace of said Township.

KENDALL'S SPAVIN CURE.

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied upon fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1894, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence Northwest following the meanderings of the bed of Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo as the same appears by the official plat of the said town of Independence, now on file in the office of the county Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, load, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispitada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura, State of California, commencing at a point twelve and ninety-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12) and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino base and Meridian, running thence South six-eighty and eleven-twentieths (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the south east quarter, and the North west quarter and the North east quarter of the North west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah, deceased.

INDEPENDENCE, CAL

FRIDAY, OCTOBER 6 1893

OUR PRESIDENT,

GROVER CLEVELAND,

OF NEW YORK.

OUR VICE-PRESIDENT,

GEN. STEVENSON,

OF ILLINOIS.

OUR

Congressman	A. CAMINETTI.
Assemblyman	P. H. MACK.
Superior Judge	GEO. M. GILL
Sheriff	JOHN S. GORMAN.
Clerk	DENNIS J. HESSION.
District Attorney	P. W. FORBES.
Assessor	P. A. CHALFANT.
Treasurer	W. T. BUNNEY.
Coroner	H. H. HOWELL.
Surveyor (endorsed)	JOSEPH SEELY.
Supt. Schools	J. H. SHANNON.
1st Supervisor Dist	ROBT. LOVE.
2d Supervisor Dist	A. C. FREEMAN.
3d Supervisor Dist	W. H. UHLMEYER
4th Supervisor Dist	JOHN WILSON.
5th Supervisor Dist	FRANK FITZGERALD.

BORN.

ANGER—At Camp Independence Oct. 1, 1893, to Mr. and Mrs. L. A. Anger, a daughter.

BUNNEY—At Independence, Oct. 2, 1893, Mr. and Mrs. W. T. Bunney, a daughter.

DIED.

WILLIAMS—At Big Pine Oct. 2, 1893, Thomas Williams, aged 57 years.

S. P. McKnight C. E. is spending several days in this vicinity on professional business.

F. McIver and C. Mulholland started for Los Angeles yesterday to attend the Irrigation Congress.

Farcy is prevalent among the horses in this section. Several animals have died recently of the disease.

R. Hessian came down from Big Pine yesterday and is spending a few days at the hub.

The Supervisors of Mono county offer a reward of $300 for the arrest of Frank Revada, who murdered Leahy about a year ago.

A special having on Capt. Supt. H. M. Yerrington and Hon. E. Williams went south over the C. & C. on Tuesday, returning next day.

J. A. McKenzie started for the World's Fair last Monday. He will meet Mrs. McKenzie, who has been east for some time, at Chicago.

E. H. Edwards of Lone Pine has been at Chicago for the past three weeks. During his absence Mark Hand is in charge of Mr. Edwards' affairs.

N. G. Fairman came in to Keeler from Panamint on Wednesday. He left next morning for Mojave and thence to Chicago and New York.

Thomas C. Boland of Inyo Lodge and R. Love of Winnedumah Lodge F. & A. M., start for San Francisco to-morrow to attend the Masonic Grand Lodge which meets next Tuesday.

Miss Lena Thomsen arrived home yesterday after spending several months at the German Hospital at San Francisco. She has entirely recovered from her painful accident of last winter.

Felix Meysan is at Independence and will take charge of the General Merchandising business of E. Chenot while the latter takes a much needed rest, not having had a vacation in twenty-two years.

The Meade Bros. arrived at Independence last evening with their big team on the way to Mojave. They are loaded with about seven tons of freight, mostly butter and cheese from the Bishop creamery.

Martin, the surveyor who is retracing the lines of the John A. Benson survey just east of Saline Valley, came in Wednesday and will return to the field in a few days. He has had rather a rough experience.

Mr. and Mrs. Tucker will give lessons in dancing on Tuesday and Saturday nights from 7 to 9 o'clock at the Pavilion. Private lessons will be given Friday afternoon from 3 to 5. Soiree Saturday evenings.

Dr. J. S. McQueen came down from Bishop on Wednesday accompanied by F. S. Poland, Deputy Grand Master of A. O. U. W. of California. Mr. Poland is an old Invoite, having mined here thirty years ago. He has been looking over the scenes of his former exploits during the past couple of days. The two gentlemen expect to return to Bishop to-morrow.

The action of the Board of Supervisors in appointing delegates to the Irrigation Congress and providing their expenses cannot be too highly commended. It evidences a progressive and enterprising spirit in keeping up with the times and is absolutely certain to result in great benefit to the whole country. They chose representative men who are thoroughly familiar with the resources of the country, and who will do all in their power to secure the ends sought.

A few days ago two men who have been prospecting about Cerro Gordo several years struck a vein of ore different in kind from any ore ever before found in that locality. The ore carries about 140 ounces silver per ton and sixty to seventy per cent lead, and so far is about the average of Cerro Gordo ore. But in addition to this is an entirely new feature in the ore, it is rich in gold. From seven pounds of the ore pounded in a hand mortar gold to the value of $8 75 was obtained. The gold is seen thickly sprinkled through the galena ore. The vein carrying gold is about eighteen inches thick. Old miners, who have been upon the Hill for many years think the discovery has all the marks of an extensive and valuable mine.

SUPERVISORS' PROCEEDINGS.

TUESDAY, Oct. 3, 1893.
9:30 o'clock a. m.

The Board of Supervisors of the County of Inyo, State of California, met at above stated time pursuant to law, the preceding and day adjourned to being a legal holiday.

Present, Supervisors A. C. Freeman, Frank Fitzgerald, W. H. Uhlmeyer, John Wilson and Robert Love, Chairman.

Minutes of preceding meeting read and approved.

Petition of citizens praying for appointment of delegates to the International Irrigation Congress to convene at Los Angeles California, on October 10, 1893, and to appropriate money for the necessary expenses being under consideration, on motion of Wilson, seconded by Fitzgerald,

Ordered: That three delegates be appointed to attend and act at said Congress.

Charles Mulholland was nominated by Uhlmeyer for a delegate, seconded by Wilson, and upon vote was chosen.

Finley McIver was nominated by Uhlmeyer, seconded by Fitzgerald and upon vote was chosen accordingly.

J. L. Bourland was placed in nomination by Fitzgerald and Robert O'Neal by Freeman. Upon vote,

For O'Neal, Freeman.

For Bourland, Uhlmeyer, Fitzgerald, Wilson and Love. Whereupon, upon motion of Freeman, J. L. Bourland was chosen unanimously.

Ordered unanimously, That Mr. Fred Eaton of Los Angeles be requested to act, in company with the delegates appointed, as a representative of Inyo county at said Congress, without compensation.

Moved by Fitzgerald, seconded by Uhlmeyer, that for the purpose of defraying necessary expenses of said delegates the sum of $420 be appropriated out of the General Expense Fund.

Moved by Freeman, seconded by Wilson, to amend by inserting the sum of $500 for such compensation.

For amendment: Freeman, Wilson.

Against amendment: Uhlmeyer, Fitzgerald, Love.

Whereupon the original motion was carried unanimously and the Auditor directed to draw warrants upon the General Expense fund in favor of J. L. Bourland, F. McIver and C. Mulholland in sum of $140 each.

Claims against the County were examined, audited and ordered allowed as follows:

W. D. Johnson, $50, for analysis of stomach of Wm. Bennett, allowed on General Expense fund in sum of $25.	
A Carlisle & Co, seal and banks	$ 26 00

L Wood, lumber etc	1 63
A W Eibeshutz, mdse etc	265 36
J W Murphy, repairs	4 50
J W Murphy, Constable fees, for $68 40, allowed in sum of	66 40

Claim of J N Yandell in sum of $214 50 for cash paid assistant for preparation of Great Register being under consideration it was by the following vote

Ordered: That the claim be allowed on the General Expense fund in the sum of $110 50.

Aye: Freeman, Wilson, Fitzgerald and Love.

No: Uhlmeyer.

Board adjourned until Wednesday, October 4, 1893, at 9:30 o'clock a. m.

R. LOVE, Chairman.
Attest: D. J. HESSION, Clerk.

WEDNESDAY, October 4, 1893.
9:30 o'clock a. m.

Board of Supervisors of the County of Inyo, State of California, met as above pursuant to adjournment.

Present, Supervisors Freeman, Fitzgerald, Uhlmeyer and Wilson, Chairman Love presiding.

Minutes of preceding meeting read and approved.

Claim of A. Stecker for work on book cases etc. allowed on General Expense fund in sum of $50 50. On motion of Fitzgerald, seconded by Uhlmeyer, said allowance was reconsidered and claim ordered to be returned to be itemized.

Claim of Margaret Lewis, contractor for care of indigent sick, allowed on Hospital fund in sum of $264 50.

Claim of Alton Baker for conveying indigent sick allowed on Hospital fund in sum of $12.

Moved by Freeman, seconded by Wilson, that the claim of Dr. L. L. Woodin for $110 be allowed in sum of $100.

Aye:—Freeman, Wilson.

No:—Uhlmeyer, Fitzgerald, Love.

On motion of Fitzgerald, seconded by Uhlmeyer, it was by the following vote ordered that the above named claim be allowed on the Hospital fund in the sum of $105.

Ayes:—Uhlmeyer, Fitzgerald, Wilson, Love.

No:—Freeman.

Allowance of the claim of Alton Baker was reconsidered by the following vote:

Ayes:—Uhlmeyer, Fitzgerald, Wilson, Love.

No:—Freeman.

Said claim was ordered allowed on the Hospital fund in sum of $10.

Claim of Nathan Rhine for Hospital supplies allowed on the Hospital fund in sum of $5 25.

Nathan Rhine, merchandise, General Expense fund, allowed in sum of $7 00.

Henry Glade, for conveying indigent sick allowed on Hospital fund in sum of $4 00.

O. I. Mairs, for conveying indigent sick, allowed on Hospital fund in sum of $8 00.

O. I. Mairs, for boarding County Prisoners, allowed on the General Expense fund in sum of $2 00.

Upon motion of Fitzgerald, seconded by Uhlmeyer, the claim of Margaret Lewis was reconsidered and allowed in the sum of $257 50.

Petition for erection of bridge across the Rawson and Ford ditch, laid over from the July meeting, was rejected.

Petition for establishment of County Road in Township 8, Ranges 32 and 33, and for abandonment of road therein, was rejected for reason that same was not accompanied by necessary bond.

Petition from residents of Road District No. 2, praying for survey and viewing of new road commencing near Frank Shaw's residence, was rejected, as not being accompanied by bond.

Board adjourned to meet at 1:30 p. m., at which hour it reconvened with all members present.

Petition of citizens of Road District No. 2, praying for the viewing and laying out of roads ordered returned for correction.

Petition of citizens of Road Districts Nos. 2 and 3, praying for viewing and laying out of roads ordered returned for correction.

Petition for reduction of retail liquor license laid over until next regular meeting.

Petition of citizens of Big Pine, in Road District No. 3, for viewing and laying out of road, ordered returned for correction.

Claim of A. Stecker, in sum of $50 50, upon its return after being itemized, being under consideration, on motion of Freeman, seconded by Uhlmeyer, said claim was ordered allowed in full by the following vote:

Ayes:—Freeman, Uhlmeyer, Wilson.

Nays:—Fitzgerald, Love.

Petition of O. Allerton, L. M. Newman and Mrs. Alice Ober as Trustees of Big Pine Cemetery, praying for permission to disinter and reinter bodies, was taken under consideration and laid over until next meeting.

Board proceeded to examine the coyote scalps and affidavits on file and certificates therefor were ordered issued as follows:

NAMES.	No. SCALPS.	AMT.
D. R. McLean	1	$ 5 00
Fred French	3	15 00
Indian Tom	3	15 00
R. M. Houle	1	5 00
Bernardine Atrese	1	5 00
A. L. Conklin	1	5 00
	10	$50 00

Board adjourned to meet Thursday October 5, 1893, at 9:30 o'clock a. m.

R. LOVE, Chairman.
Attest: D. J. HESSION, Clerk.

THURSDAY, October 5, 1893.
9:30 o'clock a. m.

Board of Supervisors of the County of Inyo, State of California, met at above stated time pursuant to adjournment.

Present, Supervisors Fitzgerald, Freeman, Uhlmeyer, Wilson and Robert Love, Chairman.

Minutes of proceedings of preceding day read and approved.

Mr. P. H. Mack appeared before the Board in the matter of the proposed refunding of the County indebtedness, which was taken under consideration by the Board.

Claim of W. A. Chalfant for printing allowed on the General Expense Fund, $37.50.

Claim of Thomas Beland for hire of teams, $12, allowed on General Expense fund in sum of $10.

Claim of Henry Levy for lumber etc allowed on the General Expense fund in the sum of $1 80, and on the Hospital fund, for conveying indigent sick, in sum of $2 50.

Claim of A. W. Eibeshutz, for Court and Record Books, allowed on the General Expense fund, $67.

Petition for laying out and establishing a new County Road in Road District No. 2 after consideration was ordered granted and said road was declared fixed and established as a public highway in accordance with prayer of petitioners as follows, to wit:

Commencing ¼ mile south of the section corner of sections 4 and 5 and 8 and 9, thence running south on said section line between the lands of W. G. Watson and Mrs. S. A. Randall (Mrs. Kug), also between G. P. Bourland and A. C. Freeman and between said Freeman and J. H. Shannon to the 1 mile corner between sections 16 and 17, Twp. 8 South, Range 33 East. Thence in a southeasterly direction across to section 21, through parts of sections 21 and 27, Township aforesaid, to the center of the south line of the northwest ¼ of section 27, a which point it intersects with the present County road.

And it is further ordered that the following described County Road be and the same is hereby declared vacated and abandoned:

That part of the old County Road commencing at a point at or near W. G. Watson's stable, about ¼ mile southeasterly from the section corner between sections 4 and 5 and 8 and 9, township above mentioned, and through the lands of G. P. Bourland, J. H. Shannon and the heirs of Schuyler Williams, Ben. H. Yandell and P. S. Partridge, on no regular line but crooked in form, to a point on the center of the south line of the northwest ¼ section 27, Township above mentioned, where the same intersects the road established by the foregoing order.

Upon motion of Fitzgerald, seconded by Uhlmeyer,

Ordered: That that the Clerk of the Board be and he is hereby instructed to make a search of all records, proceedings and acts of former Boards of Supervisors relating to the laying out, viewing and establishing of all public highways within the County and enter a complete and comprehensive abstract thereof, so far as can be ascertained, upon the Road Register.

Adjourned to meet at the hour of 1 30 p. m., at which time Board reconvened.

Board proceeded to examine monthly and quarterly reports of County Treasurer for the quarter ending Sept: 30, 1893, which were accepted and approved.

Quarterly report of County Auditor for said said term, with vouchers submitted therewith, was examined, accepted and ordered approved.

Board adjourned to meet Friday, October 6, 1893, at the hour of 9:30 o'clock a. m.

R. LOVE, Chairman.
Attest: D. J. HESSION, Clerk.

Fatal Accident

The first accident in which a white person has been killed on the Carson & Colorado railroad occurred at Laws on Tuesday afternoon. Sheriff Gorman went up on the special Wednesday and gives the following facts: A special train on its way to Keeler had stopped at Laws for a short time and was just pulling out when engineer Fred Murry saw a girl about eight years old on the track about 50 feet ahead facing the engine. It seems that children at Laws have heretofore stood on the track ahead of the train in a spirit of bravado, and would jump away as the engine neared them. As Murry's train was running very slowly he did not stop, and when close to the girl she jumped away, and only then did he see the little eighteen months old daughter of Jeremiah Leary, who had been hidden behind the older girl. The Leary's residence is within a few feet of the track and the little one had crept out unobserved by anyone and followed the older girl onto the track. It was then too late to stop the train, and the child was run over and killed. Murry had promptly reversed his engine and came to a stop within 100 feet. The Coroner's jury brought in a verdict in accordance with the above facts. No possible blame attaches to the trainmen, as the accident, though deplorable, was utterly unavoidable. The mother of the child appeared at the inquest and entirely exonerated both Murry and fireman Neil Ward.

Tuesday a telegram from Big Pine announced the death of Thomas Williams. He had been in ill health for a long time. Mr. Williams was a typical California pioneer of a social, kindly nature and generous to a fault. He had lived in Mono county for many years and removed to Big Pine three years ago. His remains were followed to the grave by a large concourse of mourning friends, many of them old neighbors from Mono.

ROYAL BAKING POWDER

No acid except that from the grape is used in the Royal Baking Powder. The Royal imparts that peculiar sweetness, flavor and delicacy noticed in the finest cake, biscuit, rolls, etc., which expert pastry cooks declare is unobtainable by the use of any other leavening agent.

Absolutely Pure

Climbing Mountains in Iceland.

The highest mountain in Iceland was ascended last summer for the first time. The successful mountaineer was Mr. F. W. W. Howell, who was encouraged when he started for Iceland by information from the Royal Geographical society that the difficulties in the way of climbing the Orocfa Jokull were supposed to be insuperable. The mountain is near the southeast coast, and is an imposing sight from the sea. Mr. Howell made an attempt in 1890 to climb the mountain, but was defeated by the weather.

On Aug. 17 last he left Sandfell, a little settlement on the coast near the base of the mountain, at 4 a. m., when of course it was broad daylight in that latitude? He was accompanied by two Icelanders as porters. He struck the snow slopes at 10 a. m., and it took him nine hours and a half to reach the top of the mountain whose sides are quite steep and covered with ice and snow.

Though this mountain is the highest in Iceland, its elevation was found by Mr. Howell to be only 6,550 feet, but owing to the latitude the phenomena of the snow slopes compare most favorably with those of mountains 10,000 feet high in Switzerland. Mr. Howell says the icicle galleries in the upper crevasses are particularly fine. This is undoubtedly one of the most successful feats of mountain climbing of the year, for the mountain presents as many difficulties as any of the Alps, with two or three exceptions. It is comparatively easy to ascend Mount Hecla, and the climb is made every once in a while by one or more tourists.—New York Sun.

Life in Central New York.

One night about three weeks ago George Ceon, Frederick Shepp and Frederick Gott, farmers residing near North Manlius, had their harnesses and robes stolen. Of course they were annoyed and anxious to catch the thief, and, somewhat inclined to believe in the mysterious, Shepp and Gott went to a Syracuse fortune teller for information. She took their money and informed them that they would find the harnesses on the premises of some one whose first name was James, secreted in a barrel. They thought of the Jameses in their vicinity. There was neighbor James Rich and neighbor James Wright, the latter a well to do farmer, and they got a warrant from a Collamer justice to search the house of the first James and one of the barns of the second James.

The officer who had the warrant did so, accompanied by Mr. Gott and Mr. Shepp. But the harnesses were not found, and now James Rich promises to make it interesting for Gott and Shepp. He claims they dug up his cellar, scattered his potatoes around and did other mischief of this character, and made no effort to put things in as good shape as they found them. He wants damages from the two gentlemen, and says he will ask the court to grant his request unless Gott and Shepp walk up and pay. —Madison County Times.

A Question for English Lawyers.

A correspondent raises the question whether a retired judge can practice at the bar, and goes on to say: "The point is an interesting one, and if report speaks truly it is not unlikely to be raised by the action of Mr. Justice Hawkins, who, on his retirement next month, it is said, will resume his old role of advocate. There is no precedent for an English judge appearing again at the bar after retirement, but it is not an uncommon thing for an Indian or colonial judge to resume practice when he has left the bench. These officials, however, are in an entirely different position to their English brethren, and their example counts for very little.

"The absence of an English precedent is much more to the purpose, and it would probably be considered conclusive by the bar committee if not by the judges before whom the question might be raised. Anyway, it would be decidedly unfair for a judge who had received a handsome pension to enter into competition with his struggling professional brethren who had yet a career to make, to say nothing of the awkwardness of the situation which would be created."—Yorkshire (England) Post.

A Sewed Fish.

A peculiar fish was brought into this port Monday by the schooner Mildred V. Lee. The fish is nearly oval in shape, with a very short tail; is 3½ feet in length, 2½ feet in width and weighed 112 pounds. When taken from the water it was of a bright red color, and the meat is about the color of salmon. The body except the head is covered by small scales, and the back is covered with light spots. On either side of his back is a peculiar line, resembling a scar, as if he had been cut and stitches taken in the wound. The fish was taken on La Have bank in a trawl in 300 fathoms of water, but nothing like it has ever been landed here before, neither can a fish answering its description be found in the publications of the fish commission.—Gloucester (Mass.) Times.

Ought to Recover.

Lady (to colored laundress)—Well, Aunt Chloe, how is your husband today?

Aunt Chloe (gloomily)—He ain't no better, Miss Mary. He's done gone on a new inscription, but de doctor's got mighty serious hopes 'bout his discovery. —Harper's Bazar.

Questioning a Dog Story.

A dog story, hailing from Putney, is related by a Mr. John Bell. He tells us that on his way to the train one morning he saw a brown retriever rushing along with a letter in his mouth. The dog went straight to a pillar box in the wall. The postman had, however, just cleared the box, and was twenty or thirty yards away when the dog arrived. The "sagacious animal went after him," says Mr. Bell, "and had the letter transferred to the bag. He then walked home quietly."

Will Mr. Bell be good enough to tell us something more about this dog? His history should certainly exhibit other traits worth study in the matter of canine sagacity, and the story of his being trained to act the part of a servant in posting letters may reveal much that will interest Sir John Lubbock and all other lovers of dogs, and especially of clever and intelligent canines. What one would like to know further, is something about the dog's intent, or that of his owner, in the matter of posting the letter.

Supposing the dog arrives at the postbox in the wall, how is the letter he carries to be posted? Does he depend on a chance passer by to relieve him of the letter and transfer it to the box? Or is he only sent at times when the postman clears the receptacle? In the latter case, does the dog refuse to deliver the letter to any one save the official? And how was he trained to perform this work? Information on these points will be welcomed.—London Illustrated News.

European Climatic Changes.

From statistics which M. Flammarion has gathered he shows that in every part of France and the Continent during the past six years the thermometer has been getting lower and lower, the fall being more noticeable in the spring than in the other seasons of the year. Great Britain shows a similar excess of cold weather, while strange to say Denmark, Norway, Sweden and Russia, which we have been accustomed to regard as cold countries, have, during the past four years, had a higher temperature than that to which they are accustomed.

M. Flammarion goes farther back than this, and quotes history to show that in past years many trees which once flourished in northern France are now found only in the south, while others have disappeared altogether. Among these are named the lemon, which no longer grows at Languedoc; the orange, which has deserted Roussillon, and the Lombardy poplar, which has disappeared from the country altogether. He also points out that many noted vintages have ceased to be, owing to the impossibility of growing the grapes under the altered climatic conditions. There is not now a single vineyard, he tells us, to be found north of Paris.—Chambers' Journal.

The Art of Perfume Making.

The art of making perfumes is as old as history itself. Before painting, music or architecture had crystallized into art, perfume and the method of making it had taken a strong hold on all peoples. A sacrifice of perfume in the form of incense was a necessary part of many ancient religions. Incense was used by the Hebrews, later by the Druids of England, and now is in all Roman Catholic churches.

The Greeks and their imitators, the Romans, all had their favorite scents, and Irving's "Life of Mahomet" tells how passionately the prophet was devoted to the delicate oriental perfumes.

The voluptuaries of old wished to be luxurious, but it has been left for the modern Gaul to produce perfumes, scents and odors, beside which those of the ancients would seem flat and crude.

The early days of the empire witnessed the beginning of the present immense industry of perfume making.—New York Evening Sun.

What to Read.

Read the good old books that have lived and held their own by the vitality of matter and style that makes them standards. Don't read a lot of new books about the Bible; read the Bible, and then you will understand what you may afterward read about the Bible. Read Shakespeare, not controversies on Shakespeare; read Scott and Thackeray and Dickens and George Eliot. Do not be content with a short history of literature that tells you their best works, and makes a few disconnected extracts, and tells you their standing, and what you should think of them.

Read intelligently and with interest, and every book you read will guide you to the next that is good for you personally, far better than a strange mentor can do, who is often full of theories and prejudices, or perhaps has gotten up a course of study as a "pot boiler" and has no real love of his subject.—Literary News.

Indians of the northwest coast subsist largely upon cakes of seaweed prepared by pressing and drying in the sun. They also cut this same sort of seaweed very fine and mix it with the grease of the candle fish, thus composing a repulsive oily mass which they relish greatly. Seaweed cakes of the sort described are also made by the Chinese and shipped in considerable quantities to China.—Washington Star.

Mrs. Slimpurse—Why in the world did you tell Mrs. De Fashion we had summered in Europe?

Mr. Slimpurse—You don't suppose I'd confess to her that we'd been economizing in Frogtown, do you? Not much.

Mrs. Slimpurse—But, dear me, she'll tell others, and before long all sorts of people will be asking us about Europe, and we haven't either of us ever been east of Sandy Hook.

Mr. Slimpurse—Don't you fear. Tell people you've just got back from Europe and they'll change the subject quicker than a wink, for fear you'll start talking about it.—New York Weekly.

After many trials it is now shown that color can be given to cotton while growing, and a beautiful red variety of this article is now being raised in Georgia.

A Definition of Somnambulism.

In the earlier days it was the commonly accepted idea that the somnambulist was possessed. Anything and everything that could not be understood or explained was of the supernatural. To see an individual apparently asleep and utterly oblivious to the greater number of surrounding objects and yet so keenly awake to others as to be able to perform the most intricate actions without the aid of the senses was so greatly at variance with the common experience of mankind as to call up feelings of astonishment and awe, not alone to the minds of the vulgar or laymen, but to those accustomed to scientific investigation. Modern science has at least dispelled this idea of the supernatural, though it has not yet been able to furnish a rational theory which will account for all of the manifestations of the affection. It has done much, however, toward elucidating the functions of different parts of the nervous system and in that way prepared the mind for a fuller understanding.

Thus, in 1845, came a definition of somnambulism as "a condition in which certain senses and faculties are suppressed or rendered thoroughly impassive, while others prevail in most unwonted exaltation, in which an individual, though asleep, feels and acts most energetically, holding an anomalous species of communication with the external world, awake to objects of attention and most profoundly torpid to things at the time indifferent, a condition respecting which most commonly the patient on awakening retains no recollection, but on any relapse into which a train of thought and feeling related to and associated with the antecedent paroxysm will very often develop."—St. Louis Globe-Democrat.

An Artist's Views.

"My own training has been a very thorough one," said Sir George Reid, P. R. S. A., in reply to a question I put him, as he refilled his churchwarden and stretched himself at full length on his sofa. "At 12½ years of age I was apprenticed to a lithographer in Aberdeen. I came to Edinburgh in 1861 and entered the board of trustees' school of painting at the Royal institution on my twentieth birthday. I started my artistic career as a landscape painter and would have scouted the idea of painting portraits.

"However, I gradually came to the realization that as a rule the drawing in landscape was very faulty and weak. I felt that a landscape painter should go in for a good figure education, and so be able to draw anything. I therefore went in carefully for that branch of art, returned to Aberdeen and began landscape painting and occasional portraits. Gradually my portraits elbowed my landscapes out of the field, which shows how little command a man has over destiny," thoughtfully remarked my host. "I don't regret it. Portrait painting has been most interesting to me and has brought me many friends."—Cassell's.

The Civic Value of the Teacher.

Since the days of Aristotle and his predecessor, Plato, there has, I think, been no great ethical or political writer who has ignored what I may perhaps call the civic value of education. Socrates himself (if indeed the "Theages" is good authority), in a passage which is possibly familiar to you as it is quoted by Roger Ascham in "The Scholemaster," enunciates the opinion that "no one goeth about a more godlie purpose than he that is mindfull of the good bringing up both of hys owne and other men's children." "What greater or better service," says Cicero, "can we render to the state than by teaching and educating the young?"

St. Chrysostom, setting the seal of Christian authority to the judgment of the refined pagan world, exclaims, "There is no greater art than this of education, for what is equal to the power of disciplining the character and molding the understand of a youth?"—Contemporary Review.

Women Should Try Raising Violets.

Such has been the rage for violets this season that the wholesale dealers have hardly been able to supply the retailers, who have paid as high as $1.75 a hundred for them through Lent and have paid since at times a penny apiece. Just before Easter one florist sold 3,000 bunches in a single day. It seems to me there is a suggestion in these facts for some refined, capable woman, who would like to add to her income. Ask any gardener, and he will tell you violets are easily raised; that the forcing of them in frames through the winter is not at all difficult, and if one can carry the same direct to the retailer during the busy season a big profit is assured. What one can do another may attempt, and it is certain that this season a certain clerk living in the suburbs brought into the city every morning freshly picked bunches of violets which greatly increased his income. —Brooklyn Eagle.

The Hidden Life of a Man.

The young man who made an unhappy marriage and was divorced was for years a mystery to his creditors, because he did not pay his debts, though he worked hard day and night. His reputation in that time suffered terribly, and he lost caste with many people who had formerly admired him. When the woman from whom he had been divorced died some time later from an excruciatingly painful disease, he began to pay his debts. There are exceedingly few people who know that all the money which he could earn he gave to make her life less miserable.—New York Tribune.

Fitted For the Post.

Hotel Proprietor—Yes, I want a clerk at once. What do you know about hotel keeping?

Applicant—Know? See here! Unless you've got four or five years to spare for a little chat, ask me what I don't know. It'll take less time. What do I know about hotel keeping? Well, I should smile. I know it all—more than all. I could run 40 hotels and play 10 games of chess blindfolded. Why, man, I used to be a commercial traveler.—New York Weekly.

Naval Officers' Clothes.

American naval officers are men of many clothes, and the official etiquette of dress aboard ship is appalling to a landsman. Every officer must have four or five styles of hats and caps, at least as many different kinds of coats, and even prescribed styles of neckties in considerable variety. The captain ordinarily prescribes the uniform of the day, but when a flagship is within signaling distance of another man-of-war, the admiral is the authority on clothes as on other things.—Yankee Blade.

SLUMBER SONG.

The mill goes toiling slowly around,
With steady and solemn creak,
And my little one hears in the kindly sound
The voice of the old mill speak;
While round and round those big white wings
Grimly and ghostlike creep,
My little one hears that the old mill sings,
"Sleep, little tulip, sleep!"

The sails are reefed and the nets are drawn
And, over his pot of beer,
The fisher, against the morrow's dawn,
Lustily maketh cheer;
He mocks at the winds that caper along
From the far off clamorous deep,
But we, we love their lullaby song
Of "Sleep, little tulip, sleep!"

Shaggy old Fritz, in slumber sound,
Moans of the stony mart,
Tomorrow how proudly he'll trot you around
Hitched to our new milk cart!
And you shall help me blanket the kine,
And fold the gentle sheep,
And set the herring a-soak in brine;
But now, little tulip, sleep!

A Dream One comes to button the eyes
That wearily droop and blink,
While the old mill buffets the frowning skies
And scolds at the stars that wink;
Over your face the misty wings
Of that beautiful Dream One sweep,
And, rocking your cradle, she softly sings,
"Sleep, little tulip, sleep!"

—Eugene Field in Boston Beacon.

Cheese Making.

The first stage in the making of cheese is that by which the curd is separated from the whey. This is done by heating the milk to a given temperature, varying according to the season, and afterward adding a certain proportion of rennet. When the cheese is to be colored, the dyeing matter is put in before the rennet. In less than half an hour after the heat has been applied the coagulation has so far progressed that the curd, from which the whey has been drawn, is ready to be cut.

Almost the only instrument used in the making of cheese is the curd knife, a curious looking arrangement something like a double comb with long teeth. The immature cheese is both cut and stirred with this, the curd being separated into small bits, none of them being larger than an ordinary walnut. The stirring and heating must go on until the curd has reached a proper stage of what is called "digestion." It is then torn into narrow strips like ribbons, for the curd by this time is as firm in fiber as the breast of a roasted chicken, and, indeed, looks like it. These strips are then fed into the salting mill, where they are thoroughly mixed with salt and made ready for the cheese press. Enormous pressure is applied in this cheese press in order that all the whey that by any possibility remains may be squeezed out.

From the press the cheese is taken to the drying room, a large, airy chamber, where it is left for days, months or even years, according to the quality desired. It is frequently turned and much care is expended on it. All cheese must go through the same stages, the different varieties being made by certain combinations of cream, fresh and skimmed milk.—Harper's Young People.

The Word "Widow" in Ireland.

Nothing is more likely to perplex the English visitor to Ireland than to find English words used there in a different sense from that in which he has been accustomed all his life to use them. One of the best known examples, perhaps, that could be cited is the peculiar sense in which the word "boy" is used, being, in fact, equivalent to the English "bachelor." A young man is a "boy" until he is married, and, though less widely, "girl" is used in a similar way to denote a spinster. To a "foreign" ear it sounds ludicrous to hear a gray haired man or woman spoken of as a "boy" or a "girl," but to one accustomed to the country the fuller meaning is clear.

If it is intended to convey the idea of youth, as a rule quite a different expression is used—it will be a "wee chap," a "gossoon," a "lad," or, for one more grown, "a lump of a lad" is the expressive designation. Equally peculiar, but much more intelligible, is the Irish use of widow. Widow in Ireland is not, as in England, feminine. It is a word of common gender, and is seldom used by itself, the gender being denoted by affixed "man" or "woman," thus "widow man" and "widow woman" are of everyday use.—London Tit-Bits.

Two of a Kind.

A rather vociferous Detroit newspaper man was once visited by a member of the bar notorious for his treatment of witnesses. He would never allow them one word of explanation, but would cry out to them: "Not another word. You are on oath. Don't speak another syllable till I tell you to."

He had a grievance against the newspaper man, but his loud complaints were met with quite as noisy and disagreeable comments and replies. At last, out of all patience, he exclaimed:

"A man comes in here, and you roar at him so one can't get in a word."

"I s'pose it reminds you of cross examining a witness," said the editor.

Then both went at it again and finally drew off exhausted, neither having heard scarcely a word the other said.—Detroit Free Press.

Salutations in the Seventeenth Century.

It was the custom in France in the Seventeenth century to kiss a lady when saluting her and continued the common usage in England for a hundred years later. Royal salutations in France required extreme formality. One saluted the bed on entering the royal bedchamber, and in approaching the apartments of the king all head covering, the skull cap of priests included, had to be removed. In saluting queens and princesses one kissed the hem of the robe.—Cincinnati Commercial Gazette.

John Montgomery, a farmer of Oconee county, Ga., is the owner of a straw hat that he has worn for twenty-six summers. It is homemade, and is in a good state of preservation.

More than one-half of the tin the world produces comes from the Malay peninsula, where it is mined by Chinese. It is found in pockets from twenty to thirty feet below the surface.

THE REASON.

Let us look into the force, meaning, reason of the oft-repeated line: Cures Promptly and Permanently.

**Pains Endured for 30 Years,
25 Years,
20 Years,
10 Years,**

Have been promptly Cured by

ST. JACOBS OIL.

By the use of:

**A FEW APPLICATIONS
A HALF BOTTLE
ONE BOTTLE
TWO BOTTLES.**

Correspondence with Sufferers shows entire permanence of cure up to this time, in some cases covering

**5 Years,
7 Years,
8 Years,
10 Years,**

and so on, and this proof we hold.

A copy of the "Official Portfolio of the World's Columbian Exposition," descriptive of Buildings and Grounds, beautifully illustrated, in water color effects, will be sent to any address upon receipt of 10c. in postage stamps by THE CHARLES A. VOGELER CO., BALTIMORE, MD.

In Yankeeland he works off steam
In foot-ball and boat-racing.
In France, with fight and plot and scheme
Seven kinds of sheol he's raising.

SWINGING AROUND THE CIRCLE

Of the diseases to which it is adapted with the best results, Hostetter's Stomach Bitters, a family medicine, comprehensive in its scope, has never been thrust upon public attention in the guise of a universal panacea for bodily ills. This claim, daily arrogated in the columns of the daily press by the proprietors of medicines far inferior to it as specifics, has in a thousand instances disgusted the public in advance by its absurdity, and the prospects of other remedies of superior qualities have been handicapped by the pretentions of their worthless predecessors. But the American people know, because they have verified the fact by the most trying tests, that the Bitters possesses the virtues of a real specific in cases of malarial and liver disorder, constipation, nervous, rheumatic, stomach and kidney trouble. What it does it does thoroughly, and mainly for this reason it is indorsed and recommended by hosts of respectable medical men.

"One of de penalties ob greatness," said Uncle Eben, "is ter be specially conspicuous ebry time yer makes er fool ob yerself."

DANGEROUS PREPARATIONS.

ALLCOCK'S POROUS PLASTER is composed of purely vegetable ingredients and is absolutely harmless. It assists nature in her own efforts to heal and invigorate, and imparts strength to the whole system.

Many preparations contain strong chemical and mineral substances which produce an injurious effect, not only upon the skin but upon the whole system, although at first they seem very beneficial, on account of their powerful action and temporary effect upon the surface.

When purchasing a plaster do not only ask for ALLCOCK'S, but make sure that you get it.

BRANDRETH'S PILLS are purely vegetable.

"Your cook is a very handsome girl." "She is. She mashes the potatoes by smiling at them."

HOW'S THIS!

We offer One Hundred Dollars reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c. per bottle. Sold by all Druggists.

New Hampshire's chief industry can't be exhibited at the Fair. It is the summer boarder.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Accounted For—"Grimley doesn't seem so tall as he used to be." "No; he lost a foot in that railroad accident, you know."

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

CHILDREN who are puny, pale, weak, or scrofulous, ought to take Doctor Pierce's Golden Medical Discovery. That builds up both their flesh and their strength. For this, and for purifying the blood, there's nothing in all medicine that can equal the "Discovery."

In recovering from "Grippe," or in convalescence from pneumonia, fevers, or other wasting diseases, it speedily and surely invigorates and builds up the whole system. As an appetizing, restorative tonic, it sets at work all the processes of digestion and nutrition, rouses every organ into natural action, and brings back health and strength.

For all diseases caused by a torpid liver or impure blood, Dyspepsia, Biliousness, Scrofulous, Skin, and Scalp Diseases—even Consumption (or Lung-scrofula) in its earlier stages—the "Discovery" is the only *guaranteed* remedy.

If it doesn't benefit or cure, in every case, you have your money back.

"August Flower"

"I am Post Master here and keep a Store. I have kept August Flower for sale for some time. I think it is a splendid medicine." E. A. Bond, P. M., Pavilion Centre, N. Y.

The stomach is the reservoir. If it fails, everything fails. The liver, the kidneys, the lungs, the heart, the head, the blood, the nerves all go wrong. If you feel wrong, look to the stomach first. Put that right at once by using August Flower. It assures a good appetite and a good digestion.

THE BEST KIDNEY AND LIVER MEDICINE.

HUNT'S REMEDY

cures Bright's Disease, Retention or Non-Retention of Urine, Pains in the Back, Loins, or Side.

HUNT'S REMEDY

cures Intemperance, Nervous Diseases, General Debility, Female Weakness, and Excesses.

HUNT'S REMEDY

cures Biliousness, Headache, Jaundice, Sour Stomach, Dyspepsia, Constipation and Piles.

HUNT'S REMEDY

ACTS AT ONCE on the **Kidneys, Liver,** and **Bowels,** restoring them to a healthy action, and **CURES** when all other medicines fail. Hundreds have been saved who have been given up to die by friends and physicians.

SOLD BY ALL DRUGGISTS.

DOCTOR
Pardee's Remedy,
THE GREAT CURE
—FOR—
INDIGESTION
and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism,
Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO.,
9 and 11 Front St., San Francisco.

HERCULES ENGINES
GAS AND GASOLINE — STATIONARY AND MARINE

For simplicity and success they beat the world!

Clean, no ashes, smell or dirt.

No engineer is necessary; they are easily managed.

Their economy for intermittent power is beyond question.

No battery or electric spark to care for.

No double or false explosions, so frequent with the unreliable spark.

The workmanship is the very best.

Our ignition tubes are a success; they explode every charge of gas which enters the cylinder.

Just light the burner, turn the wheel, and it runs all day.

For pumping outfits for irrigating purposes they run all day without an engineer.

For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

Hercules Marine Engines for Launches, Schooners, Tow Boats, Etc.

THE POOL.

I know a dim marsh place where tules grow,
And mosses cling about the water's edge;
Here tremulous borders strengthen edge on edge,
And murmurous winds steal through them soft and low;
Here dogwood blossoms, pure and white as snow,
Lean round, grave eyes above the shining pool.
How still they are! How motionless, how cool!
Here stealthy serpents, sliding, come and go,
Parting the grasses noiselessly. Like gold—
Or cups of gold—the water lilies sleep,
Drowsily rocking on the water's crest.
Somewhere a cuckoo calls; then, growing bold,
Frog voices blend in chorus soft and deep.
"Oh, world worn heart! Come! Here is peace and rest!"

—Ella Higginson.

SARAH GEAKE'S PRAYER.

There was a superstition among the ancients that if a girl bury her faithless lover's coat he will come back to her.

I knew the superstition lingered along the country side and I was sworn to find it. But, like a shy and rare flower, it eluded search. The laborers and their wives smoothed all intelligence out of their faces as soon as I began to hint at it. But such is the way of them. They were my good friends, but had no mind to help me in this. Nobody who has not lived long with them can divine the number of small incommunicable mysteries and racial secrets chambered in their inner hearts and guarded by their hospitable faces. These alone the Celt withholds from the Saxon and when he dies they are buried with him.

A chance word or two of my old nurse, by chance caught in some cranny of a child's memory and recovered after many days, told me that the charm was still practiced by the woman folk, or had been practiced not long before her death. So I began to hunt for it, and almost as soon to believe the search hopeless. The new generation of girls, with their smart frocks, in fashion not more than six months behind London, their board school notions and their consuming ambition to "look like a lady"—were these likely to cherish a local custom as primitive as the long stone circles on the tors above? But they were Cornish, and of that race it is unwise to judge rashly. For years I had never a clew, and then, by Sheba farm, in a forsaken angle of the coast, surprised the secret.

Sheba farm stands high above Ruan sands, over which its windows flame at sunset. And I sat in the farm kitchen drinking cider and eating potato cake, while the farmer's wife, Mrs. Bolverson, obligingly attended to my coat, which had just been soaked by a thunder shower. It was August, and already the sun beat out again, fierce and strong. The bright drops that gemmed the tamarisk bushes above the wall of the town place were already fading under its heat, and I heard the voices of the harvesters up the lane as they returned to the oat field, whence the storm had routed them. A bright parallelogram stretched from the window across the white kitchen table and reached the dim hollow of the open fireplace. Mrs. Bolverson drew the towel horse, on which my coat was stretched, between it and the wood fire, which (as she held) the sunshine would put out.

"It's uncommonly kind of you, Mrs. Bolverson," said I, as she turned one sleeve of the coat toward the heat. "To be sure, if the women in these parts would speak out, some of them have done more than that for the men with an old coat."

She dropped the sleeve, faced around and eyed me.

"What do you know of that?" she asked slowly and as if her chest tightened over the words. She was a woman of fifty and more, of fine figure but a worn face. Her chief surviving beauty was a pile of light golden hair, still lustrous as a girl's. But her blue eyes—though now they narrowed on me suspiciously—must have looked out magnificently in their day.

"I fancy," said I, meeting them frankly enough, "that what you know and I don't on that matter would make a good deal."

She laughed harshly, almost savagely.

"You'd better ask Sarah Geake, across the coombe. She buried a man's clothes one time—it might be worth your while to ask her what came o' it."

If you can imagine the glimmer of moonlight running up the blade of a rapier, you may know the chill flame of spite and despite that flickered in her eyes then as she spoke.

"I take my oath," I whispered to myself, "I'll act on the invitation."

The woman stood straight upright, with her hands clasped behind her, before the deal table. She gazed under lowered brows, straight out of the window, and following that gaze, I saw across the coombe a mean mud hut, with a mud wall around it, that looked upon Sheba farm with the obtrusive humility of a poor relation.

"Does she—does Sarah Geake live down yonder?"

"What is that to you?" she inquired fiercely, and then was silent for a moment, and added, with another short laugh, "I reckon I'd like the question put to her; but I doubt you've got the pluck."

"You shall see," said I; and taking my coat off the towel horse I slipped it on.

She did not turn—did not even move her head when I thanked her for the shelter and walked out of the house.

I could feel those steel blue eyes working like gimlets into my back as I strode down the hill and passed the wooden plank that lay across the stream at its foot. A climb of less than a minute brought me to the green gate in the wall of Sarah Geake's garden patch; and here I took a look backward and upward at Sheba. The sun lay warm on its white walls, and the whole building shone against the burned hillside. It was too far away for me to spy Mrs. Bolverson's blue print gown within the kitchen window, but I knew that she stood there yet.

The sound of a footstep made me turn. A woman was coming around the corner of the cottage with a bundle of mint in her hand.

She looked at me, shook off a bee that had blundered against her apron and looked at me again—a brown woman, lean and strongly made, with jet black eyes set deep and glistening in an ugly face.

"You want to know your way?" she asked.

"No. I came to see you, if your name is Sarah Geake."

"Sarah Ann Geake is my name. What 'st want?"

I took a sudden resolution to tell the exact truth.

"Mrs. Geake, the fact is I am curious about an old charm that was practiced in these parts, as I know, till recently. The charm is this: When a woman guesses her lover to be faithless to her she buries a suit of his old clothes to fetch him back to her. Mrs. Bolverson, up at Sheba yonder"——

The old woman had opened her mouth (as I know now) to curse me. But as Mrs. Bolverson's name escaped me she turned her back and walked straight to her door and into the kitchen. Her manner told me that I was expected to follow.

But I was not prepared for the face she turned on me in the shadow of the kitchen. It was gray as wood ash and the black eyes shrank into it like hot specks of fire.

"She—she set you on to ask me that?" she asked, clutching me by the coat and hissing out the sibilants. "Come back from the door—don't let her see." Then she lifted up her fist, with the mint tightly clutched in it, and shook it at the warm patch of Sheba buildings across the valley.

"May God burn her bones, as he has smitten her body barren!"

"What do you know of this?" she cried, turning upon me again.

"I know nothing. That I have offered you some insult is clear; but"——

"Nay, you don't known—you don't know. No man would be such a hound. You don't know; but, by the Lord, you shall hear, here where you're standin, an shall jedge betwix' me an that pale 'oman up yonder. Stand there an lis' to me."

"He was my lover more'n five an thirty years agone. Who? That 'oman's wedded man, Seth Bolverson. He warn't married"—this with a short laugh. "Wife or less than wife he found me to his mind. She—she that egged you come on an flout me—was a pale haired girl o' seventeen or so, i' those times—a church goin, mincin strip of a girl—the sort you men folk bow the knee to for saints, you fools! Her father owned Sheba farm, an she look'd across on my man, an had envy on en, an set her eyes to draw en. Oh, a saint she was! An he, the poor shammick, went. 'Twas a good girl, you understand, that wished for to marry an reform en. She had money too. I—I'd ha' poured out my blood for en. That's all I cud do. So he went.

"As the place shines this day, it shone then. Like a moth it drew en. Late o' summer evenin's its windeys shone when down below here 'twas chill i' the hill's shadow. An late at night the candles burned up there as he courted her. Purity and coziness, you understand, an down here—he forgot about down here. Before he'd missed to speak to me for a month, I'd hear en whistlin up the hill, so merry as a grig. Well, he married her.

"They was married eight months an 'twas harvest time come round, an I in his vield a-gleanin. For I was suffered near to that extent, seein that the cottage here had been my father's, an was mine, an out o't they c'uldn't turn me. One o' the hands, as they was pitchin, passes me an empty keg an says, 'Run you to the farm place an get it filled.' So with it I went to th' kitchen, an while I waited outside I sees his coat an wesket 'pon a peg i' the passage. Well, I knew the coat; an a madness takin me for all my loss, I unhitched it an flung it behind the door, an, the keg bein filled, picked it up agen and ran down home along.

"No thought had I but to win Seth back. 'Twas the charm you spoke about, an that same midnight I delved a hole by the dresh-old an berried the coat, whisperin, 'Man come back, come back to me!' as Aun' Lesnewth had a taught me times afore.

"But she, the pale 'oman, had a-seen me, dro' a chink o' the parlor door, as I tuk the coat down. An she knowed what I tuk it for. I've read it, times an again in her wife's eyes, an today you yourself are witness that she knowed. If Seth knowed"——

She clinched and unclinched her fist and went on rapidly.

"Early nex' mornin, an a'most afore I was dressed, two constables came in by the gate, an she behind mun, treadin delicately, an he at her back, wi' his chin dropped. They charged me wi' stealin that coat—that coat I'd a-darned an patched more'n wance."

"What happened?" I asked, as her voice sank and halted.

"What happened? She looked me i' the eyes scornfully, an her own were full o' knowledge. An wi' her eyes she invited me to abase mysel', an spake the truth an win off jail. An I that had stole nowt, looked back on her, an said: 'It's true. I stole the coat. Now cart me off to jail, but handle me gently, for the sake o' my child unborn.' When I spoke that, an saw her face, I went off wi' a glad heart."

She caught my hand and, taking me to the porch, pointed high above Sheba, to the yellow upland where the harvesters moved.

"De you see him there? The tall man by the hedge—there where the slope dips. That's my son, Seth's son, the straightest man among all. Childless woman! Childless woman! Go back to her an carry word o' the prayer I've spoken upon her childlessness."

And "Childless woman!" "Childless woman!" she called again, shaking her fist at the windows of Sheba farmhouse, that blazed back angrily as they caught the western sun.—Arthur Quiller Couch in London Speaker.

Discomfiture of a Swell.

A funny story is told of a blooming swell who was anxious to keep up a very slim reputation as a "society man" acquired among a few of his associates, without the means usually necessary for the purpose. He possessed a single pair of semistylish trousers, which he naturally valued very highly. The trousers had seen good service, however, and were beginning to show the effects by bagging at the knees. The owner, in a state of deshabille, rendered necessary by the operation, undertook to infuse into the garment an appearance of rejuvenation with a hot iron.

To avoid injuring the cloth he turned the trousers inside out, and for half an hour vigorously worked to get a crease in the garment. The crease was a very neat one, and with a sigh of satisfaction he turned the trousers right side out again, donned them and started out to do Chestnut street. He wondered why every one laughed at him so inordinately. Finally, glancing at his pantaloons, he was mortified to notice that the crease was concave, and not convex, as it should have been. He fled ignominiously.—Philadelphia Record.

Where the Mistake Was Made.

One would think that up to now education had been a failure; but men and women who had been reckoned educated and intelligent had owed that reputation to the ignorance of those about them, and that nothing worth studying forty years ago is worth teaching today. The parent of today who would accompany a child in its studies finds he must himself undertake a course of study. Arithmetic is changed, grammar has gone, and everything else is different.

All this makes you reflect what fools those people were who were educated twenty-five to forty years ago; not fools in the sense of knowing nothing, but fools because they neglected the chance to strike out in the lines that others did not know and to write school books that others could not understand, which, therefore, should be adopted forthwith to prevent one generation from using the books used by the generation before it.—Hartford Courant.

A RAJAH'S BURIAL.

Solemn Funeral Obsequies of the Ruler of a Province in India.

AN EVENT THAT ATTRACTS CROWDS.

The Coffin Washed and the Body laid on Clean White Sea Sand.

From an early hour crowds of Malays, Arabs, Javanese and other Mohammedan races had gathered in the grounds of the house lately built for the descendant of the Singapore royal line at Kampong Glam. Before 4 o'clock the large rooms of the house were filled with white turbaned sheiks and Malays seated in long lines on the mats and murmuring in low toned unison prayers for the dead. Within the house could be heard the splashing of water, where the corpse was undergoing ceremonial purifications previous to burial. Outside stood the bier, an enormous structure some twenty feet by twelve, made of lashed rollers and roofed in with yellow cloth, cut into a fantastic fringe at the edges.

Really it was a bier within a funeral carriage, for the center was screened off to contain the coffin, a space being left all around for relatives of the deceased Tungku to stand and scatter golden rice over the crowd. In one corner of the ground the coffin was having its finishing touches. This was a massive box of 2-inch thick planks, dovetailed at the corners and stayed across the top. It was in itself a great weight and took a dozen men to carry it. The tone of the crowd in the ground was quiet and subdued, but by no means sad or despondent.

Behind the coffin itself, for insurance, was a group of retainers quietly taking a meal. Swarms of Malay boys were running about the ground, and the men, some nicely dressed, many in their ordinary clothing, chatted about their dead chief. A little distance from the bier stood the gravestones of granite, also swathed in royal yellow and lashed to a stage for convenience of carriage.

THE COFFIN.

The coffin, clean wood though it was, was carried away and also washed, being then placed in the porch of the house and half filled with clean white sea sand to await the body. A posse of Malay policemen arrived to keep order, and other police officials appeared. In front of the house a row of sixteen umbrellas, eight white and eight yellow, was formed, and from many windows peeped the women of the household. A lelah or cannon in the inclosure of the mosque had been firing at frequent intervals, being tended by a gigantic negro. Meanwhile the occupants of the house remained nearly silent, interest being centered in a group of katips (priests) and Kalthis, who were seated in front of a curtain of striped satin, behind which the body was being prepared for the grave.

It was considerably after 5 o'clock when a movement among those seated in the house indicated that the time had come when the body would be put in the coffin. Amid a considerable amount of confusion and a perfect babel of excited cries, all that remained of Tungku Allum was carried down stairs, wrapped in yellow cloth and infolded in a red edged mat. Borne on the shoulders of six priests the coffin was reached and the body deposited in it, H. H., the Sultan of Johore, reverently kissing it when the wraps were removed. The bystanders seemed perfectly frantic to get a look at the corpse ere it was placed on its bed of sand in the coffin.

AT THE GRAVE.

Then, in response to cries, a deathlike silence ensued, and an Imam, in a clear, musical voice, chanted some verses in Arabic, the bystanders responding in a deep toned murmur. Then the heavy lid was put up, and with difficulty (the sand making it exceedingly heavy) the coffin was put upon the bier or kranda. Round about it placed themselves young Malays with salvers, whence they threw among the crowd yellow rice, spices, money and scents.

First marched a number of boys beating censers or cups, some with spices, many with incense. Next were about thirty women in two lines, each with an enormous yellow candle and a slip of yellow cloth tied round their necks. Then came the kranda, borne by a great number of men escorted by the umbrellas and followed by the gravestones and the immense concourse of people.

The distance to the mosque, about 300 yards, was laid with yellow cloth. The grave was in a small structure adjoining the mosque and abutting on the road. On reaching there the coffin was lifted from the bier. This was apparently the signal for the destruction of the latter. In ten seconds it was surrounded by an excited crowd who snatched at any part of it to secure a relic of what they believe had been sanctified by contact with the remains of their chief. Not a shred of the precious yellow cloth was left on it and even the wood of the structure was taken.

With much difficulty the coffin was then lowered into the grave and close upon dusk the ceremony which marked the close of the "reign" of another rajah was concluded.—Singapore Free Press.

Old and Young.

There is no surer antidote for the effect which time has over us all, in making our age evident, than a young heart.

"I should like to live to be as old as you are, grandmamma," said little Helen, "but I don't want to be as old as Aunt Susan, ever!"

"Why, why," said grandmamma, looking over her spectacles, "what do you mean, my dear child? Your Aunt Susan is a great many years younger than I am!"

"I don't see how that can be," said Helen, much perplexed. "You always remember the plays you had when you were a little girl; but when I asked Aunt Susan one day, she said, 'For pity's sake, child, you don't expect me to remember any of the games I had as a little girl. It's so long ago I've forgotten whether I ever played any!'".

THE TAILOR OF MANNHEIM.

He Invented a Bullet Proof Coat, and, Presto! Kings Are at His Feet.

Who could have told before the other day that Mannheim held her epoch making tailor? Who even in Mannheim knew it? Mein Herr Dowe—the miraculous, as he is discovered to be—was known to his fellow citizens as a plain "schneider," of whom something might be made were it possible to multiply him by nine. And now where are the nine men—barring the emperor, Prince Bismarck and Count von Caprivi—who have stirred the fatherland as Herr Dowe has stirred it these few days?

A little while ago Herr Dowe was so impecunious that he was constrained to beg the loan of the pistol wherewith he has privately tried his experiment. This moment he may if he like be rich beyond the dreams of avarice. Emperors are "wiring" him, syndicates are clustering round him, French and Russian spies are trying to bag him, and German detectives—as they appear to be—are foiling the spies. Most wonderful tailor!

Our correspondent's account makes it clear that the new coat of mail is a rigid garment which the warrior can put on his breast when he faces the foe, or clap on his back when he runs away from him. But it strikes us that the miraculous tailor has not and cannot solve the serious problem of impact. His coat of mail can stop the swiftest bullet, but it cannot destroy the force of the blow. Because a bullet is so small a thing, few people, soldiers excepted, understand how great its weight is at its terrific speed. A soldier receiving a bullet on his coat of mail would in all probability be knocked senseless for a time.

We can fancy him slowly coming to himself again, sitting up and leisurely looking round about him to see how things were going on. He has been technically dead for, say, 5 or 10 most precious minutes. But it is possible that if 30 or 40 per cent of his regiment were in the same position they might just as well, from the general's point of view, be physically dead for all time, and that though lives were saved the day might be lost. A warrior prostrated in that manner might prove a source of perplexity to the Red Cross rescuers and the takers of prisoners.—London News.

The Control of the Nicaragua Canal.

The cost of the Nicaragua canal has been variously estimated. The latest I have seen, and I believe it to be the highest, is $87,000,000. The company engaged in its construction proposes to raise in some way $100,000,000—an excess of $13,000,000 above the estimated cost—to pay interest till the canal is in operation and to provide for contingencies that may arise. The sum is not large if the patronage the canal shall receive proves to be anything like what is predicted and seems probable.

There are differences of views as to how the canal shall be constructed and controlled when in operation. As it will prove most advantageous to our own commerce, and as under public control excessive profits will not be made on the money invested, there is a prevailing sentiment that the government should build it and manage it after it is built; that it should be free to American shipping, and a tax imposed on foreign patrons only to an extent that is necessary to pay the expense of management and repair and a reasonable income on the cost of construction.—Richard H. McDonald, Jr., in Californian.

Wanted—A Broken Down Race Horse.

Alexander Jones, the richest man on the island of Barbadoes, wants an American race horse to beat the Jamaica thoroughbreds that have been carrying everything before them at the Bridgetown barracks. He doesn't want a Salvator, or a Lamplighter, or a Tammany. A horse that can go a mile in about 1:46 is good enough. The Firenzi of the Caribbees has a record of 1:49. Mr. Jones always insists on a pedigree, however. He isn't particular about the horse. The Barbadians are "death" on pedigrees. Four years ago a Clifton selling plater—than which there is no more miserable creature on earth—was shipped to a firm in Bridgetown, and nearly all the Jamaica thoroughbreds were driven off the island by him. He swept everything before him. If we could induce the Guttenburg and Gloucester legions to emigrate to Barbadoes with their wretched brutes, something would be gained.—New York Tribune.

The Sun Myths.

It was in Bayard Taylor's day that the sun myth had its vogue. One night at a party Taylor was greatly bored by the persistent efforts of a guest to discuss sun myths. No matter what direction the conversation might take this person would ruthlessly drag it back again to his favorite topic.

At last the distressed poet raised a very interesting question in regard to the threadbare subject. "Did you ever think," he asked, "that the name Smith so common all over the world is derived from sun myth?" No one had ever dreamed of such thing. Max Muller had overlooked the point completely.

"Quite possible, certainly most plausible," said Taylor, "Sun myth, Sumyth, Smyth, Smith, and some still spell the name with a y." The discussion was ended.—Youth's Companion.

A Luxurious Way to Travel.

The apartments in Dr. W. Seward Webb's private car, Ellsmere, are furnished as richly and comfortably as rooms of similar size in a millionaire's residence could be. The decorations of the interior of the car are very dainty and pleasing to the eye. In the drawing room there is a superb upright piano and other musical instruments with which Dr. Webb and his guests will be able to add to the pleasures of their long trip to the Pacific coast.—New York Times.

Forewarned.

Fizzletop—Miss Bangs is out? That's strange—I sent her a note saying I would call this afternoon.

Servant—Yes, sir; she just got it, sir.—Detroit Tribune.

LOST STEAMSHIPS.

There are Many of Them Whose Fate Will Never be Known.

APPALLING DANGERS OF THE SEA.

Losses that were never Accounted For Satisfactorily.—Passengers Drowned like Rats.

Missing ships, like dead men, tell no tales, and not until "the sea gives up its dead" will be known the fate of those who sailed away in the steamships President, City of Glasgow, Pacific, Ocean Monarch and City of Boston, the ironclad Captain and the Ella, Liberia and Barton. None of these has ever been seen or heard of since they sailed.

The mystery that surrounds the disappearance of a great ocean steamship of the modern type, with her throbbing machinery, her electric lights and all the modern appliances to make life worth the living as well at sea as on land, is appalling when one stops to think of hundreds, perhaps a thousand, persons being absolutely wiped out, drowned like rats, without a soul to see them perish or a hand to save them from an awful death.

There are many causes of disaster at sea besides the fury of the hurricane and the pounding of the waves, and many a sailing ship has outlived the gale in which a steamship foundered. There is first of all that most horrible of accidents at sea—fire! What chance has the average passenger in a fire that has gained control on shipboard? About one in a thousand if the boats have caught fire before they can be lowered.

Icebergs in a fog! Another terrible emergency to contemplate. A steamer filled with sleeping passengers approaches a berg at a high rate of speed and in the darkness of the night strikes it. Some have done it and escaped, but many believe that the City of Boston struck one so hard that she sank in a few moments with all on board.

Then there is the danger of a break in the shaft, the piston rod or some other part of the ponderous engines that drive the modern steamships through the water at a 20-knot gait. Both the Spree and the Umbria had narrow escapes from most serious disasters from broken shafts.

The latest pilot chart shows that another source of great danger to ocean travel is the fleet of derelicts that dot the transatlantic pathway. A total of 957 derelicts are reported during five years.

The steamship City of Boston cleared at the New York custom house on Tuesday, Jan. 25, 1870. She sailed on the same day for Liverpool by way of Halifax. She had 12 cabin and 45 steerage passengers. Captain J. J. Halerow was her commander. John G. Dale was the New York agent. The wind was northeast, and it was raining when she sailed. She arrived safely at Halifax and sailed from there on Jan. 28, having taken on board at the latter place 40 cabin and 10 steerage passengers, making a total of 107 passengers.

The City of Boston was an iron ship rigged screw steamer of 2,278 tons. She was 332 feet over all and 305 feet on the keel. Her beam was 39 feet and her depth of hold 27 feet 6 inches. She was propelled by compound engines of 300 horsepower. She was transversely divided into eight compartments by seven watertight bulkheads, reaching from the keel to the upper deck. Her main saloon was 48 feet long by 18 feet wide and 7 feet 6 inches high. It was very handsomely furnished.

Ten days at that time was considered quite a good passage in the winter months. There was, therefore, no anxiety for the steamer until 15 days had passed. Then friends began to inquire about the ship. By Feb. 15, 1870, grave fears were expressed. After leaving Halifax nothing definite was ever heard of the steamer either at an American or a British port. Captain Hackett of the schooner Charles Tupper stated upon his arrival at Halifax on Feb. 8 that he saw a vessel off Sable island showing signals of distress, but that owing to the heavy seas and the disabled condition of his own vessel he was unable to go to her assistance.

Captain Brooks of the City of Brooklyn, which arrived at New York from Liverpool on Sunday, Feb. 20, 1870, reported that his vessel had encountered easterly gales and heavy icefields on the course the City of Boston must have taken. The ship was provisioned for 58 days independent of her cargo, which consisted largely of beef, flour and other articles of food.

On Feb. 26 the agents of the City of Boston sent the steamship City of Durham to cruise off the Madeira islands in the hope of finding the missing steamer. Old sailors said at that time that they believed the City of Boston had encountered head winds off the coast of Ireland. She returned with no news. The agent hoped that their ship would turn up at the Azores, and when a vessel arrived at London and reported that the missing steamer was not at Fayal when she left there on Feb. 26 the confidence of the public was shaken more than ever. The City of Boston had then been out 29 days.

On March 4 the steamer Druid that had been sent out on Feb. 23 to Sable island to cruise in search of the missing steamer returned to Halifax. She had no information. On March 7, 1870, when the City of Boston had been six weeks at sea, a story was printed in the evening papers announcing the safety of the steamer. It turned out to be a cruel hoax, however.

So great was the anxiety in this city for the safety of the steamer during the early days of March that it was agreed on the arrival of the first dispatch announcing her safety to fire a feu de joie of cannon in City Hall park.

Judge Barbour, in the superior court, announced the ship's arrival to the crowd assembled from a dispatch which at the time was supposed to be genuine. It was denied soon after by a second dispatch.

On March 17, 1870, the City of Boston had been 48 days out from Halifax and 51 from New York. On that day the London Globe printed a dispatch, dated at Dublin, announcing the arrival of the steamer at Queenstown. The Inman line agent at the latter place, however, soon telegraphed that the story was false. It was summer time of that year before some of the heartbroken relatives were willing to acknowledge that the City of Boston had gone to the bottom with her living freight.

A board picked up at sea on Feb. 11, 1870, was the only thing ever found belonging to the City of Boston. Upon it was scratched a message saying that the ship was sinking at the time.—New York World.

"Madam," said Weary Walker, with his inborn dignity cropping out like the hair through his hat crown, "my physician has ordered me to take a small wineglassful of French brandy on an empty stomach every morning before breakfast"——

"Well," she interrupted briskly, "what have I to do with that?"

"Nothing, madam," returned the polite road walker, with a faraway expression in his mild blue eyes, "excepting—I have the empty stomach."—Texas Siftings.

DECEPTION AMONG WOMEN.

Why Husbands and Fathers Are to Blame for Much Apparent Dishonesty.

Since the field of woman's work has broadened, it has been discovered that the proportion of women clerks, cashiers and forewomen, who betray the trust reposed in them, is much less than that of male employes. Opposite this, as if the purpose were to balance the sins of the sexes, we find the simple proposition that, as a rule, women are more deceptive than men, but the deception is practiced either in small matters or in sentiment.

If we eliminate love from the calculations, woman is still the more deceptive in small things. That is to say, she may plead guilty to petit larceny, while her big brother covers the entire gamut, from grand larceny to murder. If this were true, it is not difficult to account for the difference between man and womankind. The majority of women depend largely upon their husbands, fathers or brothers. In the maintenance of the house and table, to say nothing of personal adornment, there are very few men who place their purse at their wife's disposal. Nineteen out of twenty have seen their mothers appealing to the head of the house for money that should have been given to her as hers by right.

The man's point of view and the woman's point of view are so far apart that it takes time to bridge it, and as the woman is usually the bridge builder, what wonder if she wearies, resolves to take the shortest and easiest way and practices some small deception? Many a girl with honest impulses, candid to a fault, has been mated to a man whose lack of sensibility, sordid views of life, greed or indifference changed the entire character of her life. She has kept her own counsel and "managed" her husband to the best of her ability. Is this excusable deception?

Many years ago the judges in England ruled that if a man had avenues of flight open, no matter how sorely he might be beset, to turn and slay his assailant was murder, and many thousands were hanged for preferring to kill another rather than stand or be overtaken and slain. Of late the judges have changed the ruling. The interpretation of the law is different. Whereas in former years no man dare assail his opponent until he was driven to the wall, now we have the common sense decision that a man need not flee from an assassin, turning his back and inviting death. He may face his opponent and kill him rather than risk being killed. If this ruling is just, what shall we say of the men whose miserly practices or greed or indifference deprives their wives or daughters of the opportunity to enjoy life within their means?

The best answer to the assertion that women are more deceptive than men is found in those families where the parents do not discriminate against their daughters; where it is assumed that the daughters are entitled to as much money as the sons, and the sons are taught that the earnings of the minors are common stock. The girls practice no more deception than the boys. They develop into independent, fair minded women. And they may be relied upon to preserve their self respect and the respect due their husbands.

In the practical, everyday affairs of life the equality taught by the master is impressed in a manner that makes character. And characterless women are the only companions that characterless men are worthy of.—Pittsburg Bulletin.

Three Ancient Trees.

Washington has three trees, each connected with some important event in the laying out of the town of Washington in 1783. The commissioners who made the survey began their work under the great white oak in the front yard of Judge Andrews' old home at Haywood. Through the following century this was one of the finest trees in Wilkes county. Another historical tree is the great poplar on the Alexander homestead. In 1790 the first ordination of a Presbyterian minister west of the Savannah river took place under that tree. This was Rev. John Springer, a man of noted character and talents, and who would have been president of Franklin college had he lived.

Finally, coming down later in time, we reach the memorable debate between Robert Toombs and Benjamin Hill in 1856? This was one of the greatest intellectual contests in the history of Georgia, and will never be forgotten by those who heard it. It took place under an oak in the grove of Haywood. It was followed by a typical barbecue of the old south.—Washington (Ga.) Gazette.

Two Bipeds Meet.

A gentleman slowly sauntering down Seventeenth street the other night was startled by a shrill whistle that sounded close behind him. He naturally stopped and looked around, but saw no one. He started on, but had proceeded only a few yards when the whistle, louder and shriller than before, was repeated. Again he looked around, and again he saw no one. Then his heart misgave him, for the hour was almost midnight. Vague, unutterable fears clutched at his soul, until his sleek locks grew to resemble the quills of that notoriously fretful porcupine.

But suddenly the mystery was solved. He chanced to glance overhead, thinking that probably, like the May Queen, he had heard the angels call, when he perceived a parrot in a cage that dangled from a second story window. The eyes of the feathered and featherless bipeds met, and the parrot quickly and appropriately remarked, "What are you looking at, you blamed fool?"—Philadelphia Record.

How Acorns Are Eaten.

Acorns form an important article of diet among many tribes of Indians. They are bruised into meal and made into dough for bread. The meal is usually soaked preliminary in water to take away its bitter taste. Acorns are stored away in trees by wood packers, and in times of scarcity the natives rob these deposits.—Washington Star.

MOHAMMEDANISM.

A Religious Solution of the Southern Negro Problem.

THE MISSION OF MOHAMMED WEBB.

Proselyting in the Cotton Fields.—Religions of other Lands.—Buddhism

A very amiable and lovable man, Mr. Mohammed Webb, is in this country looking over the field to decide whether or not the United States is a promising field for the exploiting of the Mohammedan faith. He does not undertake to make proselytes to his religion without giving the faiths already in the field fair notice of his probable intentions. This is certainly reasonable, though it is more than we of the Christian churches do when we send missionaries to India and Central Asia. The Mohammedan religion has probably 135,000,000 believers and has many very charming features. There are objections to it likewise that we shall not attempt to defend. It is true that in our highly civilized land we do not prohibit a man from marrying four or five times, but we insist that he shall have been legally released from previous matrimonial obligations. The religion of Islam, mindful of the uncertainties of life and the vagaries of human happiness, winks at polygamy, while it does not enjoin it. To employ the simile synthetically, we drive tandem, while the Mohammedan harnesses up four or more in hand.

Among the features that ought to commend Mohammedanism to a large proportion of our citizens is its stanch devotion to absention from strong drink. Belief in God is admitted and enjoined. As in Buddhism, kindness to all animals is commanded. Its conception of purgatory is picturesque, for good and bad souls alike have to cross the bridge Al Sirat, that spans hell and is described as finer than a hair and sharper than the edge of a sword. Many a believing Christian will take considerable comfort in the thought that the Mohammedan finds it quite as difficult to attain the kingdom of heaven as does he. Predestination was a cardinal doctrine of the prophet, but we Christians have been wont to ascribe its promulgation to the political motive of rendering his followers contemptuous of danger and suffering.

The Mohammedan religion is simple enough and is divided into faith and practice—the latter including prayer, almsgiving, fasting and a pilgrimage to Mecca. Taken by and large, it is a thoroughly practical religion for the races who lead nomadic lives, and one preeminently calculated for propagation at the sword's point. It is the latest of all the great faiths of the world, only dating back to 622 A. D., while Buddhism is probably of 1,200 years earlier origin and Hindooism 600 years earlier still.

There is just one field in this country for the introduction of the simple and trusting faiths of the east, and that is the great negro population of the south. The hearts of the lowest types of the colored races are receptive and naturally religious, and any faith new to them that will supplant Voodooism ought to be welcomed by the stanchest Christian. There are today 1,500,000 of believers in that strange and disgusting mysticism.

The southern negro must have a religion of pure credulity, with plenty of rewards and the mildest possible punishments. Buddhism, whose adherents today number more than one-third of the human race, might suit him did it only promise a heaven or some equally attractive future abiding place. But it offers nothing better than extinction; no God, no soul, no hope—save annihilation! It is a dream of peace—of eternal sleep, Nirvana coming to the believer like the snuffing out of a taper. Buddhism never has been are ligion of fanaticism, but has always been charitable and tolerant.

If the millions of negroes in the gulf states, who are today in the grossest intellectual and moral ignorance, could have formulated for their use a new creed uniting some of the beautiful teachings of Gautama and Mohammed, they might be guided in the direction of purer and nobler lives. Christianity could come later if they felt the need of it, but we do not believe that any man or woman who knows the facts regarding the class to which we refer will deny that Mohammedanism or Buddhism, properly introduced and preached, would advance the condition of that part of the negro race. Great schools like the Vanderbilt and Lincoln universities and the institution at Raleigh do not reach the ricefields of Georgia, the cotton plantations of South Carolina or the swamps of Mississippi and Louisiana.

Here are great missionary fields, and, without prejudice, they can be honestly recommended to the advance guard of the beneficent missionary hosts that may be expected to flock to this country if a Mohammedan or Buddhist propaganda be decided upon.—Julius Chambers in New York Recorder.

The Discovery of Glass.

Though the Egyptians claim to have been taught by Hermes the art of making glass, it may be stated upon the authority of Pliny that its discovery belongs to the Syrians, or rather Phœnicians, who obtained it accidentally. A small number of sailors who had landed upon the coast of Spain built a fire upon the sand and supported their cooking utensils with stones which they had found near the shore. After finishing their meal one of the party accidentally raked the ashes, and the action of the heat having combined the niter and sand he found a crystalline substance—the glass of the present day.—Boston Herald.

Hypnotism, spiritism, theosophy and many other things pertaining to psychology and biology are occupying the attention of brainy men and women. We may pooh pooh these as much as we please, the fact remains that they are steadily forcing themselves on our attention.—Edgar Lee in Arena.

THE IMPRISONED ROBIN.

We heard his cry this morning, and his wail
Was like the sad song of a whippoorwill.
It seems that in his prison cage he still
Has memories of the fields, and he recalls the tale
The lonesome night bird sang at vespers till
He deems it is his own. His joyous thrill
And natural pipings are now all in jail.
How different from the notes when, wild and free,
He sang his happy greetings to his mate
And pleasure seemed the business of his days!
No night bird's acts were mimicked in his ways
When he strode o'er the lawn in pride elate
Or filled the air with melody from a tree.
—Edward S. Creamer in New York Sun.

Not Big Things Only Excite Wonder.

It is not always the things of gigantic proportions that excite the greatest curiosity. Mastodons, elephants, whales and other creatures of monstrous size are and have been wonders indeed. So, too, are the pyramids, the great cathedrals, towers, monuments, etc., the great Corliss engines, the 16-drive wheel locomotive and other triumphs of mechanical skill. But while this is true beyond question, how about the wonders revealed by the microscope and the work of the deft fingered artist, D. A. Vr. Meer, who painted a landscape on the side of a grain of wheat? By the use of a strong microscope only could the wonders of this minute painting be distinguished.

Yet when a good glass was brought to bear upon what appeared to be a spot of variegated paint upon the side of the wheat grain all was changed into a beautiful landscape—a forest, a mill at the side of the river, a miller climbing an outside stairway with a sack of grain upon his back, a tall cliff at the side of the mill and a winding road along which some peasants were trying to drag a refractory pig!—St. Louis Republic.

Gloves to Ruin Husbands and Lovers.

The revival of light kid gloves for wear with walking dress is rather a blow to the thrifty minded. Those who have a limited dress allowance have delighted in the convenient black kid or brown suede, which could be worn quite a number of times without showing signs of being weatherbeaten in any way. But light gray, pale lemon and the new horrific green are soiled in an hour when worn with scalskin, dark cloth or serge. Fortunately four or six button length does very well at present, but there are some indications that in the season sleeves will be short and gloves long. If so, light kid will be atrociously extravagant, even though they will not soil so readily when worn with light colored gowns.—Cor. Chicago Herald.

Marrying by a Formula.

The woman that took part in a late marriage at Newcastle, England, had a mathematical formula to guide her. At 16 she married a man of 32. At 30 she married again and chose a man of 60. To conclude the series, she now at 42 marries a man of 84. Her first husband was a Quaker, the second a Catholic and the present one a Protestant. If she lives much longer and is determined to go on with her mathematical matrimonial ventures, she will have to advertise in the want columns for a centenarian or two and specify a new religion as one of her provisions.—Atlanta Constitution.

The Wardroom "Boy."

The wardroom "boy" on board a man-of-war is often as old as many of those he serves, but the old fashioned title and form of address stick to him. Wardroom boys usually are colored men or foreigners. When a Haytian or Jamaican negro is obtainable, he is regarded as a catch. This is truer still of the Jap. The latter seems to understand by instinct to remember a multitude of details without effort and obey promptly and without question.—Philadelphia Ledger.

Living In the Suburb.

It was several months ago that McTavish, who had never lived in the suburbs, moved with his family out to West Nobtown. The other day one of the old residents said to him:

"Well, Mr. McTavish, how do you like West Nobtown?"

McTavish sighed slightly and then said, "The merciful man is merciful to his suburb!"—Cincinnati Enquirer.

Good For Another Term.

Lobbyist (confidentially, displaying roll of bills)—Of course money is no object. What we want is to have this bill passed.

Alderman (indignantly)—Bribe me? No, sir! I am really in favor of the passage of the bill, but—but—I'll just hang my overcoat here in the hall before going in.—Truth.

A Friendly Hint.

Postoffice Clerk—See here, boy! No living mortal can read the address on this envelope you just handed in.

Boy—Well, if this 'ere postoffice department wants fine handwritin, why don't you keep better pens at these desks, say?—Good News.

The population of the kingdom of Spain, as reported in last census, taken six years ago, was 17,550,000. As the population is nearly stationary the count for this year would be about the same as that of the year in which the census was taken.

As Japan was the first nation to have her exhibit completed for the World's fair, Major Handy says that that country is the most advanced, businesslike and newspaper sort of nation in the world.

Celluloid is becoming quite popular for numerous fancy articles. It comes in several shades of the delicate colors and is an inexpensive material. The thin transparent sheets are the prettiest.

Alabama boasts a woman who was struck by lightning seven years ago, has never spoken since, and whose eyes grow luridly brilliant at the approach of a thunder storm.

In portions of the south the old time negro still lingers, preserving toward the white race the exact relations of 40 years ago, so far as outward deference goes.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Morton, deceased.

J. J. Morton, the Administrator of the Estate of John Morton, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the personal and real estate of said decedent, for the purposes therein set forth,—

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Tuesday the 14th day of November 1893, at 11 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the town of Independence, in the County of Inyo, State of California, to show cause why an order should not be granted to the said J. J. Morton, Administrator, to sell all of the real estate and personal property of said deceased.

And that a copy of this order be published at least once a week for four consecutive weeks in the INYO INDEPENDENT, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated Oct. 7th, 1893.
P. H. MACK, Attorney for the Administrator.

NOTICE TO BOND-HOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated the 6th day of October, 1893, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to cancel such bonds by the payment of the principal and interest accrued thereon.

Dated the 9th day of October, 1893.

D. J. HESSION,
Clerk of the Board of Supervisors of Inyo County, State of California.

THE DECLINE OF NERVE FORCE

Is one of the first signs of a premature condition of the body, and with it comes other weaknesses, which in the near future puts the individual beyond all nerve power.

HUDYAN stops premature ness of the discharge in 20 days.

HUDYAN is the best remedy for this premature condition. HUDYAN is a wonderfully powerful nerve producing remedy.

HUDYAN stops all losses.

HUDYAN is the most marvelous discovery of the age.

HUDYAN is power.

HUDYAN builds up the nerve tissues of the body. HUDYAN makes men new. HUDYAN is the great brain and nerve producer. Take HUDYAN.

HUDYAN will give you strength.

HUDYAN cures Lost Manhood, Dizziness, Constipation, Nervous debility, nervous prostration, falling sensations, nervous twitching of the eyes and other parts.

HUDYAN strengthens, invigorates, tones and makes powerful the entire body. HUDYAN cures headache, dizziness, dullness, confusion, pressure, blues, melancholy and wasting nervous decease. HUDYAN stops all losses instantly. HUDYAN gives power to the body, so that all the organs of the body are in a healthy state.

Undeveloped and stunted growth revitalized, resuscitated, restored by the use of HUDYAN.

The ravages made by vice, the horrors of premature decay, the victim of the drug habit, tobacco and other vicious habits will find HUDYAN pleasant to take and sure to speedily and forever cure.

There are no failures. Don't be alarmed, even though you have tried every known remedy. After you shall have used HUDYAN you will be a man, a powerful, vigorous man in every sense of the word.

If you are weak, debilitated, lack energy, nerve force, vitality, use HUDYAN.

If you would be happy, strong, vigorous and powerful use HUDYAN.

If you have a mind that is wandering, a memory that is failing use HUDYAN.

If you feel as weak as a kitten use HUDYAN.

If you are groping in purblind ignorance, not knowing what to take and have any of the above symptoms use HUDYAN.

HUDYAN is a nerve tonic.

It is a new life to the sick. HUDYAN.

Are you contemplating marriage? Then use HUDYAN.

If you do not use HUDYAN you are not doing justice to your system.

The new discovery was made by the specialists of the old famous HUDSON MEDICAL INSTITUTE. It is the strongest vitalizer made. It is very powerful, but harmless. Sold for $1 a package, or six packages for $5 (plain sealed boxes). A written guarantee given for cure. If you buy six boxes and are not entirely cured six more will be sent you free of all charges. Send for circular and testimonials. Address

HUDSON MEDICAL INSTITUTE,
1032 Market St., San Francisco, Cal.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent. will be added to the amount thereof; that all taxes may be paid at the time the first instalment as herein provided is due and payable.

J. S. GORMAN,
Tax-Collector.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of J. F. Beale, an Insolvent Debtor.

J. F. Beale, having filed in this Court his petition, seedule and inventory in Insolvency, from which it appears that he is an Insolvent Debtor, the said J. F. Beale is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby appointed a Receiver to take possession of all the estate, real and personal, of said J. F. Beale, Insolvent Debtor, except such as may be by law exempt from execution and of all his deeds, vouchers, books of account and papers, and to keep and to care for and dispose of the same until the appointment of an Assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent or to deliver any property belonging to such Insolvent, to him or to any person, firm, corporation or association for his use, and the said Debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered.

It is further ordered, that all the Creditors of said debtor be and appear before the Hon. Geo. M. Gill, Judge of the Superior Court of the County of Inyo, in open Court, at the Court-Room of said Court, in the County of Inyo, on the 11th day of November, 1893, at 11 o'clock a. m. of that day, to prove their debts and choose one or more Assignees of the estate of said debtor.

It is further ordered, that the order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as said paper is published before the day set for the meeting of Creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 5th, 1893.
P. H. MACK, Attorney for Insolvent.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD,
Justice of the Peace of said Township.

- KENDALL'S SPAVIN CURE. -

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied upon one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100 thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

Soiree Saturday night at the pavilion.

J. J. Gunn went out to the Minnietta mine on Monday last.

Miss Elsie Eibeshutz has gone to to New York to pursue her musical studies.

Mrs. A. W. Eibeshutz returned on Monday last from a visit of a couple of months at San Francisco.

John McSweeny will leave Saturday for Davisville and intends bringing back Albenton with him.

Mrs. J. D. Blair went down to Los Angeles on Wedeesday to visit her daughter, Miss Maud Cook.

Jas. R. Moffitt of Lone Pine and I. H. Mulholland started for Los Angeles on Wednesday. They will reach that city in time for the Los Angeles County Fair.

Mrs. Mary Rothschild, widow of J. S. Rothschild and mother of Mrs. A. W. Eibeshutz, Mrs. R. Goodman, Mrs. H. Kramer, Mrs. N. Goodman and Mrs. E. Rothstein, died at San Francisco, Oct. 11, aged 76 years.

The Odd Fellows are making an effort toward giving a celebration on a large scale during Thanksgiving week, that being the anniversary of the opening of the Independence Lodge. A dramatic performance will be given on Thanksgiving eve, a literary entertainment on Thanksgiving night, and a grand ball on Friday night. The townspeople have subscribed various sums amounting to about $250, and some horse races may be arranged.

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of Sept., 1893.

Mean barometer 29.80
Highest barometer 30.03
Lowest barometer 29.48
Mean temperature 69.0
Highest temperature, 1st 88.0
Lowest temperature, 13th 46.0
Greatest daily range temp'ture, 29, 25th.
Least daily range temperature, 15°, 15th.
Prevailing direction of wind, S. W.
Total movement of wind, 6520 miles.
Extreme velocity of wind, direction and date, 59 miles S. W. on 11th.
Total precipitation, T inches.
Number of days on which .01 inch or more of precipitation fell, 0.
Number of clear days 21
Partly cloudy days 3
Cloudy days 6

H. E. WILKINSON, Observer,
Weather Bureau.

The great yacht race between the English Valkyrie and the American Vigilant is soon to be finished. The Vigilant has already won three of the five races, but the third race was declared off because neither of the yachts finished under six hours. The outlook is very favorable for America's victory, and the famous Cup bids fair to remain ours.

Wedding near Bishop.

On last Wednesday evening Miss Louisa Clarke, daughter of John Clarke of Bishop, and Mr. Will Collins, formerly of Warm Springs, were married at the home of the bride's parents. Preparations had been made for this event for some time past, and the result was a very pretty wedding. Miss Leora Collins and Miss Grace Collins, cousins of the bridegroom, acted as bride's maids, and the floral decorations were especially beautiful. The young couple make their future home on the other side of the mountains where many wishes for their happiness follow them.

Gus. Stecker has purchased from D. Holland the trotting stallion Judge Kyle, by Red Wilkes. Mr. Stecker owns a number of good mares and will raise a lot of good serviceable horses.

Neel Bell came through the Sierras not long ago. The trip was unpleasant so late in the season, and several snow storms were encountered.

H. E. Wilkinson came up from Keeler yesterday. He expects to leave Keeler soon and will be succeeded by Jenkins of San Francisco.

P. H. Mack, Esq., left for Los Angeles last Sunday. He will visit Sacramento and is expected to return Wednesday.

(Official.)

AT THE "BOTTOM NOTCH"

That's where you'll find our prices on NEW FALL CLOTHING. The styles in our "Ready-to-wear" Suits are as fetching as those of custom-made goods. Just as well cut, just as well made, just as well trimmed and will give you great service. Prices! Away under, if you consider value.

New Clothing.

$10 At this popular price you can have the pick of twenty-five or more styles in Een's New Sack Coats.

$14 To $25 gives you a wide range for choice in Men's Nobby Cutaway Frock Suits in many patterns of Scotch Cheviot.

$5 At this price you have a selection in Boys' Suiis, ages 10 to 18, made of good, honest cassimere in sightly patterns.

$10 Gives you an opportunity to select from many patterns of Boys' Double-breasted Sack Suits in cassimeres or cheviots.

$2.50 To $10 leaves you nothing to desire in the way of selecting from the Children's Suits in many new designs.

New Dress Trimmings.

A Narrow Gimp, formed of irridescent beads, in colors to blend with shades of fall dress goods. In every design. Price, 25c per yard.

Tinsel and Bead Edging in very rich designs, five-eighths of an inch wide. A full line of shades. Price, 35c per yard.

Steel Passementeries, in some very choice patterns, seven-eighths to one and one-quarter inches wide. Price, 50c per yard.

At $1 per yard—Excellent values in White Nottingham Lace Pillow Shams.

Ask to see the new 16-button (elbow length) Suede Mosquetaire Kid Gloves. Comes in many colors and shades, also black.

All other baking powders contain either alum or ammonia.

The quality of courage possessed by hunting dogs of Asia appears in a marked difference of habit from that noticeable in all other carnivorous beasts. As a rule, each ferocious animal has its natural and favorite prey, which may vary in different localities, but is in each case the easiest and most profitable victim. Tigers, for instance, are cattle slayers or deer killers just as cattle or deer happen to be most abundant in their district.

Leopards prey on goats, sheep and, when they can get them, on tame dogs; wolves on sheep and cattle, stoats or rabbits and hares, and weasels on rats and mice. But, though the jungles which they visit abound in defenseless animals, the wild dog does not limit his attacks to these. The packs deliberately pursue and destroy both the black and Himalayan bears and the tigers, affording perhaps the only instance in which one carniverous species deliberately sets itself to hunt down and destroy another. From their rarity, the unhabitated nature of jungles which they haunt and their habit of hunting at night—which a probable suggestion makes the basis of the early legends of the demon hunter and "hellequin" at a time when the "red dogs" still remained in Europe—observations of their habits are rare.—London Spectator.

The Formation of Yacht Clubs.

Yachting first came into existence in the eighteenth century, when a considerable number of clubs were formed in the United Kingdom. The first was the Water club in Ireland. Then in 1810 the English Yacht club appeared, and in 1833 this club became the celebrated Royal Yacht squadron.

In America the New York Yacht club was organized in 1844. From the very first year of its existence regattas were started, and the contests were so brilliant that they were fully recorded on our side of the Atlantic. In France in 1840 Alphonse Carr and the Comte de Chateauvillard introduced yachting, but the yacht club of France was not formed until 1867.

How to Come to a Stop.

SAINT JACOBS OIL — TRY IT

When we least expect them, accidents will befall us, a verification of the old adage that the unexpected always happens. The following recites how an active business man was suddenly brought down.

THE TRAIN STOPS.

CINCIN., O.—"Recently while in the act of alighting from my car, I stepped upon a stone, which, turning suddenly under my foot, threw me to the ground, with a severely sprained ankle.

THE MANAGER STOPS.

Suffering exceedingly, I was helped into my car, and my man rubbed me most generously with arnica and kindred remedies, but to no avail.

A POINT TO STOP AT.

Reaching a station where St. Jacobs Oil could be procured, two bottles of it were bought, and the application of it resulted at once in a relief from pain, which had well nigh become unbearable. I was out and about my work in three days."

THAT'S THE ST. JACOBS OIL POINT

GOLDSTEIN & Co., 26, 28 & 30 O'Farrell Street, also 800 Market St., San Francisco. We supply *all Theatres on the Coast*, to whom we respectfully refer.

An Iron Theater Curtain.

An interesting development in the use of theater curtains, especially against the spread of fire, is now seen in many theaters. Mr. Charles J. Phipps, F. S. A., the architect, for instance, has always contended that the value of the proscenium wall in theaters was nullified by the large opening on to the stage being left open and free from any protection. The difficulty was to construct a rigid curtain that would withstand the action of fire on either side for at least a quarter of an hour or twenty minutes. A curtain on the principle of a revolving shutter had been tried in London and the provinces, but Mr. Phipps was the first architect to introduce into this country an iron curtain that formed one unbroken division between the stage and the auditorium and all practically welded in one piece.

A curtain of this kind which costs somewhere about £600 is erected at the Prince of Wales' theater. It is constructed upon an iron framework with sheets of boiler plate on either side, the curtain being thus a double curtain with an air space between of about five inches. Thirty-two feet wide and about 30 feet high it is raised by means of hydraulic runs on either side, the apparatus being worked by a small lever on the prompt side of the proscenium. The time taken in coming down is less than half a minute. When the curtain has descended, it rests upon a solid wall of brickwork, cemented over and brought up level with the floor of the stage. It weighs some six tons. —Million.

Coffins For Exhibition Only.

Not long ago a Russian Jew family had a funeral, and before the ceremony took place the head of the house visited a local undertaker, saying, "Have you a coffin with a movable bottom?" He spoke in a singular patois, and the undertaker had great difficulty to comprehend his intention. He wanted a "show" coffin in which the body was to be taken to the cemetery and lowered into the grave. Then the coffin must be drawn out of the grave, leaving its bottom lid with the body in the ground. The coffin was to be returned to the undertaker and the man pay him for the use of it. Poor Russians, it appears, are in the habit of burying their dead in that way, and undertakers in that country have a supply of show or "removable" coffins to let. They are handsome and costly ones—too expensive to be purchased outright by the poor—with elegant lining and heavy silver trimmings. The bottom is fastened to the body of the coffin with springs that may be tripped, and then it is released together with the body. The body is left in a plain, cheap box.

The Norwich undertakers had no such contrivance, so the poor Russian consulted with his friends, who united with him in having a show coffin constructed and paying for it. It is to be used by them henceforth as a "community" coffin.—Norwich Cor. New York Sun.

A Kitten In a Flywheel.

A half grown kitten became lodged in the flywheel of an engine in Portland, Or. The wheel moved so rapidly that puss could not escape. Indeed it is probable that the poor creature was soon unconscious from dizziness.

A little computation shows the distance the kitten traveled. The flywheel makes 250 revolutions per minute, and at every turn pussy went 17 feet. The engine was in motion 390 minutes and during that time the kitten traveled very nearly 315 miles.

She was taken out nearly dead, but soon recovered and was as lively as ever. It was observed afterward that she gave the flywheel a wide berth.—Exchange.

Powdered the Face of the Dead.

An incident which happened at a funeral in this city a short time ago occasioned considerable surprise. It was the action of a near relative of the deceased in powdering the face of the corpse with exquisite care. The enhanced ghastliness of the dead face is said to have been something remarkable, but it was the more remarkable display of vanity upon the part of the relative that is giving occasion for the talk.—Cincinnati Enquirer.

IN SHADOW.

Like to a coin, passing from hand to hand,
Are common memories, and day by day
The sharpness of their impress wears away,
But love's remembrances unspoiled withstand
The touch of time, as in an antique land,
Where some proud town old centuries did slay,
Intaglios buried lie, still in decay,
Perfect and precious spite of grinding sand,
What fame or joy or sorrow has been ours,
What we have hoped or feared, we may forget.
The clearness of all memory time devours,
Save that of love alone, persistent yet,
Though sure oblivion all things else devours,
Its tracings firm as when they first were set.
—Arlo Bates.

THE LITTLE BOSS.

James Barnes owned a large stone quarry up in the northern part of New York state. The laborers in that locality were composed of a decidedly rough element, and as a consequence, though they were fair workers, rebelled against the rules and regulations imposed upon them. Therefore Barnes, being an old man, and not caring to be brought in direct contact with these turbulent spirits, gave them in charge of a foreman.

But no one could remain in authority long, and Barnes was pretty well discouraged, when a dapper little fellow from an adjoining state applied for the position then vacant. The quarry owner looked at him rather contemptuously.

"You'll never be able to manage the men," he said. "You're no bigger than a well grown boy."

"Have no fear of that, my dear sir. I shall be able to manage 'em without any difficulty. They'll soon learn to know me."

He was so confident that Barnes decided to give him a trial. The new foreman, John Atwood by name, suggested that he be shown around the quarry. His employer accompanied him to the works, where several of the men were lounging around, and calling them together introduced the little fellow as their future foreman.

As might be expected, the quarrymen gathered at the corner saloon that night to discuss the situation and decide upon their plans for the future. Next morning they came to the quarry as usual. A few minutes before 7 o'clock the "little boss" arrived, and as Aaron Appleton, one of the most dangerous workmen, saw him, a broad grin settled upon his face and he glanced significantly at his companions. The men all commenced work in due time—all save Appleton, who stood leaning against a large rock, coolly puffing a pipe.

Atwood had given a few orders to a number of men some distance off before discovering that Appleton was idle. He then sauntered leisurely to where the quarryman was leaning, and pleasantly inquired:

"Well, my man, why don't you go to work?"

"I will when I get ready," said Aaron, removing his pipe and expectorating copiously at the foreman's feet.

The little boss' eyes flashed, but he coolly replied:

"I want you to begin now or not at all."

"I tell you I'll begin when I get ready, and what are you going to do about it?"

"Come, sir, I don't want any trouble with you. I simply wish you to go to work now with the rest of the men, or else leave the quarry."

"Take that, you little fool!" yelled Aaron, aiming a blow at Atwood.

But the little boss was prepared for just such a move, and quickly dodging, he allowed the huge fist of his opponent to pass harmlessly over his head; then, before the bully could recover himself, he received a vigorous blow in the face which elicited a cry of anguish.

"Now I'll kill you, curse you!" he roared.

He rushed furiously at the foreman and delivered another blow which, if it had taken effect, would certainly have proved disastrous, but it was again cleverly avoided and, as before, Appleton's face suffered.

The quarryman was mad with rage. He rushed in again and endeavored to seize his adversary, but the little boss adroitly evaded his grasp, and watching his opportunity succeeded in delivering two more effective blows.

Aaron began to weary of this punishment. He made one more effort, which met with the same result, then turned toward the other men, who had abandoned their work and crowded near the combatants, crying:

"Why don't you give me a hand? Don't you see he's killing me?"

The men were not slow to respond, though they could hardly realize that their leader had been so quickly conquered. With cries of rage they pressed forward, and it appeared as if the foreman would be annihilated. But he had expected this, and, quickly springing back, thrust his hands into his coat pockets, and the next moment the ruffians found themselves confronted by the dark muzzles of a pair of six-shooters.

"Back, you fools!" was the cool command. "One step nearer and I'll fire!"

That the step was not taken goes without saying. The men began to realize whom they had to deal with and promptly fell back.

"Now," continued Atwood, "remember that I command here and return to your work at once. As for you, consider yourself discharged and leave the place immediately," he added, turning to Appleton.

The man hesitated.

"Do as I tell you," thundered Atwood. "I came here prepared to use you well, and treat you like gentlemen, but if you will force me to use you like dogs and to rule the quarry with an iron rod I may as well begin now. Go!"

Without a word the men obeyed. At the same time Appleton slunk away, but he gave the foreman a malignant look as he left.

"I'll fix you yet, curse you," he muttered.

During the day Barnes heard of what had occurred at the quarry that morning and at once sought an interview with Atwood, warning him to look out for Appleton.

"He's a dangerous man," said the quarry owner, "and would just as soon knife you as eat. Perhaps you had better give up the place."

"Not by any means. I can take good care of myself and I have no fear of Appleton and all the knives he can use."

"Well, look out for yourself anyhow," said Barnes as he left the quarry.

The following morning one of the men came up to Atwood, saying roughly:

"Give me my time; I'm going to leave."

"What for?" asked the foreman.

"Because I want to; ain't that enough?"

"Quite enough; you can go at once."

He wrote out an order for the man's pay and handed it to him, saying:

"Go to the office and get it cashed. And now let me tell you that I know why you're leaving. Appleton has persuaded you to join him in some plan of revenge against me, and you're fool enough to do so. Now remember one thing—I warn you not to attempt to molest me or meddle with anything connected with the quarry, for if you do, as sure as your name is Joe Bangs, you'll regret it."

"We'll see," said the other, threatening ly, as he took his departure.

Several days passed. Things at the quarry went along satisfactorily, the men, although morose and sullen, performing their work fairly well.

Atwood boarded at his employer's house, which was about a mile or so from the quarry. In traveling this distance he had found a short route, but it led him through a lonely piece of wood, and at one portion of the forest the path wound around the top of a high and rocky precipice.

For some time after his encounter with Appleton he had kept constantly on the lookout for an attack from him, but as time passed and the ruffian did not molest him he began to get careless, and finally thought no more about it.

One night he was detained at the quarry until a late hour. When he set out for home darkness had fallen, and there was only a feeble light from the moon, which was then in its first quarter. In due time he came to the forest, and was soon making his way along the top of the precipice.

Suddenly he heard a noise behind him, and the next moment received a vigorous blow in the back. He threw out his arms as he fell forward, and managed to catch hold of a small bush as he pitched over the top of the cliff. There he hung unable to move, and a moment later two men, whom he easily recognized as Aaron Appleton and Joe Bangs, stepped from the shadow of a tree behind which they had been concealed.

"We've got you now, you cursed little jackanapes, and you'll never leave the place alive," was Appleton's fiendish salutation. "Come on, Joe; let's throw him over."

They approached the bush and tried to loosen the foreman's hold. Atwood felt his grasp relaxing, and suddenly letting go with one hand, he clasped Bangs tenaciously by his long beard. This act was so sudden and unexpected that the ruffian only saved himself from going over the precipice by seizing the bush with both hands. The struggle caused Atwood to lose hold on the shrubbery with his other hand, and, quick as lightning, he plunged it into Bang's whiskers, from which he now swung like a huge pendulum.

Appleton tried to disengage him, but this caused Bangs such agony that he roared like an angry bovine.

"Help!" he yelled; "help! For heaven's sake pull him up. I can't hold on much longer, and we'll both fall over the cliff!"

"Wait a minute; I'll fix him," cried Aaron with a fiendish oath, as he quickly sprang up and seized a heavy stick.

Atwood saw his intention, and groaned in despair. Then an idea flashed into his mind, and tightening his hold on Bang's beard, with his left hand he reached around and drew his revolver with his right. As Appleton advanced with the club uplifted Atwood raised the revolver and fired, and with a groan the outlaw sank down on the edge of the cliff.

"Now, you infernal fiend," cried Atwood to Bangs, "help me to climb up, or I'll send a ball through your head, and we'll go over the cliff together."

But there was no need to urge him. The ruffian was nearly wild with terror, and, despite the awful strain on his whiskers, he worked with an energy almost superhuman.

When the danger was past and both men stood safe on the top of the precipice, the reaction was so great that Bangs sank down insensible. Atwood was conscious of a sickening giddiness stealing over him, but knowing it would be dangerous to faint now, he recovered himself by a mighty effort and sat down on a stone to rest.

With revolver in hand he waited for Bangs to return to consciousness. When at last the ruffian sat up all his bravado had vanished and he proved himself what he really was, an abject and arrant coward.

"For God's sake, Mr. Atwood," he said, "don't put the law on me. It was all Appleton's fault, curse him, and I hope you've killed him. He planned this attack and persuaded me to help him; but I guess you've fixed him, and I'm glad of it. If you'll only promise not to put the law on me I'll do anything you say. You won't have me arrested, will you?"

"I'll make no promises," said Atwood, rising. "Help me drag this fellow home now, and no treachery, mind, or I'll blow your worthless head off."

Between them they got the wounded ruffian home, and a doctor was summoned. An examination proved the wound to be a dangerous, though not a fatal one, and the physician declared that the man would probably recover. He did get well in the course of time, but he soon left that locality and was never again heard of.

Bangs begged the foreman to take him back into the quarry, and as he promised to behave himself and do all he could to induce the others to obey orders Atwood reinstated him. When he came back to work it was noticed that he had shaved off his beard, and though he remained at the quarry for years afterward he was never known to wear whiskers again.

After this the quarrymen behaved well. Like all bullies, they were cowards at heart, and, having had ample proof that the "little boss" was able to take care of matters, made no further attempt to evade his authority.—E. E. Youmans in Evening World.

Bridal Chambers Out of Fashion.

Do you remark the decline in popularity of the old time bridal chamber? Time was when no well equipped hotel was complete without one or more bridal chambers, and they were in demand too. They've gone out of style lately, and now few people ever ask for them. Like as not if we sized up a couple that might fit into a bridal chamber pretty snugly we would offend a good customer. It is only when a man registers himself, tacks on "and wife" and asks for the best thing we have in the way of rooms that we dare ring in the bridal chamber on him.

Young people have become so sensitive that they try to cover up evidences of just having been married, and it's poor business policy to let them see that you are aware of their novitiature. Most bridal chambers have lost their value, and the best customers to give them to are old married people. They appreciate them more than the young ones do. Assign an aged spinster to a bridal chamber and you make an enemy of her.—St. Louis Globe-Democrat.

How Hungarians Used to Vote.

The Hungarian ballot of thirty years ago is one of the most interesting. The voter had given to him a stick from four to six feet long. With this he went alone into a room where the ballot boxes were placed, each bearing the name and color of a candidate. In one of these he must place his stick. The object in having such a large ballot was to make sure that there were not two or three extra ones concealed in the citizen's pockets. But this has now been replaced by prosaic paper.—New York Evening Sun.

A Point Possibly Well Taken.

It always struck the Listener as a rather large sized affectation on the part of the postoffice people that the state should be asked for by them in the case of a letter which is not going outside the limits of the state in which it is mailed. If a letter is already within the the state of Massachusetts when it is posted, why should it bear the name of Massachusetts? It can't be sent to Massachusetts, because it is already there, and there is no warrant in the superscription, if it bears the name of no state, for sending it out of the state. —Boston Transcript.

Russia and the Asiatic Peoples.

The Russians, semi-Asiatic by origin, in mode of life and in thought, are really more to the Asiatic than, for example, the English and the French, who owing to their higher standard of civilization are frequently hindered in intercourse with the foreign elements subjected to their rule.-

It is the inside way to the wayside inn which makes the inn popular among outsiders.

THEY SOOTHE, NEVER IRRITATE

Some people have a prejudice against plasters, because, as they think, they burn and blister. That is true of many, but not of ALLCOCK'S POROUS PLASTERS. They never irritate the skin, but always have a soothing effect.

They are useful in case of any local pain and as a rule will bring immediate relief. If they do not, it is because the trouble has been allowed to become so serious that no external remedy will reach it, and the chances are that any treatment will fail.

For stitches in the side, weakness or lameness of the back, stiffness of the joints ALLCOCK'S POROUS PLASTERS have been proved again and again to be not only a relief, but a cure.

BRANDRETH'S PILLS are safe to take at any time.

A cyclone is one of those things that makes a man feel blew.

SWINGING AROUND THE CIRCLE

Of the diseases to which it is adapted with the best results, Hostetter's Stomach Bitters, a family medicine, comprehensive in its scope, has never been thrust upon public attention in the guise of a universal panacea for bodily ills. This claim, daily arrogated in the columns of the daily press by the proprietors of medicines far inferior to it as specifics, has in a thousand instances disgusted the public in advance by its absurdity, and the prospects of other remedies of superior qualities have been handicapped by the pretentions of their worthless predecessors. But the American people know, because they have verified the fact by the most trying tests, that the Bitters possesses the virtues of a real specific in cases of malarial and liver disorder, constipation, nervous, rheumatic, stomach and kidney trouble. What it does it does thoroughly, and mainly for this reason it is indorsed and recommended by hosts of respectable medical men.

Well done. The farmer who falls in with bunco men.

HOW'S THIS!

We offer One Hundred Dollars reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

THE WOMAN WHO WORKS

and is tired, will find a special help in Doctor Pierce's Favorite Prescription. Perfectly harmless in any condition of the female system. It promotes all the natural functions, and builds up, strengthens, regulates, and cures. For women approaching confinement, nursing mothers, and every weak, run-down, delicate woman, it is an invigorating, supporting tonic that's peculiarly adapted to their needs.

But it's more than that, too. It's the only *guaranteed* remedy for all the functional disturbances, painful disorders, and chronic weaknesses of womanhood. In "female complaints" of every kind, periodical pains, bearing-down sensations, internal inflammation, and kindred ailments, if it ever fails to benefit or cure, you have your money back.

Something else that pays the dealer better may be offered as "just as good." Perhaps it is, for *him*, but it can't be, for *you*.

"German Syrup"

I simply state that I am Druggist and Postmaster here and am therefore in a position to judge. I have tried many Cough Syrups but for ten years past have found nothing equal to Boschee's German Syrup. I have given it to my baby for Croup with the most satisfactory results. Every mother should have it. J. H. HOBBS, Druggist and Postmaster, Moffat, Texas. We present facts, living facts, of to-day Boschee's German Syrup gives strength to the body. Take no substitute.

SWIFT'S SPECIFIC

FOR renovating the entire system, eliminating all Poisons from the Blood, whether of scrofulous or malarial origin, this preparation has no equal. . .

TRADE S.S.S. MARK

"For eighteen months I had an eating sore on my tongue. I was treated by best local physicians, but obtained no relief; the sore gradually grew worse. I finally took S. S. S., and was entirely cured after using a few bottles."

FOR COUGHS, COLDS AND CROUP.

GRANDMOTHER'S ADVICE.

In raising a family of nine children, my only remedy for Coughs, Colds and Croup was onion syrup. It is just as effective to-day as it was forty years ago. Now my grandchildren take Dr. Gunn's Onion Syrup which is already prepared and more pleasant to the taste. Sold everywhere. Large bottles 50 cents. Take no substitute for it. There's nothing as good.

PISO'S CURE FOR
Consumptives and people who have weak lungs or Asthma, should use Piso's Cure for Consumption. It has cured thousands. It has not injured one. It is not bad to take. It is the best cough syrup. Sold everywhere. 25c.
CONSUMPTION.

BROOKLYN HOTEL.

208-212 Bush St., San Francisco.

This favorite Hotel is under the management of CHAS. MONTGOMERY, and is as good if not the best Family and Business Men's Hotel in San Francisco.

Home Comforts! Cusine Unexcelled

First-class service and the highest standard of respectability guaranteed. *Our rooms cannot be surpassed for neatness and comfort.* Board and room, per day, $1.25, $1.50, $1.75 and $2.00; board and room, per week, $7 to $12; single rooms 50c to $1. Free coach to and from Hotel.

HAVE YOU GOT PILES

ITCHING PILES known by moisture like perspiration, cause intense itching when warm. This form and BLIND, BLEEDING or PROTRUDING PILES YIELD AT ONCE TO DR. BO-SAN-KO'S PILE REMEDY, which acts directly on parts affected, absorbs tumors, allays itching, effecting a permanent cure. Price 50c. Druggists or mail. Dr. Bosanko, Philadelphia, Pa.

BLOOD POISON

A SPECIALTY. Primary, Secondary or Tertiary Syphilis permanently cured in 15 to 35 days. You can be treated at home for the same price and the same **guarantee;** with those who prefer to come here we will contract to cure them or refund money and pay expense of coming, railroad fare and hotel bills, if we fail to cure. If you have taken **mercury, iodide potash,** and still have aches and pains, **Mucous Patches** in mouth, **Sore Throat, Pimples, Copper-Colored Spots, Ulcers** on any part of the body, **Hair** or **Eyebrows falling out,** it is this **Syphilitic BLOOD POISON** that we **guarantee** to cure. We solicit the most **obstinate cases** and **challenge the world for a case we cannot cure.** This disease has always **baffled the skill of the most eminent physicians. $500,000** capital behind our unconditional guarantee. **Absolute proofs** sent sealed on application. Address **COOK REMEDY CO., 1325 to 1331 Masonic Temple, Chicago, Ill.**

DOCTOR

Pardee's Remedy,

THE GREAT CURE

—FOR—

INDIGESTION

and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism,
Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO.,
9 and 11 Front St., San Francisco.

I SHALL NOT SEE THEM BLOOM.

I shall not see them bloom again, the flowers, the tender flowers;
My life is ebbing, ebbing fast;
I shall not feel upon my brow the cooling summer showers,
For all is gliding, gliding past.

I listen; O, my heart, do not beat so! I listen, listen
To the waving of the grasses;
I see a moonlit river, see it glisten, glisten, glisten,
As away it swiftly passes.

All the precious things of earth are going, going, going;
Each sweeter as it speeds away;
I mark them disappear, like the moonlit river flowing;
Lost in the shadows weird and gray.

My ear is so attuned I hear the smallest leaflet fall
In the twilight solitude;
I hear the leaves caress on the topmost bough of all,
Where the zephyrs lightly brood.

My senses only now awake! how lovingly they cling;
O life, O life, why do you flee?
I shall never see them bloom again, the welcome flowers of spring;
They will be blooming over me.

—Mrs. N. B. Morange in Arkansaw Traveler.

SMUGGLER JOCK.

"The bonnie north countrie." It makes my old blood circulate more freely merely to write these words. As old soldiers love to fight their battles o'er again, so we of the hills and dales live, methinks, more in the past than we do in the workaday present of this swirling world. The very thought of the wild northern moors and glens awakens pleasant memories. To see them but once would be to love them for life. To have been born amid their beauties—what more could man desire than this? Every acre of their picturesque desolation is rich in stories of the past; and every ruinous peelhouse recalls the border foray and the fierce mosstrooper of other days. Through the ravines cattle lifters have journeyed far and wide in pursuit of their nefarious trade; while, high up the rocky hillsides, silkies, goblins, broken men, outlaws and smugglers have disputed for supremacy.

The glens which stretch between the North and the South Tyne, lying, as they did, outside the direct track of civilization, were, fifty years ago and upward, much affected by defrauders of the revenue and others who had but scant respect for national laws and customs. In one of the most secluded of these stood a small house which bore a somewhat dubious reputation. Few even of the hardy residents in the district cared to approach it after nightfall. The characters of its inmates were too well known. The very appearance of the house was against it. It was apparently entirely cut off from the outside world. No amount of search availed to discover any direct entrance to its interior.

The massive, dingy walls were wholly innocent of doorways, but abutting upon one corner of the building there stood a dilapidated cowhouse. It was through this forbidding entrance that the house must be reached, if it were reached at all. Here, after probably falling over a spitefully disposed long horned cow, the explorer would be sharply brought up by a midden of broken crockery, bottles and sharp fragments of tin and iron, the accumulation of many years. Only after a safe and fortunate steerage between this Scylla and Charybdis of bovine malice and cottar rubbish could the den of the occupant of the house be reached.

This was a single large room, in which all the Lares and Penates were exposed to view at a glance. The floor was composed of clay, the tenacious clay of the fens; not smooth and attractive, if homely, but rough cast and angular as a newly macadamized road. The apartment boasted only of a single window, set high in the wall. This was often stopped with a tailless coat, a whisp of hay and sacks half filled with rubbish. Above stretched a number of roughly hewn beams, or rafters, bristling with sticks, faggots and brushwood, upon which were stored the winter's supply of peats and turfs, with, perhaps, something more. The only means of access to this apartment, if such it might be called, was by a ladder, or stee.

In the bustling times of the Napoleonic wars this grewsome castle of desolation was the home of a noted smuggler named Jock Stockoe, who was welcomed, or feared and hated, according to the characters and callings of those who happened to have dealings with him. Jock was well fitted for his risky life, for he was a man of herculean proportions and was possessed of immense strength and a resolution of iron. He conducted a large and widely extended trade in brandy, hollands, laces, teas and a thousand and one excisable commodities upon which he should have paid duty, but did not do so.

As imitation is the sincerest form of flattery, Jock had many flatterers, but he had no real rivals. His emissaries, with their hardy, heavily laden shelties, penetrated to the remotest boundaries of Northumbria and even to Durham, Cumberland, Westmoreland and even Scotland itself. There was not a laird's dwelling or even a lonely country farmhouse where Jock was not known and into which his "run goods" were not freely admitted. The morality of the time and county was such that the smuggler was rather regarded as a benefactor than a criminal. At the same time, his reputation for daring hardihood was so great that the most resolute gauger, thirsting for promotion, feared to explore the recesses of Jock's humble home.

It so happened that the principal exciseman for the district died, and shortly afterward a stranger was appointed to the post. This caused some disappointment among the members of the staff, who had looked for promotion all round; but the ways of governments are inscrutable. The newcomer was not there long before he heard of Jock Stockoe, and he resolved to bring that worthy to book. Like a wise man, he awaited his opportunity, well knowing that many a bird has been lost by a premature springing of the trap. He had not long to wait.

Tidings reached him in some inexplicable manner that a valuable cargo of spirits had been run and was hidden away upon Stockoe's premises. Without a moment's unnecessary delay the supervisor applied to the nearest resident magistrate for a search warrant.

"Let sleeping dogs lie, mon," said that worthy, when he was fully apprised of his visitor's errand. "What has the honest fellow done to you that you should want to harry him thus?"

"Duty demands it," replied the gauger, pompously. "His most gracious majesty has been robbed too long, and too barefacedly, under the very noses of his faithful subjects. It is time that these faithless loons learned that the law is stronger than they."

"But who do you think, mon, will have the impudence to serve this?" queried the worthy official, who even then had some of Jock's brandy in his cellars, while his lady openly partook of the smuggler's tea.

"That will I, your worship," answered the exciseman.

"Be it so. I suppose you know that Jock has sworn to brain the first revenue officer who dares to set foot within his doors?"

"I'll even take my chance of it. Search his house this very day I will."

"Well, my good friend," sighed the magistrate, "if you will not be advised, you must even gan your own gate. A willful mon will hae his way; but for your own sake I wish you would think better of it."

The officer, however, was not to be moved by either fears or favors; so the necessary search warrant was duly made out, and he started alone upon what was, to say the least, a dangerous errand. Although alone, however, he had taken the precaution to be well armed, and being really a brave man, felt no fear as to the consequence of his proceedings.

On arriving at his destination he found Stockoe sitting over a peat fire, alone except for the presence of a young girl. Thrusting his legal document before the eyes of Stockoe, who, being unable to read, knew just as little as he cared what it was, he announced his business.

The smuggler, sitting with his head resting upon his hands, neither looked up nor spoke. It was as if he had not heard.

Without a word or interruption from the smuggler, the exciseman commenced his search, going through his self imposed task thoroughly, like one accustomed to the tricks and wiles of the smuggling crew. He ransacked the room, hunted through the closet, delved into the oatmeal chest, pried into the cowhouse, and found—nothing.

Encouraged by Stockoe's apathy or terror, the man of law next inquired, "What is up there?" pointing, as he spoke, to the loft.

Stockoe jerked his head in the direction of the ladder.

The exciseman climbed this, feeling elated at his success in bullying the redoubted smuggler.

"It only requires a little common sense, with true courage," he said to himself, "and these wild fire eaters will become as meek as mice. Who would have supposed that this huge, lumbering fellow was a coward, with no more pluck than a school girl?"

Communing after this manner with himself, he continued to prosecute his search. Very soon a perfect shower of turfs and peat, with avalanches of straw and hay, descended into the lower apartment.

A careful investigation failed to bring to light any of the articles of contraband for which he sought. Somewhat disconcerted and chagrined at the non-success which had attended his labors, he descended and prepared to depart.

"Lassie," now said Jock Stockoe, "bring me Brown Janet."

The girl disappeared only to return immediately with a large oaken sapling—a young tree which had been twisted up by the roots, and formed a weapon fit for a Samson.

"Now, you rascal," he thundered to the astonished disturber of his peace and quiet, "if you will even turn an honest man's house upside down, you must leave it as you found it."

"What do you mean by this outrage?" stammered the exciseman, as soon as he could regain his breath.

"I mean that you will put back all this mess into yon loft, or I will break every bone in your accursed body, you scoundrelly land rat!"

The exciseman wanted not courage. He drew a pistol, but a sudden blow with the cudgel knocked it up, and as it exploded the bullet lodged harmlessly in one of the rafters. The next moment the cudgel was thrust full into his face, and Stockoe, with eyes ablaze with terrible anger, glared down upon him.

"Spare me, for the sake of my wife and children," gasped the terrified man, who expected nothing less than instant death.

"Get about your work," growled the smuggler, expediting the other's movements with a kick. "Put all these things back just as you found them. Quick, now!"

With a heavy heart the supervisor set about the task. It was a novelty to him, and a painful one. Like many modern critics, he had hitherto found the work of destruction more congenial than that of construction. It had been one thing for him to tumble Jock's winter stores about the ears of their owner—it was quite another for him to be compelled to replace them. Yet it must be done—there was no escape. The eyes of the smuggler were upon him. So he worked on, groaning wearily the while. Whenever he hesitated, a shake of the club sufficed to quicken his ungainly movements. For four mortal hours he toiled on, until every square of turf and peat had been replaced and the last bundle of fodder had been put back again.

As the final signs of litter were cleared away, Jock said:

"Now, mon, be seated, wi' ye."

Exhausted with his endeavors, and almost more dead than alive, the disgraced supervisor complied.

"Run, giri, and fetch us the other Brown Janet."

This time the little maid brought a gray hen, i. e., a huge bottle of brandy. Filling two cups with the liquor, Jock tossed one off and then handed the other to his visitor, who drank with evident relish.

"It is good," said Jock, "very good of the kind, and never paid duty either. Now, just listen to me—I have a word to say—then go and see that you never come here again. You are the first man who could say that he ever searched my house. I let you do so, and I forgive you, because you are nobbut a stranger in these parts; but if you ever think of playing this game again, take my advice and get measured for your coffin before you leave home."

Nothing loth, the revenue officer quitted the dwelling of his dangerous entertainer, who was ever afterward left to follow his free trade pursuits unmolested by the resident agents of the government.

The story might have ended here, but it is universally and everlastingly true that the way of the transgressor is hard. The evil doer weaves the web of his own punishment.

Jock Stockoe, after having for many years maintained the sanctity of his well worn habitation inviolate, paid the penalty of his rashness and his crimes. He was shot dead upon the Northumbrian shore in a bloody fight with the representatives of the law which he had so long and so successfully outraged and defied.—C. N. Barham in Trueflag.

Young Women and Presents.

Young ladies should not distribute or take presents thoughtlessly. Think carefully before giving or receiving a present. They are dangerous weopons, skillfully wielded by many persons. Young men will esteem your friendship just as highly, and you will be able to retain that feeling of independence more easily if you rarely make or accept a gift.—Exchange.

KEPT HIS WORD.

How A Compositor Finished A "Take" After Being Killed.

A GHOST IN A PRINTING OFFICE.

Kirley Promised to come back and Complete His Job and He Did, though His Body was in the Morgue.

Printers seldom tell ghost stories and still more seldom believe them, but Slug 3 evidently believed what he was talking about as he stood puffing a cigarette and narrated the story which The Call of San Francisco prints in his own words:

"It was a job office and had considerable work and a good force of men on. A sprinkling of old timers was there, prints I'd worked beside at all points of the compass—Bill Allen and Scotchy and Bill Kirby. Kirby was a little, wiry fellow, with a mustache too big for his face. Hard drinker, Kirby was. On that particular day there was a rush, and the foreman was wild and all the men pulling away for dear life. About 10 o'clock in came an old chum of Kirby's from Portland, and nothing would do but they must go and have a drink together. The foreman said he shouldn't go, but Kirby was bound that he would.

"'You finish that brief first,' said the foreman. 'There's only about a galley more of it, and it's got to be off this afternoon.' But, no; Kirby said he'd come back after dinner and finish the take. At that the foreman got pretty mad; said he knew what Kirby'd do. He'd go off and get drunk or get run in or something and wouldn't show up again for a week. Then Kirby, he up and swore that his word was as good as any man's, and that dead or alive he'd be back after dinner and finish that take, and he went.

"When we went down town to dinner, there was a big crowd in front of the O. K. saloon, and everybody seemed excited, as if something had happened, and sure enough something had happened, for there'd been a general row, and Kirby had his head smashed in with a beer bottle and was having a kind of one sided interview with the coroner. Dead as a mackerel, Kirby was. It kind of spoiled our appetites for dinner. 'I guess Kirby won't finish his take,' said Matthews.

"Well, 1 o'clock came, and we were all at our cases but Kirby. The foreman went

around with a face like a thundercloud, but still things went pretty smooth for about half an hour, when Jimmy Maxwell, who had the case next to Kirby's, back in the last alley, came up and said he was sick and would have to go home. The foreman just boiled at that, said that was the way some men did—they would carouse around all night and then soldier around next day and cheat the office. That was hard, for Jimmy was the straightest man in the shop, but he never said a word. He just got his hat and made for the stairs as if his life depended on getting out of that. He did look sick too.

"About 3 o'clock Matthews was told to go over to Jimmy's case and finish his story. So over into the last alley he went, and in two minutes back he came with his eyes as big as saucers. 'May I be cut into bits,' he said—you know how Matthews talks—'may I be cut into bits if Kirby ain't back there a-finishing his take!'

"The foreman stared as if he thought he was crazy. 'You've been drinking again,' he said. 'Parsons, you go over there and finish Jimmy's take.' I kind of hated to go over in that alley, and I've got pretty good nerve, too, but I knew the boys would laugh at me if I didn't, so I went and picked up the stick and never looked at Kirby's case. I put my eye right on the copy and stood turned a little sideways, but all the time it seemed as if I must look, and the more I made up my mind I would not look the more something seemed to pull me that way. Then I thought what a fool I was, and I turned around and looked right at the case. Sure enough, there was old Kirby himself, bobbing away with a funny little motion of his shoulders that was all his own.

"To say that I was scared would be drawing it mild, but I drew myself together and went on with the story. Presently the ghost turned around and crossed the alley, and as I am a living man if there wasn't a galley on the opposite case nearly full. He dumped the stickful and went back to his case, and then I saw he was on the last page of the brief. My hair was just standing on end, and I could feel a cold sweat all over me, but I was bound I'd see it out, for I knew he was nearly through. I shook so I couldn't hardly hang on to a type, but I stood there with my teeth chattering and pretended to work.

"But the ghost set just as steady as a machine, though I couldn't hear the click of the type nor a sound of any kind. All of a sudden he set down his stick, gathered up the copy and straightened it out and hung it on the dead hook, emptied his stick and put his rule in it and put it up on his case, and turned round and nodded at me in a sort of friendly way, and the next thing I knew I was alone in the alley. Then I went and told the foreman, and he swore the whole force was crazy, but I took him back there and showed him that galley of type, and it rather staggered him. The men came crowding around and looked at the galley. It was the last take of the brief all right enough, but it made them feel creepy, and they didn't offer to touch it. The boy wouldn't take a proof of it for love or money, but the foreman was mad by that time, and he said he would prove it and make it up, too, if the devil himself set it up, and he did, and the brief was off that afternoon o[illegible]"

The wear upon the Cape Cod coast is shown to be at the rate of 755,756 cubic yards per year, or an annual wear of the coast equal to a distance of about eight feet.

Choked a Bear to Death.

One Saturday George Kenison, who is in the employ of the cattle department of the Kern County Land company, was riding in the Coast Range mountains near Carissa looking after stock, when he came upon a grizzly bear. When first seen, the bear was sitting on its haunches. Kenison made for the bear and got it started down the gulch. He kept behind it until it came out on the Carissa plains. Then he raced quickly up to it, fired a shot from his pistol into its back, and while passing threw his lasso over its neck and then straightened out the rope. The horse was greatly frightened and took good care to keep the rope taut, but it was a long distance fight, as there was about 60 feet of rope between the bear and the horse.

Kenison kept his horse under perfect control. When the bear would clutch the riata, he maneuvered with the horse so as to break the bear's hold. He circled around and around with good horsemanship and perfect coolness, all the time keeping the rope tight around the bear's neck, and he actually choked the grizzly to death. J. E. Hunter, who handles the herds for the cattle department, saw the struggle from a distance and put his horse to its speed in order to give all the help in his power, but before he could reach the scene of combat the bear lay dead, and Kenison had conquered it single handed. The grizzly weighed 900 pounds.—San Francisco Chronicle.

A Proud Animal.

The crier, or tambourineur, as he is generally called, because he carries a drum, is one of the institutions of rural France. The crier's business is to announce to all whom it may concern that the animal is to be killed this very evening, and tomorrow morning its flesh will be sold at 1 franc 25 centimes the kilo. It will all go at a uniform price, for this is the custom. Those who want the aloyau, or sirloin, will only have to be in haste.

The ox, notwithstanding the fact that he has a rope tied round his nose and horns and is led by the butcher, evidently thinks it a great distinction to be tambourine. His expression indicates that this is the proudest day of his life.

Every time the drum begins to rattle he flourishes his tail, and when each little ceremony is over he moves to a fresh place with a jaunty air, as if he were aware that all this drumming and fuss were especially intended for his entertainment. No condemned wretch ever made his appearance in public with a better grace.—"Wanderings by Southern Waters."

The Queen's Favorite Mare.

Jessie, the queen's favorite old riding mare, was found placidly standing in a solitary loose box warmly wrapped in rugs, her own natural coat being like very thick, soft, black plush. With her splendid coat, silky mane and tail, lofty crest and soft, mild eyes, she looks worthy of her royal mistress. Jessie's pedigree is not given, but she was bred near Balmoral. She is about 15 hands 3 inches in height, black as a coal and with peculiar white markings on forehead and back. She is now 26 or 27 years old, and until within the last 12 months has carried her majesty for many years. The queen is stated to be very fond of Jessie, who, although now from old age past work, is invariably sent to the castle for inspection when her majesty is at Windsor.—Idler.

A Queer Thing About Trees.

Tom, who had been forbidden to climb trees in his new trousers, had disobeyed and was receiving a lecture from his father for injuring his clothing.

Fearing that a flogging was to follow, Tom sought to create a diversion.

"Pa," he exclaimed, "my teacher says some plants are masculine gender and some feminine. Now, I know which trees are, do you?"

The father's curiosity was excited. He was fairly trapped. "No," he said, "I certainly do not. Which are they?"

"Masculine," said Tom, "'cause they wear boy's trousers," and for that time he escaped.—Quips.

Georgia Cayvan's First Part.

Miss Georgia Cayvan made her first appearance in the character of Dollie Dutton in "Hazel Kirke" at the Madison Square theater. "I cannot recall the first speech, but I can remember distinctly my impressions at the time," said Miss Cayvan. "They were a startling weakness in the knees and a fear when I came to the front that I was going to fall over the footlights. The small stage in the Madison Square theater had doubtless something to do with this, but I often have the same feeling now during first nights."—New York World.

A Big Check.

The two men were at a hotel table.

"That's a pretty girl over there," said the first.

"Which one?"

"That one with the big check in her dress."

"She must be rich," was the next answer, and the second man stupidly wondered what relevancy the remark bore until an hour or so later he began to comprehend the relation between riches and big checks.—Detroit Free Press.

MAN'S PROGRESS.

The Evolution of Man Accomplished By Rigorous Fiting.

EARLY STRUGGLE FOR EXISTENCE.

The Unthinking Animal Has Evolved until He Has Become the Capitalist of To-day.

Every seat in Huntington hall was occupied at the fourth lecture by Professor Drummond on the "Evolution of Man" in the Lowell institute course.

Professor Drummond's subject was, "The Struggle For Life." He said:

"The first great struggle was to get man started on his upward journey. The inertia of things is such that without compulsion they will not move of themselves. The whole world moves, and therefore everything in the world must move.

"A man eats food in the morning, but he must soon move to get more. The sun moves to the west, the wild animals move about, and the man moves away for safety.

"The first law of evolution is the law of motion. Man's body is a quivering mass of earthen leaven. It is always on the verge of something else. It is like a house built on cards. A shock, friction, wind or fire affects it strongly.

"A single movement of any part of the body draws new energy to it. Man walks, and muscles are made and developed. In a child there is a constant building up—in an old man a constant repairing.

"Under the stimulus of competition man goes on to an advancing improvement. Take him at the time when he was Mr. Darwin's 4-footed quadruped, and he wasn't a very vigorous animal, and so as he couldn't do much with his body he called something else into action—the mind—and the quadruped took a club to help him in his struggle for life.

"To use a club the animal must stand erect, and so it has continued until we have the well developed, erect man of to-day.

"To prove that this erect position is unnatural, take a baby when it is born, and it is a quadruped, and for the first months the baby goes on all fours. Then also see how a man always wants to sit down.

"The next stage after an invention is to improve upon it or to further its usefulness. After taking the club roughly torn from the tree one was found one day with a point, and that was appreciated, and the clubs were sharpened by rubbing them against rough stones, and in that way the spear came into use.

"Then the man that could throw his spear the farthest was the most successful in war, and so other power was called into service, and the sling came into use.

"Today we have gunpowder and dynamite to do this same service, and thus the struggle for life has gone on. It is not mere accident; it is the predestined evolution of man.

"Digging in the soil for mollusks and bulbs suggested agriculture. By catching at first the young or wild animals and keeping them for their flesh and milk the advantage of domestic animals was shown.

"Man slowly passed from the animal to the savage. The sense of power grew stronger and with it the sense of virtue.

"Now he subjugates other animals and other men and takes to himself the best of the earth. The struggle of life is called war. War to evolution is not simply warfare, but the means of developing man. War is the foster mother of civilization, the educator of the races. It created a larger sphere for the individual.

"Each community is governed by the law of self preservation, and so it is forced to fight for sufficient food with which to feed itself, and so occurred the struggles for the most fertile lands, the best game reserve and the best fishing waters. That is war.

"Primitive man was a selfish man. He was so of necessity. He lived alone and for himself. Primitive man looked out for number one.

"A war combination made him think of 100 instead of one. He didn't stop thinking of himself, but he slowly began to think of others. Number two was his wife. Three, four and five were his children. After learning to bear with these, he learned to bear with others.

"The struggle for life is as irresistible a stimulus as life itself. The man must struggle.

"It is evolution or death. And among all the struggles some man will once in awhile perform a noble, self forgetful deed, and that deed seen by others will never be forgotten, and as it is talked of around the campfire the love of heroism grows and grows.

"From the struggles of tribes and communities emerges the nation. Then comes revolution.

"An isolated man could not live in a savage country. Either he would be forced to unite with a tribe or he would be killed. In all the explorations of Africa not a single isolated savage has ever been found. He must belong to a tribe.

"He cannot leave it. If the tribe fights, he must fight. No man by the mere construction of the world liveth to himself.

"It is absurd to say that man evolved himself. As well might one say that a book printed itself. It was impossible for the savage to keep out of nature's machine, and once in the machine to keep from being molded by it.

"The savage went in the machine and came out the man.

"The struggle for life is only one factor in evolution. Science did not invent the struggle for life; it only showed its great moral value. The other name for this struggle is called the survival of the fittest. If this is to be a good world, the bad must be eliminated or transformed. The law of the survival of the fittest demands that every man and every animal shall live its best. No better law was ever evolved.

"Before science was born nature had termed the struggle of life war. The first science was of war, the first industry that of war, the first music that of celebrating a victory in war, and the first religion taught trust in the god of war.

"Peace and the vices of civil life only flourish together. But it is here that the student of history is in danger of going off the rail. It is possible to believe that all is now to go on peacefully. This is wrong. But nothing can justify war today among civilized nations.

"The struggle of life, however, must still go on. The social struggle is now going on. Instead of the struggle for bread, the struggle is for money with which to buy bread, and these struggles result in making man better."—Boston Herald.

Killed by Wild Beasts.

The yearly average of persons killed by wild beasts in India is between 2,500 and 3,000. The mortality from snake bites is much greater, varying from 21,000 to 22,000. In one district of Bengal, Hazarybaugh, no fewer than 205 deaths were due in 1891 to a single brood of man eating tigers.

THE HOME IN THE CITY.

Drawbacks to Life In the Fashionable Flat In the Swell Part of a Town.

Small house or flat? This is a question which has been interesting the middle class paterfamilias. "But there are advantages, you must allow, in a flat. We can get along with only one girl, and thus save kitchen squabbles. There are no stairs, halls, cellars, furnaces and sidewalks to care for, and when the building is heated by steam there is only the kitchen fire to supply with fuel."

I always want to smile when that old plea about stairs comes up, for in case of small children there are circumstances arising every day which will necessitate going up and down stairs, even if your suit of rooms is all on one floor. I know one family where the wife actually suffers for out of door exercise because she dreads going up and down the stairs." "She isn't obliged to. She can take the elevator." "It is a great mistake to conclude all flats are supplied with elevators. One of the finest buildings put up within two years in this city, in a high toned neighborhood, has no elevators, and I could mention others. As for the cellars, they are there, and the worst of it is you have no idea of their condition. You cannot make sure, as in the small house, that they are all whitewashed every spring and that all the corners are free from filth, and as for the furnace, the heat is seldom right. Your rooms are either too hot or too cold, unless the janitor is more of a model than I have ever found. In the small house you make sure of better light, better ventilation, more sunshine and, best of all, more freedom."

Leaving out these physical considerations, the small house in the city comes nearer the true ideal of a home than the flat. Edward Everett Hale writes, "No home is a real one which has not windows on all four sides." It seems to me Mr. Hale does not allow sufficiently for that living consideration which goes far toward making a home of even a basement, but certain it is that the more windows the more beautiful the abode for the to be home. It is a pity that through unavoidable circumstances the word home in the city has not that significance it has in the country. Through continual movings home associations are constantly broken. "Do you own your house?" asked one friend of another. "No; fashion in houses, or rather in localities, changes so often it is not desirable to buy in the city. We have moved twice simply on account of the changing neighborhood, though we liked the house in each case."

This hardly accords with Henry Ward Beecher's idea of a home, which could not be perfect until sweetened through and through with the experiences of the soul itself. With a strong desire to establish a real home with an individuality of its own, many of these unfavorable obstacles could surely be removed, but do you not know women who shoulder the responsibilities of immense houses, burdening themselves with all the worry of letting out floors for the sake of living in a grand suite of rooms in a tony quarter rather than living in a small, unostentatious house in a quiet street?—Brooklyn Eagle.

Soldiers' Disgust of Cards.

Miss B. asked General S. of Louisiana if it was true that many of our solid citizens, while soldiers, regarded card playing and petty pilfering as among the accomplishments of camp life. General S. replied: "A base libel, madam—a calumny. True, they never left a friendless chicken to nod on its uncomfortable roost; never suffered an overburdened apple tree to break down from its load of fruit; never removed a bee gum until the shades of night made the removal more to the comfort of the bees; never permitted the lacteal fluid to sour in badly ventilated milk houses, and never—no, never—left a wounded shoat to bleed its young life away by the roadside, and as for cards we give you our word that before the battles of Seven Pines, of Perryville, of Murfreesboro, we saw cards strewn all along the road, so great was the soldiers' disgust for card playing!"—Confederate War Journal.

Take American Rubbers Abroad.

"Take a supply of American rubbers for European use," is the advice of a woman who has suffered through not following it. The goloshes of England are unwearable for feet accustomed to the featherweights of New York shops, and the German thick boots are equally objectionable. Your German friends will exclaim with horror because you wear rubbers, warning you that a list of dreadful diseases will result, but don't be frightened; the list has not resulted, though rubbers are much worn, and the tangible result of well protected and neatly clad feet on stormy days is more satisfactory than a lot of chimerical fears.—New York Times.

One Way to Sell Sugar.

Mrs. Grampus—That last sugar I bought here wasn't sweet at all.

Grocer—No doubt when it touched your lips it seemed by contrast far from sweet, but all the other ladies in the neighborhood say it is the sweetest sugar they ever tasted.

Mrs. Grampus—Do they? Well, you may give me 10 pounds.—Boston Transcript.

IN HARD LUCK.

A Farmer who was born to be Battered but not Broken.

HE ALWAYS TURNED UP SMILING,

Lightning cannot Feaze Him nor Cyclone Dull the Edge of His Good Nature—A Modern Jonah.

In the valley of the Connecticut dwells a man who from his early youth has been marked for the slings and arrows of outrageous fortune, but who could give Job points on patience. Jonah was a lucky man compared with Farmer Holloway. The record of the man who journeyed from Joppa will not compare in exciting incidents and dire misfortunes with the experience of this modern husbandman. Jonah was only once shipwrecked, whereas Mr. Holloway has been struck by lightning twice, carried about a quarter of a mile through the air by a cyclone, tossed 20 feet into a stone quarry by a locomotive and chased to the point of death by a prairie fire. Barring a few broken bones, the man is none the worse for his accidents and is as merry and care free as a marked man can hope to be.

When he was 18 years old, Holloway was returning from church with a young woman one evening. A thunderstorm came up, and they sauntered along under an umbrella. The path skirted a millpond for a short distance. The couple had reached this point when Holloway says he saw a blinding flash of light, felt a sensation in his legs and arms as if they were rubber, had been pulled out several feet and allowed to snap back. Then he was conscious of striking the water. He had been knocked into the pond. He was pretty badly scared and yelled at the top of his voice for help. The girl, who was uninjured, found a pole and hauled her companion ashore. The umbrella was completely destroyed, and the fact that the girl was not hurt is a pretty good indication that Holloway's arm was a nonconductor.

When he was 25 years old, Holloway went to Kansas. He was riding a sulky plow one day when his attention was attracted to a low rumbling. He looked over his shoulder just in time to see a barn about a half a mile away jump up in the air, turn a double somersault and fall in a hundred pieces.

Thoroughly frightened, Holloway suspended the plowshares and started the horses on a run for the river a little more than a quarter of a mile away. The wind was faster than the horses, and before half the distance to the river was covered the fleeing outfit was picked up and hurled through the air with terrific speed. After being lifted into the air he had no recollection of what happened until he came to himself some time in the night.

He had probably been roused by the noise made by a searching party sent out for him. He heard the men talking and saw their lanterns twinkling through the darkness below him. He called out, and in a few minutes he saw that he had been blown into the top of a tall cottonwood tree that stood on the bank of the river fully a quarter of a mile from the point where he last remembered holding the reins. He managed to get down to the ground, but a broken collarbone and a dislocated hip compelled him to keep to his bed for several weeks, at the end of which time he came up smiling and ready for another "scrap."

He didn't have to wait long. One afternoon a few months later a prairie fire came marching down on him from the northwest. He saw the flames coming, and putting a bridle on his horse, which was old and slow, he started for the river 10 miles away. The horse did its best, but was played out and finally fell dead in its tracks. Holloway was cornered. The fire was almost upon him, and he was half suffocated with smoke, but he was equal to the emergency, and with his pocketknife he ripped open the belly of the dead horse, disemboweling the carcass, and crawled into the cavity. It was the only avenue that offered escape for the man, and it preserved his life, though for a time fresh air was hard to get, and Holloway wasn't sure but that he would suffocate after all.

Holloway bought a railroad ticket and started east. He got as far as Omaha, and there his money gave out. He got a brakeman on a freight train to let him ride to Chicago in a box car. The train had been running but a few hours when the engine jumped the track, and the box containing Holloway and some baled hay went rolling down an embankment and landed on its roof among a lot of rocks. Again was Holloway miraculously preserved. One leg was pretty badly jammed by a bale of hay falling against it and crushing it against the side of the car. The man crawled out through a hole that had been broken through the side of the car and started to walk to Chicago.

One day, after reaching home, he was coming from the shore with a basket of clams. A part of the way he was obliged to walk on the track of the Shore Line road. While crossing a trestle he met a train. He got out on one of the crossbeams. He was anxious to save his basket of clams, and in his anxiety he forgot his own danger, and when the train reached the spot where he stood the steam chest on the locomotive caught him on the shoulder and knocked him 20 feet into an abandoned stone quarry. He was picked up for dead, but after lying unconscious five days he came to his senses and wanted to know where his clams were.

Mr. Holloway's latest introduction to the electric fluid came a short time ago. He was milking a cow in the barnyard when a thunderstorm came up. Lightning struck the cow and killed her. The milker was knocked a distance of 15 feet and driven under a feed trough, from which position he was extricated half an hour later by a farmhand. Holloway has about recovered from the effects of his last accident and is looking for the next attack.

Recent experiments in Queensland have shown that mother-of-pearl shells can be made to produce pearls artificially.

W. T BUNNEY,
County Treasurer.

Subscribed and sworn to before me this 3rd day of Oct., 1893. D. J. HESSION, Clerk.

Examined, accepted and approved by the Board of Supervisors this 4th day of Oct., 1893
R. LOVE,
Chairman.

NOTICE OF CONSTABLE'S SALE OF PERSONAL PROPERTY.

BY VIRTUE OF AN EXECUTION issued out of the Justice Court of the Second Township, County of Inyo, State of California, on the 16th day of October A. D. 1893, in the suit of Thomas & Hill plaintiff, vs Thomas McLane, defendant. I have levied on sixty tons of hay in stack, eighteen head of stock cattle, one and one-half acres of potatoes, and about forty acres of corn.

Notice is hereby given that on Tuesday the 24th day of October, A. D. 1893 at ten o'clock a. m. I will sell the said above described property to the highest bidder for cash, at the Yerrington ranch in said County of Inyo, to satisfy plaintiff's demand in said action and for costs and accruing costs.

H. H. McMURRY,
Constable of said Township.

MISCELLANEOUS.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Morton, deceased.

J. J. Morton, the Administrator of the Estate of John Morton, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the personal and real estate of said decedent, for the purposes therein set forth,—

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Tuesday the 14th day of November 1893, at 11 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the town of Independence, in the County of Inyo, State of California, to show cause why an order should not be granted to the said J. J. Morton, Administrator, to sell all of the real estate and personal property of said deceased.

And that a copy of this order be published at least once a week for four consecutive weeks in the INYO INDEPENDENT, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated Oct. 7th, 1893.
P. H. MACK, Attorney for the Administrator.

NOTICE TO BOND-HOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated the 6th day of October, 1893, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to cancel such bonds by the payment of the principal and interest accrued thereon.

Dated the 9th day of October, 1893.
D. J. HESSION.
Clerk of the Board of Supervisors of Inyo County, State of California.

Notice of Commissioner's Sale Under Foreclosure.

W. J. HOSKINS vs. WILLIAM GREEN AND B. F. LEWIS.	Order of Sale and Decree of Foreclosure and Sale.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 19th day of October A. D. 1893, in the above entitled action, wherein W. J. Hoskins, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against William Gheen and B. F. Lewis defendants, on the 9th day of October, A. D. 1893, for the sum of Twelve Hundred and ninety-six and 58-100 dollars United States, Gold Coin, besides interest, costs in counsel fees making a total of $1297.58 which said decree was on the 19th day of October, A. D. 1893, recorded in judgment book I of said Court, at page 116, I am commanded to sell all those certain lots pieces or parcels of land situate, lying and being in the County of Inyo, State of California, and bounded and described as follows:

The East half of the North East quarter, and the North half of the South East quarter of Section Two (2) in Township Eight (8) South Range Thirty-three (33) East, Mount Diablo Base and Meridian.

Also an undivided one fifth (1-5) interest in and to that certain water ditch commencing on the west side of Owens River, opposite R. W. Fords ranch, leading to Andrew Dell's slough and from thence to Gregg's ranch, as constructed by Andrew Dell, David Garland, James Moratly, Frank Holland and I. H. Gray.

Public notice is hereby given that on Saturday, the Eleventh day of November, A. D. 1893, at 2 o'clock p. m. of that day, in front of the Court House door of the County of Inyo, I will, in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the Nineteenth day of October, 1893.
JOHN ALEXANDER,
Commissioner.

PROBATE NOTICE.

Notice for publication of time appointed for probate of will.

In the matter of the Estate of Thomas Williams, deceased.

Notice is hereby given that Saturday, the Fourth day of November A. D. 1893, at 10 o'clock a. m. of that day, at the Court-Room—Probate—of said Court, at the town of Independence, in the County of Inyo, State of California, have been appointed as the time and place for proving the will of said Thomas Williams, deceased, and for hearing the application of Sarah Ann Williams for the issuance to her of letters testamentary thereon.

D. J. HESSION, Clerk.
Bonnett & Forbes Attorney for Petitioner
Dated Oct 14th, 1893.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent will be added thereto; that the remaining one half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent. will be added to the amount thereof; that all taxes may be paid at the time the first installment as herein provided is due and payable.

J. S. GORMAN,
Tax-Collector.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of J. F. Beale, an Insolvent Debtor.

J. F. Beale, having filed in this Court his petition, scedule and inventory in Insolvency, from which it appears that he is an Insolvent Debtor, the said J. F. Beale is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby appointed a Receiver to take possession of all the estate, real and personal, of said J. F. Beale, Insolvent Debtor, except such as may be by law exempt from execution and of all his deeds, vouchers, books of account and papers, and to keep and to care for and dispose of the same until the appointment of an Assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent or to deliver any property belonging to such Insolvent, to him or to any person, firm, corporation or association for his use; and the said Debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered.

It is further ordered, that all the Creditors of said debtor be and appear before the Hon. Geo. M. Gill, Judge of the Superior Court of the County of Inyo, in open Court, at the Court-Room of said Court, in the County of Inyo, on the 11th day of November, 1893, at 11 o'clock a. m. of that day, to prove their debts and choose one or more Assignees of the estate of said debtor.

It is further ordered, that the order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as said paper is published before the day set for the meeting of Creditors.

And it is further ordered, that in the mean time all proceedings against the said insolvent be stayed.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 5th, 1893.
P. H. MACK, Attorney for Insolvent.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.
A. C. McDONALD.
Justice of the Peace of said Township.
E. SPENCER, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of JOHN MCFETRIDGE, deceased.

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of JOHN MCFETRIDGE, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at the office of P. W. Forbes, Esq., in the Court House, at the town of Independence, the same being the place for the transaction of the business of the said estate in the County of Inyo, State of California.

H. H. HOWELL,
Administrator of the estate of John McFetridge, deceased.

Dated at Independence, Aug. 28th, 1893.
P. W. Forbes, Attorney for Administrator.

KENDALL'S SPAVIN CURE.
STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.
Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied up one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.
Yours truly, HUGH McDADE.
Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1894, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of he said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows to wit: Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dieprcada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1) in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South six-eighty and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Religious Services.

Rev. S. W. Albone will conduct services until further notice as follows: Lone Pine 11 a. m.; Georges Creek, 2:30 p. m.; Independence, 7 p. m.

Sunday Schools, Fort and Lone Pine 10 a. m.; Independence, 2 p. m.

Go and practice the poetry of motion at the soiree Saturday.

Tom Webb arrived from Long Valley this week with the cattle.

America is again victorious and sighing for more yachts to conquer.

The Odd Fellows give their regular social Thursday evening next.

A compromise acceptable to silver men is being shaped at Washington.

The committee on the Thanksgiving week programme will report next Saturday evening.

Supervisor Wm. H. Uhlmeyer and Miss Angie McDonald were married at Big Pine on Wednesday evening.

Mr. Emmons Spencer of Big Pine spent a few days in town this week. He has been suffering with the grippe.

While the mid-day is like summer, the mornings and evenings have a wintry flavor, and quilting bees are now in order.

The race meeting at Los Angeles this week is one of unusual interest, the best horses in the State being in attendance.

The Indian School at Big Pine is to be opened soon with thirty pupils in attendance. Miss Josie Turner has been appointed teacher.

The Sorba mine at Darwin has been sold to Messrs. Lane, Armstrong and Ely of Los Angeles for $10,000. The mine is undoubtedly a good property. The owners will commence work at once.

Miss Leora Collins, accompanied by her cousin, Miss Grace Collins returned from the wedding festivities at Bishop last week. Miss Grace Collins intends to spend the winter at Camp Independence where she will attend school.

Irrigation Congress.

The Irrigation Congress completed its work last Saturday and adjourned for one year. Judge Emery who acted as chairman during the convention summed up the result of the week's work as follows: "The net upshot of the assemblage is that it will result in the unification of the ideas of the various inhabitants of arid America upon the points of asking the General Government to do what ought to be done for the reclamation of the arid lands. Other congresses like this will follow, and in the imminent future the whole of arid America will be agreed upon the propositions to be put to the Government for its action. And when this is once accomplished, the irrigation of these vast acres will follow speedily."

C. Mulholland of Inyo county detailed the wonderful results of irrigation in the region of the Mojave desert and Death valley, two very forbidding names, suggestive of desolation. Many Californians know more about Africa than of their own State, so he asserted. He said, "In this region of seeming desolation there are regions so fair that they might have been choice pieces of Eden dropped into the wilderness.,, The borax industry of Death valley was described. "Men stay there nine months in the year and get a crop of alfalfa each month. Anything else will grow as well that is suited to the warm climate and soil. The country has 10,500 square miles, larger than some eastern States. Within a month a canal will be built from Owens river to Indian Wells valley. Not a resident in that country would take a farm in Kansas as a gift and live on it, with due respect to the president of the congress and the resources of Kansas." This aroused great laughter.

Good News.

The Con. Virginia mining Company is preparing to once more work this mine through the old Con. Virginia shaft. About eight or ten men are employed in and about the old works making repairs on them. A new gallows frame, foundation and all, is being put in, and the scene in the hoisting room, carpenter shop and yard, where the men are getting timbers ready, is livelier than for a long time. It is quite a while now since this shaft was shut down, and the reopening of it will be a pleasure to record. Jas. G. Rule is lying at his home in San Francisco dangerously ill. Mr. Rule is the man who has offered to locate the big ore body on the Comstock, and it is said his proposition has been accepted.—*Walker Lake Bulletin.*

THE OWENS RIVER VALLEY.

A VALLEY OF 500,000 ACRES OF TILLABLE LAND.—THE GREAT WATER SOURCES AND IRRIGATION DEVELOPMENT.

The wealth of the Pacific Coast is based on irrigation. People in some localities may argue to the contrary, but facts are stubborn things and prove the prior statement.

The rapid increase of population in California during the past decade or two has been confined as a rule to the irrigated sections and the decline in population or stagnation as regards increase or decrease has been confined to those portions of California where irrigation was not an absolute necessity, and yet where cultivation of the soil was hazardous without the artificial application of water.

California has been cursed with large land holdings where millionaires grabbed up large tracts of land and held them for grazing purposes and declined to subdivide and sell the same except at extortionate prices.

The San Joaquin valley is a living illustration of this fact. When the Senatorial Arid Land Committee with Senator Stewart of Nevada as its chairman in 1889, took a trip through California, they were driven all day in Kern county through a tract of land belonging to one firm, and viewed 100,000 acres of alfalfa under one ownership.

The wealth of France is to-day founded on the small holdings of land and the necessary intense cultivation.

There is no place in Southern California to-day where the head of a family can secure a tract of good choice irrigated land for general farming purposes at a low figure such as should prevail in a new country.

The irrigated lands of Southern California are as a rule high-priced lands, and are devoted to the cultivation of high-priced fruits—crops that will stand a high price for the lands. What is needed now is a large body of choice farming lands at a moderate price that can be irrigated so as to insure successful cultivation so that a large farming population can be accommodated.

Such a country is soon to be opened up for settlement, and when the work for opening up such a tract begins there will be a rush for cheap lands such as has never been witnessed on this coast.

There is to-day in Inyo and Kern counties on the east side of the Sierra Nevada range of mountains a chain of valleys which contain over half a million acres of as fine farming land as can be found in the United States.

The land belongs to the United States government and is subject to entry under the Homestead Act and under the Desert Land Act by paying therefor the sum of 1.25 per acre.

These lands are worthless without water but are very valuable with water.

There is an abundant supply of water for irrigating a half a million acres of land or more, but it requires capital to take the water out of the stream and put it on the land.

Heretofore and at present these lands have been inaccessible because of lack of railroad facilities. It is true that there is a narrow guage railroad coming into Owens river valley from the north connecting with the Central Pacific railroad at Reno in the State of Nevada, but the line of travel from the valley to civilization is so long and so roundabout that public attention has not been called to the wealth which could be so rapidly developed in these large valleys which are so far to one side from the common line of travel.

It is now proposed to spend several millions of money in developing these valleys, bringing them in contact with Southern California and opening up homes for a vast population.

The Los Angeles *Herald*, which is always alive to all questions bearing on the development of Southern California, in an extensive article relative to the plans for settling up the Owens valley country thus refers to what is being done:

"Owens valley contains 500,000 acres of tillable land surrounding Owens lake, which is 18 miles long and 12 miles wide.

Owens river comes down the east slope of the Sierra Nevada mountains, which are covered with snow a large portion of the year, and the highest peaks of which are covered the entire year.

"This river never carries less than 100,000 inches of water—enough water to irrigate 500 000 acres of land, with a first-class water right.

"This river is at its lowest stage late in the fall or in early winter, after irrigation has ceased for the season, and is highest in early and midsummer, when its waters are in the greatest demand. During the irrigation season Owens river carries 500,000 inches of water—more water than can ever be utilized unless some gigantic scheme is at some future date undertaken to bring the surplus water of that river southward a hundred miles or more to irrigte the great Mojave desert, which is desert only from lack of water.

"To the south of Owens valley are a series of valleys, the largest of which is the Indian Wells valley, which contains about 350,000 acres of choice land. The south end of this valley is about 35 miles northeast of Mojave station.

"Just north of Indian Wells valley is the Rose Springs valley, which contains about 40,000 acres of choice land; and north of this is to be found the Owens valley.

"Owens lake is about 3600 feet above sea level, and the valleys to the south have somewhat less elevation.

"It is 100 miles from Mojave to the lower end of Owens lake, and the lay of the country is such that a railroad can be built from Mojave through this chain of valleys to connect with the railroad now built to Independence from Reno as cheaply as a line can be built up the San Joaquin valley. A railroad line to connect these two points would be 152 miles in length.

"That chain of valleys is composed of as good farming land as can be found on the Pacific coast, and is supplied with more than enough water to irrigrte every foot of arable land at a very small sum per acre. The actual cost of an irrigation system to cover 500,000 acres of land would not exceed $4 per acre. The land all belongs to the government and can be taken up at the minimum price of $1.25 per acre. There are no railroad grants to claim the odd sections.

"The big canal system now projected takes the waters of the Owens river at a point a few miles north of the town of Independence and swings around to the west side of the valley, continuing through the chain of valleys, and if desirable and profitable 30 miles more of canal than is now contemplated would bring the waters out upon the rich lands of the Mojave country.

"Inyo county, in which these valleys are mostly located, contains to-day a population of 3700, notwithstanding the lack of capital to divert the water from the river for irrigation purposes, and the further lack of capital to build a railroad that shall place these valleys in close touch with the outside world. Attention is, however now being directed to those valleys, and now that the tide is turned nothing can stop it until that section becomes densely populated and very wealthy.

"The only railroad now reaching the Owens valley is the Carson and Colorado Narrow Guage railroad via Reno and the Central Pacific railroad to San Francisco, a distance of nearly 1000 miles.

"A railroad built directly from this valley to Mojave so as to connect direct with Los Angeles would do the business of the valley to the great benefit of both the valleys and Los Angeles city.

"With such a railroad built the Indian Wells valley would be brought within 135 miles of Los Angeles.

"It is safe to say that if that road were built and the irrigating streams were turned loose in these valleys that a stream of population would pour out over the railroad into these valleys that would astonish those who are accustomed to rapid developments here in Southern California, for nowhere else could the advantages of these valleys be duplicated—all things considered.

"It is to build that railroad and that irrigation system that a few enterprising Los Angeles men aided by English capital have been turning their energies for the past few months with every assurance now that active construction will be commenced at an early date and that work will be pushed to completion.

"The Los Angeles, Owens Valley and Utah railroad has been organized, the surveys of the line were completed a few days since, all the plans and details have been laid before English capitalists by Mr. Frederick Stock, who is president of the company, the plans have been approved in London and arrangements are being made for active construction at an early date, as Mr. Stock is assured by recent advices from London.

"Not only that but the Mount Whitney Canal and Irrigation Company has also been organized and its plans of operation have been approved by the English capitalists, and Mr. Stock is informed that construction will commence on the first of November next, on the main canal, in order that water may be delivered ready for use by the beginning of the next irrigation season.

"At present the railroad will only be built from Independence to Mojave but the plans of the company contemplate the eventual extension of the road to Salt Lake City in one direction and to the city of Los Angeles in the other.

"Work will soon commence on the railroad at Mojave, and the road will be built into the Owens River Valley via Indian Wells Valley as rapidily as men and money can do the work.

"Work will soon commence also on the canal system which is to be built, connecting with the Owens River at a point a few miles north of the town of Independence. This canal will be large enough to carry 100,000 inches of water, and during the irrigating season there is always a full stream, as the melting snows on the Sierra Nevada mountains always keep up the waters of the river late in the summer."

It is understood that the canal company proposes to deal liberally with the settlers for they want every acre of land taken up during the next six months, and if the present proposed policy is carried out there will not be an acre of government land left under the flow of the canal many weeks after work is commenced on construction.

The lands can be taken up under the Homestead Act or Desert land Act.

The company will fix a reasonable price for the water rights and give settlers long time in which to pay for same. They will also contract with the settlers that after they secure title to their land they can deed to the Mt. Whitney Canal and Irrigation Company seven eights of their land in full payment of a good water right for the one eighth of land retained by them. Thus a person can take a half a section of land and after he gets title to the same he can deed to the company 280 acres and the company will cancel all amounts due for water rights, so that the settler gets 40 acres of land with a good water right for the bare cost of the naked land. A settler can homestead 160 acres and take 160 acres under the Desert Act at a cost of $200. When he gets title for both tracts he can deed 280 acres to the company and retain 40 acres that has cost him with the water right attached but $200—the insignificant price of $5 an acre for land with a good water right.

The settler, however is not obliged to thus part with his land. He may sell to the company only a part or the amount named or none of it. He can pay for his water right and retain all the land taken up if he so chooses. This offer is only made to secure the settler and make him feel as though he were not going hopelessly into debt where he could not help himself. In the meantime while he is getting title to his land he can have the entire use of the entire tract and have water to use on the same by using the established rates of delivery, which will also be reasonable.

If that program doesn't put 1,000 families in those valleys in a year at the outside then we have missed our calculation.

Mr. Frederick Stock is at the head of these developments. His connections in London are good, and it is because of these connections and because of the feasibility of his plans that he has succeeded in interesting English capital to build one of the largest and finest irrigation enterprises in the State, and also to build a railroad to bring that enterprise in close touch with the thicklier settled portions of Southern California.—*Rural Californian.*

Egg and Basket Party

This evening an egg and basket party will be given at the residence of Mr. and Mrs. Schabbell at Camp Independence. The desks at the Fort school are sadly dilapidated and the pupils have struck upon the following plan to get new ones. Every lady who goes to the party this evening is requested to bring her lunch and an egg. She must write her weight in pounds and her name on the egg and deposit it in a basket as she enters the house. The gentlemen on entering shall draw an egg from the basket, read the name and weight written thereon, pay one cent for every pound and betake himself to the lady who shall be his partner for the evening. The object is a worthy one and the well known hospitality of the Schabbell family assures a good time for every body.

In the Irrigation Congress last week C. Mulholland offered a resolution asking the Secretary of the Interior not to abolish the land office at Independence until the settlers can present their case in support of maintaining the office. The resolution was passed by a unanimous vote.

AT THE "BOTTOM NOTCH"

That's where you'll find our prices on NEW FALL CLOTHING. The styles in our "Ready-to-wear" Suits are as fetching as those of custom-made goods. Just as well cut, just as well made, just as well trimmed and will give you great service. Prices? Away under, if you consider value.

New Clothing.

$10 At this popular price you can have the pick of twenty-five or more styles in Een's New Sack Coats.

Wedding Bells.

One of the prettiest weddings of the season took place at the residence of Mr. and Mrs. J. Clarke, Bishop, Oct. 11, when their daughter, Miss Louise Clarke, was united in marriage to William W. Collins by Rev. De La Matyr of the Methodist Church. The parlors were beautifully and tastefully decorated in appropriate flowers and greens. In the centre of the arch hung a "true lover's knot" of white roses under which the bridal party stood. At 8:30 o'clock Miss Nellie Coyle played the wedding march, and the bridal party entered the parlor. A very impressive ceremony was said after which congratulations were given. The bride looked very sweet in white silk and lace, her veil being draped here and there with orange blossoms. Miss Leora Collins, sister of the groom acted as Maid of Honor. She was dressed in ecru silk and lace. Miss Grace Collins, cousin of the groom, acted as bride's maid. She wore a dress of lavender silk, and looked very pretty. Dr. E. M. Clarke and John B. Clarke attended the groom. About 9:30 o'clock the guests were invited to the flower decked dining room where a splendid collation was served.

Louise will be missed, not only by her family, but by all who knew her. She took light and happiness wherever she went. Mr. Collins was a resident of Inyo for a while and was very popular. The happy couple was driven to the station next morning by a host of friends, and took the north bound train. They will visit friends in Virginia city for a few days, then Sacramento and San Francisco, from which place they will go to their home in Tulare City. May they always be attended by health, happiness and prosperity, and some day "wander back again" to Inyo.

You can Economize

By using Royal Baking Powder to the exclusion of all other leavening agents. The official analysts report it to be 27% greater in leavening strength than the other powders. It has three times the leavening strength of many of the cheap alum powders.

It never fails to make good bread, biscuit and cake, so that there is no flour, eggs or butter spoiled and wasted in heavy, sour and uneatable food.

Do dealers attempt, because times are dull, to work off old stock, or low grade brands of baking powder? Decline to buy them. During these times all desire to be economical, and

Royal is the most Economical Baking Powder.

THE THREE WISHES.

Once to a man a goblin came
And said to him: "If you will name
Three wishes, whatsoe'er they be,
They shall be granted instantly.
Think of three things you deem the best,
Express your wish—"we do the rest.'"
"O goblin!" cried the man, "indeed
You're just the kind of friend I need.
Hunger and want I've known thus far.
I fain would learn what riches are."
"Then," cried the goblin, "learn it well—
Riches are title deeds to hell!
Now wish again."

"Alack a day!"
Exclaimed the man. "I've thrown away
And all for naught, a chance immense.
I only wish I had some sense!"
The goblin waved his wand—the dunce
To his surprise was wise for once.
And being wise, he laughed and said,
"I am a fool—would I were dead!"

* * * * * * *

"Granted!" the goblin yelled. "It's plain
You'll never be so wise again."
—Oliver Herford in Life

"JUDGE YE NOT."

Ye who cull the weeds and poisons
Cropping from the human heart,
Holding up the faults and foibles
Carping on the viler parts;
Wrapped in self, and self so loving,
That ye have but hate to spare,
For the weakness of a nature
Made so frail that it can err,
Ye are killing all the beauty
That the sin and folly hide,
And are crushing out the flower
With the cruelty of pride.
Ye are blotting out the luster
Of the jewels hid within,
That perhaps are brightly shining
'Neath their covering of sin.
That which Christ has called the greatest,
That without which all is dross;
Ye forgetting, cast your venom
Under shadow of the Cross.
Teach your hearts some kindlier lesson,
Cleanse from sin the robes ye wear;
Judge ye not the lives of others,
Lest yourselves the judgment share.
—Pittsburg Bulletin.

Verdi's Lack of Self Assertion.

On the occasion of the first presentation of his last opera so devoid was Verdi of all self assertion that he even expressed his regret that so vast a concourse of strangers should have taken the trouble to come from all parts of Europe for the première and declared that he preferred the days of his earlier career, when his operas were accepted or rejected on their merits alone, and when the test was independent of any considerations of personal popularity. A glance at his honest eyes was enough to satisfy the hearer that these were his true convictions and no affectations of humility.

Such men are at all times rare, but living as Verdi does at a moment when the younger Italian school, which he has so long fostered almost single handed, is rapidly coming to the fore and is reaching an important crisis of its development his influence for good cannot possibly be overrated, nor can it fail to be productive of the highest results.—Fortnightly Review.

Power of the Shark.

Philosophers, although as a rule men of exceedingly positive opinions and wholly adverse to confessing their ignorance upon any point whatever, have failed signally in arriving at any satisfactory conclusion as to the advantage of the shark in the general scheme of nature. It has been suggested that he was created specially for the repression of conceit in man, and in order to show him that he was not, as he otherwise might have supposed, the undoubted lord of the inhabitants of the waters as of the dwellers upon earth.

Given special advantages, such as that of holding the end of a stout rope at the other extremity of which is a hook fixed in a shark's mouth, man may, with the assistance of a number of his fellows, have the best of the shark. But alone and in the water the advantage is wholly and absolutely the other way, and the strongest swimmer and the bravest heart fall when the tyrant of the sea seeks to make his acquaintance.

It is true that reports have been current that there are natives of the islands of southern seas who, armed with a knife, fear not to go out to give battle to the shark in his own element; but these tales must be accepted with caution and akin to the many apparently authentic narratives of the appearance of the sea serpent. The shark is a creature gifted with great strength, a savage temper, dogged perseverance and exceptional power of jaw. The lion and tiger may mangle, the crocodile may lacerate, the bulldog may hold fast—the shark alone of living creatures possesses the power of nipping off a human limb at a clean bite.—London Standard.

Costly Railway Pamphlets.

There is not a hotel in either the United States or the Canadas that does not contain a rack of some sort, filled and kept filled with hundreds of railway folders and tourist publications.

Very many of them are prepared in the style of greatest elegance—the choicest paper, the finest of engraving, the most enchanting of views along the line of the road, the most fascinating scenes of picnic description, the most carefully compiled statements of resources, the very best of maps (locally considered), the most marvelous statements of resources of strange and peculiar products, the most ravishing of hunting facilities, the mightiest crops of grain and the most overwhelming of scenery.

The literary part of the descriptions, as a rule, is faultless. Choice writers are invariably secured; heavy prices paid; special cars provided, as this writer knows from experience, and every facility afforded that human ingenuity can devise, to produce a book that shall be better than any rival publication. Photography and photogravure work, with all the latest improvements, are indulged in, and fortunes are spent in their production every season.—Printers' Ink.

Truth Telling an Art.

Ignorantly, carelessly, because of unrecognized bias, we fail to tell the truth. There are only a few men and women who have learned perfectly the art of telling the truth. Undoubtedly it is an art to be learned. It is one we shall not take the trouble to learn, unless we love the truth. So that the foundation of the highest sort of truthfulness is moral virtue, not mental efficiency. But the intellectual element comes in. A man must think before he speaks—this our grannies told us—and he must discriminate between what he knows and what he guesses or imagines or concludes, and he must be discreet in the use of his adjectives; and, probably, a man may die at a good old age without having been obliged to form much acquaintance with the superlative degree.—All the Year Round.

How the Judge Regarded the Act.

A story is told of a judge who became so interested in the statement of a would be assassin who had just missed fatally stabbing his victim that he exclaimed at one point of the narrative, "Ah, you should have struck more to the left!" The judge was the last man to have committed a deed of violence, but his surprise that the thing had not been done more skillfully caused him to forget the question of life and death which was involved.

John Stoll of Philadelphia has quite a reputation among the juveniles of his neighborhood as a jumper. He was giving a number of them an exhibition of his jumping qualities when he met with the accident which has caused him the temporary loss of speech. He had cleared a fence in good order by a standing jump, but when he reached the opposite side of it he fell to the ground with great force. He picked himself up quickly and with his fingers pointed to his mouth, which was bleeding freely. In the fall his teeth cut the tongue in two.

Detecting Guilt In Liberia.

The brown skins of the natives in Liberia are often daubed with red and white clay, the effect of the latter being rather startling. This is called dressing. Sometimes a vertical blue mark is seen across the forehead. This is a sign of freedom. The Kroomen have it more than others. They are largely employed as extra hands on the steamers. When a man is suspected of murder, theft, etc., he is made to drink "sasce wood." This being deadly poison, his innocence is declared by the draft not proving fatal. I am told, however, that this is only a form. When the fatal moment arrives, some expedient is generally adopted, or else it is considered that only an innocent man would be willing to approach the deadly draft.—Cor. Goldthwaite's Magazine.

A Hint to the Ladies.

A real estate gentleman, who is also a Sunday school superintendent, was trying to sell a lady a lot in town, notwithstanding she wanted to buy one in the suburbs.

"But, my dear madam," he urged, "a woman is practically forbidden by the Scriptures from owning suburban property."

"I don't see what the Scriptures have to do with it," she protested.

"That's because you are not conversant with them," he said. "Don't you know of the lady who had a Lot in Sodom and as soon as she went into the suburbs was changed into a pillar of salt?"—Detroit Free Press.

All He Could Do.

A man noted for his quarrelsome disposition and love for the ardent came into the postoffice a few days ago and said, "Ed, have you any of the new Columbian stamps?" "Yep. Want any?" "Yep." He looked at them a few minutes and threw them back, saying, "Don't want 'em." "Why?" "W-e-l-l, 'twixt the old woman, boys and schoolteacher, I've got about all I can lick."—Billings Gazette.

Andrew Carnegie's Shooting Grounds.

The shootings at Cluny castle, which Andrew Carnegie has rented from Cluny Macpherson, extend over 12,000 acres and afford excellent sport. The old castle, in which Sir Robert Peel lived at the beginning of the century, has been altered and enlarged.—Chicago Herald.

Near Liskeard in Cornwall is a strange natural phenomenon. A pile of rock 32 feet high, shaped like a top, is balanced on the smaller end. It is quite immovable, though apparently a very slight effort would upset its equilibrium.

LIKE AS A MOON.

Love, thou art waning, alas, so soon!
Love, thou art over thy plenilune!
Waxing weary as passions pale,
Lagging late as desires fail!

Love, thou art lessening, slow, but sure,
Thy perfect circle could not endure!
Full soon thou wilt be but a broken arc
Sailing on to the swallowing dark!

Love, thou hast vanished! no single ray
Shoots from thine orbit across our way,
No ghost of thee vexes content supreme,
We only remember thee as a dream!
—Susie M. Best in Table Talk.

PARLOR COMEDIANS.

The Countess Flavia Andorni was charming, twenty-eight years of age, 40,000 lire of income as her dowry and she did not take a husband. Every now and then she refused one. Countess Flavia read a great deal, she invented the fashions which the elegant women imitated, she did not attend first representations at the theater, but preferred second performances; she did not care for poetry, did not use paint or powder, never was ill, journeyed very often, allowed herself to be courted up to a certain limit, never talked politics, liked the conversation of men better than that of women, had gray eyes, dark complexion and brown hair.

Therefore she was called—rightly or wrongly—I have nothing to say about that—a woman of esprit.

The Marquis Ernesto Carafa, thirty-two years old, had a handsome head, with a tawny blond mane, a short, aristocratic, tawny beard, 60,000 lire of income and not a sign of a wife. He paid court to all the ladies with a certain graceful nonchalance, danced while others were playing cards, did not cultivate the acquaintance of the corps de ballet, drove his horses himself, did not wear a flower in his buttonhole, did not patronize the fine arts, did not care for music, lent money to his intimate friends, did not aspire to be elected deputy to Rome, loved the mountains like a platonic member of the Alpine club, had no literary proclivities, never wrote love letters, was always in love and never in love. Rightly or wrongly, Ernesto Carafa was called a man of esprit.

These two exceptional beings began, naturally, like others, their acquaintance. Some friend of Flavia said to her, "That Carafa is really a brilliant man; why don't you have him presented to you?" And Ernesto's friends: "Do you know the Countess Andorni? A brilliant woman, my dear fellow." And this thrice four times, twenty times, so that Flavia was bored and Ernesto annoyed by it. They saw each other on a promenade and looked at each other with ill concealed curiosity like two rare beasts, but the countess discovered nothing extraordinary and the marquis shrugged his shoulders for the same reason.

One evening at the San Carlo, the marquis was presented to the countess, in her box, by a friend. Few words were exchanged, and those of the simplest, of the kind that are not in the vocabulary of people of esprit. Ernesto went away soon, smiling ironically upon manufactured fames, and Flavia asked herself if she must add another name to the category of foolish and useless beings already so large among her acquaintances. So when they met—at the theater, in society, at festivals, on the promenade—they exchanged a rather disdainful bow, without seeking to approach each other or to become better acquainted.

But chance—that, far from being a person of esprit, has obstinacies which are quite stupid—made them meet and remain near each other, perforce, at the marriage of a cousin of Flavia with a friend of Ernesto. They resigned themselves to endure each other mutually. Each one thought how to sustain the character attributed to her and to him, in order not to make a poor figure; and there ensued a conversation of paradoxes, retorts, bizarre questions, odd answers, stupendous absurdities, a display of fireworks that ended by bewildering the two pyrotechnicians and putting them into a state of nervousness foreign to their habits. "What a witty and disagreeable man! but I kept up with him," said Flavia when she was alone. "A witty and disagreeable woman; but I was not left behind her," murmured the marquis.

Yet the marquis went with some frequency to the house of the countess, and the countess received him with politecordiality. Both perceived that the people around them enjoyed the relations that united the most witty man and woman in the city; they perceived the slight smiles, the curious attention, with which others sought to take part in their colloquies; the care with which was reported a witticism said by Flavia to Ernesto, or vice versa; in short, they perceived that they were treated by the public as star actors. Were they conscious of playing a part or of speaking the truth? That is the dark point which I shall not illuminate, but it is certain that the little comedy continued, recited with liveliness and much interest. Belonging to the far from numerous class of brilliant people, the two sought to do precisely the opposite of whatever all the others did.

Ernesto had at the very first declared that he would never, never pay court to the countess, and the countess had added that she forbade him to fall in love with her, which is quite the reverse of paying court. Ernesto never sent flowers to Flavia, and she never asked him for confidences, as is customary between friends. The marquis never felt himself obliged to praise the arrangement of the hair, the eyes or the arms of the countess, and the countess avoided speaking of him with her friends. On the subject of love they were in accord; they spoke equally ill and well of it, skimming the topic lightly, of course making witticisms. Upon matrimony it was the same. They never became tender, never were melancholy or pensive. They always feared to talk sentiment after the manner of the crowd. They never hazarded artistic discussions, never discoursed of poetry.

All ready made phrases were banished—all conventionalisms, axioms, sentences, classic quotations, lines of poetry, newspaper diction, things that everybody repeats because everybody has begun by saying them. I do not speak of proverbs; they were rigorously prohibited. At first for awhile they amused themselves by citing proverbs upside down, at the cost of causing a shudder to the mightty Solomon and all other collectors of proverbial philosophy; but it was a jest that soon became common, and they let it go. The marquis was always upon guard, fearing to see a smile of scorn appear upon the beautiful mouth of the countess for some involuntary offense against esprit on his part. And on the other hand the countess was wary as to her words, blushing to be caught in a moment of weakness in which she should resemble too much any other woman.

But by too great subservience to their reputation, Flavia and Ernesto began to become rather tiresome; that is to say, not to themselves, but to the people who frequented them. It is natural that brilliant people have many exactions, it is natural that they live a life different from that of the multitude. For example, when they met at a ball, Ernesto saluted the countess and spoke with her for one moment, then took a little turn and came back to say something to her, without even stopping long, but returning often, and people around said that he was right to do so, because she alone could understand him. They frequently danced together for the same reason—and the other admirers of the witty countess were left badly off, disappointed of the mazurka or quadrille hoped for in vain. When Flavia went away the marquis moved about the rooms for a little while longer with a bored air; then put on his overcoat and departed because he had no longer any one to talk with.

At the theater Ernesto remained much longer than was his duty in her box, for it is very common to make short visits to ladies. If some poor mortal, in ferm of a dark youth in a dress coat, marmoreally polished shirt front and the relative crush hat, presented himself to the Countess Flavia—if this unhappy but contemptible young man dared venture the customary compliments—an impertinent little laugh stirred the lips of the marquis and a cutting reply came from the rosy mouth of the countess. The result was the precipitate flight of the young man. There was a rumor that the Marquis Ernesto had paid assiduous court to the young Duchess Cesira Galbiati, a very beautiful young woman, tall, with statuesque outlines, great Junonian eyes, long golden hair, a flower of womanhood, but in the way of intelligence, a goose of the ingenious and conscientious sort; well, it was to be supposed that the Countess Flavia had exploded more than one epigram at the marquis, for he ceased to hover around the Duchess Cesira.

Again, the countess and the marquis had reserved to themselves the privilege of many, very many strange ideas, which they never failed to put into execution. When all the stream of carriages was at the Riviera di Chiaia, Flavia made hers turn by the corner of Piedigotta and go by the Corso Vittorio Emanuel; Ernesto described a circle, went by way of the Toledo and the Salvator Rosa and came to meet her. In the winter season, in midst of the amusements, festivals, balls, Flavia fled away all alone to Sorrento, and after three days Ernesto appeared there, bored by the city. At first Flavia had a reception day, then annuled it, seeing that all the other women, her friends, had one, and also because the marquis made fun of days.

The marquis had lost his inveterate habit of going to hunt every year in Calabria. So, little by little, a certain isolation was made around them; the world confessed aloud that in those two was contained the entire wit of Naples, but added, sotto voce, that it was better to leave the two models of wit to fight it out between themselves. Flavia and Ernesto did not perceive this, and when the tardy moment came, in which they found themselves alone, one facing the other, it seemed to them a very simple thing. The public had withdrawn itself—but not in vain was the invention of art for art's sake.

One evening, be it known, in autumn the conversation between those two languished, exhausted. Not that they found nothing more to say, but a certain sense of weariness descended upon them. All the evening their wit had sparkled brilliantly, and the charming epigram, delicate ironies, courteous implications, biting amiabilities had showered unintermittently. Now they were silent. The countess extended herself slightly in her armchair; she was adorable under the quiet lamplight; but the marquis, while recognizing this fact, had the good taste not to speak of it. He was playing with a mother of pearl pen handle.

"Marriage is a very fine thing," he murmured, with a pretended air of conviction.

"For the unmarried, yes," the countess quickly retorted.

And she adjusted her lace cravat. Ernesto took a book from the table, read the title and laid it down again.

"Do you know what they say down there about us?"

"I do not know. And I do not care to know."

"Then 'tis a sign that I ought to tell you. Many of our mutual friends are agreed in the opinion that we two are persons of too much wit ever to marry each other."

"Bah!" said the countess, shrugging her shoulders.

"If in order to prove ourselves witty we should do just the contrary. What do you say, countess? It would be charming!" and he opened the Pungolo newspaper to read the locals.

"Charming, indeed," she replied, putting out her hand to take her fan.—Translated from the Italian of Matilde Serao by E. Cavazza for Short Stories.

The Real Reason.

"Now, children," said a Sunday school gentleman visitor, who had been talking to the scholars about "good" people and "bad" people—"now, children, when I am walking in the street I speak to some persons I meet, and I don't speak to others; and what's the reason?" He expected the reply would be, "Because some are good and others bad," but, to his discomfiture, the general shout was, "Because some are rich and others are poor."—New York Advertiser.

To Get a Good Price for Butter.

A professional farmer says: "There is only one way whereby a man can raise, with equity and certainty, the price of his butter. No single farmer and no combination of farmers can force the butter market up or down. But any man can raise himself from being a ten-cent a-pound man to being a twenty-five-cent-a-pound man by making and marketing the quality of butter for which people will pay twenty-five cents."

A sentimental young Bostonian is fond of sauntering about the Common in the very early morning. At that hour, he says, the place is so still that one can almost hear the bark of the trees.

It has been shown that the life of a fish is very great. Hundreds of fish are still alive in the royal aquarium in St. Petersburg that were placed there more that 150 years ago.

At a basket picnic the greatest loss results from the devouring element.

PUBLIC SPEAKING.

This is one of the heaviest strains that comes upon any man or woman. A little cold, a little hoarseness, and the work is done. The best of ability is rendered absolutely useless.

Mark Guy Pearse, the eminent English preacher, writes as follows:

"BEDFORD PLACE, RUSSELL SQUARE,
LONDON, December 10, 1888.

"I think it only right that I should tell you of how much use I find ALLCOCK'S POROUS PLASTERS in my family and among those to whom I have recommended them. I find them a very breastplate against colds and coughs."

MARK GUY PEARSE.

BRANDRETH'S PILLS always give satisfaction.

"I want to be an angel,
But let there be no doubt,
I do not care for gettin' there
By any trolley route."

SWINGING AROUND THE CIRCLE

Of the diseases to which it is adapted with the best results, Hostetter's Stomach Bitters, a family medicine, comprehensive in its scope, has never been thrust upon public attention in the guise of a universal panacea for bodily ills. This claim, daily arrogated in the columns of the daily press by the proprietors of medicines far inferior to it as specifics, has in a thousand instances disgusted the public in advance by its absurdity, and the prospects of other remedies of superior qualities have been handicapped by the pretentions of their worthless predecessors. But the American people know, because they have verified the fact by the most trying tests, that the Bitters possesses the virtues of a real specific in cases of malarial and liver disorder, constipation, nervous, rheumatic, stomach and kidney trouble. What it does it does thoroughly, and mainly for this reason it is indosed and recommended by hosts of respectable medical men.

"Do you believe that matches are made in heaven?" "I dare say. They surely don't need any in the other place."

HOW'S THIS!

We offer One Hundred Dollars reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c. per bottle. Sold by all Druggists.

Significant Characteristics—"What is your idea of a poet?" she asked. "A poet," replied he, is a man who is long on hair and short on cash."

Use Enameline Stove Polish; no dust, no smell

Try Germe for Breakfast.

NO QUARTER will do you as much good as the one that buys Doctor Pierce's Pleasant Pellets. This is what you get with them: An absolute and permanent *cure* for Constipation, Indigestion, Bilious Attacks, Sick and Bilious Headaches, and all derangements of the liver, stomach, and bowels. Not just temporary relief, and then a worse condition afterward—but help that *lasts*.

Pleasant help, too. These sugar-coated little pellets are the smallest, the easiest to take, and the easiest in the way they act. No griping, no violence, no disturbance to the system, diet, or occupation.

They come in sealed vials, which keeps them always fresh and reliable; a convenient and perfect vest-pocket remedy. They're the *cheapest* pills you can buy.

"August Flower"

I used August Flower for Loss of vitality and general debility. After taking two bottles I gained 69 lbs. I have sold more of your August Flower since I have been in business than any other medicine I ever kept. Mr. Peter Zinville says he was made a new man by the use of August Flower, recommended by me. I have hundreds tell me that August Flower has done them more good than any other medicine they ever took. GEORGE W. DYE, Sardis, Mason Co., Ky.

Welcome to Hood's

We say at our house, because of the good it has done me. No one knows the intense misery I endured for 20 years with dyspepsia. No prescriptions seemed to help me and I had great prejudice against proprietary medicines. But being strongly urged to try Hood's Sarsaparilla, I did so. I am now using my fourth bottle, and feel better than I have in twenty years, and consider myself cured." FRANK C. STUART, Marshall, Mich.

ENGRAVING!!

INDUSTRIAL EXHIBITION AWARDED TO DEWEY ENGRAVING CO. HALFTONE PHOTO ENGRAVING 1888

S. F. Mechanics Institute Medal.

PRINTERS SHOULD KNOW that the oldest and best Photo-engraving office in San Francisco was established in 1877 by the Manager of the DEWEY ENGRAVING CO., who has secured the latest and best Improvements, secret processes and a full complement of the most approved machinery, photo apparatus, powerful electric lights, etc. Having long experience, and superior artists, this pioneer Co. turns out the highest class of work promptly, reliably and at uniformly moderate prices for all kinds of engraving. Publishers helped to get up special issues. Job printers and others should send for samples, estimates and information. A. T. DEWEY, Manager, 220 Market St., S. F., Cal.

HAVE YOU GOT PILES
ITCHING PILES known by moisture like perspiration, cause intense itching when warm. This form and BLIND, BLEEDING or PROTRUDING PILES YIELD AT ONCE TO DR. BO-SAN-KO'S PILE REMEDY, which acts directly on parts affected, absorbs tumors, allays itching, effecting a permanent cure. Price 50c. Druggists or mail. Dr. Bosanko, Philadelphia, Pa.

DOCTOR
Pardee's Remedy,
THE GREAT CURE
—FOR—
INDIGESTION
and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR
Scrofula, Rheumatism,
Salt Rheum, Neuralgia,
And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO.,
9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE

STATIONARY AND MARINE ENGINES.

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE,
ECONOMICAL,
SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

DREAD.

Sick of the scent of the reeds,
Of the scent of the cool marsh mud;
Sick of the sight of the bending bays
And the scent of each long white bud.

So sick of your lover's moods,
Sick of your lover's desire;
My heart was full of wild, new lights
As the woods at night on fire.

Oh, I hated the dreadful life,
The calm days out and in;
To you it was heaven, because of me,
But to me hate made it sin.

Oh, I hate the thought of the bending bays,
And the reeds in the cool, marsh mud;
For every thought seems a bird whose wings
Are wet with its own life blood.

—New York Sun.

THE HOUSE OF DISHONOR

The wind was a roaring tenant of the desolate chambers and scurried through the house, filling the long, bleak corridors with the sound of its furious passage. Out and aloft it screamed most melancholy in the pines, and flew around the corners and gables in claps of the veriest passion. The white night was in the possession of a thousand evil powers mocking at me in my torture, as all solitary I waited by the dim lantern, watching her fair, frail body slipping quietly into the arms of death. Anon her soul would flicker to her eyes; the lips would tremble, the lids would rise, and the slow, unmeaning gaze rest for an instant upon my face of dread. And then again the lashes would fall, and life, impotent and weary, would drop and vanish from the beautiful clay.

As God is above I swear in those moments I had no terror for my grievous sin. As we had loved so also had we lived—may he hold those few poor months sacred upon his scroll! No distant thought of that vain weakling whom men call my wife came to me over sea. I had put her from my mind long since with the great sin that was my happiness. In that hour but one hope held me, but one fear.

Without, the long drive ran upward through the ragged woods toward the hills, and by that avenue must come the clattering hoofs to bring me help against this death that shrieked about the house and wandered whining through the empty rooms. Between that silent couch and the bare, shining road my glances strayed, and ever on my heart fear laid his chilly fingers, tightening his hold and straining as though 'twere I, not she, that drew nearer to the end. And in truth not she, but I, was wrestling with this specter. I heard him crying in the night, I watched him on his rounds, between him and the dying, I, the living, stood defiant and almighty—of my love I braved him there alone that night within the darkness, and, swollen to a monstrous horror, fear loomed beside me, and all past delight, all future evil laughed me to derision in his presence. Apart sat my one remaining servitor, a faithful guardian at the door, squat like a dog, immediate to the slightest call, should any call sound here save that of death above the hurly burly of the night.

I could not catch her breathing; she opened her eyes in a smile, and the white teeth shone spectral in the twilight of the room. I bent to her, shuddering—there was some whisper on those wavering lips, but the wind was gibbering like a devil at the windows.

"To steal the last whisper," I cried, "that were worthy God!" and hid my face upon the couch.

It was at this instant there fell a sudden hush, and through the distant doorway he entered swiftly with the sudden clank of spurred feet. Turning, I beheld him white and furious against the light.

"You have an amiable turn for withdrawal," said he, "but 'twill not serve you long. Put a hound to the scent," he cried, "and in the end 'twill lick his chops in blood."

"Man"— I cried; but fiercer than my fierce voice he flung between me and my words.

"Coward!" he cried, his jaw fixing upon the cry, and, raising a heavy hand, swept in a stride upon me. I took him by the wrist and, pulling feverishly at his arms, besought him with my eyes.

"Man"— said I, and the voice choked in my throat so that I could but point a shivering finger to the couch and that white lily drawing unto death.

"What is this?" said he, and stared upon me.

"The plague," I muttered; but my words were low, and I seemed to speak it to myself.

His white face was so nigh to mine that I could mark each line that time had turned upon his cheeks, and I thought that his black eyes grew blacker, and a slow smile wrinkled about the moving lips. He said no word, but walking to the bed peered down upon his sister where she lay. I seemed to see her fading in and out of consciousness, as it were, with her heaving bosom, and methought her eyes met his with that plaintive look of suffering that had tortured me through the long day. If this were so I know not surely, for at that moment the gravel rang without with a clash of hoofs, and, exultant at the sound, I sprang toward the door. Then there broke in my old and faithful servitor, and the wind flapped down upon us from the sky. I heard his voice calling through the noise, his thin hands gesticulating in the air, and at his words I stood struck dumb and cold.

"No help!" he cried, "no help! Nought will avail now. The plague has ta'en the servant from his errand," he moaned; "the plague! the plague!"

And looking through the long windows, I could espy in the white night a great horse streaming from the nostrils, and a limp figure sprawling from the stirrup, stark and motionless.

"The plague devours us," I screamed, and took the brother by the coat.

"Man," I said, "ride as from hell.

"Ride for this physician beyond the hills, and God will be with you upon this errand of pity.

"Ride!" I cried.

He shook me off and laughed.

"Sir," said he, "you have mistaken. I am no serf or bondman of yours, but the mere brother of this pitiful creature who is like to redeem somewhat of our honor within this night."

At these monstrous words I fell back, staring at his white and smiling face.

"Why," said he lightly, "you will perceive the situation. These six months I have been minded to dissolve this pretty compact, and but that you hid yourself so deftly those hands had surely done it. But now the task is taken from them; she will herself dissolve it within this night, I doubt not. It is a sure way out of a mighty unpleasant case."

He stood twiddling his thumbs and smiling at me.

"What fiend are you that should be brother," I cried, finding voice at last. "This is an ill time for a jest. Ride, ride!" I screamed, "for the devil is behind you."

"I regret," said he, "to find you at a loss for reason. You have no eye for logic at this moment, but it is obvious that your vision will be clearer by and by. You have a pleasant home," said he, glancing through the window, "but a trifle noisy on a windy night, and lonely in the time of plagues."

"God who made you," said I, "judge you for this!"

"I am the brother of this thing," said he, jerking his finger at the couch, "that soon shall be a corpse. With that she will have passed beyond the dishonor of our honorable house. And yet," he continued as though he would beg me a favor, "though she be no wife of yours, I have hopes you will conduct her obsequies in the decorous fashion of your race. It is said you toll the death bell in these hours of dissolution. Though the plague have rid you of your domestics, I perceive a serviceable veteran here, whom doubtless you will instruct in his proper behavior."

He paused as though for an answer, but I, speechless with horror and a growing madness, crouched desperately back against the wall.

"You are uncivil in your silence," he resumed. "No doubt it were distasteful in your eyes to treat your mistress as your wife. And yet you will pardon me if, out of respect for what is still the dying body of my kinswoman, I take upon myself to order this ceremony upon your behalf."

He had scarce ceased ere I had flung upon him; but at that very second the life surged in my love once more, and with an inarticulate cry she raised her head. I threw him away and fell upon my knees beside her. Her breath went soft upon my cheek; her bosom palpitated and was still. Springing from the room I rushed out of the house and leaped upon the panting horse before the door; and, loosened by my leap, the plague stricken, dusty body slipped from the stirrup and rolled full into the moonlight upon the gravel. I dashed my hands at the reins, spurred at the recking beast, and in a frenzy faced the night bareheaded, clattering for the cliffs. The horse, overworn with the hard riding of its dead master, and smitten, maybe, with something of the panic of that fearful countryside, shivered and trembled on its way.

The fire was gone from its palsied limbs; its life was spent; its forelegs splayed and staggered on the hard chalk, and stumbling from point to point we rolled together through the night. The winds now flew from all quarters upon us, and stung my sight so keenly that the lids fell with the quick pain. Out of the sea below they seemed to rise up and take the beast below his belly, lifting him from his traitor feet. From the front they sprang at him, chill and gusty, choking the steaming breath back into his gaping throat. While ever from the black hills they dashed upon us both as though to swirl us in their company over the sheer cliffs, where the white sea ran shouting upon the walls below.

In this helpless fashion I had gone but a mile or so, and was come to where the mountain closes on the sea and leaves but a ribbon of pathway, when I was aware of a rider thundering in my rear. So swift was his speed that I had but turned uneasily in my saddle ere he had swept by me; his pallid face gleamed for an instant in a set and cruel stare, and then he was past the corner in the distant gloom.

"Ride! ride!" I called; and my weak steed, struggling with the wind, followed behind him into the narrow pass. The great circle of the moon hung upon the sheer heights, and the silver streak of footway ran white along the cliff verge. I had imagined him a penitent, assured that some grievous exhibition of his sister's plight had at last made a call upon his humanity, and that he was thus tardily upon mine own errand. But as I entered upon the passage I perceived him standing there in the moonlight, his face turned full upon me, his horse at hand oblique across the pathway. As I rode up he raised an arm and checked me.

"Upon second thoughts," he said, "I cannot perceive that the performance of her manifest duty acquits me of mine own. You will dismount."

I gazed at him in stupefaction across the vapor from my horse's nostrils.

"Come, you are dull, you are dull," he went on impatiently. "You must know the consideration proper to her blood. Be done with your wonder and dismount. I have given the matter thought, and, believe me, it is the one thing possible."

It was then for the first time I took his meaning and the full significance of his hideous purpose flashed upon me. Passion choked my voice.

"Out of my way!" I whispered hoarsely.

"Descend," he said; "or shall I break this creature under you? You make an uncommon fuss." He took a pistol from his belt. "Into the case of this," said he, "I have put my honor. Come."

I ground my teeth and clinched my hand above my head.

"Out of my way, devil!" I cried, pushing the horse's nose upon him.

He put it aside.

"Nay," said he, easily, "you may perhaps ride on hereafter if you have the occasion left you. By my soul, we must settle on this spot, if I should pull you from the saddle. Your mistress shall find a fitting burial, I promise you, in the tail of the morrow.

"Dismount, my craven."

The madness rushed upon me in a flood, and I bent low upon my horse's neck.

"Out of my way!" I yelled.

He laughed.

I struck my nails deep in the flanks, and with a start the beast leaped forward upon the white face in the path. His horse behind him swerved and pulled, backing upon the cliff.

The winds dropped from the heights in a gust.

Spurring I drove at him.

I saw the forefront of my horse poised in the air a moment, and then with a plunge he flung himself free upon the empty path; while with a sharp neigh of terror that other creature rolled in a tangle with the white, set face, slipped o'er the verge and fell from peak to peak down the great precipice below.

And at that instant the shrill wind came crying around the pillars of the hills, and I could hear, far off and desolately still, the sound of a dull bell booming through the night.—H. B. Marriott Watson in National Observer.

The Value of Local Expression.

Let us not say too much against local peculiarities of expression or idioms in embryo. They are the life of the language. If it had not been for the facility of the English in taking up and giving the authority of usage to these odd phrases, many of which are illogical, incorrect, intrinsically ridiculous, we should have a dead, formal speech like the Spanish, or a pretty and graceful but fatally unelastic tongue like the French. It is not desirable that all Anglo-Saxon nations should speak English exactly alike or that New England should talk just like South Dakota. Let us thank heaven for the pleasing diversity of speech that we still have on this big continent and pray that the time will be long in coming when schoolmasters shall have succeeded in running us all into one unlovely mold!—Boston Transcript.

CHEAP COAL.

An Inventor Who Claims to be Able to Manufacture Fuel.

YEARS DEVOTED TO EXPERIME.

A Simple Chemical Process that Endows Lignite or Interior Coal with Burning Qualities.

Many inventions are in the field. Another inventor has come to the front with an invention which he believes will rival even those of Edison and bring to mankind generally a degree of benefit which will be in direct inverse proportion to the woe inflicted upon the individuals commonly known as the coal barons.

What he has to offer is no less than a scheme to manufacture a coal which will be superior in its results to either bituminous or anthracite coal, to which the world has been so long accustomed to look for its chief supply of fuel.

So many vast conceptions have been already brought to the attention of the public only to end in disappointing failures that every new great scheme is apt to be regarded with suspicion. We have not suffered from the Keely motor project and the many plans for navigating the air, to say nothing of the many ideas for submarine crafts, without having our confidence in such matters seriously impaired.

The new aspirant for undying fame and incidentally for the millions of money that are attendant upon great discoveries which are world wide in their uses has at least the courage of his convictions, and his ideas are entitled to respect.

Mr. Albert Edelmann claims for his invention that it will enable him to manufacture his coal at a cost of only one dollar per ton. Besides the exceeding cheapness of the new article Mr. Edelmann claims for it the merit of being absolutely odorless and capable of being burned without smoke and being consumed so utterly that it leaves but 1 per cent. of ashes.

Mr. Edelmann was born in Warsaw, Poland, in 1823, and was educated at the university at Dorpat, one of the provinces of Livonia, on the Baltic sea. He was graduated there as a civil engineer, and then made the grand tour of Europe. In 1852 he went to Australia, the voyage from London to Sydney occupying six months.

HIS FIRST INSPIRATION.

In Australia Mr. Edelmann devoted himself to his profession and spent his time in building railroads and in other engineering enterprises. In 1860 he first turned his attention to the discovery of cheaper coal, and since then he has devoted all his time and money to that pursuit.

In the first place he argued that it was a well known fact that there exists upon the surface of the globe a large quantity of what may be termed inferior coal, which is commonly called lignite. Briefly defined, lignite is a coal formed at a much later period than either bituminous or anthracite coal, and therefore without those chemical properties which would enable it to burn as well as either of them, and which, therefore, renders it practically useless for fuel or other purposes.

That this lignite would, in centuries to come, develop into a fuel which might be utilized exactly as well as that which was already known as bituminous or anthracite coal was a source of pain and vexation to Mr. Edelmann. He could not sleep at night from his continual study of the problem. He was actually jealous, he says himself, to think that a people a thousand years hence would avail themselves of that which the world might use today could he but solve the problem of effecting by chemical processes that for which nature would take centuries.

A GLEAM OF LIGHT.

After a study of many weary years Mr. Edelmann believes that he has solved the problem whose solution he so faithfully sought, and is satisfied that he has found a process for transforming this worthless lignite into coal, which for all purposes is equal, and in many instances superior, to either anthracite or bituminous coal.

In other words, the inventor believes that by the mixture with lignite of certain chemical bodies a coal is produced which is as perfect as any that was ever mined, and this lignite, he claims, were it allowed to remain in the earth, would require a thousand years for its transformation into perfect coal.

In his technical description of the process alluded to the inventor says:

"To accomplish this result the lignite and certain chemical bodies (which have first been reduced to a powdered condition in order to permit of their perfect commingling) are placed in molds and subjected to great pressure in machinery expressly constructed for the purpose, and from which the mass comes in the shape of what are termed, for want of a better name, 'brickets.' These brickets can be made of any size or shape in order that they may suit different conditions, as, for instance, if the material is to be used for furnaces they would be in the neighborhood of eight inches in size (either square or oblong), whereas for stoves they would be made correspondingly smaller.—New York Herald.

In a country town not 20 miles from this, there used to be a bus driver who very often forgot his customers. A lady and her daughter anxious to connect with a train for New York gave strict injunctions for him to come for them in good season. He was leisurely stopping at the door and positively assured his passengers that he could easily get them there, but half a mile from the depot they were enraged to see the train go away without them. "Waal," said the driver, "I got ye most there, anyhow."—Springfield Homestead.

A Fair Exchange.

Angry Poet (rushing into the office)—See here, sir! That check you sent me for my poem is no good!

Editor (coldly)—Neither was the poem. Shut the door, please.—Life.

The Formation of Tumors.

The oldest theory by which it was attempted to account for the origin of tumors ascribed it to a peculiar state of the system, a "cancerous diathesis," which rendered the tissues of the body liable to "cancerous degeneration." The great answer to this theory is the large number of cases now on record in which complete cure of the disease has been attained by early and thorough operation, for if the tumor does not return at its previous site or elsewhere it is manifest that its cause must have been a local one and must have been removed with the tumor.

The coexistence of several tumors has been advanced as proof that there was a constitutional taint, but more careful pathological work has shown that in almost every case it can be proved that where there are several tumors one is considerably older than the rest, and that the latter are secondary and owe their existence to an infection from the first. The old theory also fails to explain why the cancerous growth remains confined to one small portion of the body for so long a time; and why, after removal, it persists in returning to the same locality; whereas both of these facts become clear at once on the supposition that cancer is a local disease.—Harper's.

Britishers Enlightened.

Miss Jennie O'Neill Potter relates a funny story of an experience in England during her tour in that country. She was invited by the Royal artillery to give an entertainment in aid of a military charitable institution at Woolwich garrison, near London. Her readings met with approval, and in response to an encore she recited "Sheridan's Ride." An old general of the Royal artillery, who was chairman for the occasion, came to Miss Potter during the interval and said, stroking his gray mustache: "Aw, Miss Pottah, don't cher know, several persons wish to know—aw—where the incident of this—aw—Sheridan's ride took place. Of course I've heard about it, but it has—aw—quite escaped my memory."

"Why, general," replied Miss Potter, who dearly loves a joke, "that Sheridan's ride took place at the battle of Bunker Hill."

"Certainly it did," rejoined the general, who rose, and addressing the audience, said, "Ladies and gentlemen—In response to numerous inquiries I have to inform you that the ride of General Sheridan was an incident of the battle of Bunker Hill."—New York Telegram.

Peculiarities of French Bread.

In Paris bread is indeed the "staff of life." It is carried about the streets without even a string around it. Women clasp the long rolls affectionately to their bosoms and rest the ends against their hair. Men forget that it isn't a cane they are carrying and rap the end of the loaf on the pavement as they walk. I saw a little boy in the dirt by the Seine using a long piece of bread for a plaything. Presently he wiped it upon his dress and took a mouthful. I saw a woman sitting on a bench in the Luxembourg gardens cosily hugging a great round loaf—without any wrapper, please remember. We heard angry voices before our window, and beheld a woman thumping a man with a fresh baked roll. It broke in two, but the woman beat a tattoo on his back with the pieces. When we go to buy bread we are tempted to ask, "How much is it a yard?" We are sure the French people never die of lockjaw, for any grinding apparatus that can stand the test of years on this bread can stand anything.—Paris Cor. Chicago Post.

Glass and Paste Diamonds.

Of late years paste diamonds, imitation diamonds, quartz diamonds and glass diamonds have been placed upon the market in quantities, and it is difficult to distinguish many of these from the genuine articles. They are cut in the most approved style, and a good quartz diamond, cut in the shape of a brilliant, makes a very effective show. Its value, however, is less than one-twentieth of that of a diamond of similar size and shape.

Glass cut in prism shape will illustrate the value of angles in any transparent body, and glass diamonds can often be cut so that they resemble greatly the pure water gems. Fine, large diamonds are so very expensive that many wealthy people prefer to wear imitations on general occasions and leave the genuine stones for only very important and special times.—George E. Walsh in New York Epoch.

The Ivory Nut in South America.

The ivory nut is grown in the equatorial regions in South America. The principal point of shipment is Colon, on the Isthmus of Panama. Like the banana, the ivory nut is perennial in its native clime, and may be found in all stages from the bud to the ripened nut at all seasons of the year. The nuts grow in great bunches of about fifty incased in a shell, as are chestnuts in the burr, though the shell outwardly resembles in roughness the surface of a pineapple. The entire cluster of nuts in this shell is as big as a man's head. This shell comes off easily after the nuts are ripe. At this stage they fall from the trees—which are fourteen or fifteen feet in height—and are packed on the backs of natives to the points of shipment. They are about the color of an unwashed last year's potato and as hard as an elephant's tusk.—New York Telegram.

Singular Ocean Sponges.

A singular ocean sponge is the glass rope, which sends down into the mud a coiled wisp of filaments as thick as a knitting needle. The latter opens out into a brush, fixing the creature in place after the manner of a screw pile. Still another remarkable sponge is found in the deep water off the Loffoden islands. It spreads out into a thin circular cake, surrounded by what looks like a fringe of white floss silk. Yet another curiosity is the "eupectella" sponge of the Philippines, which lives embedded to its lid in the mud and supported by a lovely frill.—Interview in Washington Star.

WHY THEY MISS.

The Reason Expert Marksman often Make Bad Shots.

DUE TO NERVOUS EXCITEMENT.

Dr. Carver Gives the Result of His Observations During a Lifetime Spent In the Wild West.

Dr. Carver, the champion rifle shot of the world, so widely known by the Indians of the great west as the "Spirit Gun," explained to a reporter yesterday why it was that dead shots, cowboys and other western and southern characters, accustomed from childhood to the use of revolvers and rifles, would make remarkably bad scores when laboring under the slightest excitement.

"Why," said the doctor, "I have known men who could snuff a candle at 40 paces with a 6-shooter go out into the middle of the street and empty a gun at some fellow who was blazing away at them a short distance off and never touch their man. It makes a heap of difference to most men when they are squinting along the barrel of a winchester or over the sight of a 6-shooter whether they are cutting loose at an inanimate target or looking into the muzzle of a gun. I don't mean to say that they become frightened, as I have seen many men who didn't know the sensation of fear and who take pride in their marksmanship get wrought up to such a frenzy by being opposed to any one that they get into a state of nervous excitement that renders it almost an impossibility to hit anything. There was a shooting match between two 'bad men' at Plum Creek across a billiard table. Neither flinched, and both emptied their guns, and both men were hit but once, and that exactly in the same place. They had each thrown their arm forward over the heart to protect it, and both were hit in the arm near the elbow, the other shots flying wide of the mark, causing a stampede and wrecking some of the glassware.

"The same thing applies to big game shooting. When you take a quail or snipe shooter—a man who rarely misses in the field, and let him be ever so good a wing shot—lead him out into the timber or on the prairie and show him a moose, bear or elk, it is a hundred to one that he will miss the animal altogether. Good shots have been known to empty the magazine of a winchester at the first big animal they ever fired at, and then become mortified to see the animal trot off uninjured. Of course this is not fear; it is excitement. It is known to all hunters as 'buck ague,' and few indeed there are who have not experienced it some time in their lives.

"There are men, however, who never shoot except to kill their man. They are invariably cold blooded, iron nerved, desperate men, who have devoted their lives to hunting men or protecting themselves and who experience as little excitement while being shot at and shooting at a man as the old hunter does while pursuing his favorite game. These men carry the best revolvers obtainable, their pistols always being of the largest caliber and single action, for a cowboy or an Indian will have nothing to do with a selfcocker. Such men wear their guns in such a manner as to be able to drop their hand upon them without any false motion or awkward gestures and wear them where it is impossible for them to get caught in the clothing in the act of drawing.

"One of the coolest things I ever saw was a man who had terrorized western Missouri for a long time after the close of the war, and who had emptied his 6 shooter at a party of men opposed to him and his side during one of those factional fights that still occur in that section. After emptying his gun, instead of attempting to seek shelter, he rode boldly out into the town and sat upright in the saddle coolly reloading his pistol while under fire, and having satisfied himself that he was ready for battle again, he whirled around and did some very effective work until the opposition made it so hot for his party that they retreated, fighting down a side street, and escaped across the broad creek that ran through the edge of the town. It is the same with the shooter as it is with the billiard, baseball, racquet or tennis player, he must be in good form to do his best."

Dr. Carver is an old buffalo hunter and tells how, in the early days when buffalo shooting, he stayed in one locality until game got rather scarce. Then he met some Indians who spoke of a big herd further up the river and said that in this herd was a white buffalo.

"Now," said the doctor, "ever since I began shooting and roping buffalo I had heard about white buffalo and was pretty anxious to see one. I moved camp and got up in the vicinity of the big herd. I located them and did one or two days' shooting without discovering the white buffalo. I had really not expected to see one, as I did not believe there was such a thing in existence. One afternoon, however, I came upon a small herd near the mouth of a canyon, and to my surprise and delight I saw right in the middle of the bunch, feeding with the rest, the white buffalo himself.

"I immediately determined to have this animal, if I was obliged to kill a horse to get him, and I nearly did kill Red Dips, one of the best horses I ever owned, for I drove up this canyon, dropping a buffalo here and there, and after a hard ride, when my poor horse was nearly fagged out, I was in despair, as the white buffalo remained right in the middle of the herd, where it was impossible for me to drop him. However, a lucky shot dropped a cow in the center and well in advance of the herd. Then the bunch split, one-half turning sharp to the right, and the other half keeping right on.

"Among those turning to the right was the white buffalo. As the animal swung around I got a good look at what I had been spoiling my best horse for and wearing myself out to kill, and what do you suppose it was?—a big white Texas steer, that had evidently been brought up in some herd and strayed away and joined this band of buffalo. It is needless to say that I checked my horse and rode slowly back to camp without an effort to even get revenge for the long ride or to spoil the Indians' pet white buffalo story by killing the closest resemblance to one that I think ever existed on the plains."—Indianapolis Journal.

Left Without Giving Notice.

Those unhappy housewives with whom the maidservant question is an ever present horror will learn with mingled feelings of a domestic incident in South Africa. General Joubert, the Boer leader, told on a visit to the United States of a cook who left his service suddenly without giving notice and without waiting to be dismissed. In fact, a lion entered the kitchen and carried off the cook almost beneath the eyes of her astonished mistress.—New York Sun.

Pedestrianism in Germany.

A German friend of mine (he is somewhat of a humorist) was bantering me about the notorious aversion of Americans to walking, and he remarked that he had heard it said that the average American did not walk more than a mile a day. Of course I resented this gross libel, and I asserted that the average American thought nothing of starting out for a walk of five miles. I cited with a good deal of pride the habitual practice of Julian Hawthorne of taking a mere stroll of twenty or thirty miles whenever he has a few moments to devote to exercise. I spoke, too, of your townsman, Mr. Slason Thompson, editor of The America, who is in the habit of walking ten miles a day and running fifteen or twenty more.

My friend thereupon became personal, and ventured to intimate that I could not walk five miles. Of course I accepted the challenge implied, and, peacefully doddering imbecile that I was, I actually walked for four consecutive hours before I learned (upon remonstrating with my humorous friend) that a German mile was equal to four and a half English miles, and that in order to accomplish the feat I had undertaken I should have to cover twenty-two and a half miles.

Germany would be a veritable paradise, methinks, for Julian Hawthorne and Slason Thompson. They would be elected to the reichstag at the first congressional election.—Eugene Field in Chicago News.

Information for the Boy.

The instruction that nursemaids are able to impart to the greedy young minds that are given into their charge is truly fearful and wonderful. As a Coney Island boat was passing the Bartholdi statue a 5-year-old youngster was moved to ask the Milesian lady who attended him:

"W'ot's that, Jane?"

"That's Liberty," quoth Jane.

"W'ot's Liberty?" he asked again.

"W'y, just Liberty. Don't you know w'ot Liberty is?"

"W'ot's Liberty?" he insisted.

"W'y, you goose," instructed his teacher, "Liberty is—w'y it's—Freedom. And now you know, don't you?"

And of course he did. Just wait until somebody asks him.

There was more of the same kind from the same source.

"W'ot's those, Jane?" he asked again, with significant finger at the life preservers overhead.

"Them's life preservers," said Jane.

"W'ot are they for?"

"They're for when you fall in the water and get drowned," she informed him, "and when you do they make you float."

"After you're drowned?" asked the boy.

"Oh, yes. I do wish you'd keep still and not ask so many questions, you bad boy."

But he didn't.—New York Evening Sun.

Drink Your Soda Slowly.

Good soda should be sipped. Quickly drinking off the effervescence, which is merely foam, an interval of a minute or two should be allowed before the last half of the glass is taken. Clerks should know this, and give customers time without warning by looks or actions that they are expected to leave in the shortest possible order after bolting their soda and paying for it. A glass of soda so taken is a refreshing stimulus, better than food in a very hot noon, but tossed off as most people take it is a recipe for cramps or indigestion.

If it is poor soda, tasting of metal with the silver worn off, or standing in silver too long, flavored with sirups made from oranges or lemons whose musty taste is plain to all refined palates, the less one takes the better for life and health. Girls who serve the cheap soda fountains at fancy stores well know this from experience, and the old hands rarely touch soda themselves. The girls behind the counters who depend on soda to keep up their strength through the close days injure their digestion by it, and perhaps owe more of their sudden indispositions to it than they imagine.—Shirley Dare in New York Herald.

Where Mr. Curtis Learned to Write.

Whatever my style of writing may be, it is the result of natural selection and not of special design. The first author who interested me deeply after "Robinson Crusoe" and the usual children's books of fifty or sixty years ago was Washington Irving. Then came Walter Scott and Charles Lamb, Keats, Shelley and Wordsworth, then Bacon and Emerson, Burke and Carlyle, Thackeray and Hawthorne. But rhetoric or composition I have never studied. My long connection with the press has been of the utmost service to me as a writer. For many years I have been the chief editorial writer upon Harper's Weekly, a paper which takes part in political discussion, and the necessity of making myself intelligible to the rapid reader in a comparatively short space has been probably the best training I could have had. Fortunately I have no taste for what seems to me the frequent extravagance of newspaper writing, and therefore I have easily avoided it. Every young writer should remember that bigness is not greatness, nor fury force.—George William Curtis.

The Proper Function of a Newspaper.

In its ambition to be everything and to have everything the newspaper has traveled far beyond its legitimate bounds. The complaint of the magazines indicates the outgrowth on one side of those bounds; the more excited protests of an invaded privacy point to another overflow, and other burstings of limits are heard from in other directions. The original functions of a daily newspaper appear to have been forgotten. Keen competition among themselves has finally brought newspaper people to a condition of feverish anxiety in which everything within reach must be theirs. Everything printable is printed. Nothing is so small that it cannot be stooped to; nothing too remote and abstruse for reaching after.—Noah Brooks in Forum.

A RARE PICTURE.

The Reproduction of the First Railroad Engine Due to It.

A CLEVER ARTIST WITH SCISSORS.

Unique Bit of History that Deals with the Anti-Masonry Feeling in New York Of Sixty Years Ago.

"The New York Central Railroad company's reproduction of the first railroad train and locomotive ever run in New York state, a most interesting and valuable exhibit at the Chicago fair," said an old resident of Albany, "causes me to wonder how many of the officers of that company know that if the disappearance of Morgan from Batavia 65 years ago had not been attributed to murderous machinations of the Masonic fraternity, which resulted in the great anti-Masonic excitement that spread throughout the country and became a sensational political factor, they would not have been able to make the reproduction, and the appearance of that curious railroad train and engine would never have been known in accurate and pictorial representation.

"It was years before the discovery and practical introduction of that crude predecessor of photography, the daguerreotype, when the pioneer railroad train in this state was run, and as the future importance to history of the appearance of that train never occurred to those interested in bringing it into existence the skill of no artist with his pencil was brought into use to perpetuate it on paper. It happened that a young man named Brown—William H. Brown of Philadelphia—was in Albany on the day the train was run, Aug. 9, 1831, and had been in the place several days.

"He had a marvelous talent for cutting with a pair of scissors out of black paper lifelike profile portraits and accurate representations of buildings, machinery and even landscapes.

"The remarkable part of this talent of his was his power to make a perfectly exact portrait of persons days and even weeks after having seen them but once, and that only casually on the street.

"He had for some time made a good living by the exercise of his peculiar art. Thaddeus Stevens was at that time just beginning to make a reputation in politics and had seized upon the anti-Masonic idea for use in Pennsylvania, as it had been so successfully worked by Thurlow Weed and his lieutenants in New York state. The feeling was growing in Pennsylvania, and young Brown thought it would be a good stroke of business for him to go to Albany, have a look at Thurlow Weed and others, snip their likeness out in silhouette, and besides getting a fee from them for the work duplicate the pictures for sale among the anti-Masonic enthusiasts in Pennsylvania and elsewhere.

"He went to Albany early in August, 1831, and did a great deal more than get the portraits of Thurlow Weed. His wonderful work took the town by storm, and he was kept busy from morning until night cutting the silhouette likenesses of people of all kinds, sexes and ages that flocked to his rooms.

"His greatest artistic feat was the cutting in one large picture of the famous Burgess corps entire, with staff and band in full parade, each member's portrait being of surprising accuracy. This picture is among the most precious relics in the state library.

"And so it happened that this unique young artist was in Albany on the day the quaint locomotive De Witt Clinton, with its equally quaint coaches, was to be run on its first trip over the Mohawk and Hudson railroad.

"He was one of the passengers on the train, and when it returned to Albany he cut with his scissors an exact picture of the locomotive and two of the coaches, making the portrait of David Matthew, the engineer, and John T. Clark, the conductor, on his seat on the outside of the front coach.

"In that picture appear the likenesses of Thurlow Weed, ex-Governor Yates and other distinguished Albanians of that day, but neither Mr. Weed nor the ex-governor was on the train. Without a thought of the future of that picture as a valuable contribution to history, the artist cut those portraits merely as an exercise of his skill in depicting a subject from memory. He told me so himself 40 years afterward.

"While Artist Brown was in Albany he concluded to go to Boston and Hartford to make some portraits and other cuttings with his marvelous scissors. While in Hartford he showed the picture he had made of the railroad train and locomotive to a member of the Connecticut Historical society, who at once saw what a treasure it must necessarily become, and the artist presented it to the society, where it is today a relic beyond price.

"Some 30 years after cutting that picture Brown became interested in the railroad business himself, having long ceased to exercise his artistic skill professionally, and one day, having almost forgotten the Albany picture, he read in a newspaper an account of a lithograph that had just been published from a photograph of the silhouette picture he had presented to the Connecticut Historical society.

"He sent to the publisher of the lithograph and procured a copy of it and was rejoiced to see an exact reproduction of his scissors cutting of more than 30 years before. But the joy he felt over a sight of the picture was scarcely as great as the inscription beneath it gave him.

"The date of the running of the train was given as some time in 1832, the name of the locomotive being the John Bull instead of the De Witt Clinton and the name of the engineer John Hampson instead of David Matthew.

"Brown at once set about the task of correcting the lithograph publishers' history, a task at which he worked for more than 30 years, for the lithograph copy of his picture, with its incorrect inscription, had been widely circulated."

Workmen in Malaga are allowed 15 minutes' leisure in every hour to smoke cigarettes.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY.

INDEPENDENCE, CAL.

FRIDAY, OCTOBER 27..... 1893

Major Powell of the United States Geological survey, professing an extreme devotion to duty of which he has never before been suspected, told the Irrigation Convention at Los Angeles that in the arid region of the country as a whole there is only enough water to irrigate the lands owned by private individuals, without extending irrigation to the lands now owned by the Government. In making this broad and sweeping statement Major Powell was seemingly careful to avoid reference to the scheme which underlies every well reasoned system of irrigation for the arid lands, that of the construction of storage reservoirs where the surplus water may be accumulated and held until needed for purposes of irrigation. It may be entirely true that the present flow of water in its natural channel is none too great for the use of land owners at the times when they need it, but it does not require a scientist to know that millions upon millions of gallons run to waste every year, a large part of which might be utilized. An Arizona delegate asked Major Powell whether it was not true that there was sometimes in one day enough water running to waste down the Colorado river to supply all the needed irrigation for the State of California for one year. To this Powell did not reply, but said that when the number of inches of annual rainfall per acre in the great arid region was compared with the amount of water needed per acre for irrigation, his statement would be found to be true. The answer was palpably evasive for it omitted from consideration such sources of supply as springs and rivers. If storage reservoirs were to be filled by rain alone Powell might be right, but he certainly knows better than to even imply such a thing. Major Powell and his geological survey have not been in the best of odor for some time. It may therefore be said with confidence that his adverse opinion is or, should be wholly insufficient to stop the advancement of a general and beneficent plan for the reclamation of the arid and public lands of the United States.

The Irrigation Congress ended its labors last Saturday. Probably no gathering of irrigators has ever been watched with more interest than this one. It was conposed of many men with many theories as to reclamation of arid acres, but notwithstanding this, formulated a broad, comprehensive and reasonable platform that cannot fail to be productive of awakening interest on the subject of irrigation all over the country. Last week the members of the congress inspected the wonders accomplished by irrigation in Southern California and these object lessons will tend to increase the strong interest that delegates have shown. The Irrigation congress has developed the fact that the members who constituted it were earnest, progressive and intelligent. It also brought out the enthusiasts, and it is this class who accomplish results of import. From now on it can be expected that a systematic and vigorous endeavor will be made to reclaim the arid lands and thus add to the productiveness and wealth of the country.

Never in the history of railroads in the United States, have there been so many horrible accidents as lately. Every day the killed are enumerated in long lists, which are only excelled in length by the names of the maimed and wounded. Many years ago in Harpers Weekly was published a cartoon illustrating a way of preventing such disasters by the binding of a railway director to the cowcatcher of the locomotive. But, seriously, this daily slaughter of human beings has reached a point where a practical remedy is absolutely demanded.

"All's well that ends well." The people will await with great interest the consummation of a common sense programme on the silver question, which will establish the fact that the Senate of the United States is a most useful body. Meanwhile the European syndicate, that was waiting to jump on silver with both feet, will look twice before it leaps. The cause of bimetallism is taking a marked step forward.

It is said that a plot has been formed to release Chris Evans from captivity. This statement leads us to believe that the popularity of the melodrama "Evans and Sentag" is waning, and that more advertising is needed to hold it in the public regard.

THE BRIGHT SIDE.

THE HAPPY FACULTY OF LOOKING ON THE BEST SIDE OF LIFE.

Too Many People Allow Themselves to Be Weighed Down by the Daily Cares of Life That Must Be Met and Fail to See the Pleasant Things Near By.

Everything has at least a good side to it, and sooner or later some one will be able to see it. It is a happy fortune to be able easily to see what is good, though I do not believe in shutting our eyes to the evil. I have a friend who never sees the evil until it overwhelms her. She considers all things to be well enough at least and so has no foresight to ward off disaster. This is certainly a curious disposition and not a good one for those who have the care of families. What I do mean is that it is a capital thing to see the good that really is in all things.

I said to my neighbor, who is deaf in one ear, "It is a pity, my dear; is there no remedy?" "I don't think there is," she said, "but then there is a great blessing in it, for I have learned to sleep with my good ear to the pillow, and so no noise can disturb me." It was a curious illustration of how one may use a deprivation and make it a real advantage. It is a great art to find out all the good there is in life. Emerson says, "Do not dilate on your private wrongs and personal ills." But no one ever becomes tedious in dilating on her privileges and joys. The longer I live the more I find that most of our troubles are imaginary.

There are half a dozen things we have to learn, and many never do learn them. One of these is that we have will power to control a vast deal that we sit down underneath. Life has no blessing greater than its antagonisms. Differ as we may from professional faith curists, they have a great truth in store, and I wish they may have vast influence in reconstructing sentiment. There is no need of being an extremist in belief, yet it is a fact that we have cultivated a kind of moral cowardice about our diseases. I believe they are right that we are vastly more powerful than we have supposed ourselves to be.

But I am a broader believer than they, for I am confident we cannot only cry "down and out" to half our physical ills, but to a large proportion of our troubles and what we call our bothers. And that is just the meaning of life—it is a series of defeats or of victories over small affairs. The habit of making much of petty evils indicates defeat. Many a woman is thoroughly whipped by her ordinary household duties, as many a man is whipped out by weeds and thistles. She never can face a day with a smile and a strong will. She does her duty as a task and never as a joy. This hefts our duties down; the opposite way lightens them.

Life everywhere has a better side to it than we are always willing to confess or able often to see. Our choicest gifts and blessings lie just the other side of our saddest moments. It seems like mountain climbing to get a view of a sunrise, but we are willing to toil hard to get to the mountain top. It pays not only at the top, but all the way up. I have a delicious fern bordered glen that every summer I visit and do not mind the bushes that tear nor the extremely hard climbing to get in and to get out. Ah! the lovely brook at the bottom, and the pebbly island in that brook, and the old moss covered beech logs, and the banks of "creeping hemlock." It pays. Every step pays. I come back full of rest, not of weariness, of joys that sparkle and run like the brook itself. Last summer I took with me an enthusiastic lover of nature into my pet ravine, and she being a good scientist found in an hour's search five sorts of salamanders.

If we live widely and think nobly and study what the world is, we find that the cheapest and roughest conceals grand facts that make character and joy for us. The world is a ready spread feast for our senses and intellect. But there are races that will not eat eggs, and there are others that will not use milk. So there is a possibility of not seeing the best things about us and hearing the finest harmonies. The best question one can ask of herself is: Are you getting the best of the world about you? I have heard the narrowest kind of men preaching on the parable of the prodigal son, not knowing that they were themselves feeding on husks—the poorest husks of thought and manhood.

I suppose, in fact, there is a good side to everything, only I am not able to see it on the occasion. The best effect of studying history is to teach us to look back at events some time after their occurrence, when we are almost surely struck by the real advantage that comes out of what at the time seemed totally evil. There is no qustion but that American character has been made stronger by the great fight with and victory over slavery. There is just as much good accumulating from the fact that intemperance is so hard an evil to eradicate. Harriet Martineau says, "The greatest advantage of long life—at least to those who know how and wherefore to live—is the opportunity which it gives of seeing moral experiments worked out, of being present at the fruiting of social causes and of thus gaining a kind of wisdom which in ordinary cases seems reserved for a future life." This is fairly what any one may reap from life, that apparent evil is or may be made to become good.—Mary E. Spencer in St. Louis Globe-Democrat.

Ninety-two Years In a Workhouse.

The death has been reported to the Sheppey board of guardians of Eliza Humphries, who has been an inmate of Sheppey Union workhouse, Sheerness, for 92 years. The deceased was born in the establishment and remained chargeable until her death, a somewhat weak intellect debarring her from earning her own living. She was affectionately known as the "mother" of the house. Frequently she would ask the visiting guardians whether her long residence had not entitled her to a pension.—Exchange.

The Taste For Display.

I am often reminded of how unwisely some wives spend money when shopping, but never more vividly than the other day when I watched a family in a Sixth avenue store. The occasion was important, that was easy to see, for even the father had left his work to take part in the selections. The mother, with a baby in her arms, was poorly dressed and with little attention to details. She wore no gloves, her shoes were slipshod and her choker unfastened. The father led a small boy who was rather gayly attired, but the chief object was a girl of 12 or 14 whom they were fitting out.

They had been on the second floor, as appeared in the new dress and new jacket, a very light, delicate affair in the height of fashion, which was bound to show wear very soon unless kept far more carefully than there was any likelihood of its being. Now they were trying on a bit white leghorn hat turned up in the back with a ribbon bow. The brim was edged with lace, while two large white plumes ornamented the crown.

Never once during the interval of indecision did the mother glance toward the array of black or brown straws. Lizzie must have a big white hat, and of course the saleswoman was only too glad to show the expensive models. The father seemed proud of the new "rig," and from his soiled and greasy pocketbook gladly paid the money for the inappropriate hat just selected. The looker on could not but imagine its condition a few weeks hence, when, bedraggled and soiled, it would look so mean. In fact, there were quite a number of interested spectators slyly watching the scene, doubtless led by the contrast of such finery with the general appearance of the family. It seemed such a pity that the sum spent that morning should not have been for more serviceable apparel, but who would venture to interfere?—Brooklyn Eagle.

Seeing the Beautiful.

Franklin tells a story of a man whose two legs were very unlike—one handsomely turned, the other deformed. When any one who visited him looked at the ugly leg and commented on it, he held the man to be looking for the bad side of things and folk. But if the visitor saw his handsome limb and commented on its beauty he held the fellow to be worth esteem, for he looked at the good side of things and probably would see the best in his neighbors and friends. Is it easier to see other people's virtues than their faults? I have at last come to see that folk are far better than they get credit for being.

When Carlyle and Emerson walked London and saw the horror of gin palaces and the miseries of poverty, the former said, "What do you think now of the Saxon stock?" Emerson answered, "The more I see of the English people the more I admire their power and wonder at their progress." A story is told of Jesus that he was walking with some of his friends when they came on the carcass of a dog. They turned up their noses in horror, but Jesus stooped down, and looking said, "But behold what beautiful teeth he has."—St. Louis Globe-Democrat.

Won His Way With Logan Carlisle.

Every official in Washington just now is being ged by people in quest of office, and the treasury department has probably more than its share of them. Officials know how it is themselves, however, and their good nature is almost superhuman. Among the extra well balanced ones is Logan Carlisle, chief clerk of the treasury, and to him came a youth from Indiana, who wanted to know about a place that he had in view.

"It's this way," said the young man after some talk. "I'm like the young man who had his leg cut off by a locomotive."

"How's that?" inquired Logan.

"I'm in need of immediate attention."

"Oh, is that case," laughed Logan, "you'd better go to the Emergency hospital."

"Well," exclaimed the youth, making a low bow, "here I am." And Logan agreed on the spot to attend to his needs at the earliest opportunity.—Washington Cor. Chicago Herald.

Mrs. Stanford's Jewels.

Apropos of jewels, the handsomest in Washington is the collection owned by Mrs. Leland Stanford, wife of the millionaire senator from California. Her diamonds are second only in value to the Russian and English crown jewels. They are of all tints—one pink, another yellow, one blue, besides the pure white stones, and the aggregate value is estimated as being over $2,000,000. In Mrs. Stanford's safe of steel, with time-proof burglar locks, which, as she seldom wears her jewels, is kept at a safe deposit company, are 50 diamond rings, each worth about $500. She cares for no other stones, so there are only diamonds in her collection.—Washington News.

"Assistant Pastor."

"Assistant pastor" is a new title for a woman and seems to be so far held by only one under this name. The pioneer in this field finds her home and work in Brooklyn, where, at a salary of $400 a year, she relieves the pastor of many routine duties that in a large city parish unwarrantably consume his time and energy. The office might better be called "pastor's wife's assistant," for its work is taking a direct burden from the shoulders of those long suffering women.—New York Recorder.

An Infantile Philosopher.

A pretty little nonentity who has a brilliant mother exasperates her parents almost beyond bearing by such wise remarks as this, uttered after profound reflection upon some case of want and woe, "Well, when one thinks of it, it does not seem, does it, as though riches were evenly divided?"—Philadelphia Press.

An Explanation.

"I admit that I married for money"—began Hicks.

"Why, John!" ejaculated Mrs. Hicks.

"I mean matrimony of course, my dear," explained Hicks.—Harper's Bazar.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JED COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD,
Justice of the Peace of said Township.

E. SPENCER, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of JOHN McFETRIDGE, deceased.

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of John McFetridge, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at the office of P. W. Forbes, Esq., in the Court House, at the town of Independence, the same being the place for the transaction of the business of the said estate in the County of Inyo, State of California.

H. H. HOWELL,
Administrator of the estate of John McFetridge, deceased.

Dated at Independence, Aug. 29th, 1893.

- KENDALL'S SPAVIN CURE. -

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatise on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 9 months standing. I removed it with ½ bottle. I tied up one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1894, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 19 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

Religious Services.

Rev. S. W. Albone will conduct services until further notice as follows: Lone Pine 11 a. m.; Georges Creek, 2:30 p. m.; Independence, 7 p. m.

Sunday Schools, Fort and Lone Pine 10 a. m.; Independence, 2 p. m.

Rev. J. Becker, the Evangelical Lutheran minister of Bishop, will give a German service Sunday, Oct. 29, at 3 p. m. at the M. E. Church. All are invited.

T. C. Boland is expected home on to-day's train.

Soiree at the Pavilion to-morrow evening.

Henry Rhine started for San Francisco last Saturday.

Mrs. Alvah Conklin spent several days in town this week.

P. W. Forbes Esq. went to Bishop last Tuesday. He will return to-day.

Henry Detels recently brought in some fine specimens of gold to Rhine's from the Alabama Hills.

Wm. Rowan arrived home yesterday from Los Angeles. P. P. Keough is expected to arrive to-day.

O. I Mairs and Fred Holbert are fattening about 700 head of beef cattle for the Los Angeles market.

There is scarcely a family in town that does not contain one or more members in the clutches of "la grippe."

Mr. and Mrs. John Fiehman and H. E. Wilkinson came up from Keeler yesterday morning and will return to-day.

Mrs. C. W. Craig started for Reno yesterday morning to meet a sister from the East whom she has not seen for twenty-eight years.

The report of the Bureau of Animal Industry and Agriculture has just been received. It contains much valuable matter, including many diagrams and colored plates

Southern California was jubilant over the victory of Silkwood. His pacing record of 2:08¼ made at the Los Angeles races last week is the fastest time ever made in a race west of Chicago.

Charles French of Pomona arrived in the Valley yesterday coming by stage from Mojave. Mr. French is now looking over the Bishop country and will come to Independence in a day or two.

Victor Trepier came up from Keeler yesterday. He has some beautiful gold specimens from his new discovery near Cerro Gordo. Large pieces of free gold can be seen all through the silver-lead ore.

F. McIver arrived home from Los Angeles yesterday, where he had been to attend the Irrigation Congress. J. L. Bourland will be home on Monday's train, accompanied by his sister, from the East.

A. Schilling came up from Los Angeles on Thursday and is looking over Owens Valley with a view to securing a suitable location for a German-Swiss colony. He is now at Bishop and will come south in a few days.

A change has been made in the signal service station at Keeler, H. E. Wilkinson being succeeded by Presley T. Jenkins, formerly of San Francisco. Mr. Wilkinson has been granted a leave of absence pending his assignment to a new station and will start for San Francisco on Tuesday.

The exhibit of fruit taken to Los Angeles by the delegrees to the Irrigation Congress excited a vast amount of interest concerning Owens Valley. Crowds of people viewed the display every day, and a constant stream of queries was made regarding the country where the fruit is produced.

Shelhamer & Coe will have a hydraulic artesian well-boring plant at Olancha within a few days and will make a thorough test of the feasibility of getting artesian water. Should they prove successful an era of unprecedented prosperity for Owens Valley will be inaugurated. The result of their experiment will be awaited with the deepest interest.

The Rayner Comedy Company will give a dramatic entertainment at Lone Pine tonight and to-morrow night. The company will be at Independence Monday and Tuesday nights, thence going up the Valley to Big Pine and Bishop. The company consists of eight members, five gentlemen and three ladies. They will give a good entertainment—far better than the average traveling players.

The citizens of Independence will give races on Thanksgiving Day, followed by a grand ball in the evening. The Directors of the Track Association will meet to-morrow for the purpose of making definite arrangements. It is expected that two running races will be made, one a three-quarter mile dash and a three-eights and repeat. Full particulars will be published next week.

INYO MAIL LINES.

By advertisement of September 15, 1893, proposals are invited for carrying the mails in California from July 1, 1894, to June 30, 1898. Proposals received till December 1, 1893. Decisions announced on or before February 1, 1894. Following are the Inyo county routes:

Arrive at Cerro Gordo by 12 m;
Leave Cerro Gordo Tuesday, Thursday and Saturday at 1 p m;
Arrive at Keeler by 4 p m.
Bond required with bid, $700.

76389—From Keeler, by Olancha and Freeman, to Mojave, 122.50 miles and back, twice a week.
Leave Keeler Monday and Thursday at 6 a m;
Arrive at Mojave Tuesday and Friday by 6 p m;
Leave Mojave Monday and Thursday at 6 p m;
Arrive at Keeler Tuesday and Friday by 6 a m.
Bond required with bid, $6,200.

76390—From Keeler to Darwin, 24.50 miles and back, twice a week.
Leave Keeler Tuesday and Saturday at 7:30 a m:
Arrive at Darwin by 1:30 p m;
Leave Darwin Wednesday and Sunday at 7:30 am;
Arrive at Keeler by 1:30 p m.
Bond required with bid, $1,300.

School Benefit

The party at the Schabbell residence last Friday evening was attended by most of the young people at the Fort and many from Independence. Mrs. Rossi, assisted by Mr. Meysan and Mr. Marks, played for the dancers, and it was nearly midnight when a halt was called and each lady auctioned off according to her weight to the highest bidder It was stipulated that nothing less than one cent a pound should be bid. Some of the girls brought as high as three and four cents a pound, and Miss Collins, the teacher of the school, brought eight cents. Each lady accompanied to supper the gentleman who had bought her. A choice supper was served by Mrs. Schabbell and the young folks, after which dancing was continued until nearly four o'clock. As a result of the sale $44 was handed to Miss Collins, which is enough to buy the necessary desks for the school. Taken both socially and financially the affair was a decided success.

J. R. Moffett and Irv. H. Mulholland got back from Los Angeles yesterday. The latter purchased from C. A Durfee, the owner of McKinney, 2:11¼, the yearling colt Osito by McKinney-Twilight. Osito is standard and registered and is a grandly bred youngster, his dam being by Othello, he by Sultan, sire of Stamboul, 2:07¼, out of Atlanta, a full sister to Beautiful Bells. His second dam is by Oddfellow, he by Echo, and the sire of a number in the list. Third dam also by Oddfellow and fourth dam by George M. Patchen 3d. Osito trotted in the Yearling Stake at Los Angeles last Friday and after making a bad losing break trotted a game race and finished close up to Kion in 2:47.

Carl Walter and Ira Smith, two young boys of Camp Independence, deserve credit for the industry and skill they have shown in putting up a telegraph line between their homes. They consulted a book for amateur telegraphers, went to the mountains after a suitable pole, sent for wire and followed the directions carefully. As a result they are now tapping away at the dots and dashes and bid fair to become first class operators.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent. will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent. will be added to the amount thereof; that all taxes may be paid at the time the first instalment as herein provided is due and payable.

J. S. GORMAN,
Tax-Collector.

NOTICE TO BOND-HOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated the 6th day of October, 1893, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to cancel such bonds by the payment of the principal and interest accrued thereon.

Dated the 9th day of October, 1893.

D. J. HESSION,
Clerk of the Board of Supervisors of Inyo County, State of California.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of J. F. Beale, an Insolvent Debtor.

J. F. Beale, having filed in this Court his petition, schedule and inventory in Insolvency, from which it appears that he is an Insolvent Debtor, the said J. F. Beale is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby appointed a Receiver to take possession of all the estate, real and personal, of said J. F. Beale, Insolvent Debtor, except such as may be by law exempt from execution and of all his deeds, vouchers, books of account and papers, and to keep and to care for and dispose of the same until the appointment of an Assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent or to deliver any property belonging to such Insolvent, to him or to any person, firm, corporation or association for his use; and the said Debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered.

It is further ordered, that all the Creditors of said debtor be and appear before the Hon. Geo. M. Gill, Judge of the Superior Court of the County of Inyo, in open Court, at the Court-Room of said Court, in the County of Inyo, on the 11th day of November, 1893, at 11 o'clock a. m. of that day, to prove their debts and choose one or more Assignees of the estate of said debtor.

It is further ordered, that the order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as said paper is published before the day set for the meeting of Creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 5th, 1893.
P. H. MACK, Attorney for Insolvent.

Notice of Commissioner's Sale Under Foreclosure.

W. J. HOSKINS vs. WILLIAM GHEEN AND B. F. LEWIS. | Order of Sale and Decree of Foreclosure and Sale.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 19th day of October A. D. 1893, in the above entitled action, wherein W. J. Hoskins the above named plaintiff, obtained a judgment and decree of foreclosure and sale against William Gheen and B. F. Lewis defendants, on the 9th day of October, A. D. 1893, for the sum of Twelve Hundred and ninety-six and 58-100 dollars United States, Gold Coin, besides interest, costs and counsel fees making a total of $1,327.53 which said decree was on the 19th day of October, A. D. 1893, recorded in judgment book 1 of said Court, at page 416, I am commanded to sell all those certain lots pieces or parcels of land situate, lying and being in the County of Inyo, State of California, and bounded and described as follows:

The East half of the North East quarter, and the North half of the South East quarter of Section Two (2) in Township Eight (8) South Range Thirty-three (33) East, Mount Diablo Base and Meridian.

Also an undivided one fifth (1-5) interest in and to that certain water ditch commencing on the west side of Owens River, opposite R. W. Fords ranch, leading to Andrew Dell's slough and from thence to Gregg's ranch, as constructed by Andrew Dell, David Garland, James Moriarty, Frank Holland and I. H. Gray.

Public notice is hereby given that on Saturday, the Eleventh day of November, A. D. 1893, at 2 o'clock p. m. of that day, in front of the Court House door of the County of Inyo, I will, in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the Nineteenth day of October, 1893.

JOHN ALEXANDER,
Commissioner.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Morton, deceased.

J. J. Morton, the Administrator of the Estate of John Morton, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the personal and real estate of said decedent, for the purposes therein set forth,—

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Tuesday the 14th day of November 1893, at 11 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the town of Independence, in the County of Inyo, State of California, to show cause why an order should not be granted to the said J. J. Morton, Administrator, to sell all of the real estate and personal property of said deceased.

And that a copy of this order be published at least once a week for four consecutive weeks in the INYO INDEPENDENT, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated Oct. 7th, 1893.
P. H. MACK, Attorney for the Administrator.

AT THE "BOTTOM NOTCH"

That's where you'll find our prices on NEW FALL CLOTHING. The styles in our "Ready-to-wear" Suits are as fetching as those of custom-made goods. Just as well cut, just as well made, just as well trimmed and will give you great service. Prices? Away under, if you consider value.

New Clothing.

$10 At this popular price you can have the pick of twenty-five or more styles in Een's New Sack Coats.

Royal Baking Powder Leads All.

From actual analysis made by me, I pronounce the Royal Baking Powder to be the Strongest and Purest Baking Powder before the public.

It is entirely free from alum and other additions injurious to health.

W. T. Wenzell

Prof. Chemistry, College of Pharmacy Dep't., University of California.

All other baking powders are shown by analysis to contain alum, lime or ammonia.

How She Served the Summons.

She was bright and pretty, and she dropped into a lawyer's office the other day and asked for work.

"What can you do?"

"Anything a woman of ability can do, and more than most men."

"Great opinion of yourself, young woman," said an elderly lawyer present. "Perhaps you think you could serve this summons."

"I might," said she. "May I look at it? Yes, I will."

"If you do that you'll do something we've all been trying to do for a week. He's a slippery fellow and his people are all posted. However, you may try it. You can afford to lose a little conceit," and the lawyer smiled grimly.

At 10 the next morning the office door was opened and the bright young woman walked in again.

"Thought you'd give it up, eh? Found him too slippery for you? Thought so."

"The paper is served," said she. It was her turn to smile now, and she did it. The lawyer swung round in his chair.

"Served. How'd you do it?"

"Oh, it was simple enough. I called at his place of business, looked around, priced some materials and then asked if he was in.

"'No,' said the salesman, 'but I can do as well.'

"'I think not,' I said quietly. 'He has always served me before, and he understands just what I want.'

"'Oh, in that case you might call at his house. He will be in to dinner.'

"I did call at his house, dressed in my best, card case in hand. I sent in my card and he appeared promptly.

"'Mr. ——?' said I, rising.

"'Yes. You wish to see me on business?'

"'I hear you are interested in property in —— street?'

"'Yes.'

"'Well, I have a paper which will interest you concerning it,' offering him the summons, which he took with a smile. He looked at it and flushed crimson. So did I. Nothing was said. He controlled his temper and accompanied me to the door.

"Another field open to women," was the lawyer's only comment.—New York World.

Pity the Poor Drummer.

A very good looking drummer he was, and he had succeeded in making a great impression upon the table girl at a Maine hotel. He paid strict attention to the girl and to his dinner and his performance was creditable and thorough in both directions. But he did not eat his sweet corn. Finally the girl said in her sweetest tone: "You must have another ear of corn. That is cold and is not filled out."

"Oh, no"— but she is gone.

She returned with a steaming ear of corn and then waited expectantly to see him bury in the succulent vegetable his pretty teeth, that he showed with such charming grace in his smile. He ought to have known better, but in a spirit of bravado he responded to the mute appeal in that waiter girl's eyes and set his teeth into the corn. The first mouthful went all right, the second was a great success, but the third—we would that our tale could end here, but it cannot.

At the third mouthful, as he darted a gleam of fond adoration at the girl, his teeth loyally stayed by the mangled ear of corn for an instant, then dropped to the floor with a rattle that sounded in his ears like the discharge of heavy artillery. Worst of all, as he madly scratched for them he couldn't find his treasure. Finally the girl recovered them from a neighboring table, after a lady had kindly moved her skirts aside and revealed the truant teeth. The look that passed between that girl and the drummer as she handed him the teeth had something in it that wilted the bonquet over which it passed.—Lewiston Journal.

Never Lost by Politeness.

"A man never loses anything by politeness," said a breezy little chap to his companion on the Brooklyn bridge promenade recently as he politely raised his hat to a former colored coachman.

Scarcely had the speaker concluded his words when a bit of paper fell from his hat and was whisked away over the railing and went floating down to the river. "Just my infernal luck," he remarked after a hasty investigation, the benign expression leaving his face and one of anger taking its place.

"That was a $100 check," he added. "My wife has warned me about carrying things in my hat, and I lost it all through bowing to that black rascal of a coachman. I had the pleasure of horse whipping him once. There's some satisfaction in that."

"And as you were saying," remarked the other, "you have never lost anything by politeness. Your temper and your $100 check are gone"——

"Yes, and I'm off, too," said the erstwise polite individual as he turned in high dudgeon and retraced his steps, muttering curses and maledictions the while.—New York Herald.

An Adirondack Term.

Healthy summer visitors to the Adirondacks frequently hear a term used by the natives in describing some of their city comrades in those delightful and health giving regions that greatly mystifies them at first. The people thus referred to technically are called the "lungers," who are generally found to be pretty plentiful. "Lungers," pronounced "lung-ers," is a word that has not as yet got into general usage outside the range of the pine tree odors of the northernmost part of New York state; but its meaning and derivation are soon perceived and compel instant admiration for their simplicity and significance.

The "lungers" of the Adirondack regions are none other than the consumptives who resort thither for the benefit of their lung troubles, and who form a class by themselves in the eyes of the natives apart from the mere huntsmen and pleasure seekers. There is a sort of distinction in being a lunger that naught else can give, and though the word thus evolved by an admirable philological fitness seems to have a touch of rugged brutality in it at first sight, yet there is, after all, a kind of rough sympathy in it that is redolent of the soil.

As the pulmonary knowledge of the Adirondack people increases in minuteness, as it doubtless will, one may expect to hear the more detailed designations of "one lungers," "half lungers," etc., though this, it is believed, has not yet been observed.—New York Tribune.

What Three Women Do While Riding.

A busy woman says she gives her mind a complete rest on her journeys to and from the scene of her daily work: "I close my eyes behind my hand or paper and make my mind as complete a blank as possible." Another woman, a writer, says, on the contrary, "I make a practice to give my brain over to wandering fancies, often getting my best ideas while in transit." Still another woman, a busy mother, plans the children's frocks, "Mentally making over, altering and combining in a way that is most helpful to me afterward." All of which shows that this perennial riding has come to have an allotted place and consideration.—Her Point of View in New York Times.

Holes In the Drinking Cups.

Every tin cup in the police stations of this city now has a hole punched in its bottom. The police commissioners wondered at the disappearance of so many cups some time ago and caused an investigation to be made. This showed that the policemen were in the habit or carrying cups of water to their sleeping rooms to quench their thirst during the night. In this way the cups were mislaid and never returned to their proper places. Many remedies were suggested, but without avail. The cups were tied by chains and strings, but they continued to disappear. At last an ingenious member of the department suggested punching a hole in the bottom of every cup. Then it would be impossible for them to hold water any length of time. The inventor did not secure a patent, and in all the station houses his plan has been adopted.—New York Times.

How Westerners Regard the East.

One very noticeable peculiarity of the people of Colorado is their habit of speaking of the east as "home." "At home in the east we call that Virginia creeper," said one. "I go home to New York every few months," said another. "We long to go back east to our homes, but when we get there the climate does not agree with us, and we hurry back to Colorado." Thus was revealed the peculiar tenure the place has upon thousands of its citizens.—Julian Ralph in Harper's.

The Heavens Seen From the Sea.

Every one who has been much at sea knows something of the peculiar splendor of the heavens when beheld from the deck of a ship. Celestial phenomena seem to possess an unusual impressiveness when viewed under such circumstances. The clearness of the air in fair weather and the flatness and distance of the horizon tend to heighten this effect. A similar impression is noticed upon the broad, grassy plains of Texas.—Youth's Companion.

Made Things Lively.

Although the district school in Holloway, Conn., was tightly closed during the vacation, there was one caller that kicked up a rampus. It was a thunderbolt, but where it entered can only be conjectured. During its short stay it passed through a wide range of studies, including spelling, reading, grammar, arithmetic and geography. Besides throwing new light upon the books treating on these subjects, it tore up the floor, splintered the desks and in its exciting exit carried off part of the window sash.—Yankee Blade.

Two Deer Fight.

The gentlemen comprising the surveying party now working for the Bear Valley company up Millard's canyon, were on Monday treated to a sight which seldom comes to men in this center of civilization. We get the story from Messrs. Pollock and Ross, transit men of the party.

The men were working up the canyon about a mile above the Millard House when they heard a peculiar, crashing noise. Looking up they saw on the cliffs high above the stream, and about a quarter of a mile from them, two noble bucks standing, with heads lowered, about ten feet from each other. Thus they stood eying each other and pawing the dirt for fully a minute. Then they made a simultaneous spring, and came together with a noise like a falling tree. So violent was the concussion that the animals were thrown back until a distance of ten or fifteen again intervened between them. The men, fascinated with the sight, watched the deer go through the same performance again and again.

Finally, after a more than usually violent rush, the bucks did not separate, but struggled as if apparently trying to push each other back. It soon became plain to the men, however, that instead of pushing they were pulling away from each other. In other words their horns had become locked, and from raging combatants the bucks became frightened animals, and were only bent on securing a divorce. Messrs. Ross, Pollock and party then conceived the idea of taking advantage of the helpless condition of the bucks and capturing them. They made a great rush for the scene, but before they reached it the deer in their struggles approached too near the edge of the cliff and both of them fell to their death in the pool below. When the party reached the water the deer were found locked in each other's horns quite dead.

The gentlemen thought to skin the deer and bring in the hides to lend an air of authenticity to the tale, but the law is so strict as to having in your possession the hide of a newly deceased deer, no matter whether the deer dies of la grippe, commits suicide or falls out of a balloon, that they forbore.—Banning Herald.

Three American Queens.

Three little dirty, half clad girls made a brief sensation on upper Broadway the coldest day recently. The eldest was not more than eight, and her companions might have been six and seven respectively. The eight-year-old carried a faded, rib rotten parasol that had once been pale blue, and her two companions were trying to squeeze their heads under it, while they carried the rear of their short dresses in one hand, as ladies manipulate their trains at a muddy crossing.

The eldest divided her attention between the proper angle for the parasol and getting her little skirt down low enough to touch the sidewalk, which she occasionally accomplished by stooping. Three pairs of feet were visible through the dilapidated shoes, and the shabby old July hats wouldn't have been picked out of the gutter. And these three little girls playing lady on Broadway were evidently delighted at the good humored attention of stalwart gentlemen in heavy ulsters, ladies in costly furs and carriage drivers muffled to the ears in warm livery.—New York Herald.

Fixed to the Rail by Electricity.

A very peculiar case of shocking by electricity occurred in Shelbyville recently. The victim was William Louden, who works at the Hotel Ray. In front of the hotel is an iron veranda running to the third story. An electric wire passes from the street into the room occupied by George Goulding in the hotel building. This evening when the electric light was turned on a heavy rain was falling. The electricity apparently had heavily charged the iron veranda. Louden came out of the hotel and stood with his back against the iron railing. In an instant he was shocked and fixed in his position. His frightful yells attracted a big crowd. Charles Huffman ran out of his store, and, touching Louden, was also badly shocked. Louden finally fell on the sidewalk. The two men are badly burned.—Cor. Indianapolis Journal.

Almost Drowned in Sawdust.

Men have lost their lives in quicksands, but seldom, if ever, has any man come nearer sinking down to death in quick sawdust than did Merchant Tailor E. W. Batzle, of Williamsport. Walking along eight or ten yards from the river bank, upon what he did not know was made ground almost entirely composed of sawdust, he began to sink before he realized any danger. After he had gone down to his waist, and could not regain the shore, he removed his upper garments and threw himself as fast as possible out into the river, where he struck wading ground and made his way in the water around the treacherous sawdust tract.—Cor. Philadelphia Record.

Coolness In the Face of Capture.

Mere coolness will often extricate one from a terrible difficulty, without the necessity of recourse to untruthfulness. This fact was well illustrated in the early days of the civil war at Belmont, Ky., where a Confederate force under General Cheatham was approaching the Union volunteers.

At that time the uniforms of Federals and Confederates were much alike, and strange mistakes were sometimes made.

As General Cheatham was riding out one day, he met a squadron of cavalry coming down the road toward his position. He had no sure means of knowing whether the force was friendly or hostile. He resolved to ascertain.

Riding up, accompanied only by an orderly, to within a few yards of the troop, he asked:

"What cavalry is that?"

"Illinois cavalry, sir," was the reply.

"Oh, Illinois cavalry," said the Confederate general. "All right, just stay where you are."

The Illinoisans had no doubt but that the officer was a Federal. They obeyed his order. Cheatham looked about for a moment and then rode back to his own command under the guns of another Federal regiment, who, seeing him come from the cavalry troop, supposed he was "one of them."—Youth's Companion.

DUALITY OF THE MIND.

The Man Whose Two Brains Are Equal Is the Napoleon of Life.

Duality of the mind in its marked character is ever before us; there is not a single work of imagination portraying human character in which the duality is not exemplified. Fictionist and poet live upon it, and I noticed recently that one of the most analytical and realistic writers of fiction in France, and one of the most popular, M. Guyot, recognizes not only the art but the science of the method.

In describing one of his imaginary characters, or more probably a real character transformed from the ordinary daily life into his pages under a false name, he explains duality on the same principle that Wigan did long before him. He is dealing with a man who has two brains—brains which are not of the same mold, and therefore not of the same action—and he writes his character from this standpoint with all the vigor of a master in literature and the precision of a man of science.

Wigan was of opinion that no single person has the two brains exactly balanced. He considered the most powerful mind was that in which the two brains, both being healthy, were nearest to each other in capacity. But he believed that that was also a good condition in which one brain took the leading part, and in which the other brain, in accord with the stronger, lent the stronger its assistance. A mind sustained in this manner was strong for endurance and one that was able to undertake, with certainty of successful work, the most difficult and hazardous labors. The minds of men like Cromwell, Washington, Wellington, Franklin, would be of this last named cast, while the minds of the giants of intellect, of Napoleon, Newton, Columbus, would be constructed on two brains of equal power, both in unison in their capacity and will for action.

In common life the two brains act together with sufficient unity to maintain the mind in a fairly balanced state, but there are conditions in which the divergence is so considerable that balance is broken, and then there is what we call insanity. Wigan sums up the argument in a very clear manner. He says: "I think it may be assumed without risk of contradiction that the fact of each brain being perfect and a complete instrument of thought is abundantly proved. That each, while in health, corresponds in action with its fellow is obvious from the fact that this unison and correspondence give only one result, as in the case of two eyes producing single vision; that when from any cause one brain is disordered a discrepancy in the two processes of thinking takes place; that the healthy brain (aided by the action of such of the organs of its fellow as are not affected by the disorder which disturbs the others) can in nearly 999 cases in 1,000, according to the usual proportion in this country, control all manifestations of morbid emotion or judgment, but that the thousandth case is the madman."

The balance is sufficiently preserved on the grand scale to prevent the intrusion into the world of an excess of insanity. At the same time there is a wide range of diversion, short of obvious destruction of balance. Heredity here plays a leading part.—Dr. Richardson in Asclepiad.

The Indian Hornbill.

A hornbill is something like a big magpie in all its sly tricks and ways. It catches a little ball of food if thrown to it with a sharpness and precision worthy of a cricketer. On one occasion, when Mrs. Hornbill had made herself a nest in a hollow in the trunk of the tree in which was their house and deposited her eggs in it, Mr. Hornbill came and plastered up the opening with mud, leaving only a space sufficient for him to insert his bill and feed the female and the nestlings. He feeds them in a very affectionate manner by throwing up from his own stomach pellets of food enveloped something like a sausage in "gizzard sacs" formed of portions of the interior lining of his own stomach. This is perhaps more curious than nice.—Longman's Magazine.

SURE CURE FOR PILES.

A sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germe for Breakfast.

MERCURIAL

Mr. J. C. Jones, of Fulton, Ark., says of S.S.S. "About ten years ago I contracted a severe case of blood poison. Leading physicians prescribed medicine after medicine, which I took without any relief. I also tried mercurial and potash remedies, with unsuccessful results, but which brought on an attack of mercurial rheumatism that made my life one of agony. After suffering four years I gave up all remedies and commenced using S. S. S. After taking several bottles, I was entirely cured and able to resume work. S.S.S. is the greatest medicine for blood poisoning to-day on the market."

RHEUMATISM

Treatise on Blood and Skin Diseases mailed free. SWIFT SPECIFIC CO., Atlanta, Ga.

An eminent physician says it is often dangerous to lie on the right side. It is also unnecessary. Any political speaker or writer knows the wrong side needs the lying, if any.

SWINGING AROUND THE CIRCLE

Of the diseases to which it is adapted with the best results, Hostetter's Stomach Bitters, a family medicine, comprehensive in its scope, has never been thrust upon public attention in the guise of a universal panacea for bodily ills. This claim, daily arrogated in the columns of the daily press by the proprietors of medicines far inferior to it as specifics, has in a thousand instances disgusted the public in advance by its absurdity, and the prospects of other remedies of superior qualities have been handicapped by the pretentions of their worthless predecessors. But the American people know, because they have verified the fact by the most trying tests, that the Bitters possesses the virtues of a real specific in cases of malarial and liver disorder, constipation, nervous, rheumatic, stomach and kidney trouble. What it does it does thoroughly, and mainly for this reason it is indorsed and recommended by hosts of respectable medical men.

He had a sorrel trotting horse
Which was so pesky slow,
He named him Chinese after awhile
Because he wouldn't go.

STOOD THE TEST.

ALLCOCK'S POROUS PLASTERS are unapproachable in curative properties, rapidity and safety of action, and are the only reliable plasters ever produced. They have successfully stood the test of over thirty years' use by the public; their virtues have never been equalled by imitators who have sought to trade upon the reputation of ALLCOCK'S by making plasters with holes in them, and claiming them to be "just as good as ALLCOCK'S" and they stand to-day indorsed by not only the highest medical authorities, but by millions of grateful patients who have proved their efficacy as a household remedy.

Beware of imitations. Ask for ALLCOCK'S, and do not be persuaded to accept a substitute.

BRANDRETH'S PILLS will purify the blood.

The question that confronts the fast young man is whether he will let up now or let down later.

Use Enameline Stove Polish; no dust, no smell

A "RUN DOWN" and "used-up" feeling is the first warning that your liver isn't doing its work. And, with a torpid liver and the impure blood that follows it, you're an easy prey to all sorts of ailments.

That is the time to take Dr. Pierce's Golden Medical Discovery. As an appetizing, restorative tonic, to repel disease and build up the needed flesh and strength, there's nothing to equal it. It rouses every organ into healthful action, purifies and enriches the blood, braces up the whole system, and restores health and vigor.

For every disease caused by a disordered liver or impure blood, it is the only *guaranteed* remedy. If it doesn't benefit or cure, in every case, you have your money back.

$500 is offered, by the proprietors of Dr. Sage's Catarrh Remedy, for an incurable case of Catarrh. Their remedy perfectly and permanently cures the worst cases.

"German Syrup"

Just a bad cold, and a hacking cough. We all suffer that way sometimes. How to get rid of them is the study. Listen—"I am a Ranchman and Stock Raiser. My life is rough and exposed. I meet all weathers in the Colorado mountains. I sometimes take colds. Often they are severe. I have used German Syrup five years for these. A few doses will cure them at any stage. The last one I had was stopped in 24 hours. It is infallible." James A. Lee, Jefferson, Col.

BLOOD POISON

A SPECIALTY. Primary, Secondary or Tertiary Syphilis permanently cured in 15 to 35 days. You can be treated at home for the same price and the same guarantees; with those who prefer to come here we will contract to cure them or refund money and pay expense of coming, railroad fare and hotel bills, if we fail to cure. If you have taken mercury, Iodide potash, and still have aches and pains, Mucous Patches in mouth, Sore Throat, Pimples, Copper-Colored Spots, Ulcers on any part of the body, Hair or Eyebrows falling out, it is this Syphilitic BLOOD POISON that we guarantee to cure. We solicit the most obstinate cases and challenge the world for a case we cannot cure. This disease has always baffled the skill of the most eminent physicians. $500,000 capital behind our unconditional guarantee. Absolute proof sent sealed on application. Address COOK REMEDY CO., 2235 to 1331 Masonic Temple, Chicago, Ill.

HAVE YOU GOT PILES — ITCHING PILES known by moisture like perspiration, cause intense itching when warm. This form and BLIND, BLEEDING or PROTRUDING PILES YIELD AT ONCE TO DR. BOSANKO'S PILE REMEDY, which acts directly on parts affected, absorbs tumors, allays itching, effecting a permanent cure. Price 50c. Druggists or mail. Dr. Bosanko, Philadelphia, Pa.

DOCTOR

Pardee's Remedy,

THE GREAT CURE —FOR— INDIGESTION *and Constipation.*

A Regulator of the Liver and Kidneys

A SPECIFIC FOR Scrofula, Rheumatism, Salt Rheum, Neuralgia, And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO., 9 and 11 Front St., San Francisco.

HERCULES

Gas or Gasoline Stationary and Marine

:ENGINES:

Can be Used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

No Delicate Parts to Get Out of Order.

For simplicity and success they beat the world. Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day.

GIVE ME SLEEP.

A morrow must come on
When I shall wake to weep,
But just for some short hours,
God, give me sleep!

I ask not hope's return.
As I have sowed I reap;
Grief must awake with dawn,
Yet, oh, to sleep!

No dreams, dear God, no dreams;
Mere slumber, dull and deep,
Such as thou givest brutes—
Sleep, only sleep!
—Anne Reeve Aldrich in Scribner's.

A FAMILY FEUD.

Those two rival families repeated on a small scale the discords of the Montagues and Capulets; only, with due regard to the civilization of the times, instead of spilling blood they spilled money. Instead of dead relatives there had been many lawsuits, long and entangled; they went to law for spite, for resentment, for anger; they kept at law with that obstinate delight in litigation which is one of the joys of provincial life. As usual, it was a question of trifles—a stream of water that had taken a wrong direction; an unruly goat that had leaped from the field of one into the field of the other; some obscure and stupid potatoes which, spreading themselves underground, had disregarded the boundaries.

Upon this showered legal documents. The lawyers toiled to write in that style of theirs, the last relic of barbarous invasions. Judgments ware multiplied. Lawsuits grew complicated. The two advocates rubbed their hands for joy, and from the aspect of things were sure of transmitting as a valuable inheritance those quarrels to their sons. How the enmity between the Pasquali and the Dericca families had been caused could not be clearly learned. Affirmations varied on one and the other side. But it was a deep and declared enmity. Being neighbors in town and in the country, they frequently met, looking askance at each other. The women heard mass in two different churches. If the Dericca girls wore blue gowns, the Pasquali girls at once put on pink ones. In the municipal council the Pasquali were always conservative and the Dericca naturally radical. That which one did the other would not have done for a thousand scudi. Where one went the other did not appear.

And then gossip, evil speaking, complaints, eagerness for scandal, malignity; in short, all that outfit of pleasing things which take place in provincial towns between two rival families. On top of all this, Carlo, the eldest son of the Pasquali, and Maria, the second daughter of the Dericca, thought it best to fall in love with each other.

Love in a small town has not much variety; usually it begins in childhood, continues amid games of blindman's buff, is apt to manifest itself in social dancing parties and round games, and is always ratified by the parish priest and the mayor. These loves are recognized, superintended, established, registered in the household comings and goings, protected by grumbling grandfathers and by priestly uncles; loves without nerves, without tears, without tenderness and fancies; something extremely calm and slow, the crystallization of love.

But Carlo Pasquali had had the incomparable fortune to pass, once, a fortnight at Naples, which made him look with scorn upon provincial customs; and Maria Dericca, at night by feeble lamp, had wept over the hapless heroines of Mastriani, and had envied them in their fantastic passions; therefore for these two was required an exceptional love. First it was a furtive glance, a softly murmured word, yet heard with singular perception by her who should hear it; a carnation pink fallen from a balcony by reason of the wind, of course; a sudden pallor of his, a sudden blush of hers; then, by the armed intervention of a rogue of a fifteen-year-old girl who came with a flatiron to smooth Maria's linen and the course of true love at the same time—a note and a brief reply; a little letter, a long letter and finally those voluminous epistles of eight or ten sheets of note paper which mark the highest point of the folly of love.

Alas! The joy of the young people was brief and sorrow rapidly arrived to destroy it. They were seen, spied, the news reached their respective papas and all the thunderbolts of paternal wrath, embittered by eleven lawsuits, fell upon the heads of the poor lovers. The balcony windows were closed, the bolts were fastened on the terrace door, the carnation pinks on the bush were counted, walks were forbidden, or at least made without previous notice, the hour of going to mass varied each Sunday—but those two continued to love each other. Rebuffs, exhortations, prohibitions, difficulties availed only to inflame their love; at night, in the winter, Maria arose, dressed herself, wrapped herself in a shawl, and in slippers, with bated breath, trembling for fear, descended the stairs to a window of the first floor; the young friend was in the street, leaning against the wall.

So they talked for two or three hours, without caring for the cold, the rain, or the loss of sleep; they talked without seeing each other from a distance of five meters of altitude, becoming silent at every sound of a passer, then cautiously resuming their discourse, with the continual fear that Maria's parents might arouse and find her in that aerial colloquy. But what did it all matter to them? They had within their hearts sunshine, light, springtime, courage, enthusiasm. If the king had come they would not have moved. Instead the brother of Maria, one night when he could not sleep, arose from his bed and found the door ajar, went down the stairs, heard a murmur, and caught his sister in the act. He unceremoniously barred the shutters in the face of Carlo, gave Maria a resounding box on the ear and brought her to her room. Next morning the small window on the first floor was walled in.

Oh, all ye faithful lovers, who grieve amid the pains of thwarted love, imagine the despair of those two! Their letters were no longer legible, for tears blotted the words; rows of exclamation points, that looked like Prussian soldiers under arms, followed the daily imprecations against fortune, destiny, fate and other impersonal beings incapable of resenting them; a thousand fantastic plans were created, discussed, and then rejected. Carlo would have liked to elope with Maria, but his father allowed him no money, and it would have been difficult to put together the nine lire and fifty centesimi for two tickets for the journey to Naples; they thought for a moment of suicide, but found that it would not solve the difficulty. Then, in the long run, their love became systematic, the imprecations were always the same, and they could not go to their beds without having "poured forth upon the faithful paper the fullness of their grief."

In the town nothing was talked of but their unshakable love and their torments; they were the objects of general interest; if a Neapolitan arrived, the townsfolk took him to see the ruins of the amphitheater and related the case of Carlo and Maria. Therefore the young people, flattered in their amour propre, assumed the behavior fitting to the circumstances. Maria was always pale, with a melancholy air, never smiling, always talking to her girl friends about her joyless days, refusing to amuse herself, content to resemble in all respects one of Mastriani's heroines.

Carlo took lonely walks, was always deeply depressed; at balls he never moved out of a corner, content that they murmured around him. "Poor young man, that unfortunate love affair saddens his life!" In society, at small festivities, in visits, with the unwearying monotony of the province, the discourse always returned upon the subject of the two lovers. Carlo and Maria bore with dignity the burden of their popularity.

Finally, after I don't know how many years—four or five, it seems to me—of this continual struggle, of daily weeping, of long, long love maintained alive by dissensions, the aspect of things changed. There was a worthy person—there still are such—who with many efforts of eloquence persuaded the parents that by the lawsuits they were losing property, and much of it, as witness the two advocates who had grown rich at the expense of their clients; that those two young people were pining and would go into a decline because of that thwarted love; the houses were side by side and the estates contiguous; Christ forgave and they must forgive, if they wished to find forgiveness. He said so much and so many other persons, moved by the example, interposed, that the questions came to a compromise which had, as its first chapter, the marriage of Carlo and Maria.

Here, surely, every one will suppose that the young people were greatly consoled, and will suppose truly—but my obligation as a sincere story teller constrains me to say that in their first free colloquy reigned a great embarrassment. They were accustomed to see each other at a distance, by stealth; to speak from a first floor window down to the street, in the darkness, disguising or smothering their voices; they found themselves quite different, perhaps a little ridiculous; they had no subjects of conversation, they were often silent, hastening in their thoughts the hour when they should quit each other. There were no more imprecations and tears to be mingled with the ink; they no longer wrote to each other.

Everything was free, smooth, easy for their affection; they were not obliged to think of subterfuges by which to evade the vigilance of their elders; they took no more pleasure in murmuring a few words in secret; they made no more daring projects for the future. They would be married prosaically, without obstacles, like so many other silly couples. The townsfolk no longer took thought of them; the wonder and the comments on the marriage once over, Carlo and Maria no longer awoke attention; were no longer talked about; their behavior was noted no more; they ceased to be pointed out as an example of fidelity. Now all eyes were fixed upon the wife of the pretor, who was accused of too great partiality for the vice attorney—a serious piece of business.

The two lovers felt themselves forsaken; a great coolness arose between them. Carlo found that the virtues of his fiancee, those virtues which shone in her letters, were dimmed by the atmosphere of home; Maria frequently thought that Carlo was rather commonplace in his tastes, and that to end with a stupid marriage, so tempestuous a love was unworthy of a reader of Mastriani. A few lively remarks passed between them in regard to "illusions contradicted by the reality," about "mirages," "optical delusions" and similar pin pricks; a quarrel ensued, then two, then they became a daily occurrence. One evening Maria said with an irritated tone:

"Carlo, let us leave it off."

"Let us," he replied without hesitation.

And the next day he set off on a journey for the improvement of his mind. Maria went to Naples, to the house of a cousin, to fish for a heroic husband. The families had a new falling out; Maria's father had an opening made for a window which overlooked his neighbor's courtyard; the latter, in order to annoy him, built a dovecote of which the doves ran about everywhere; immediately there was a summons, a second, a third, the lawsuits began again, and this time, the advocates said, smiling, without hope of any compromise.—Translated from the Italian of E. Cavazza for Short Stories.

Agreed with His Papa.

One day when about to undergo corporal punishment for one of his misdemeanors, a small boy pleaded in arrest of judgment that he had heard papa say that he was against all violence, and the proper way to settle all disputes was by ar-ar-bitration!—London Truth.

The earliest traces of algebraic knowledge are found in Egypt. Ahmes, who lived in 1400 B. C., dealt with geometric and algebraic problems in a papyrus manuscript.

DREARY MOLOKAI

The Leper Settlement as Seen by an American Physician.

WORK OF CHRISTIAN CHURCHES.

A Village Filled with Inhabitants whose Lives have lost all Hope of Earthly Happiness.

Dr. Leonard Freeman, a prominent physician of Cincinnati, has returned from a tour of the Sandwich Islands, where after much trouble he secured the privilege of visiting the celebrated leper colony on the island of Molokai. Of the island he says:

It contains about 5,000 acres. It is surrounded on three sides by the Pacific ocean, and guarded on the fourth by a tremendous precipice, which cuts it off from the rest of the world like a gloomy wall. There are about 1,100 lepers in the colony, and it is true of this spot if it is of any other that "Ye who enter here leave hope beyond." Even the ground itself looks as if it had leprosy, with its volcanic debris sticking through the thin soil.

We went at once to the little Methodist church, made of boards and painted white, where the Rev. Mr. Emerson, whom I had met on the steamer, was to deliver a sermon. The church was as plain as a church could be, with wooden benches and some pitifully small panes of stained glass inserted above the windows, in order to impart a religious air to at least a portion of the light which entered. Just outside the open door I could see the white surf pounding against the black rocks with a roar that sometimes threatened to drown the voice of the preacher.

They were all dark skinned natives except one white man who sat in a front seat, the picture of hopeless dejection. Mr. Emerson spoke earnestly in the Kanaka language, and his audience listened eagerly. After he had finished, he requested me to address the congregation, and I preached my first and perhaps last sermon. One of the lepers, with an obvious paucity of fingers, arose and thanked me. Among other things, he said he hoped I would live long and "never have leprosy"—as though leprosy to him involved every evil in the world, and if I escaped it I could not fail to be happy.

After the sermon we got some horses and rode about the settlements. The lepers live in white frame houses about the size of an ordinary room and divided into several apartments. They do not require much furniture, because they prefer squatting on a floor to sitting in a chair. They have horses, cats, dogs and other domestic animals, and some of them cultivate small gardens. When a Kanaka gets leprosy, he regards it as a dispensation of Providence, burys his hopes and ambitions and goes to Molokai to die. To be sure, the disease is only feebly contagious, but contagious it is, and the slovenly, unhealthy lives led by many natives are conducive to its spread.

Huddled together in small damp huts, existing on insufficient and improper food, eating with their dirty fingers from a single dish, smoking the same pipe, it is no wonder the Hawaiians have been decimated by leprosy and afflicted with other terrible diseases. One may live with lepers for many years, however, without contracting leprosy. It is said that a native woman of Honolulu sent three husbands to Molokai with the disease before she developed it herself. There are several other churches in the colony besides the Methodist, including a Catholic church and a Mormon church.

I met on the island a gentleman named Dutton, who had been an officer in the United States army and had lived for a time in Cincinnati. He was formerly wealthy and stood high in the social world. Five or six years ago he was converted to the Catholic faith, disposed of his fortune, gave up his social position and went to Molokai to devote the remainder of his life to the lepers. I found him a good looking and extremely intelligent man, about 45 years of age, with black hair and beard and a pleasing address. He lived in a 1-storied, 3-roomed cottage, surrounded by a high stone wall.

Every morning this good Samaritan puts on an old blue blouse and a pair of overalls and goes down to what he calls his "workshop," a small frame house with a veranda, around which are arranged a number of benches and some dishpans filled with warm water. Miserable, decrepit lepers come hobbling in until the benches are filled and standing room is at a premium. Mr. Dutton, with true religious courage and sympathy, bathes the sores in the pans of water and applies fresh salve and bandages. A Cincinnati lady has presented him with a large music box, and while he is attending to these poor people this music box plays waltzes by Strauss—a genuine piece of sarcasm. Mr. Dutton is nobly carrying out the work inaugurated by Father Damien, who lived some 16 years among the lepers and finally died a martyr to the disease, the horror of which he had endeavored so long to mitigate.

I remained in the leper colony two nights and nearly two days and was just as glad to get away from the place as I was to get into it. I never before realized how dreary a landscape could be in spite of beautiful scenery and perfect climate if suffering humanity formed the background. Although strictly speaking the people do not suffer much, a characteristic of the disease is the early destruction of sensation, so that a finger or even a leg might be hacked off without much discomfort. They never commit suicide. It would be easy to climb the precipice that guards their prison and jump off, but they do not do it. The truth is, they seem comparatively resigned and happy. There are so many of them that they do not lack society, and the worst cases appear to mingle freely with those in the earliest stages.

The sisters were just opening some Christmas boxes, filled with large, colored rubber balls, dolls and presents of various kinds, and I thought to myself, if the people in the outside world knew how much things were needed on Molokai, there would be not only a few pitiful little boxes to open, but whole steamer loads of them.

It was with a feeling of relief that I took my mackintosh under my arm, bade farewell to the kind hearted doctor and climbed the winding trail up the pali. I stood on the top and took a last view of the leper colony. There was the same little tongue of land far below, green with moist grass and fringed with lines of snowy breakers, rolling against black, volcanic rocks. There was the same multitude of cottages, shining white in the clouds. But the beauty of the spot, its sunlight, the same blue sky and fleecy watering place appearance, was gone. I knew what a dreary, festering ulcer of a hole it really was, and I felt a deep love and sympathy for the sisters of charity and the fathers and for Mr. Dutton and the good doctor who were devoting their lives and energies to the lepers in order that their living deaths might be a little less hard to bear.—Cincinnati Telegraph.

The Great Eastern was the largest ship ever built—680 feet long, 83 broad, 60 deep and 28,627 tons burden.

How Bees Are Trained to Carry Messages.

M. Teynac, the distinguished bee master of the Gironde, has turned this instinct to account in the carrying of messages between the houses of friends at a distance of two or two and a half miles and his own. His mode of operation is not a difficult one to follow. A small hive, well stocked with bees and food for them, is sent to the friend. At the end of a few days the bees have become accustomed to their new surroundings. They are then placed in a small shipping box, covered with wire gauze so as to allow of a supply of air, and sent back to their destination.

After their arrival they are set free in a room in which a little honey has been placed upon a table. A hungry bee immediately alights on the repast. At this moment the dispatch, a tiny strip, slit with a pair of scissors so as to form two flaps, is attached, the two flaps, which are covered with fish glue, being quickly and lightly applied to the bee held with pinchers. The glue must not touch either the head or wings of the insect, which as soon as it has had its fill of the honey, takes its flight and steers straight for the hive.

Before the entrance of each hive has been placed a small tin box, having apertures in front of just sufficient size to allow of the passage of the males or drones. The opposite side, which is entirely open, is applied exactly against the entrance of the hive, so that, in order to enter or make their exit, all the bees must pass through these apertures. The little messenger, hampered by the weight of the load on its back, exhausts itself in vain efforts to pass through in its turn, and is obliged to wait for some one to free it from the burden that prevents it from entering the hive.—Pittsburg Dispatch.

Stories of Life in Bowery Pawnshops.

The very manner in which the Bowery pawnshop dealers have shoveled the goods out for exhibition is impressive. It is usually their rule to heap the bottoms of the windows a foot or two deep with the less showy and bulkier relics of misfortune, and then to display the more peculiar and tempting goods on swinging shelves hung close to the panes. Here you see medals presented for heroism in saving life or for bravery in battle, swords given to men for taking part in actions that are household words, badges of bejeweled gold bearing the arms of petted militia regiments, all showing that their owners were once confident of fortune, and yet must have come to desperate passes. A medal of silver to the best scholar in a great sectarian school, one of gold to the champion clog dancer of Australia, a golden headed malacca cane won by — —, the most popular police officer in —, these call to the mind happy scenes that no one dreamed would have such forlorn sequences.

But what of the scores of opera glasses and bracelets engraved with such mottos as "To Laura on Christmas," or "Isabel," or "With J. M. F.'s love to Sadie?" Rings, bracelets, breastpins, jewels especially devised, and curios which no one would part with except from stern necessity are in the heaps and on the shelves—literally in burden by the ton when you take them all together; and yet every article in the mass carries its sermon of happiness despoiled, of security that was only fancied, of vanity that toppled, or of applause that beckoned anguish.—Julian Ralph in Century.

Spoiled Children.

Spoiled children are not the product of effete civilization. They have always existed, literally since the beginning of our race, for the first child was Cain, and in the light of subsequent career we cannot doubt that Eve allowed the wonderful little creature his own way in everything. Original sin was then so new, so fresh, that the baby had it in its undiluted potency, and the young mother, most hapless of women, never had a mother of her own to guide and instruct her.

Other instances of spoiled children could be easily cited from the Scripture records—Jacob, his mother's darling, and Absalom, the pride of David's heart, coming at once to mind—but it is not necessary to turn to the past, we have the species always with us; perhaps in our own homes may be found choice, well developed specimens.—Harper's Bazar.

A Career for the Young Man of Means.

If the American young man who loves his work for his work's sake, and need not get his bread by it, should elect to take a hand in the government of cities, the result might be comforting to that respectable body of citizens who are tired of being governed by men who are in the business primarily because they find it a source of income. Of course, when the man who loves his work for his work's sake comes into competition in municipal politics, as elsewhere, with the man who is working for his dinner, his coat must come off, metaphorically speaking, if he is to accomplish anything.

That is the beauty of it. It would be hard work, harder than yacht racing or even polo; less vainly amusing, and less cheaply glorious; and fitter, for those reasons, to satisfy the aspirations of an energetic and devoted spirit.—Scribner's.

LIFE IN HAWAII.

A Navy Officer from the Sandwich Islands Tells a few Stories.

DUSKY KINGS WHO ENJOYED LIFE.

Kamehameha III and His Strange Dislike of an American Lieutenant.—Rewarding a Traitor.

An officer of the navy who recently returned from a cruise of the Pacific squadron, and who spent many months cruising among the Sandwich Islands, relates an interesting story in connection with the convivial habits of some of the monarchs of that kingdom. He says that the navy department, at the request of the state department, has been specific in its instructions since the civil war that commanding officers and other officers of the navy should as far as possible cultivate the most friendly acquaintance with the Hawaiian people. He went on to say:

"There was a time when it was apparent that the people of those islands had not any desire to have friendly intercourse with American navy officers. That was when Lieutenant (later Rear Admiral) William Reynolds was naval storekeeper at Honolulu in 1857 and staid there two or three years. He had a manner that made him many friends and also many enemies, and King Kamehameha III was especially offensive toward the lieutenant. The king sought every opportunity to show his dislike of Lieutenant Reynolds.

"At that time the latter was on the 'reserved list' of the navy, and the king concluded that he was not obliged to show him the same amount of courtesy that would be due to him if he were on the active list. But in 1861 Lieutenant Reynolds was, upon his own application, put back on the active list, and after the close of the war, in 1866, he was sent to Honolulu in command of the sloop-of-war Lackawanna.

"The Lackawanna remained in Honolulu harbor for more than a year, and her long stay there excited the distrust of King Kamehameha, and he employed a person detailed on the Lackawanna to do a shrewd piece of detective work—to secure copies of the dispatches of Captain Reynolds to the navy department at Washington. The person employed for this clandestine work was enamored of one of the Hawaiian women of noble birth and considerable wealth, and Bill Ragsdale, a Kanaka and one of the smartest politicians in the kingdom and a man of great power and influence in the royal family, encouraged the lover in his desire to marry the young woman and promised him ultimate success if he should secure copies of the confidential correspondence between Captain Reynolds and the navy department.

"The correspondence was secured and given to Ragsdale, who then informed upon the young man who had played false to his commander, and instead of marrying the girl he was court martialed and sentenced to imprisonment on the notorious Dry Tortugas. Ragsdale afterward had to be sent to the island of Molokai, where all lepers are exiled and where he died a few years ago.

"The Lackawanna was succeeded by the sloop-of-war Mohongo, of which the late Rear Admiral Edward Simpson was commander, and the latter, by his diplomatic tact and keen judgment, soon won King Kamehameha over, and the officers of the Mohongo became very popular at court and received every attention and courtesy during the dozen months that the vessel was in Honolulu harbor. King Kamehameha was succeeded on the Hawaiian throne by his brother Lunalilo, popularly known as Whiskers Billy, because of his fondness for his beard, which was of luxurious growth. Lunalilo also had a fondness for that which would inebriate, but as there was a no license law—that is, so far as selling liquor to a native Hawaiian was concerned—he made it a practice to visit friendly warships to satisfy his appetite.

"Lunalilo lived only a short time. Kalakaua took Lunalilo's place on the throne, and he was a fair successor and succeeded pretty well in sustaining the reputation of his predecessor as an anti-prohibitionist. He also was fond of a good game of poker, and when simply Prince David he engaged in many an interesting game. Billy Emerson, the negro minstrel, had as one of his 'gags' on the stage in San Francisco that he once sat in a poker game with five kings. 'How's that?' said the middle man. 'Why, I held four and Dave was the other,' said Billy. This was a game in which it is said the minstrel held Kalakaua for a 'pot' amounting to $2,500.

"In 1874 Kalakaua visited this country, coming to San Francisco on the war vessel Benicia. Upon the arrival of the vessel at San Francisco, Lieutenant Commander W. H. Whiting, recently on duty at the navy yard, and who has been ordered to command the Alliance, now at Honolulu, was detailed to take charge of the royal party and escort it to San Francisco. A good round sum was provided for its entertainment by the state department, and the king and his party had a right royal time.

"You will no doubt recall the joke which the officers have had on Lieutenant William S. Cowles, who is now naval attache at the London legation, ever since the visit of the Queen Dowager Kapiolani to this country a few years ago. He had command of the junketing boat Dispatch when the queen was taken on a trip down the Potomac, and in his address of welcome on board he paid this extravagant eulogy to her, 'Most noble and beautiful queen, I ask your majesty's gracious permission to address you.' Inasmuch as Queen Kapiolani was the color of chocolate, the other officers who heard it thought it a little strong, but then the speech was entirely impromptu."—New York Tribune.

Druggist—I'm going to discharge that new clerk. He's too careless.

Friend—What has he done?

Druggist—This morning he sold a wild eyed woman a dose of poison and trusted her for the money.—Life.

When Not to Keep Books.

She decided that the only way to run a house economically was to keep a set of books, so she made all the necessary purchases, including a bottle of red ink, and started in.

It was a month later that her husband asked her how she was getting along.

"Splendidly," she replied.

"The system is a success, then?"

"Yes, indeed. Why, I'm sixty-eight dollars ahead already."

"Sixty-eight dollars!" he exclaimed. "Heavens! You'll be rich before long. Have you started a bank account?"

"No—o; not yet."

"What have you done with the money?"

"Oh, I haven't got the money, you know. That's only what the books show. But just thing of being sixty-eight dollars ahead."

"Um, yes. But I don't exactly see"——

"Why, don't the books show it?"

"Of course; but the money? What has become of that?"

"I don't exactly know," she said, doubtfully. "I've been thinking of that, and I think we must have been robbed. That's the only way I can explain. What do you think we had better do about it?"

He puffed his pipe in solemn silence for a moment and then suggested:

"We might stop keeping books. That's easier than complaining to the police."—Chicago Tribune.

The Jeweler's Best Day.

There are peculiarities about all branches of trade, but one of the most striking peculiarities is connected with the jewelry business. Those who are connected with the latter branch of commerce hail Monday morning with joy and gladness, for the business of that day is almost sure to be large and profitable, no matter what the season of the year.

For a great many years retail jewelers were at a loss to assign a reason for this. Finally the question was sprung at a convention of jewelers, and as a result a queer fact was made known. It seems that a large percentage of the marriage engagements are made Sunday night, and the happy young man can hardly wait until the jewelry stores open Monday morning, so anxious is he to purchase the golden circlet of love.

And then again, married persons generally talk over domestic affairs on Sunday evening, and papa is usually beguiled into handing over a check ample enough to buy the set of silver spoons or the silver sugar bowl and cream pitcher that mamma has set her heart upon.

And then again, persons who go to church on Sunday are very apt to see something worn by somebody else that strikes their fancy, and on Monday they go and buy it.—Philadelphia Press.

Pears Without Cores.

Writers often express surprise that there should be an orange without seeds, but this experience is met with in almost all kinds of fruits. There is an apple called Mennechor's Nocore, so named expressly from the total absence of seeds. An illustration of this is in the Rutter pear; it is extremely rare that seed is found in it, although they are occasionally there. The common currant, Zante currant of the stores, is simply a grape which does not produce seeds. A singular feature about these varieties is that they seem to increase in productiveness by reason of perfection of the seed. The Rutter pear is especially a good bearer; there seems almost as many pears as leaves on the tree. Unfortunately, if allowed all to come to perfection, the fruit is of inferior quality, but when properly thinned out the flavor is delicious.—Mehan's Monthly.

When Chinese Won't Talk.

Chinese gold miners in California do not talk at their work, as they consider it unlucky, and for the same reason they do not like to be addressed by visitors. At Rock Springs, Wyo., the Chinese miners in the coal mines considered it very unlucky to speak before breakfast. They would not move any of the dishes on the breakfast table for fear of bad luck, but let the dishes remain where they are placed. A Chinese man who visited them and passed a night at one of their cabins says that when he commenced to talk in the morning on getting up no one answered him, and it was afterward explained they were afraid of bringing bad luck. The work in these mines is very dangerous and accidents are of frequent occurrence.—Philadelphia Ledger.

Diamonds in Carbons.

Arc light carbons frequently possess characteristics of the diamond, to which in composition they strongly approximate. The pieces of unburned carbon which are thrown away are often found to contain very hard, sharp ends which will cut glass, and the mischievous street arabs have discovered this fact and use the pieces for defacing windows and doing other destructive work.—Electrical Review.

Clinched.

Mabel—Yes. I give you my hand with my heart in it.

Jack—You cannot do that.

Mabel—Why not?

Jack—Your hand is too daintily small to hold such a large heart.

That made the engagement irrevocable.—Harper's Bazar.

ANNEXATION.

Great Advantages to This Country of Union with Canada.

VIEWED AS A QUESTION OF TRADE

It would Bring Millions of Dollars to American Manufacturers. Canadian Imports.

The total value of the imports into Canada and Newfoundland for the fiscal year ending June 30, 1892, was in round numbers $135,000,000, or $27 per capita, while the total value of the imports into the United States was $827,000,000, or only $12.60 per capita. We are more wealthy than our good Canadian cousins and therefore purchase more luxuries, expensive goods and works of art per capita than they do which are not produced upon this continent. The same is true of some of the necessaries of life—viz, of sugar, of which we are consuming at present 25 pounds more per capita per annum than the Canadians do.

It may be safely estimated that with continental union consummated—or, in other words, the political union of the United States and British America—the people who live north of the existing boundary line between the two great countries will not import more foreign goods per capita than we do in this country at the present time—that is, $12.60 per capita, or a total of $63,000,000. Under the present tariff of Canada and Newfoundland we supplied $54,000,000 worth of the total imports of the two countries in 1892. With absolute free trade between British North America and the United States and with practically the present tariff of this country as against all other nations extended to Canada and Newfoundland we should be better able than we are now to furnish all we supply.

We now sell to Canada $10.50 per capita of her total imports. If with continental union her total per capita imports are reduced to $12.60, the same as in the United States, it will leave only $2.10 per capita to be supplied by other nations, or a total of $10,500,000, which, deducted from $135,000,000, her total imports for 1892, leaves $124,500,000 to be furnished by this country. Of this we now supply $54,000,000 worth, which, deducted from $124,500,000, leaves $70,500,000 of new trade to come to us through continental union at our very doors upon our own continent with an intelligent, high minded, honorable people of our own race, free from the risks connected with most foreign trade—a trade that will be ours for all time to come—that cannot be taken from us by any other power in a market all parts of which can be reached by railway by every merchant and manufacturer in the United States within 10 days and collections made as cheaply and as promptly as within our present territory—a trade which can be indefinitely, rapidly and permanently increased under the laws, legislation and flag of the republic of the United States.

Dare any one estimate the effect upon immigration from Great Britain and Ireland and northern Europe of the opening up to settlement of half a continent, rich beyond description in natural resources, in a most healthful and invigorating climate, containing 200,000,000 acres of public land open for settlement, upon which wheat of the best quality can be profitably grown, and a like amount suitable for grass and grazing, under the American flag, which has already drawn 12,000,000 of immigrants from Europe and would be, with continental union consummated, unquestionably the most powerful, wealthy, prosperous and peaceful nation in the world—a nation in which the per capita value of production and the earnings of labor are the greatest and are rapidly increasing, while the cost of the necessaries and comforts of life is the cheapest and is steadily decreasing—a nation lavish in the distribution of the good things of this life, but most economical in the expenditure of human labor in production?

Where else can we at one stroke add $70,000,000 to our export trade under such favorable conditions, with a certainty of rapid and permanent extension, and at the same time add enormously to the power, prestige, influence, resources, honor, glory and safety of the republic and the peace of the world?

In 1892 the value of imports of iron and steel and manufactures thereof into British North America was $15,000,000, or $3 per capita. The imports of manufactured cotton goods for the same year was $5,000,000, or $1 per capita, and of manufactured woolens $10,000,000, or $2 per capita. Total for the three lines of manufactured goods, $30,000,000, or $6 per capita.

The total value of the imports into the United States for the same year of the same three lines of manufactured articles was $94,000,000, or $1.43 per capita. With continental union consummated we should transfer a trade in these three lines of manufactures alone equal to the difference between $6 per capita and $1.43 for 5,000,000 of people, or $22,750,000 less than the value of our present exports to Canada of these goods. Steel rails are now admitted free of duty into British North America and are supplied chiefly by England. With continental union we should transfer that trade to our own steel rail mills, and as 8,000 miles of railway have been constructed in Canada since 1880, and renewals are required for 15,000 miles now in operation, the Canadian market is well worthy of consideration by our steel rail manufacturers.

To the manufacturers of mill, factory and mining machinery and machinery for the construction of public works continental union would open an immense market, as well as to those engaged in the production of agricultural machinery and implements.

Every increase in our consuming power enables us to make more advantageous commercial treaties with other nations for the admission of our surplus products into their markets. The consummation of continental union assures an enormous development of the internal commerce of the continent under the American flag. Every merchant, manufacturer, carrier by rail or water, artisan, railway builder, ship owner and capitalist should give it active moral, political and financial support.—Francis Wayland Glen in New York Sun.

A Feast.

Wee Miss—We couldn't eat all the cake you gave me for my garden party.

Mother—You said you had invited 10.

Wee Miss—Yes, but eight of zem were dolls.—Good News.

A Fair Inference.

"Saturn must be the commercial traveler of the planetary system."

"What makes you think so?"

"He wears so many rings."—Detroit Tribune.

Why They Never Met.

Miss Pinkerly—You have never met my father, have you, Mr. Tutter?

Young Tutter—No, Miss Pinkerly; I have always seen him first.—Club.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 3 1893

The consolidation movement among trades unions is spreading in the East. A proposition to amalgamate the American Federation of Labor and the Knights of Labor is being discussed, and at the meeting of the latter body in November the matter will be acted on. Following this federation it is proposed to bring about a national affiliation between the Labor bodies and the Farmers' Alliance for political ends. Some of the leaders—among them President Gompers of the Federation of Labor—are against consolidation, while Powderly of the Knights of Labor and many leading union men favor it. Aside from the desire to centralize the power of labor organizations and do awaw with labor dissensions,, the consolidators have in view the abolition of the Pinkerton system and the extinction of the National Guard as a factor in the settlement of labor disputes. The workingmen of the country have learned the futility of the strike and the boycott, and have turned their attention to the ballot. It would seem that less time should have been necessary to teach them that the ballot was their best and most effective weapon. There is no abuse that legislation put into force will not remedy, and in this country, where the ballot is free and every facility is afforded for all men to legally gain their rights, there is no excuse for a system of force such as the strike and boycott belong to. Their use necessitates force from the opposite side, and in a physical "controversy" there can never be any reasonable doubt as to which class must prevail in the end. The adoption of politics as a means of settling labor disputes would be satisfactory to all parties and to the public in general, and as an educator of the masses in patriotism it would be valuable too. The unmistakable tendency toward the ballot in labor circles is for many reasons one of the most important movements in progress in this country.

It has been developed in the course of the trial of Evans for the Tovey murder, that the detectives and officers have resorted to the most outrageous means to extort a confession from the the prisoner. A constable testifies that he had slips printed to resemble the cuttings from newspapers giving false and misleading reports of the declarations of witnesses Evans depended upon to prove an alibi, and that whisky, opium and other drugs were administered to the unfortunate man to further weaken an intellect which was not bright at its best. They laid all sorts of snares to entrap him into admissions, and passed bogus letters in to him to lead him into making a confession upon which they could convict him of the horrible crime. If Evans has been made the victim of such shameful practices he is to be pitied, and the officers of the law who resorted to them ought to be pilloried.

Los Angeles comes to the front again in the weekly report of clearing house transactions in the principal cities of the United States. She is the only city in the whole list that shows an increase. With the single exception of a week ago, this city has maintained the unique position in these reports of an increase for the past ten weeks. A showing like this is certainly strong evidence of the sound financial condition and the healthy advance in busines activity of the commercial activity of Southern California. These reports have figured regularly in every newspaper in the United States; and have undoubtedly attracted wide attention to the financial stability of Los Angeles at a time when business affairs were in a case of chaos in all other American cities.

Eleven prominent women of Stromsburg, Neb., now are lying in the county jail, charged with assault. They attempted to reform the social ethics of the town by dragging five gay young girls to a grove and unmercifully beating them. Women have peculiar ideas of reform, and even cultivated women are wont to be misled by the notion that such drastic measures as corporal punishment can change the inclinations and natures of men and women. This is about as big a mistake as some statesmen make by passing sumptuary laws.

They had a train robbery in Russia a few days ago. and yet there are some people who declare that that country is not civilized,

WOMAN'S WORLD.

WOMEN MAY BE DELEGATES IN AN IMPORTANT CONVENTION.

A Beauty's Curious History—The Time to Fight Moths—The Royal Laundry—Crinoline In Paris—A Distinguished Frenchwoman—Timely Topics.

The event in the late session of the New York legislature of most importance to women was the passage of the bill providing for the convening of the constitutional convention in 1894. In all respects the securing of the clause in this measure which gives women seats in that body is the greatest triumph ever obtained in this state, and those of us who have so long urged it have every reason to rejoice in the success. The bill provides as follows:

The number of delegates to such convention shall be 175. One hundred and sixty-three of them shall be elected by senate districts and shall be known as district delegates. Each senate district shall be entitled to five district delegates. Fifteen delegates shall be elected for the state at large and shall be known as delegates at large.

The electors may elect as a delegate any male or female citizen of this state above the age of 21 years.

Never has so high an honor been paid to the women of any state (except Wyoming) as this. Never has there been such an opportunity to secure a swift and certain victory. It will be seen there are to be five delegates chosen in each senate district, and that women may be elected in this way, and that there are to be 15 delegates at large. Now, any elector can vote for any 15 he may choose—say five Democrats, five Republicans, three Prohibitionists and two women. He can pick out men and women for their merits or popularity, entirely irrespective of party, and vote for any 15 who are in nomination.

All over the state the women ought to be moving to secure the nomination of suitable women. Next summer we should nominate our own ticket of 15 delegates at large, composed of men who favor our cause, irrespective of party, and the leading women of our state. This great opportunity—the result of years of labor—should be used to the utmost, since if we can elect women delegates to the convention to revise the constitution our cause will be won.—New York Cor. Boston Woman's Journal.

A Beauty's Curious History.

"The last Countess of Rumford," otherwise known as Mrs. Abigail Buck, is said to have died at West Paris, Me., a few days ago. A reporter visited the aged countess a fortnight since, reaching by rail, sleigh and on foot the remote farmhouse where Mrs. Buck had lived for many years, carrying on her farm in the fullest sense by sheer hard work. Bossing the bulls, milking the cows, driving the horses, riding into town seated on a piece of board tucked over a "fore-ox," and every way a stout, eccentric and self reliant person. And yet she began life a petted daughter of an accomplished woman, who taught her Latin and Greek and three modern languages and made her a musician, and she was so beautiful that at 16, visiting Boston, men stood still in the streets to watch her out of sight.

Her parents when she was 20 opposed her marriage to the man she loved, and after brooding over this some time she one day informed them that while she had given up her lover she should now marry the first man who asked her. A young farmer, Jabez Buck, who had long admired Abigail Marshall (for that was her name), heard of her vow, proposed and was accepted, and the couple are said to have led a happy life—from which one infers that Jabez was a meek man. The old woman who has just died told the correspondent that he was one of nature's noblemen, but rather jealous, and on his deathbed made her promise never to marry again.

"Since he died," she said, "I have had 23 offers of marriage from good men, besides two half offers. By half offers I mean proposals from men who had wives living whom they purposed to divorce." The aged Mrs. Buck had a great quantity of valuable gowns, stuffs, laces, paintings, etc., and the correspondent heard of two sets of table service, one solid silver, the other solid gold, besides many jewels, in a safe deposit vault in "a neighboring city," that "have come from many sources to the last of a royal line." We forgot to say that Mrs. Buck was also supposed to have descended direct from Henry VIII, but that is a mere incident.—Exchange.

The Time to Drive Away Moths.

Moths begin to fly about in the spring, and as it is then they lay their eggs it is then they require most watching. The damage is not done by the moth, but by the grubs proceeding from the eggs which the moth lays in the spring. The great and most efficient remedy against these pests is cleanliness. Dust and dirt encourage them, and once they are fairly nested in it is a work of time and labor to get rid of them. Everything put away should be carefully examined, both to see that it is free from any trace of insect and also that it is scrupulously clean. Anything put away stained is all but sure to fall a victim to moth. Insecticide, moth paper, camphor, pepper, bitter apple, and even a tallow candle wrapped in brown paper are all well known and popular protectors, but they are almost unavailing unless care is taken in putting things away. These should be scrupulously looked over, then dusted with whatever remedy is adopted, folded up in old sheets and then, if to be put away for some time, done up in brown paper, the edges of which should be carefully gummed down to prevent the entrance of any pest.

Valuable furs are better sent to a furrier, who for a certain charge will take care of them for the summer months. Ordinary furs are better hung up in linen bags in a cupboard in use, and carefully looked at every week or so, beaten with a slight switch and hung out in the fresh air. Paper sprinkled with paraffin or turpentine can be pinned or otherwise fastened underneath chairs, sofas or mat-

RIDING PRETTY HARD.

An Old Wartime Engineer Tells About an Eventful Railway Journey.

Bivouacked around a campfire one evening were a party of officers busily engaged in roasting goobers in the ashes and washing them down with the contents of their canteens. "Never heard tell o' the time I got lost in the mountains with a engin', did ye?" asked a tall, lanky, good humored comrade, who strolled up and helped himself to a handful of the goobers.

Every man present expressed his bitter regret at never having had the opportunity of hearing the story.

"Waal," said the tall man, seating himself on an upturned bucket, "I mout's well tell ye, long's ther's time afore taps. I wur runnin an engin' fur the guv'ment doorin the war down in Ferginny. She wur an ol hookmotion Rogers an smart enuff to clim' a tree ef she'd 'a' got toe holt onto it.

"I had a nigger fireman as was afraid of his shadder, w'ich didn't prevent him goin to sleep at any minute, day or night, whilst he wur standin up lookin ahead, 'parently wide awake. But I wuz goin to tell ye about gettin lost. Ye see,'twas this way: They started us out one dark night over a branch that we didn't know, and we had to go to it blin. The track wur in turr'ble shape, an 'twould hev puzzled ye to say when we wuz on the rails an when we wuzn't. I should say we everidged 'bout half and half. We was plowin 'long 'bout so so, when all of a suddent I saw by the headlight thet we was a-goin into a tunnil.

"I giv Zeb a kick and hollered, 'Zeb, is ther' a tunnil on this line?'

"'Can't tell for shuah, boss,' said he; 'mighty cur'us doin's these days. 'Twasn't so 'fo' de wah.'

"'Waal, keep yer eye skinned fer snags,' I sung out, an as I wuz sort of sleepy myself I snoozed off an on, mostly on, I guess, fer a spell, till finally the old gal giv' a snort an stopped dead. We both on us waked up to wunst.

"'Twas so dark I couldn't see Zeb to kick him fer goin to sleep, but I cussed him fer lettin us hit a snag. 'Git down ther', ye coon, an see if we're on the rails,' sez I.

"He took the torch an clim'ed down an wallered roun awhile. Fust I knowed he wus back ag'in, his face white's a sheet.

"'Well, what's the matter now?' I asked him.

"'Fo' de Lo'd, boss,' he sez, 'we's in de tun'l yit, an dere ain't a rail in sight!'

"Jest ez I was gittin down to 'vestigate, long comes the conductor. 'What in thunder do you mean,' says he, 'by running this train six miles into a cave?'

"Shore enuff, those Johnnies had taken up the rails and turned 'em into that cave, and that ol hook motion kept on a goin with us till we struck the end of it. I 'member thinkin she was ridin pretty hard, but I s'posed she hed got off the ties onto the roadbed, which wasn't graded very well."—Kate Field's Washington.

Artificial Features.

Artificial noses are now made of aluminium, and they are so perfectly shaped, colored and adjusted as to defy detection. The aluminium is first covered with some light cloth—muslin generally—and is then painted, and the color of the skin is so closely adhered to that it is impossible to tell which is the false nose and which the true until you pull it. The materials formerly used for this purpose were vulcanite, wax, celluloid, wood and porcelain, but for many reasons aluminium is the superior of them all, it being lighter as well as stronger. Aluminium ears have become quite as fashionable as aluminium noses.

There are more of these false noses and ears on the street than one would suppose until one deliberately looks into the subject. Scores of people wear these deceptive noses and ears, and so artistically are they made that it is impossible to tell the false with the naked eye. I have said that the best way to tell a real nose from the false member is to give it a jerk. Yet I must admit that if one were to go about jerking the noses of friends or strangers just to detect the false noses life might be made decidedly unpleasant for that one.—Chicago Tribune.

Yankee Sententiousness Saving Salt.

In our opinion sententiousness is rarely effective without a considerable dash of humor. How much more telling Emerson's sententiousness was than that of most of his contemporaries (Goethe, for example, or Carlyle), just because Emerson was seldom sententious without a smile, while Carlyle was most sententious when he was least humorous. A Yankee, indeed, seldom gives advice without a little irony pointed to himself for giving it, but Germans and Englishmen are sententious in grim earnest and are very apt to be quite as self important as they are earnest. Very few of the so called wise sayings of Goethe and Carlyle are free from this fault of ponderosity.—London Spectator.

Steam Vessel First Used as a Transport.

There is a curious fact that may have been overlooked—that troops withdrawn from Canada upon the close of the American war of 1812-15 for the purpose of joining the army intended to crush Napoleon after his return from Elba were transported down the St. Lawrence by a Canadian steamer. This was probably the first occasion on which a steam vessel was used for purposes of military transport.—Toronto News.

A Sensible Prayer.

"And now, parson," said the editor, "will you ask a blessing before we dine?"

"Good Lord," said the parson, "have mercy upon this man and open his eyes that he may see and understand that greens are not greens without bacon, and that grace without grits is dead!"—Atlanta Constitution.

The Real Mother Goose.

"Mother Goose," who is probably more familiar to children than any other personage in story books, was a real person. Mrs. Goose, for that was her real name, lived with a family named Fleet who kept a little store in Pudding lane, Boston.—New York Sun.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893. A. C. McDONALD,

Justice of the Peace of said Township.

E. SPENCER, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of JOHN McFETRIDGE, deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a mare of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. TAYLOR.

Price $1.00 per bottle.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 58-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the county Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.

COURT NOTES.

Geo. M. Gill, Superior Judge.

FRIDAY, Oct. 27, 1893.

Lillie May Brooks vs. R. Fred Brooks—Decree of divorce granted awarding custody of minor children to Plaintiff.

TUESDAY, Oct 31, 1893.

Estate and guardianship of Hattie Vagt et al. minors.—Filed petition for authority to lease real estate. Filed order to show cause why lease of real estate should not be made.

WEDNESDAY Nov. 1, 1893.

Estate of John Blair, deceased—Filed final account.

Estate of J. B. Steward, deceased—Filed petition for order of sale of personal property.

The winds of yesterday had a strong wintry feeling.

J. W. Murphy got back last night from a trip down the valley.

Soiree to-morrow night at Mair's Hall. Everybody welcome.

Capt. E. A. Reddy has been appointed Postmaster at Darwin.

Ben. H. Yandell started for San Francisco on Tuesday's train.

Mr. and Mrs. D. Holland made a trip to Cerro Gordo during the week.

All persons desiring masks for the domino ball apply to Mr. J. Tucker.

S. P. McKnight C. E. has been busy surveying in this vicinity for the past week.

H. E. Wilkinson went north on yesterday's train on his way to San Francisco.

J. J. Stewart of Lone Pine came to Independence this morning, returning this afternoon.

It is reported that Archie Farrington has struck a big ledge of $500 gold ore in the Lodi mines.

Mrs. Fred Burkhardt of Lone Pine visited friends in the vicinity of Independence this week.

W. R. Johnson came up from Bishop on yesterday's train and will spend a few days in town.

The new school house at Lone Pine is completed and will be ready for occupation next Monday.

W. F. Matlack has been on the sick list for about a week, He was confined to his bed for several days but is now able to be around.

Wm. Arcularius came up from Los Angeles on Thursday's train. He expects to start back in a few days with his mule team.

The new weather boss at Keeler is a daisy. The threatened storm has cleared away and a more beautiful Autumn day could not be found in any country.

The Fall meeting of the Pacific Coast Blood Horse Association began at the Bay District track last Saturday. Some of the best eastern cracks are in attendance.

Mrs. C. W. Craig, accompanied by her sister, Mrs. Julia A. Lord of Portland, Maine, will arrive at Independence on today's train. Mrs. Lord will spend the winter visiting at Independence.

P. H. Mack Esq. will arrive home on today's train from an extended visit through Southern California. He visited Sacramento on his way home on business connected with the refunding of Inyo county's indebtedness.

Hon. P. Reddy is expected to arrive at Independence on Monday's train. He is counsel for the plaintiffs in the water suit of J. Baxter et al. vs. A. D. Gilbert et als. to be tried in the Superior Court next Tuesday.

A domino ball will be given at Mairs' Hall, Independence, on Thanksgiving night. Prizes will be given for gentleman and lady characters and every possible arrangement made to secure a good time. Supper at the Norman House.

Charles French of Pomona spent several days visiting the lower end of the Valley this week. He inspected the country in the neighborhood of Bishop last week and expressed himself as being very favorably impressed. Mr. French is closely connected with the building up of Pomona, and as a successful real estate dealer of many years experience his judgment should be excellent.

Will Not Be Removed.

Representative Caminetti has been hard at work lately in the interest of the people of this section by preventing the removal of the Land Office from Independence to Visalia. It required steady and persistent effort on the part of Mr. Caminetti to accomplish the end sought, but as that gentleman is tireless when he undertakes any measure the desired end was attained. The following telegrams to the various San Francisco papers are self-explanatory:

Chronicle, October 25th: Representative Caminetti to-day obtained leave of absence to enable him to get to California. He had the satisfaction also of getting through his resolution calling upon the Secretary of the Interior to separate the Visalia and Independence land districts in California which were consolidated some weeks ago by an order emanating from the office of the Commissioner of the General Land Office. When Caminetti tried to get the resolution through yesterday, under unanimous consent, objection was made by certain Eastern Democrats, who did not understand the situation and objected because the scheme of consolidation was thought to be in the line of economy. Caminetti explained that the two districts were located on two sides of a great mountain range, which was impassable for many months in the year, and that it would be a great hardship upon the hundreds affected to do business on the opposite side of the range during the greater part of the year. It was also stated that one of two districts still contained 11,000,000 acres of unappropriated public land and the other nearly an equal amount. If the consolidation of districts should be made Caminetti said it would be better to consolidate some other districts than the two mentioned. This argument had due weight, for the resolution was passed today without trouble.

Examiner, October 27th: Representative Caminetti called on Secretary Smith to-day and succeeded in getting him to promise that the Independence Land Office would not be consolidated with the Visalia office. The Secretary has simply withheld the order and has not rescinded it, and Caminetti will try to pass his bill requiring the Secretary to revoke his order.

Chronicle, October 27th: On the strength of the proceedings in the House concerning the consolidation of the Independence and Visalia land districts of California the Commissioner of the General Land Office has decided to withhold, for the time being at least, the order for their consolidation. Meanwhile Representative Caminetti will seek to press his resolution on the subject so as to ward off all danger of a renewal of the order.

Sheriff Gorman received a telegram last Monday morning stating that John Burt had broken jail the night before and escaped to parts unknown. Burt was held by Justice Dunlap last week to answer for the crime of murder. As the examination was not concluded until Saturday Constable Smale placed the accused in the branch jail at Bishop to wait until Monday's train. It is supposed that he had a confederate on the outside who made an opening in the jail walls through which Burt escaped. He is about 5 feet 10 or 11 inches in height; age between 30 and 32 years; dark complexion, black mustache; speaks English with strong German accent and speaks several languages.

It is reported here that James Largay was fatally injured at Cameron's Station, near Mojave, a few days ago. He was exercising a spirited pair of horses and the animals became frightened at a train and ran in front of the engine. Largay was picked up in a dying condition and taken to Los Angeles where he expired a few minutes after his arrival.

A. Schilling came down from Bishop last Monday and has spent the time since looking at land in the vicinity of Independence. Mr. Schilling represents a party of capitalists who wish to start a German-Swiss colony in California and is looking for a suitable location.

ORDER TO SHOW CAUSE WHY LEASE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate and Guardianship of Hattie Vagt, Lena Vagt and Jacob Vagt Minors.

Heinrich Glade, Guardian of the Person and Estate of Hattie Vagt, Lena Vagt and Jacob Vagt, minors, having filed his petition herein, duly verified, praying for an order authorizing him to lease certain real estate of said minors, for the reasons and on the grounds therein set forth, which said real estate is described as follows, to wit:

Lots Nos. 3 and 4 in the fractional North West quarter of Section No. 6 in Township No. 13 South, Range No. 35 East, M. D. M. containing 160 acres, all in Inyo County, State of California.

Wherefore it is hereby ordered that all persons interested appear before the Judge of said Superior Court on Saturday, the 18th day of November, 1893, at the Judge's Chambers in the Court House in the town of Independence, County of Inyo, State of California, at 10 o'clock a. m. of that day, then and there to show cause why the above described real estate should not be leased from the date thereof for the full period of 5 years, for the rental of $500 per annum, as stated in the petition of said Heinrich Glade, Guardian as aforesaid, now on file herein, to which for further particulars reference is hereby made. And it is further ordered that a copy of this order be published in the Inyo Independent, a newspaper published and printed in said Inyo County, for at least two weeks, said publication to be completed before the said 18th day of November, 1893.

GEO. M. GILL.
Judge of the Superior Court.

Dated October 31, 1893.

Lodge 221, F. & A. M.

Regular meetings of Lodge No. 221, F. & A. M., for the year 1893, will be held at the Lodge room at Independence as follows:

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent. will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent. will be added to the amount thereof; that all taxes may be paid at the time the first instalment as herein provided is due and payable.

J. S. GOFMAN,
Tax-Collector.

NOTICE TO BOND-HOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated the 6th day of October, 1891, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to cancel such bonds by the payment of the principal and interest accrued thereon.

Dated the 9th day of October, 1893.

D. J. HESSION,
Clerk of the Board of Supervisors of Inyo County, State of California.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of J. F. Beale, an Insolvent Debtor.

J. F. Beale, having filed in this Court his petition, schedule and inventory in Insolvency, from which it appears that he is an Insolvent Debtor, the said J. F. Beale is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby appointed a Receiver to take possession of all the estate, real and personal, of said J. F. Beale, Insolvent Debtor, except such as may be by law exempt from execution and of all his deeds, vouchers, books of account and papers, and to keep and to care for and dispose of the same until the appointment of an Assignee of his estate. All persons are forbidden to pay any debts to the said insolvent or to deliver any property belonging to such Insolvent, to him or to any person, firm, corporation or association for his use; and the said Debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered.

It is further ordered, that all the Creditors of said debtor be and appear before the Hon. Geo. M. Gill, Judge of the Superior Court of the County of Inyo, in open Court, at the Court-Room of said Court, in the County of Inyo, on the 11th day of November, 1893, at 11 o'clock a. m. of that day, to prove their debts and choose one or more Assignees of the estate of said Debtor.

It is further ordered, that the order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as said paper is published before the day set for the meeting of Creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 5th, 1893.
P. H. Mack, Attorney for Insolvent.

Notice of Commissioner's Sale Under Foreclosure.

W. J. HOSKINS vs. WILLIAM GREEN AND B. F. LEWIS.	Order of Sale and Decree of Foreclosure and Sale.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 19th day of October A. D. 1893, in the above entitled action, wherein W. J. Hoskins, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against William Gheen and B. F. Lewis defendants, on the 9th day of October, A. D. 1893, for the sum of Twelve Hundred and ninety-six and 38-100 dollars United States, Gold Coin, besides interest, costs and counsel fees making a total of $1,327.33 which said decree was on the 13th day of October, A. D. 1893, recorded in judgment book 1 of said Court, at page 116, I am commanded to sell all those certain lots pieces or parcels of land situate, lying and being in the County of Inyo, State of California, and bounded and described as follows:

The East half of the North East quarter, and the North half of the South East quarter of Section Two (2) in Township Eight (8) South Range Thirty-three (33) East, Mount Diablo Base and Meridian.

Also an undivided one fifth (1-5) interest in and to that certain water ditch commencing on the west side of Owens River, opposite R. W. Fords ranch, leading to Andrew Dell's slough and from thence to Gregg's ranch, as constructed by Andrew Dell, David Garland, James Moratly, Frank Holland and I. H. Gray.

Public notice is hereby given that on Saturday, the Eleventh day of November, A. D. 1893, at 2 o'clock p. m. of that day, in front of the Court House door of the County of Inyo, I will, in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the Nineteenth day of October, 1893.

JOHN ALEXANDER,
Commissioner.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Morton, deceased.

J. J. Morton, the Administrator of the Estate of John Morton, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the personal and real estate of said decedent, for the purposes therein set forth.—

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Tuesday the 14th day of November 1893, at 11 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the town of Independence, in the County of Inyo, State of California, to show cause why an order should not be granted to the said J. J. Morton, Administrator, to sell all of the real estate and personal property of said deceased.

And that a copy of this order be published at least once a week for four consecutive weeks in the INYO INDEPENDENT, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated Oct. 7th, 1893.
P. H. MACK, Attorney for the Administrator.

AT THE "BOTTOM NOTCH"

That's where you'll find our prices on NEW FALL CLOTHING. The styles in our "Ready-to-wear" Suits are as fetching as those of custom-made goods. Just as well cut, just as well made, just as well trimmed and will give you great service. Prices? Away under, if you consider value.

New Clothing.

$10 At this popular price you can have the pick of twenty-five or more styles in Men's New Sack Coats.

$14 To $25 gives you a wide range for choice in Men's Nobby Cutaway Frock Suits in many patterns of Scotch Cheviot.

$5 At this price you have a selection in Boys' Suits, ages 10 to 18, made of good, honest cassimere in sightly patterns.

Don't Blame the Cook

If a baking powder is not uniform in strength, so that the same quantity will always do the same work, no one can know how to use it, and uniformly good, light food cannot be produced with it.

All baking powders except Royal, because improperly compounded and made from inferior materials, lose their strength quickly when the can is opened for use. At subsequent bakings there will be noticed a falling off in strength. The food is heavy, and the flour, eggs and butter wasted.

It is always the case that the consumer suffers in pocket, if not in health, by accepting any substitute for the Royal Baking Powder. The Royal is the embodiment of all the excellence that it is possible to attain in an absolutely pure powder. It is always strictly reliable. It is not only more economical because of its greater strength, but will retain its full leavening power, which no other powder will, until used, and make more wholesome food.

A MOUNTAIN ROAD.

Stone roughened till the hoof that climbs it treads
Its steep stretch cautiously, it plunges through
Where thick leaf tangles muffle and subdue
The wild wood sounds, and spruces join their heads
And shut out dimly all the cloudless blue.

It dips and winds adown the hills, between
Where buckwheat fields breathe fragrance to the air,
Fine flowered, billowy, and snow white; where
Stone fences trail dark through the land's fresh green,
And farmsteads mark the slopes but here and there—

Good homes, where tins dry in the sun; and brave
The jealous tended dooryard posies blow;
A sawmill, idle while the stream runs low;
And its red dust is stirred but little save
For ox drawn load or hay cart rumbling slow.

Only the locusts' sleepy whir, and bells
On hillsides and in woods where cattle stray,
Hallowing all the sweet, long summer day;
A quietness wide and serene, that tells
The moiling, harassed world is far away.
—Emma A. Opper in Harper's Weekly.

A Remarkable Bishop.

In the Seventeenth century Bishop Wilson was sent to the Isle of Man—then containing a lawless and ignorant community—with such unlimited power over clergy and people that it is a wonder he succeeded in doing good rather than evil. A tyrant did he prove, but a loving one, and all Manxmen today bless the good bishop's name. In time of famine he threw open his own house to the needy and gave without stint, asking no man whether he were saint or sinner, but only if he hungered.

When his own means were gone he begged from England, though he was, as one historian declares, "a man who would not have held out his hat to save his own life."

He never desired preferment, but clung to his own thorny road with the zeal of one who has renounced material good for the love of the highest.

"See, my lords," said Queen Caroline one day, as he approached the crowd of churchmen who surrounded her, "there is a bishop who does not come for translation."

"No, please your majesty," said Wilson, "I will not leave my wife in her old age because she is poor."

His island was, indeed, a poor spot, but he had wedded it for life.—Youth's Companion.

Iron Used for Horses' Shoes.

It is reported that there are 1,945,000 horses within the limits of the United Kingdom and Channel islands. From this number at least one-twentieth must be deducted as not requiring to be shod—such as colts, fillies, horses at grass, etc.—this leaves 1,847,750 horses wearing shoes. According to the nature of their employment the periods which their shoes last vary—as also the weight of the shoes. The number of times horses are shod during the year ranges from six to nine, but the average may be taken at eight, which gives as a result 59,128,000 horseshoes used during the year.

This number of shoes, including the requisite number of nails, consumes 59,392 tons 424 pounds of iron, which at the rate of £7 10s. per ton for material and £2 10s. for labor—£10 in all—represents a sum of £593,922 expended annually in horseshoeing.—London Tit-Bits.

Judgment Day in Childish Dreams.

On the spirit of many a little innocent, in its waking night hours, is reflected a shadow, faint but awful, of the judgment day. Few deem how heavily on their comparatively sinless hearts weighs the burden of the sin of the world and of the wrath of God pursuing it. Though few we trust have passed through the experience of Wordsworth, who describes himself as quaking in his bed when four years old, "in sharp conflict of spirit" on the subject of divine permission of evil. "Nothing but faith," says the poet in his later years, "can keep you quiet and at peace with such awful problems pressing on you—faith that what you know not now you will know in God's good time." An echo of the conclusion come to by the Psalmist long before, "Be still, and know that I am God."—Argosy.

A Baby.

London Tit-Bits months ago offered a prize for the best definition of a baby. Out of hundreds the following was selected as the best:

A tiny feather from the wing of love, dropped into the sacred lap of motherhood.

RIDING PRETTY HARD.

An Old Wartime Engineer Tells About an Eventful Railway Journey.

Bivouacked around a campfire one evening were a party of officers busily engaged in roasting goobers in the ashes and washing them down with the contents of their canteens. "Never heard tell o' the time I got lost in the mountains with a engin', did ye?" asked a tall, lanky, good humored comrade, who strolled up and helped himself to a handful of the goobers.

Every man present expressed his bitter regret at never having had the opportunity of hearing the story.

"Waal," said the tall man, seating himself on an upturned bucket, "I mout's well tell ye, long's ther's time afore taps. I wur runnin an engin' fur the guv'ment doorin the war down in Ferginny. She wur an ol hookmotion Rogers an smart enuff to clim' a tree of she'd 'a' got toe holt onto it.

"I had a nigger fireman as was afraid of his shadder, wich didn't prevent him goin to sleep at any minute, day or night, whilst he wur standin up lookin ahead, 'parently wide awake. But I wuz goin to tell ye about gettin lost. Ye see, 'twas this way: They started us out one dark night over a branch that we didn't know, and we had to go to it blin. The track wur in turr'ble shape, an 'twould hev puzzled ye to say when we wuz on the rails an when we wuzn't. I should say we averdiged 'bout half and half. We was plowin 'long 'bout so so, when all of a suddent I saw by the headlight thet we was a-goin into a tunnil.

"I giv Zeb a kick and hollered, 'Zeb, is ther' a tunnil on this line?'

"'Can't tell for shuah, boss,' said he; 'mighty cur'us doin's these days. 'Twasn't so 'fo' de wah.'

"'Waal, keep yer eye skinned fer snags,' I sung out, an as I wuz sort of sleepy myself I snoozed off an on, mostly on, I guess, fer a spell, till finally the old gal giv' a snort an stopped dead. We both on us waked up to wunst.

"'Twas so dark I couldn't see Zeb to kick him for goin to sleep, but I cussed him fer lettin us hit a snag. 'Git down ther', ye coon, an see if we're on the rails,' sez I.

"He took the torch an clim'ed down an wallered roun awhile. Fust I knowed he wus back ag'in, his face white's a sheet.

"'Well, what's the matter now?' I asked him.

"'Fo' de Lo'd, boss,' he sez, 'we's in de tun'l yit, an dere ain't a rail in sight!'

"Jest ez I was gittin down to 'vestigate, long comes the conductor. 'What in thunder do you mean,' says he, 'by running this train six miles into a cave?'

"Shore enuff, those Johnnies had taken up the rails and turned 'em into that cave, and that ol hook motion kept on a goin with us till we struck the end of it. I 'member thinkin she was ridin pretty hard, but I s'posed she hed got off the ties onto the roadbed, which wasn't graded very well."—Kate Field's Washington.

Artificial Features.

Artificial noses are now made of aluminium, and they are so perfectly shaped, colored and adjusted as to defy detection. The aluminium is first covered with some light cloth—muslin generally—and is then painted, and the color of the skin is so closely adhered to that it is impossible to tell which is the false nose and which the true until you pull it. The materials formerly used for this purpose were vulcanite, wax, celluloid, wood and porcelain, but for many reasons aluminium is the superior of them all, it being lighter as well as stronger. Aluminium ears have become quite as fashionable as aluminium noses.

There are more of these false noses and ears on the street than one would suppose until one deliberately looks into the subject. Scores of people wear these deceptive noses and ears, and so artistically are they made that it is impossible to tell the false with the naked eye. I have said that the best way to tell a real nose from the false member is to give it a jerk. Yet I must admit that if one were to go about jerking the noses of friends or strangers just to detect the false noses life might be made decidedly unpleasant for that one.—Chicago Tribune.

Steam Vessel First Used as a Transport.

There is a curious fact that may have been overlooked—that troops withdrawn from Canada upon the close of the American war of 1812-15 for the purpose of joining the army intended to crush Napoleon after his return from Elba were transported down the St. Lawrence by a Canadian steamer. This was probably the first occasion on which a steam vessel was used for purposes of military transport.—Toronto News.

A Sensible Prayer.

"And now, parson," said the editor, "will you ask a blessing before we dine?"

"Good Lord," said the parson, "have mercy upon this man and open his eyes that he may see and understand that greens are not greens without bacon, and that grace without grits is dead!"

A WOMAN DURING THE MOVING.

Some of the Ludicrous Things She Is Likely to Do in That Trying Period.

A woman's idea of moving is to wear a pair of old shoes, her husband's old overcoat, a damaged skirt and a last year's old hat turned hind side before.

Thus formidably attired, with a pocketful of screws, nails and picture cords, and an old knife in one hand and a broom in the other, she is prepared to believe that something is about to be done. The first move she makes is at the front parlor carpet. She takes up two tacks in about fifteen minutes, puts them in a saucer and sets the saucer in the middle of the floor, where it will not be in the way. Then she goes into the hall to tell the moving men to be careful in bringing down the large rocking chair, as her mother gave it to her.

After that she darts into the kitchen, stops suddenly in the middle of the room and says, "Now, what is it I was going to do?" and then races up stairs with a great bustle on, suddenly remembering that a pair of vases were not packed away with the bedding. But they were packed away, and when she discovers the fact she comes back, saying that she has so much to do she doesn't really know what she is about.

Afterward she draws out the glassware to put it into a barrel, and after packing away a couple of tumblers and a salt cellar takes down her dresses and examines them with as much care as if she were going to a ball, and the carriage was already at the door. In the midst of this survey she suddenly thinks of something else and rushes off to attend to it, the knife in one hand, the broom in the other.

When the pier glass is taken down, she is there; when the sideboard is being lifted, she is in the exact way of the man who is going backward; when the carman gets up on the best chair to take down a picture frame, she is there to rebuke him.

She attends to everything. She makes her husband go outside and clean his shoes. She gets in the way when they are moving the sofa. She leaves the dustpan just where the carman's assistant can step on the handle, and have it turned with him at a most unfortunate time. She gets the broomstick entangled with her husband's legs, which trips him up.

She tries to lift a two bushel basket of crockery, and finding she cannot do it tells the carman she is not so strong as she used to be, and then contents herself with carrying down an old wooden chair, which has just been brought up stairs to be used in removing things from the walls and which has to be found and brought up again by some one else.

But it is loading where she makes herself conspicuous. She brings out a ten inch looking glass and wants it laid on the bottom of the cart, and she don't want anything else to go on until she can get her workbasket. She thinks the fender and bedroom set should ride together and is quite confident that if the piano is permitted to stand on the cart as it does it will never again be fit to be played.

She knows that that load isn't put on as it ought to be, and there is room for lots of things yet. She brings out a clock and some old gas pipe, and a pair of old boots covered with mildew, and a small basket of empty spice boxes, and an old gaiter, and the back of a worn out vest and wants them all put on the cart. She says there is plenty of room, and the things will come useful some time and they don't take up any room, and just as the vehicle is moving away she rushes after it with a coffeepot stuffed with debris, which she successfully introduces into the load, and then comes back in triumph.—London Tit-Bits.

Singing Cattle to Sleep.

It is interesting to watch trained men deal with great herds of cattle which you notice on the plains. Perhaps there is no animal so timid as the cow. You will see numbers of them huddle themselves together by a tree or some other object whenever there is thunder and lightning. If left to themselves at night, too, they will take fright at the least sound, if it were but the flying of a sparrow, that is, when they are not asleep.

What the cowboys have to do, then, every night is to collect them together and drive them into their pens. Then three of them, perhaps, will ride around the ring, each following the other, and all singing. They must sing or keep up some kind of noise, or otherwise the whole herd would go on a stampede, and perhaps it would take a ride of thirty miles to get them back. But while the singing goes on you will see first one and then the other lie down to sleep, all coming as close together as it is possible. The riders keep on till the last has followed the example of the others and then the cowboys are done with their day's labor.

When a stampede does take place the only remedy is for a rider to go ahead of the cattle. There would be no use in attempting to check it otherwise. Gradually, by turning this way and that, he gets the herd to make a circle, and when that is done the cattle will stand and can be led anywhere. But the singing seems to have as soporific an effect on the cattle as the speeches of certain politicians have upon an audience.—Interview in St. Louis Globe-Democrat.

A Little Reprobate.

A boy of five, after having been checked to no purpose by his mother for teasing her when she was busy, was thus addressed, "My dear little boy, if you loved mother you would try and please her by doing what you are told." Whereupon replied the boy, "Mother, I'm trying to please God; I can't please everybody."—London Truth.

HOW TO SEE THE COUNTRY.

The Choice of Seats on Different Railroads to Enjoy the Scenery.

There is a choice of seats in the cars of almost every railway, not on account of sun or shade, but for what is to be seen, unless the scenes along the route are familiar; then the shady side is to be chosen.

The Piedmont Air line runs through such a varied scenic country that it is difficult to choose; either side will do—it will take a round trip to see it all, especially on the Western North Carolina road to Asheville and the Warm Springs.

On the Queen and Crescent trains out of Cincinnati a seat on the left is best as far as High bridge; thence the scenery is for the most part on the right hand side of the cars to Chattanooga and around Lookout mountain, though the rear end of the train affords the only good view of the historic hills; thence southward the left side is the best.

On New York Central trains leaving New York the seats on the left side of the car are the ones best for scenery along the Hudson to Albany and also west of that city through the Mohawk valley.

On West Shore trains the very opposite seats are to be chosen; those on the right hand side afford the best views of the scenery.

On the Lehigh Valley road it is best to take a seat on the right as far as Mauch Chunk, on the left from there to Fairview, then on the right as far as Wilkesbarre—after that on the left.

On the Erie, going west, take a left hand seat as far as Port Jervis, and then on the right.

The bulk of the Baltimore and Ohio scenery is best enjoyed from the left windows from New York to Washington, also westward from the capital.

On the Pennsylvania railroad, from New York to Harrisburg, a seat on the left is best, thence to Altoona on the right, again on the left to Cresson and on the right to Pittsburg.

On the Iron Mountain route, south from St. Louis, a seat on the left side of the car will show the fine views of the Mississippi river. The great Iron mountain of Missouri is on the west side of the track.

The Chicago, Milwaukee and St. Paul runs through a beautiful lake region, to be seen from either side of cars, but beautiful Lake Pepin and the Mississippi are to be seen from the left windows of a west bound train.

In Mexico the tortuous winding of the railroads render it impossible to offer any suggestions, but a seat on the right side of a Mexican National train bound south is the best; certainly it is between Toluca and the City of Mexico, where the grandest views are.

On the Mexican Central the best general views are on the right (except at Zacatecas) as far as Tajo de Nochistongo; then the first view of the plain and city of Mexico and the volcanoes from the windows on the left.—Exchange.

Parliamentary Wages.

In Germany both houses receive about $2.50 per day. In Austria the pay is $5 a day. In Greece the senators get $100 per month and the deputies $50. In France members of each house receive the same—$5 per day. In Denmark the members of landsthing each receive about $3.75 a day. In Belgium each member of the chamber of representatives gets $85 a month. In Portugal the peers and commoners are paid the same sum, which is about $335 a year. In Spain the members of the cortes are not paid for their services, but enjoy many advantages and immunities.

In Switzerland the members in the national council get $2.50 per day, and the council of state, the lower house, $1.50. In Italy the senators and deputies are not paid at all, but they are allowed traveling expenses and certain other privileges. England is the only country where members of parliament are not only unpaid, but have no special rights or privileges whatever.—Boston Transcript.

Imperial Tea.

In the grand courtyard of the imperial palace at Peking are two very large tea bushes. These are incased in glass houses and are carefully guarded by attendants appointed for the purpose. For many years the only tea drank by the imperial family has been plucked from these bushes. One of these plants, by the way, died a few years ago. It is still zealously watched, though, and no one, under penalty of death, save those who guard them, may even touch one of the plants.—Interview in New York Herald.

The most curious animal in the world is the Ornithorynchus paradoxus of Australia. It is shaped like an otter, has fur like a beaver, is web footed like a swan, has a bill like a duck, a tail like a fox, is amphibious and lays eggs.

It is well to remember, for use in cases of illness where the burning thirst of the patient cannot be assuaged by cracked ice or water, that a teaspoonful of glycerin will afford prompt and comparatively long relief.

There are 58,000 Poles in the chief American cities—24,000 in Chicago, 10,000 in Milwaukee, 9,000 in Buffalo, 6,700 in New York, 2,000 in Cleveland, 2,700 in Pittsburg and 2,200 in Philadelphia.

HOW'S THIS!

We offer One Hundred Dollars reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c. per bottle. Sold by all Druggists.

His borrowing has caused a loss
To him as well as me;
For I have lost the money loaned,
And he his memory.

A PRACTICAL MAN.

Of all the practical men of whom America is justly proud no one holds a higher place than the late Cyrus W. Field. His son shows that he has inherited the shrewd common sense of the man who laid the Atlantic cable. He writes:

8 EAST 50TH STREET,
NEW YORK, May 8th, 1893.

Several times this Winter I have suffered from severe colds on my Lungs. Each time I have applied ALLCOCK'S POROUS PLASTERS, and in every instance I have been quickly relieved by applying one across my chest and one on my back. My friends, through my advice, have tried the experiment and also found it most successful. I feel that I can recommend them most highly to any one who may see fit to try them. CYRUS W. FIELD, Jr.

BRANDRETH'S PILLS are the best medicine known.

"What did you think of the play?" "Oh, it was just lovely. The heroine appeared in six different costumes in one act."

SWINGING AROUND THE CIRCLE

Of the diseases to which it is adapted with the best results, Hostetter's Stomach Bitters, a family medicine, comprehensive in its scope, has never been thrust upon public attention in the guise of a universal panacea for bodily ills. This claim, daily arrogated in the columns of the daily press by the proprietors of medicines far inferior to it as specifics, has in a thousand instances disgusted the public in advance by its absurdity, and the prospects of other remedies of superior qualities have been handicapped by the pretentions of their worthless predecessors. But the American people know, because they have verified the fact by the most trying tests, that the Bitters possesses the virtues of a real specific in cases of malarial and liver disorder, constipation, nervous, rheumatic, stomach and kidney trouble. What it does it does thoroughly, and mainly for this reason it is indorsed and recommended by hosts of respectable medical men.

A hypocondriac is a person who gives everybody else a pain all over when he has a pain in his little finger.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germe for Breakfast.

Use Enameline Stove Polish; no dust, no smell

VOLUMES COULD BE WRITTEN,

filled with the testimony of women who have been made well and strong by Dr. Pierce's Favorite Prescription.

It's a medicine that's made especially to build up women's strength and to cure women's ailments—an invigorating, restorative tonic, soothing cordial, and bracing nervine; purely vegetable, non-alcoholic, and perfectly harmless. For all the functional derangements, painful disorders, and chronic weaknesses that afflict womankind, the "Favorite Prescription" is the only *guaranteed* remedy.

It *must* have been the medicine for most women, or it couldn't be sold on any such terms.

Isn't it likely to be the medicine for *you?* Sold by druggists everywhere.

"August Flower"

I had been troubled five months with Dyspepsia. I had a fullness after eating, and a heavy load in the pit of my stomach. Sometimes a deathly sickness would overtake me. I was working for Thomas McHenry, Druggist, Allegheny City, Pa., in whose employ I had been for seven years. I used August Flower for two weeks. I was relieved of all trouble. I can now eat things I dared not touch before. I have gained twenty pounds since my recovery. J. D. Cox, Allegheny, Pa.

TWO MEN.

Two men toiled side by side from sun to sun,
And both were poor;
Both sat with children, when the day was done,
About their door.

One saw the beautiful in crimson cloud
And shining moon;
The other, with his head in sadness bowed,
Made night of noon.

One loved each tree and flower and singing bird
On mount or plain;
No music in the soul of one was stirred
By leaf or rain.

One saw the good in every fellow man,
And hoped the best;
The other marveled at his Master's plan,
And doubt confessed.

One, having heaven above and heaven below,
Was satisfied;
The other, discontented, lived in woe
And hopeless died.

—Boston Transcript.

SALLIE.

Tom Clarkson was not considered a great actor by any one. He was a reliable man—always gave an intelligent reading of any part he undertook, but never seemed to create in his audience that intensity of attention, that "creepy sensation up the back" which comes to one when listening to an actor of great talent or genius.

Tom was leading man at the old Holborn theater in London some fifteen years ago. That was before it was burned down and when it was devoted to the production of sensational melodramas. I think it was then under the management of Clarence Holt, but am not sure of this.

Tom played heroes. He was a fine looking, handsome fellow, and when he enacted the part of a Jack Tar, and just as the Villain (with a capital V please) was about to rush off with the sweet heroine, weighing a hundred and sixty pounds, after having instructed his band to carry off the treasure and murder the old "parients," Tom always was sure of a tremendous roar of applause from the gallery by rushing down the stage from some unexpected locality, shouting: "Never! Unhand the girl, ruffian! Never shall it be said that a British sailor deserted his ship or failed to rescue a pretty girl in distress!" Then he would go for the villain and beat him and his "dastardly crew" off the stage.

Tom Clarkson was a married man with one little daughter, a poor, delicate little thing of six years, who worshiped her father in a way simply rivaled by his own adoration. There could not be many more completely attached families than Tom Clarkson, his wife and little Sallie. It was positively beautiful to see them sometimes when at rehearsal Tom would bring little Sallie "to keep her out of harm's way," as he said, "while the wife is doing the marketing." It was a question which loved Sallie more, the father or the mother, and it was pretty to notice how the child endeavored to share her favors equally between them.

So sweet, too, were Sallie's ways and so amiable and loving was she, and so patient when all knew how she must suffer at being unable to romp and play like other children, for her mind was as bright as a star, that every member of the company down to the meanest super and smallest stage hand was in love with her and ready to go to the other end of London, or England for that matter, for the sake of "Mr. Clarkson's Sallie." "Our little Sallie" most of them called her, for she seemed to belong to them.

Two years ago, when in London, the story was told me by a prominent actor at the Adelphi, who had been a member of the Holborn at the time Clarkson was "in the lead."

"We were going to produce a new play that night," he said, "and Tom was in high feather, for he had a part which suited and pleased him and he thought his chance had come at last. Something else excited pleasurable feelings within his breast. He had obtained a couple of dress circle tickets, and his wife and our little Sallie were to be in front to see the first performance.

"Tom came down to the theater in great spirits. We all knew in a very short time what was the matter. He had all sorts of funnylike yarns to tell about Sallie and her excitement and delight at the idea of coming to see father act. He told us fellows in the dressing room how she had put her little arms around his neck and had insisted upon giving him the last kiss before starting him off to his work. 'That's for good luck, father; don't you wipe that off. I'm coming to see you tonight; mind, you make a big hit.' And Tom laughed with delight as he imitated the baby voice using the quaint theatrical slang expressions.

"The play was a highly sensational one, and Tom's big voice and fine figure had plenty of opportunity to make capital for themselves. This was always a source of great fun in the theater, for we knew Tom to be the most gentle hearted fellow that ever breathed. As the saying goes, he wouldn't have hurt a fly. Why, he was tender and kind as a woman, and a kinder nurse never lived. I was only playing 'walking on' parts at the time, but he had always a kind word, a gentle suggestion of advice for me, and I had been to his little home in Holloway several times. He was like a big elder brother to me. Little Sallie used to call me her sweetheart.

"Tom was dressed quickly that evening and down on the stage looking through the peephole to see his darlings arrive. It is not always so very easy to distinguish people in the front of the house from the stage, though, and when the first act was called Tom had not yet been able to find them. He knew they were there, though, and full of the feeling that he was acting for their delight he did his very best.

"I never saw him act so well before. The manager was heard to remark that he 'didn't believe it was in him.' We fellow actors knew all about it, though, and when the applause came at the end of the act, and Tom, nervous and excited, stepped before the curtain, he and we felt sure we could hear above all the noise the clapping of a tiny pair of hands in the dress circle, and a little baby voice saying: 'Look, mother! There's father! Isn't he beautiful! Oh I'm so happy!'

"By and by some of the rest of the company began looking through the peephole for Tom's wife and child, but no one could see them.

"Then as the play went on we noticed that Tom himself was getting anxious. He had not been able to find them either and he had begun to wonder why they were not there and what had become of them. Still hope had not left him. He felt sure that somewhere in the vast auditorium a pair of bright brown eyes were following his every movement and he did his very best, though with a somewhat heavy heart.

"He had a big change in dress to make before the fifth act, and as he had been on the stage up to the last moment of the fourth he had very little time to make it in. Therefore he did not get time to take a last peep at the auditorium. I think some kind of a presentiment must have filled his mind, for he seemed to have grown careless and did not act with the same spirit as heretofore. His thoughts seemed anywhere but on the stage, and every now and then we could hear him heave a great sobbing sigh.

"The audience, however, had grown lenient. Tom had caught their sympathies in the earlier acts, and anything he did was good enough now.

"The act was nearly over; Tom was in the middle of his last speech when we noticed a woman standing in the wing with a note in her hand. It was Mrs. Clarkson's servant girl.

"Almost hurrying through his words for Tom had caught sight of her, too, we came to the 'tag,' the last words of the play. They were soon spoken, and amid an outburst of applause the curtain came down. Scarcely waiting for the roller to thump upon the stage Tom rushed at the girl and tore the note from her hands.

"I saw it afterward—this is how it read:

"'Tom, dear Tom, our darling has fallen and hurt herself; come home quickly.'

"Without waiting to change his dress, without waiting to wash off the grease paint and mascaro, in his stage costume, wig and all, just as he was, just as he had made the first and biggest success of his life, he rushed from the stage, pushing aside every one who stood wondering in his way; with eyes staring like a madman's, all the terror and grief that was eating at his heart looking out from his face, he ran headlong down the staircase and passage to the stage door, crying: 'Get me a cab! For God's sake, a cab! Oh! my God! my darling! my darling! be quick! She may be dead!'

"Just as he reached the threshold something seemed to give way. He tripped and fell forward on his face, and a great gush of blood spurted from his mouth and nose.

"They picked him up so tenderly, those supers and stage hands standing round about, and carried him into the doorkeeper's room and sent for a doctor. But when the doctor came poor Tom Clarkson was dead.

"Well, no, that is not the whole of the story. The whole company subscribed, and the manager gave a benefit for Mrs. Clarkson, and a nice little sum was raised. We have never let her be in want, besides Tom had always been a thrifty man. But the most interesting part of this anticlimax to me is yet to come. Sallie did not die. We had good doctors for her, and she grew up straight and strong and tall, and if you will come to the Adelphi this evening you will see my little wife make her debut on the stage. We have been married eighteen months."—Tracy L. Robinson in New York Recorder.

The Question of Fare Paying.

Two ladies got into a Broadway car a day or two ago and both at once opened their purses. "I have the change," said one, and at the same moment the other, being nearer the conductor, dropped a coin into his outstretched hand. Whereupon the first woman, supposing she had been forestalled, put away her pocketbook. But the conductor came on and asked for her fare.

"Why," said her friend, seeing that the other supposed she was paid for, "I beg your pardon. I did not pay your fare, though I should have been pleased to do so. My long residence abroad has made me unmindful of our American habit of this little exchange of financial courtesies. You know in Europe everybody pays his own way and expects everybody else to do the same. Nobody thinks of franking you over there. I really believe it saves time and trouble."

"Yes," replied the other, "and money too. I have a great deal of company from out of town, and I don't know why they should, but most of them expect me to do all the fare paying. When we go about, two or three together for a few days, it is easy to use up an appreciable amount of change in car fares." A statement few will dispute. It is to be wished that this European practice might obtain here.—New York Times.

New Principles in Physics.

A Mr. Lewis, of this city, claims to have discovered some new principles in the laws of physics, and is prepared to demonstrate that there are errors in Newton's "Principia." It has long been considered an established fact that the pressure of the atmosphere could only raise a column of water in a vacuum about twenty-two feet, and in practice it has not been found possible to raise water quite that distance by means of a suction pump. Mr. Lewis claims that he can raise water fifty or sixty feet by means of a suction pump.

He has a large lot of mathematical calculations bearing on this matter, and is now studying up the rise and fall of the tides on this coast with a view of ascertaining what influence the attraction of the moon exerts upon the earth. He is preparing an account of his studies and discoveries to be sent to the Columbian exposition. If he can exhibit there a suction pump which will raise water fifty feet he will, it is safe to say, attract more attention than any other exhibitor at the exposition, not omitting Edison.—Portland Oregonian.

BLIND COMPOSER.

Fanny Crosby, Who Wrote the Hymn, "Safe in the Arms of Jesus."

DEPRIVED OF SIGHT IN HER YOUTH.

She has Done More Than any Other Person to Make Religion Attractive and Inspiring.

The woman who has written more Sunday school hymns than any other ten living writers has her home in this city. Her maiden name was Frances Jane Crosby, and she is always familiarly called Fanny Crosby, the name attached to some of her hymns. Few of the thousands who weekly sing the words she has written know that she is blind and has been so ever since she was six weeks old, through maltreatment of the eyes for some slight disease. She is now sixty-one years of age.

Visitors to the music publishing house that prints the majority of her hymns may see on certain days in the week a shrunken figure in a black dress and colored spectacles either entering, guided by some one who has brought her from her up town home, or feeling her way around among the desks and avenues of books, helped now and then by the employees of the place, who all like the little woman. A smile generally lights up her face, and she speaks in the voice of one who is seldom sad. A certain rocking chair in a back room is devoted to her use, and she comes down to occupy it several times a week. Probably no other house in existence has so regular a composer of one kind of writing hymns. She furnishes by contract a fixed number each week, some of which are at once used, some not. She is considered to have a marvelous faculty for knowing what will "sing," and does considerable revising of the hymns of others to make them suitable for music.

Miss Crosby's method of work is unique, even for a blind person. While composing, she always holds closely over her eyes a small opened copy of some book, "Golden Hymns" being her choice if that is available. When the piece is finished to her satisfaction she dictates it to some one who writes it out as "copy." Generally the music is composed after the stanzas are written, though sometimes she is required to make verses for tunes, new or well known. Another of her specialties is the composition of all the hymns and recitations required for annuals used by Sunday schools on Christmas, Easter, Children's Day and like occasions, and sometimes she performs this service for the celebration of any special date in a single church.

When fifteen years old Fanny Crosby was removed from her home to the Institution for the Blind, this city. She received so good an education in this school that she afterward taught there English grammar, rhetoric and Greek, Roman and American history for eleven years before her marriage. Her gift for rhyming showed itself early, and her first piece was composed at the age of eight. She says it has been the motto of her life and the secret of her cheerfulness:

Oh, what a happy soul I am,
Although I cannot see!
I am resolved that in this world
Contented I will be.
How many blessings I enjoy
That other people don't;
To weep or sigh because I'm blind,
I cannot nor I won't.

While a teacher she wrote words to many songs for George F. Root, the well known composer. Some of them became very popular and are favorites still, among them "Hazel Dell," "Rosalie, "The Prairie Flower," "Proud World, Goodby," "I'm Going Home," "Honeysuckle Glen" and "There's Music in the Air." The words for some successful cantatas, notably "The Flower Queen" and "The Pilgrim Fathers," were included in her work.

Miss Crosby was selected to read a poem in the senate chamber. She was the first woman to speak there in a public capacity.

HER LIFE WORK.

Her living, lasting work was begun in 1864, six years after her marriage with Alexander Van Allstyne, also from the Institution for the Blind. In that year, at the request of William B. Bradbury, the famous composer of sacred music, she began to write Sunday school hymns, and found her real life work. The first hymn she ever composed:

We are going, we are going
To a home beyond the skies.

Came into existence at the Ponton hotel, Franklin street, New York, on Feb. 5, 1864, and ever since its author has earned her living by writing hymns. In the twenty seven years since then she has composed nearly 3,000 hymns for Mr. Bradbury and the firm which were his successors. Beside these, she has done the same kind of work for many well known men, Philip Phillips among the rest.

The hymn by which she is most widely known, "Safe in the Arms of Jesus," was composed in 1868. It is her own favorite. In the same year she produced the well known one beginning:

Pass me not, O gentle Saviour,
Hear my humble cry.

Each succeeding year Miss Crosby has written hymns that have sung their way into many hearts, and have been translated into many tongues. Notable among them are "Rescue the Perishing," written in 1869; also "Jesus, Keep Me Near the Cross" and "Keep Thou My Way, O Lord," a piece composed to suit the music. It was used for several years as the prayer song at the Mayflower mission connected with Plymouth church, Brooklyn. In 1871 "The Bright Forever" was written. In 1873 "Close to Thee;" in 1874 "O Come to the Saviour," "Like the Sound of Many Waters," and "Saviour, More Than Life to Me;" in 1875 "I Am Thine, O Lord," "So Near to the Kingdom," and "O My Saviour, Hear Me."

There are many interesting incidents connected with some of Miss Crosby's hymns, and those which come to her knowledge are carefully treasured. She tells this story of how she came to write "All the Way My Saviour Leads Me:" "I was sitting in my room on a hot day in July thinking. Some one came in and gave me ten dollars. I didn't expect it. The gift awakened a train of thought, and I reflected that, step by step, God was leading me, and said, 'Praise God that I cannot see any more than I do!'"

"Do you really mean that?" her hearer asked, astonished. "Do you mean you are glad you cannot see?"

"Yes, I mean just that," the little woman said. "I wouldn't change if I could, for I feel this is best for me. Why, if I had not been blind I should never have had so good an education nor know so many beautiful things by heart. If I could see perhaps I would not be able to do the good I can now. When I'm going along the street, if I hear a man swearing I'm not afraid to go right up and speak to him. They listen to me always, because they do not like to treat me any other way. Then I should not have known music as I do now."

PURSUED BY THE TIDE.

An Exciting Race For Life Before an Approaching Tidal Wave.

At the little town of Granville, in Normandy, there are treacherous tides, which suddenly overwhelm the low shore. Two friends were one day absorbed in examining the rocks at some distance from the shore and in collecting the numerous marine plants which abound in their crevices when suddenly one of the pair called out: "Mercy on us! I forgot the tide, and here it comes."

Turning toward the shore they saw a stream of water running rapidly between them and the sand. They quickly descended the rocks, but before they could reach the ground "the sand was in stripes and the water in sheets." They then ran for the shore, but before they had proceeded far they were met by a fisher-girl, who called:

"The wave, the wave! It is coming! Turn and run for the rock or you are lost!"

They did turn and saw far out at sea a large wave rolling toward the shore. The girl led the way, and the two friends strained every nerve to keep pace with her. As they neared the rock the wave was beginning to roll in, and for the last 10 steps they were up to their knees in water, but they had reached the goal.

"Quick, quick!" cried the girl, pointing upward. "There is the passage to the cross at the top, but if the second wave comes we shall be too late!"

She scrambled on for a hundred yards until she came to a fissure in the rock 6 or 7 feet wide, along which the water was rushing like a mill sluice. With some difficulty they reached the upper rock.

There they rested for a moment, when another great wave rolled in, and the water ran along the little platform where they were sitting. They rose and mounted the rocky points, which are never quite covered with water, and clustered together for support.

In a few moments the suspense was over. The girl pointed to the shore, where they could see people waving their handkerchiefs and whence came the faint sound of a cheer.

"They think the tide has turned," said she, "and they are shouting to cheer us."

She was right. The tide had turned. Another wave rolled up and wet their feet, but when it passed the water had fallen.—"Artistic Travel."

A Whole Army at Prayer.

During one of the numerous wars waged by France two centuries ago a strange scene took place near Saluzzo, a disputed outpost, which well illustrates the religious spirit which often prevailed among the soldiers of earlier times.

The French approached the besiegers' lines, and both armies were arranged for a fight. The sun shone from a cloudless sky. Every detail on each array in the field was visible to the other, and both were beheld at once from the citadel.

There were three French marshals present, and it was Schomberg's turn to command. He drew up his 20,000 men in four lines, with skirmishers in front, and the regular cavalry were placed at stated intervals, ready to charge.

In this impressive order, and in absolute silence, the French advanced until nearly within cannon shot, when at a signal the mass halted and simultaneously knelt down to pray. Then followed the order to attack, which was silently and cheerfully obeyed.

The battle was not to be, however, for Mazami, amid a volley of musketry, suddenly appeared, rode at a gallop between the armies and staid the incipient fight by bringing acceptable terms of peace.—Youth's Companion.

A Delusion as to Infectious Diseases.

When one child catches a disease, many mothers think that the sooner the whole family takes it the better, so that the trouble may be over and done with. In proof that this delusion still exists, Dr. Thursfield of Shrewsbury, the medical officer of health, stated at a meeting of the Whitchurch guardians that in one case of scarlet fever the mother told him she had put four children to sleep in the same room, hoping they would all take the fever, so she might have the trouble "all at once," and she was evidently disappointed at the obstinacy of one child in not catching it.—London Tit-Bits.

Matthew Arnold's Criticism.

A woman who was Matthew Arnold's hostess for a day or two while he was here told at a recent luncheon that she served maple sirup with the hot cakes which were offered to him at breakfast on the first morning of his stay. He first declined the sirup, then reconsidered and poured some on his plate. He ate with seeming relish and passed the jug on to his daughter, with the remark, "Try this; it is not so nasty as it looks."—New York Times.

How Moccasins Are Made.

In some tribes the moccasin is made somewhat on the pattern of the so called seamless sock, being made of one piece sewed up the back, while in other tribes several pieces of skin or cloth are used, and a rawhide sole is fastened on to the upper of many colors.—Exchange.

DINED WITH HIM.

Jim Younger's Daring Joke on Detective Allan Pinkerton.

HIS GREAT CONTEMPT FOR OFFICERS

The Famous "Sleuth Hound of the Law" was Looking for Younger but Did Not Recognize Him.

Everybody remembers the great Northfield bank robbery which occurred at high noon on Sept. 7, 1876, and resulted in the capture and incarceration in the Minnesota state prison at Stillwater of the notorious Younger brothers. Although the final fatal exploit at Northfield is the principal performance which entitles the Youngers to fame, they were long notorious as members of the Jesse James gang. Border chroniclers connect them with many train, stage and bank robberies, but the brothers have steadfastly maintained that the affair at Northfield was the first robbery in which they participated.

Their final capture was due to the fact that Jim Younger was shot at Northfield, and his brothers Cole and Bob remained behind the other members of the gang to assist his flight. His condition so delayed their progress that they were finally surrounded and made prisoners, although Jesse James and the other members of the party escaped. The three brothers received life sentences, and Bob, the youngest, died in prison in September, 1889. The outlaws are considered model prisoners, and Cole acts as librarian, while Jim is postmaster of the institution. The latter is described as a pleasant featured, fair complexioned man, little above the medium height. He is 45 years old and seems as contented as a man can be whose liberty is restricted. He has the freedom of the prison even to the outer door of the warden's office. By special permission of the governor he is permitted to wear his heavy sandy mustache, which conceals an ugly scar on his upper lip made by a bullet.

Referring to detectives in a recent conversation with a reporter, Jim Younger said: "I saw Allan Pinkerton only once in my life, and that was at the Palace hotel in San Francisco, where I had the honor of eating supper with him and Yankee Bly, the great Louisville detective. One night early in May, 1876, I was walking down Market street in San Francisco when a lady touched me gently on the arm and said, 'Mr. Younger, I believe.' I replied that it was my misfortune to bear that name, and in a moment I recognized the lady as an old Missouri girl whom I had befriended years before, when she was little more than a child. She hadn't seen me for nine years, and during that time I had grown a full beard, changed my Missouri slouch hat for a silk 'tile' and got into the habit of wearing broadcloth clothes, yet that woman knew me at a glance.

"After talking about our old Missouri friends a few minutes she said, 'Do you know that Pinkerton is in town?' I replied that I did not. 'Well, he is,' said she. 'He is up at the Palace hotel, and Bly is with him.' Now, Allan Pinkerton had made his boast that if he ever saw Jim Younger he would know him. Bly had seen me five years before in Louisville and had come along with Pinkerton to take me in.

"I had a curiosity to see the two greatest detectives in America, and I wanted to show Pinkerton that he did not know Jim Younger. So I asked my friend if she would walk up to the Palace hotel with me. She was astonished at such a foolhardy proposal and begged of me not to think of doing such a thing. I was determined to see them and finally prevailed on her to go with me. We went to the hotel, and I registered and ordered supper for two.

"As good luck would have it, the head waiter led us to the very table where Pinkerton and Bly were. I sat down opposite Pinkerton and the lady opposite Bly. Did I eat a hearty supper? Well, no. My companion gave me some uneasiness. She was pale and nervous, thinking of course that I might be recognized and an attempt be made to take me. But I enjoyed that meal as much as any I ever ate in my life.

"I always had a profound contempt for detectives. They had come on from New York and Chicago in droves to capture us until we got so used to their ways that it was a positive enjoyment to have a few of them around. I had a worse opinion of detectives than ever after eating supper that night. The very man they had traveled across the continent to take had walked right into their arms. Of course they couldn't have taken me anyhow, and it was fortunate for them that they didn't know me. No, it wasn't detectives that brought us down at last. After dozens of detectives and hundreds of uniformed state militia had hunted us for weeks and finally gave up the chase a crowd of farmers with muskets and pitchforks got after us down near Madelia, Minn., and brought us here. We have served now over 20 convict years, and both Cole and I are getting to be old men. Do we expect to be pardoned? Well, of course we hope to be pardoned some day. No, we will never try to break jail. It would be an easy matter to get out of here, and we have had a good many chances, but we were hunted down once, and it would be an easier job to catch us again. If we ever walk out of here, it will be as free men.

"We are trying to live down our notoriety, but it's a pretty hard thing to do in one lifetime. The fellows that write this blood and thunder literature have been our worst enemies. No, there isn't more than a half dozen pages of truth about us in any book I ever saw—nothing but a lot of fairy stories got up to sell. Most of the books about us, you know, have me down as having been with Quantrell during the war. Now, I was barely 14 when the war broke out. I enlisted in the Confederate army and served as a spy. I carried dispatches from friends of the Confederacy in the north through the Union lines."

A Story of Daniel Drew.

When Sir Morton Peto visited this country with a large assortment of railroad schemes in his head, he gave a grand dinner at which old Dan'l Drew was present. When the company were in good humor, Sir Morton developed his plans in detail and did it very plausibly. Drew listened to the end, and then turning to the gentleman sitting next to him remarked, "We ain't goin to do none o' them ere things." That ended it.—New York Telegram.

A Very Bad Case.

Vokes—Gilleland is so stupid that many people think him wise.

Meekison—His case is even worse than that. He is so stupid that he thinks himself wise.—Life.

A Central Sun In the Universe.

Suppose that in the wide extent of the Atlantic ocean there was one individual diatom of a specially interesting character—I do not mean one species with its myriad individuals, but one solitary specimen of a particular microscopic organism, which happened to flourish somewhere or other in the north or south Atlantic ocean at some depth or other from the surface.

Suppose that absolutely nothing further was known as to the whereabouts of this individual object, it might, for anything we could tell, lie beneath a mighty ice floe in the arctic regions; it might be miles deep in the Caribbean sea; it might be basking on the surface in the equatorial regions; it might be tossed in the surf on the shores of St. Helena; it might be floating at the mouth of the Amazon; it might be off the Cape of Good Hope or amid the Antarctic icebergs.

Would any reasonable man who desired to obtain that unique and extraordinary specimen for his collection imagine that if he went down to the coast of Cornwall and lifted a single drop from the Atlantic he would have such inconceivably good fortune as to find in it this rare diatom of which but a single individual existed throughout the millions of cubic miles of water which compose that mighty ocean? Of course the mere statement of such a case is sufficient to show its absurdity. But the improbability that the ardent naturalist would secure the prize in the way I have described is not one whit greater than the improbability that even if there were a central sun it should lie within the domain of our scrutiny.—Sir Robert Ball in Fortnightly Review.

People Who Forget Umbrellas.

"Oh, that's nothing," said the clerk as he gathered up the abandoned umbrella; "we find them here every day."

It was in a railroad office, where people came and went every few minutes. And it was raining too.

"Now, you'd think," he continued to an amused gentleman, "that anybody who had sense enough to come in when it rains would have enough left to take their umbrella with them if they didn't want to go in, wouldn't you? But they haven't. There may be reason for a chap going away and leaving his cane on the counter, but I can't exactly place those who deliberately go out into the rain and leave a silk umbrella behind them. Yes, they come back sometimes—sometimes they don't. There must be something in the fact of buying railroad tickets. You see, they are not used to traveling. Buying a railroad ticket is an event to them. They show that by the questions they ask. They have their minds gorged with the important details of the proposed journey, the time the train is to start, the time it gets there, the connections, the checking of baggage and all that sort of thing, and they haven't room for umbrellas and canes and packages. It's the same on the cars."—New York Herald.

The First Sight of Gibraltar.

The first sight of Gibraltar is, I think, disappointing. It means so much, and so many lives have been given for it and so many great ships sunk by its batteries, and such great powers have warred for 1,200 years for its few miles of stone, that its black outline against the sky, with nothing to measure it with but the fading stars, is dwarfed and spoiled. It is only after the sun begins to turn the lights out, and you are able to compare it with the great ships at its base, and you see the battlements and the mouths of cannon and the clouds resting on its top, that you understand it. And then when the outline of the crouching lion that has faced all Europe for a hundred years comes into relief you remember it is, as they say, the lock to the Mediterranean, of which England holds the key.

And even while you feel this and are greedily following the course of each rampart and terrace with eyes that are tired of blank stretches of water some one points to a low line of mountains lying like blue clouds before the red sky of the sunrise, dim, forbidding and mysterious—and you know that it is Africa.—Richard Harding Davis in Harper's Weekly.

Spontini's Decorations.

Casparo Spontini regarded himself in the light of a demigod, and when inspirations crowded upon him he donned a wide, togalike gown of white silk with a border of gold and a fez of white silk embroidered in gold, from which a heavy tassel hung down. With great dignity he sat down before his desk, and if a grain of dust was visible on the paper on which he penned his music he rang the bell impatiently for his servant to remove the obstacle. Spontini owned so many medals and decorations that they could no longer be accommodated on his breast. At a grand musical reunion at Halle an old musician remarked to a comrade, "See how many decorations Spontini has, while Mozart has not one." Spontini, who overheard it, replied quickly, "Mozart, my dear friend, does not need them."—St. Louis Post-Dispatch.

"Lucky Pins" the Fad.

"Lucky pins" are the favorite little gifts of the hour, and several special patterns are used to signify good fortune to the wearer. The mysterious virtue of the horseshoe has long been recognized, and of late years the mistletoe sprig has been considered equally fortuitous, while, added to the merry thought, it acquires new virtues. This, with the "Campanello Margherita," which is the facsimile of an ancient gold bell found during the present excavations near Rome and presented to the queen of Italy, are the popular mascots of the day. The sides of the latter bear the inscription, "Toi Com, Veo Tet," of which this is the translation: "I (little bell) was made against fascination."—New York Tribune.

Reason For His Affection.

The Wife—Do you really love me more and more every day?

The Husband—Yes, darling, for you do not play the piano nearly as much as you used to.—Vogue.

LOST ILLUSIONS.

Iconoclasts Destroy Pretty Stories of Ancient History.

SOME FAMOUS MYTHS EXPLODED.

Legends of Great Heroes Proved to be Nothing but Yarns of Imaginative Writers.

It seems to be the purpose of certain writers to pull down Pocahontas from the pedestal on which she stands as the reputed savior of Captain John Smith when he was about to be put to death by order of her father, King Powhatan, and to convict Smith of tergiversation, if not downright mendacity. Mr. Henry Adams is the latest writer, in a book of essays, to make a thorough examination of the Pocahontas legend, which Bancroft, in his history of the United States, accepted as true. The starting point of Mr. Adams' critical review is "The True History of Virginia," written by Smith himself in 1608, in which he relates his exploration of the Chickahominy, the killing of two of his men by the Pamunkey Indians, his own subsequent capture, his being carried in triumph through a number of Indian towns, and his final delivery as a prisoner to King Powhatan, who received and treated him well and furnished him with guides, who took him back to Jamestown.

In this true story there is not a word about Pocahontas and her rescue of Smith from impending death. In Wingfield's "Discourse on Virginia," published in London a few weeks before the publication of Smith's True History, an account is given of Smith's journey up the Chickahominy on a voyage of exploration and in search of food for the starving colony of which Wingfield was then the president, but there is no mention of the Pocahontas incident. Accounts of the colony published in England in 1612 and 1615 are equally silent as to the fact of the heroic act of Pocahontas, which has since become historical.

It was not until the publication in 1824 of Smith's "General History," which was a collection of papers on Virginia by various hands, edited by John Smith, "late governor of Virginia," that the Pocahontas episode first appeared. The story of how Smith was condemned to death, how he was dragged to the sacrificial block, how he was thrown down and the executioners made ready to crush his skull, and how Pocahontas sprang forward, and, putting her head on the head of Smith, pleaded with Powhatan for his life, is not told by Smith himself in the general history, although it virtually confirms the truth of it by his tacit indorsement.

WHEN THE POCAHONTAS ROMANCE STARTED.

On many occasions, indeed, Smith had said that he owed his life to the Princess Pocahontas, and in his letter to the queen of James I he strongly recommended Pocahontas to the patronage of the court when she came to England as the wife of John Rolfe, on the ground of the signal service she had rendered him, but even then he entered into no details. The extraordinary thing about the matter is that in Smith's narrative of his capture on the headwaters of the Chickahominy, and of his subsequent adventures as a prisoner, he invariably speaks of having been well treated and says nothing of his rescue from death at a critical moment by the intervention of Pocahontas.

It was not until sixteen years later that this romantic incident in the annals of Virginia was made public with Smith's acquiescence and by another hand, and from that time passed into history. With some persons who read the essay of Mr. Adams the verdict will be that the story of the rescue of Smith by Pocahontas was a fraudulent interpolation. With others it will be the Scotch verdict of "not proved," implying doubt, but with the generality the ingrained belief in the truth of the story will remain unshaken.

The literary iconoclasts are so many in these latter days that doubt is being thrown on the truth of the existence, or the fate, or the sayings of quite a number of historical personages. They are raising at this time new statues in France to Joan of Arc, the heroic peasant girl of Domremy, who, after leading the troops to victory against the English, was taken prisoner, tried and condemned as a heretic and sorcerer, and was burned at the stake in the market place at Rouen. We are now told by more than one French writer that she was not burned, but pardoned and released, and that she married and became the mother of a family.

EXPLODED LEGENDS.

They have been celebrating, in Switzerland, the sixth centenary anniversary of the independence of that republic, and in the great parade of historical personages was William Tell and his son, having the mythical apple that Tell is alleged to have shot from the child's head with a crossbow in the market place of Altdorf. We now are assured that the story of Tell is a myth. That there was no Tell, that he did not shoot an apple on the head of his son by order of Gessler, the Austrian bailiff, and that Gessler was a good administrator and a merciful man.

The infamous Lucretia Borgia is declared by Roscoe, the English historian, and by Mr. Astor, of New York, to have been a good and much maligned woman. The famous Sappho did not throw herself from the Leucadian cliff for love of Phaon, nor did she live a lewd life, but married and lived respectably and respected, according to the German writer Welcker, who wrote a book to prove her innocence. Bishop Thirlwall and Lord Lytton both believed in the purity of her character.

The slaughter of the rear guard of the army of Charlemagne, immortalized in the Norman-French epic, "Chanson de Roland," was not the work of the Moors of Spain, as declared for centuries in song and story, but of the wild Gascons, who descended from their mountains and fell upon Roland and his knightly followers and men at arms and massacred them to the last man.

Washington did not cut down the young cherry tree with his little hatchet. Shakespeare's hunchback, Richard III, was a well proportioned man. Cambronne did not say at Waterloo, "The guards die, they never surrender," nor did the Duke of Wellington at the crisis of the battle turn to his English soldiers and say, "Up, guards, and at them!" Yet history records these things, and the legends will live in spite of all the destructive criticism.—Baltimore Sun.

The nautilus is a genuine sailor, having a membrane for a sail, a perfectly formed boat and a set of antennæ for paddles and rudder.

The man whose sympathies embrace the whole world generally spreads them out pretty thin.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 10 1893

The San Francisco Bulletin says: "Superintendent Daggett of the U. S. Mint in this city has received orders to resume the coinage of 412½ grain dollars. The Superintendents of the Mints at New Orleans and Philadelphia have received similar orders from Washington. The coinage of dollars has been light for some time, as there was no particular need for them. It is known that the revenue of the Government has been falling off of late, and it is feared that unless something is done to bring in money there will be a large deficit at the end of the fiscal year. The government has a great amount of silver bullion in its vaults, purchased at low figures. It is said the difference between the cost of this bullion and its coinage value is about $53,000,000. This represents profit to the government. It is proposed to put this profit into dollars by coining up enough of the bullion on hand to represent that sum. This will put new money into the treasury and eventually into circulation, and thus for a time tend to prevent the contraction to result from a cessation of silver purchase.

Attorney General Olney has issued instructions to the several district attorneys of the United States, and among the rest to District Attorney Denis of this district, and Garter of San Francisco, directing them to discontinue proceedings looking to deportation except in the case of Chinamen who have been convicted of felony. These last are to be deported. All others are to be released. The Chinese Minister has called at the State Department and assured Secretary Gresham that his government will use all its authority to induce the Chinese to register. It is said that the six companies will do likewise. We shall see what wee shall see.

The McCreary bill has passed the Senate with the amendments that gave it some force. The people of the Pacific Coast are in the mood of saying: "Small favors thankfully received, large ones accordin.'" Senator White refrained from offering any amendments to the measure for fear its passage would be jeopardized altogether. We shall have an opportunity of seeing whether the Chinese will spit a second time on the laws of this country. We assume of course that President Cleveland will sign the bill.

Powderly may be said to be the head of all the labor organization in this country. He has invited every labor organization in the United States to meet in conclave and to determine for themselves whether free silver coinage is in the interest of labor or against it. He will show what he knows on this occasion, and that it is in the interest of every laboring man in the country to record his vote unequivocally in favor of the free coinage of silver.

One of the leading questions now being discussed is the succession tax, designed to reach the great fortunes that exist in the country. Both the Democrats and the Republicans in Massachusetts have declared in favor of it. Some such law should certainly be devised. The great wealth centered in the hands of a few is a standing menace to the public good.

The humors of the law are beautifully shown in the proposed trial of Prendergast. The fellow murdered Mayor Harrison, he confessed having done it, and has expressed no regret for his crime. If anyone can give a good reason for not hanging the wretch at once, and giving him a trial at the Coroner's inquest, we should like to hear him.

It is stated in Washington that Minister Willis has been instructed to follow the general principle of non-interference, unless it may be necessary to take action to prevent foreign intervention. Should the policy imposed upon Minister Willis be permanently adopted as that of the United States we would consider the Hawaiian problem very happily solved.

England walking over the dead bodies of the natives to give the blessings of Christian civilization to South Africa is not a novel spectacle, but it is an impressive one. So long as the sphere of the missionary is expanded the British pulpit will thank God and take courage.

A Novel World's Fair Idea.

Is it worth while to offer a suggestion for the next vast assembly in Chicago—that of May, for example? Is it worth while to set the American people thinking about the difference between what appeals to the eye and what to the ear? If it be, let the value of the pageant be considered. Let us imagine a vast room, or a great space in the open air, with a dais, on which the colors should be effective and harmonious. Let there be standards and floral decorations in abundance, arranged by some artistic hand. When the few chief dignitaries have been received, let other representative people be brought forward in groups bearing emblems or symbols which indicate their claims to consideration. Let delegations of the various professions and arts, in their appropriate robes, uniforms or traditional dresses, be introduced.

Let the workmen in every craft—the workers in wood, iron, brick, stone, the architects, sculptors, painters, decorators, manufacturers, engineers, carriers—all who have been concerned in making the exposition a success—send their representatives to participate in the opening ceremony. A simple act, the bestowal of medals, wreaths, flags, would give point to the assembly. A sentence from the mouth of some high official, a collect and a doxology would express all that language need say on such an occasion.—Professor D. C. Gilman in Century.

Electric Heating.

Electricity generated for heating or for any other purpose must be produced at the cost of the expenditure of some other form of energy, such as the burning of coal or the force of falling water. As the latter form of power is hardly available for use in New York, it follows that if electric heating is to become a commercial phase of life in that city, current will be supplied to consumers from central stations in which coal is burned under the boilers, precisely similar to existing plants for the supply of light and power. The conversion and transmission of heat by this process is not economical, and current from coal burning stations in sufficient quantities for heating could only be used by the wealthy, to whom its convenience and cleanliness would commend itself.

It is apparent, however, that the "coal barons" would have nearly as much to say about the supply of fuel to such stations as to individual consumers at present, although it is probable that the mere cost of coal and labor would be proportionately reduced by the use of cheaper grades of fuel and by centralization. Doubtless electric heating has a great future, but at present it seems to be principally available in localities where water power can be utilized to the prime movers.—Chicago Western Electrician.

The Ratemaking Power.

This is what Aldace F. Walker, chairman of the joint committee of the Trunk Line and Central Traffic associations, says about railroad rates in The Railway Age and Northwestern Railroader: "The fact is—and it is so often overlooked that it must be stated strongly—the ratemaking power of a railway company is its highest corporate function. It is a charter power. Its control rests ultimately in the state. In acts of incorporation this power is universally conferred upon the boards of directors—the highest seat of corporate authority. It should have been treated with seriousness and as representing the most important duty of the several boards. But instead of this our country has been treated to a carnival of rates—rates—rates. Hundreds of thousands of tariffs have been filed in Washington during the last five years. The directors of every corporation have practically abdicated this most important duty and have left it in the hands of subordinates, who have patiently developed a most ingenious confusion through which they alone are competent to pick their way."

The Color of the Waistcoat.

Life learns from private sources that when a gentleman goes to an entertainment to which he has received an engraved invitation he should wear a white waistcoat. If the invitation is written, he simply wears the usual black waistcoat. It is perhaps unnecessary to inform our readers that the man who ignores this rule is no gentleman. Shall we hardly like to advise a hostess to eject from her house every man whose waistcoat is not in perfect harmony with his invitation.

It is not to be expected, however, that his welcome will be as warm as if his waistcoat were what it ought to be. Should he be, for instance, a distinguished author, a high church dignitary or an eminent scientist, the hostess might allow him to sit in the kitchen rather than have him ejected from the premises.—Life.

A Lake That Cannot Freeze.

In the vicinity of Chestertown there is a picturesque lake which, because of the fact that it has never been known to be ruffled or disturbed by the most violent storms, is called Still pond. This pond has never been known to have even a skim of ice on its surface, and during the recent intense cold weather was not frozen, but was a favorite resort for waterfowl.—Cor. Baltimore Sun.

Steam and Electricity In a Tug-of-war.

At the T. H. E. works in West Lynn a few days ago a locomotive was coupled to a mammoth electric motor, and power was applied to them in opposite directions. Neither one gained a particle for quite a while, but finally with the aid of sand thrown on the track the locomotive came off victorious.—Boston Record.

A pistol ball was recently removed from the right thigh of a man which had been there since 1864. The ball, it is said, had gravitated about a foot and a half through the flesh in the last 29 years.

The consul of the Argentine Republic at Bangor, Me., was called upon recently for the first time in 20 years to affix his seal and signature to a document.

Notice of Commissioner's Sale Under Foreclosure.

W. J. HOSKINS vs. WILLIAM GREEN AND B. F. LEWIS. } Order of Sale and Decree of Foreclosure and Sale.

UNDER AND BY VIRTUE OF AN ORDER of sale and decree of foreclosure and sale issued out of the Superior Court of the county of Inyo, of the State of California, on the 19th day of October, A. D. 1893, in the above entitled action, wherein W. J. Hoskins, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against William Green and B. F. Lewis defendants, on the 9th day of October, A. D. 1893, for the sum of Twelve Hundred and ninety-six and 58-100 dollars United States Gold Coin, besides interest, costs and accruing costs, not to exceed $1 2 33, which said decree was on the 14th day of October, A. D. 1893, recorded in judgment book 1 of said Court, at page 4, 6, I am commanded to sell all those certain lots, pieces or parcels of land situate, lying and being in the County of Inyo, State of California, and bounded and described as follows:

The East half of the North East quarter, and the North half of the South east quarter of Section Two (2) in Township Eight (8) South Range Two (2) East, Mount Diablo Base and Meridian.

Also an undivided one fifth (1/5) interest in and to that certain water ditch commencing on the west side of Owens River, opposite R. W. Forbes ranch, leading to Andrew Dell's slough and from thence to Greggs ranch as constructed by Andrew Dell, David Garland, James Morrow, Frank Roland and I. H. Gray.

Public notice is hereby given that on Saturday, the Eleventh day of November, A. D. 1893, at 2 o'clock p. m. of that day, in front of the Court House door of the County of Inyo, I will in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the Nineteenth day of October, 1893.

JOHN ALEXANDER, Commissioner.

NOTICE TO BONDHOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated 6th day of October, 1893, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to call such bonds, by the payment of the principal and interest accrued thereon.

Dated, the 9th day of October, 1893.

D. J. HESSION, Clerk of the Board of Supervisors of Inyo County, State of California.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and current and be taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent. will be added to the amount thereof; and that if said one half be not paid before the first Monday in April next at six o'clock p. m. an additional five per cent. will be added thereto; that the remaining one half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto fifteen per cent. will be added to the amount thereof.

J. S. GORMAN, Tax Collector.

NOTICE TO CREDITORS.

Estate of JOHN McFERRIDGE, deceased.

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of John McFerridge, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at the office of P. W. Forbes, Esq., in the Court House, at the town of Independence, the same being the place for the transaction of the business of the said estate in the County of Inyo, State of California.

H. H. HOWELL, Administrator of the estate of John McFerridge, deceased.

Dated at Independence, Aug. 24th, 1893.

P. W. Forbes, Attorney for Administrator. au31-5t

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JED COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above named Plaintiff, filed in the Justice's Court of Second Township, County of Inyo, State of California, and now pending before the Justice at his office in said Township, the complaint filed therein within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned by Plaintiff unto you, and goods, wares and merchandise furnished by Plaintiff, at the town of Big Pine, between the 8th day of August, 1893, and the tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD, Justice of the Peace of said Township.

E. SPENCER, Attorney for Plaintiff.

ORDER TO SHOW CAUSE WHY LEASE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate and Guardianship of Hatty Vagt, Lena Vagt and Jacob Vagt Minors.

Heinrich Glade, Guardian of the Person and Estate of Hattie Vagt, Lena Vagt and Jacob Vagt, minors, having filed his petition herein, duly verified, praying for an order authorizing him to lease certain real estate of said minors, for the reasons and on the grounds therein set forth, which said real estate is described as follows, to wit:

Lots Nos. 3 and 4 in the fractional North West quarter of Section Nine (9) in Township No. Twenty (20) South, Range No. Three (3) East, M. D. M., containing 16 acres, in Inyo County, State of California.

Wherefore it is hereby ordered that all persons interested appear before the Judge of said Superior Court on Saturday, the 18th day of November, 1893, at the Judge's Chambers in the Court House in the town of Independence, County of Inyo, State of California, at 10 o'clock a. m. of that day, then and there to show cause why the above described real estate should not be leased from the date thereof for the full period of 5 years, for the rental of $[illegible] per annum, as stated in the petition of said Heinrich Glade, Guardian as aforesaid, now on file herein, to which date for such hearing is hereby made. And it is further ordered that a copy of this order be published in the Inyo Independent, a newspaper printed and published in said Inyo County, for at least two weeks, said publication to be completed before the said 18th day of November, 1893.

GEO. M. GOLD, Judge of the Superior Court.

Dated October 31, 1893.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Colt of long standing. Then I had a four year old colt badly **sweenied**; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a **Thoroughpin** and **Blood Spavin** on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at College Grove, Or. S. Z. PAYNE.

—Price $1.00 per bottle.—

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest at the said estate of John Allen Hannah, deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death, in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lode, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 18-100; thence North-east following the meanderings of the bed of Creek along its North branch to Edwards street, in the town of Independence, thence follow said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Carroll Mining District, County of Inyo, State of California, known and designated as the "La Dispiacida Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura, State of California, commencing at a point twelve and ninety-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South six and eight and seven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North west quarter and the North east quarter of the North west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North twenty-four and eleven-twentieth (24 11-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to the Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER, Executor of the Last Will and Testament of John Allen Hannah deceased.

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, Nov. 4, 1893.

Estate of Thomas Williams, deceased—Issued letters testamentary to Mrs. S. A. Williams.

Estate of John A. Hannah, deceased—Issued inventory and appraisement.

MONDAY, Nov. 6 1893.

Yerington et als. vs. T. McLean—Issued execution.

BORN.

SMITH—At Big Pine, November 2d, to Mr. and Mrs. A. F. Smith, a son.

BULPITT—At Bishop, October 30th, to Mr. and Mrs. Fred H. Bulpitt, a son.

CARRASCO—At Lone Pine, November 6th, to Mr. and Mrs. Roberto Carrasco, a daughter.

MCSWEENY—At Sacramento, Cal., November 5th, to Mr. and Mrs. Daniel McSweeny, a daughter.

DIED.

DE LA MATYR—At Bishop, November 25th, George W. De La Matyr, a native of New York, aged 64 years.

Independence will boom on Thanksgiving. See ads.

The latest silver quotation heard was 68 cents per ounce.

Attorneys Sneden and Lewis are in town on Court business.

L. F. J. Wrinkle was up from Keeler early in the week.

Treasurer Bunney is on the sick list. Nothing serious, however.

A lot of new Fall and Winter goods has just been received at Rhine's.

Remember that taxes will be delinquent the last Monday in this month.

Supervisor Wilson of Lone Pine was at Independence last Monday.

Prime beef is quoted in the San Francisco market at 5 cents.

A pleasant social dance was given at Mairs' Hall on Wednesday evening.

Al. Smith wears his overalls about three rolls higher. See birth column.

S. G. Gregg and Mrs. S. A. Williams were down from Big Pine last Saturday.

Charley Summers is down from Bishop and will remain in this vicinity a few days.

Webb & Whitmore have returned from Long Valley bringing out the last of their cattle.

The several cases in the Superior Court this week brought quite a number of visitors to town.

Hay is being delivered in Independence at $5 per ton. At Bishop $4 is the ruling price.

A. L. Conklin has gone to Bakersfield. He went to Keeler on Wednesday and took the stage yesterday.

Mrs. J. J. Gunn has gone to Modock to join her husband. Mrs. J. C. Irwin accompanied her as far as Keeler.

The case of Jonathan Brown vs. W. L. Hunter, Executor of the Hannah estate, will come up for trial on the 18th.

Miss Georgia Johnson of Bishop is attending the Superior Court in the official capacity of stenographer.

The President has issued his proclamation declaring Thursday, November 30th to be a day of general Thanksgiving.

Sheepmen are now on their way south with their flocks. From present indications feed will be very short in the lower country this winter.

General Clarke of Carson and Judge Boardman of Reno are here in the interest of the Defendants in the suit of Baxter et al. vs. Gilbert et als.

A wedding is on the tapis to take place at the Fort next Sunday. When the marriage Bell is ringing you needn't ask, "What's the matter now?"

The extraordinary session of Congress came to an end last Saturday. Having accomplished the purpose of demonetizing silver, they had nothing else to do.

The Withrow Case.

The case of the People vs. William L. Withrow came up for trial in the Superior Court on Wednesday, Hon. P. Reddy appearing as counsel for the defendant. Counsel for defendant had previously moved that the action be dismissed on the ground of informality in the proceedings of the preliminary examination. After argument by counsel and District Attorney the motion was denied, and the case came on regularly for trial. The following named jurors were sworn to try the case:

Manuel Montano.
Jacob C. Miller.
Thomas W. Carroll.
George W. Brady.
M. S. McLeod.
George W. Huckaby.
Joseph McNally.
Thomas Hughes.
John Dehy.
Mike Maldoon.
H. Levy.

The Clerk read the information to and informed the jury that the defendant plead "not guilty" to the charge. John Barnes, A. Diaz and John Kispert Jr. were sworn as witnesses. Kispert and Barnes were examined for the prosecution and Diaz for the defense. The prosecuting witness, H. E. Wilkinson, left the county a short time ago and was not present at the trial. Also Mitchell, the man shot by Withrow, had decamped. The prosecution and defense waived argument and the case was submitted to the jury. After being out a short time the jury returned a verdict of "not guilty" and the defendant was discharged.

The Big Water suit

The water suit of Baxter et al vs. Gilbert et als. came on regularly for trial in the Superior Court yesterday. Hon. P. Reddy and P. H. Mack Esq. appeared as counsel for plaintiffs and General Clarke and Judge Boardman for defendants. Yesterday was taken up with reading the complaints and answers and argument upon matter to be stricken out. Up to the time of going to press no witnesses had been called. It is expected the case will occupy the remainder of this week and all of next, as interests of the greatest moment to the principals are at stake, and the case will be keenly and closely contested. Quite a number of witnesses have been subpœaed, both as expert testimony and witnesses of fact. Extensive surveys and drawings have been made. The result of the suit will be of great interest throughout the Valley.

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of October, 1893.

Mean barometer 29 98
Highest barometer 30 29
Lowest barometer 29 69
Mean temperature 60.0
Highest temperature, 7th 81 0
Lowest temperature, 18th 41 0
Greatest daily range temperature, 32, 28 h.
Least daily range temperature, 11, 24 h.
Prevailing direction of wind, S. W.
Total movement of wind, 4127 miles.
Extreme velocity of wind, direction and date, 40 miles S W. on 15 h.
Total precipitation, 7 inches.
Number of days on which .01 inch or more of precipitation fell, 0.
Number of clear days 23
Partly cloudy days 4
Cloudy days 4
Dates of frost, none.

P. T. JENKINS, Observer,
Weather Bureau.

The Tulare County *Times*, Visalia, says: "Congressman Caminetti has succeeded in preventing the consolidation of the Independence Land Office with the Visalia office. A trip from Inyo county to Visalia would cost more than the average quarter section of Government land is worth, and it is astonishing that the Interior Department should ever have thought of making the consolidation."

A grand domino ball will be given at Mairs' Hall, Independence, on the night of November 30th, Thanksgiving Day. Suitable prizes will be given for gentleman and lady characters. A hot supper will be served at the Norman House. Masks can be obtained by applying to J. Tucker. Excellent music will be provided and a good floor for dancing. See ad.

John Clarke came down from Bishop yesterday. A few days ago he brought Ernest Shannon from Lundy to Bishop. The young man has a dangerous attack of pneumonia and is now lying in a critical condition, though Mr. Clarke says there are strong hopes of his recovery.

A robbery is reported to have occurred at Bishop last week. Two men on horseback were held up at McCrosky's corner, and one of them robbed of about $500. There is no clue to the identity of the highwaymen.

The N. S. G. W. will give a dramatic entertainment, followed by a ball, at Independence on November 29th. The drama "Caste" will be presented followed by the laughable farce, "To Oblige Benson."

Hon. P. Reddy arrived at Independence last Monday. He had several cases in the Superior Court this week and is now engaged on the Baxter—Gilbert water suit.

The case of the People vs. T. B. Scovil was called in the Superior Court on Tuesday. On motion of the District Attorney the action was dismissed.

The report of the Weather Observer at Keeler shows that no frost occurred during the month of October. The lowest temperature recorded was 41°.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Morton, deceased.

J. J. Morton, the Administrator of the Estate of John Morton, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the personal and real estate of said decedent, for the purposes therein set forth.—

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Tuesday the 14th day of November 1893, at 11 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the town of Independence, in the County of Inyo, State of California, to show cause why an order should not be granted to the said J. J. Morton, Administrator, to sell all of the real estate and personal property of said deceased.

And that a copy of this order be published at least once a week for four consecutive weeks in the INYO INDEPENDENT, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated Oct. 7th, 1893.
P. H. MACK, Attorney for the Administrator.

NEW ADVERTISEMENTS.

DOMINO BALL

Irv. H Mulholland. Norm. Mairs.

Tickets, $1.50.

Supper will be served at the Norman House. Good music and lots of fun. J. TUCKER.

Watch this space next week for particulars of entertainment to be given at Independence by the N. S. G. W on November 29th.

OFFICIAL.

NOTICE TO CREDITORS.

Estate of Thomas Williams, deceased.

NOTICE IS HEREBY GIVEN BY THE undersigned, Executrix of the last Will and Testament of Thomas Williams, deceased, to the Creditors of and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice to the said Executrix, at the office of Bennett & Forbes, Attorneys-at-Law, in the County Court House, at Independence, the same being the place for the transaction of the business of the said estate, in the County of Inyo, State of California.

SARAH ANN WILLIAMS.
Executrix of the last Will and Testament of Thomas Williams, deceased.

Dated at Independence, Inyo Co., Cal. November 8 1893.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of J. F. Beale, an Insolvent Debtor.

J. F. Beale, having filed in this Court his petition, scedule and inventory in insolvency, from which it appears that he is an Insolvent Debtor, the said J. F. Beale is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby appointed a Receiver to take possession of all the estate, real and personal, of said J. F. Beale, Insolvent Debtor, except such as may be by law exempt from execution and of all his deeds, vouchers, books of account and papers, and to keep and to care for and dispose of the same until the appointment of an Assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent or to deliver any property belonging to such Insolvent, to him or to any person, firm, corporation or association for his use; and the said Debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered.

It is further ordered, that all the Creditors of said debtor be and appear before the Hon. Geo. M. Gill, Judge of the Superior Court of the County of Inyo, in open Court, at the Court-Room of said Court, in the County of Inyo, on the 11th day of November, 1893, at 11 o'clock a. m. of that day, to prove their debts and choose one or more Assignees of the estate of said debtor.

It is further ordered, that the order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as said paper is published before the day set for the meeting of Creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 5th, 1893.
P. H. MACK, Attorney for Insolvent.

AT THE "BOTTOM NOTCH"

That's where you'll find our prices on NEW FALL CLOTHING. The styles in our "Ready-to-wear" Suits are as fetching as those of custom-made goods. Just as well cut, just as well made, just as well trimmed and will give you great service. Prices! Away under, if you consider value.

New Clothing.

$10 At this popular price you can have the pick of twenty-five or more styles in Een's New Sack Coats.

The New Bread

As endorsed and recommended by the New-York Health Authorities.

Royal Unfermented Bread is peptic, palatable, most healthful, and may be eaten warm and fresh without discomfort even by those of delicate digestion, which is not true of bread made in any other way.

To make One Loaf of Royal Unfermented Bread:

1 quart flour, 1 teaspoonful salt, half a teaspoonful sugar, 2 heaping teaspoonfuls Royal Baking Powder,* cold boiled potato about the size of large hen's egg, and water. Sift together thoroughly flour, salt, sugar, and baking powder; rub in the potato; add sufficient water to mix smoothly and rapidly into a stiff batter, about as soft as for pound-cake; about a pint of water to a quart of flour will be required—more or less, according to the brand and quality of the flour used. Do not make a stiff dough, like yeast bread. Pour the batter into a greased pan, 4½ by 8 inches, and 4 inches deep, filling about half full. The loaf will rise to fill the pan when baked. Bake in very hot oven 45 minutes, placing paper over first 15 minutes' baking, to prevent crusting too soon on top. Bake immediately after mixing. Do not mix with milk.

** Perfect success can be had only with the Royal Baking Powder, because it is the only powder in which the ingredients are prepared so as to give that continuous action necessary to raise the larger bread loaf.*

* * *

The best baking powder made is, as shown by analysis, the "Royal." Its leavening strength has been found superior to other baking powders, and, as far as I know, it is the only powder which will raise large bread perfectly.

Cyrus Edson, M. D.
Com'r of Health, New-York City.

Breadmakers using this receipt who will write the result of their experience will receive, free, the most practical cook book published, containing 1000 receipts for all kinds of cooking. Address

ROYAL BAKING POWDER CO., 106 WALL ST., NEW-YORK.

Burglarized on His Wedding Night.

Charles Rohan was a graduate of Oberlin college. He went to New York, where he wooed and won a prominent young lady. On the night following his wedding his wife was awakened by pistol shots, and soon saw her husband rush into the room. He had burglarized the next door residence, and, being discovered at his nefarious work, was pursued and shot at. He fought his way through a crowd of policemen, who were attracted by the pistol shots, and made good his escape. He was soon afterward captured for another job and sent to the Ohio penitentiary from Cuyahoga county. In the meantime it developed that the wedding in New York was a mock affair, and his supposed wife has since married a wealthy merchant.

A few days ago Rohan was tried for the New York crime, and his defense was based on the affidavit of J. G. Shaw, his pal, to the effect that the latter was the man who deceived the young lady and robbed the house of her next door neighbor. The young woman, deeply veiled to conceal her identity, came into court and identified Rohan as the man, notwithstanding Shaw's affidavit. Her name was kept a secret in the courtroom by an arrangement with the attorneys.—Cincinnati Commercial Gazette.

A Dream.

I was told of an instance which is perhaps not unworthy of mention. On the occasion of the fatal accident to a lift in Paris—I think at the Grand hotel—a few years ago, a lady who was just going up in it started back, saying, "Oh, there is that dreadful man again!" and tried to induce her husband to come off it too, but he refused, and was among the killed.

The "dreadful man" to whom she referred she had seen in a dream, which the niece of the friend who told me the story had heard her relate a day or two before the accident. It was of a funeral drawn up at her door, so pompous as to produce a great impression on her, presided over by a big, dark man in a strange sombrero hat. This man she saw, or believed she saw, in the lift, and the coincidence terrified her from going up in it.—Notes and Queries.

A Palpable Hit.

Father—Why can't you be as good a boy as little Arthur Arthurson?

Small Son—I don't know, but I've heard folks say that Arthur Arthurson comes of very good old stock.—Good News.

THE $7,500

HAS NOT BEEN PAID TO MR. FELLOWS OF BUFFALO.

It Cost Him $30 to Send His Ticket to Kansas City.—Lawyer Stone of St. Paul Will Try and Get the Money for Him.

SCHROEDER, THE MAN WHO SOLD THE TICKET TO FELLOWS, IS INDIGNANT.

"Not a cent," said Joseph B. Fellows of Prospect avenue, when asked by a *Times* representative whether he had received the $7,500 won by him last May from a lottery concern run by E. Fox & Co. of Kansas City, called the Little Louisiana lottery, but which has no connection with the Louisiana State Lottery proper. "When they saw I was persistent and after the publication of the *Times* article giving the particulars of my holding a winning ticket and their failure to pay, they telegraphed me that they were enjoined from paying by the court. Since then I have heard nothing from them."

"Of course you expect to," said the *Times* man.

"Well, I don't know, replied Mr. Fellows. There is a lawyer at St. Paul who wrote me that he represented a man who had won a $15,000 prize and named conditions under which he would undertake to get my $7,500 at the same time. I told him to go ahead, but I seem to be as far away now as I was before. It cost me $30 to send my ticket to Kansas City and I think they might at least return that amount to me, as I had to pay it to the express company."

"What does Schroeder, the man from whom you bought the ticket think of it?"

"He was as badly taken in as I was."

"Does he sell tickets for them still?"

"No, indeed, they had the audacity to send him some and request that he go on and do business for them as before."

Schroeder is a barber on Niagara street and knew nothing of the character of the concern which he represented. When he learned it through the *Times* and his experience in the Fellows matter he dropped them quick and has warned all those who formerly purchased tickets of him not to do any more business with them or their representatives.

Mr. Fellows is an honest industrious citizen who has a right to believe that he should receive what they acknowledged was his. There are those, however, who are of the opinion that as this is the same company that swindled the late Julius Haas out of a like amount that Mr. Fellows stands a very small chance of ever getting a penny from it.

Just what success Lawyer Stone will have for his client Mr. Fellows of course cannot tell but he hopes for the best. People who have been investing their money in this concern are of the opinion that if this company is the fraud it seems to be, they should be exposed in all sections of the country. Their game like that of the green goods man and the bunco man is one of fraud.

In the first account of the fraud practiced on Mr. Fellows it was shown that in St. Paul and other cities the same game had been played on the unsuspecting. Some people think there may be a compromise through Lawyer Stone, but those who have read and heard more of this concern than they say that Fellows he is out the $1 he paid Schroeder for the ticket, out of the $30 he paid to send it to Kansas City, and out $7,500 which his ticket called for as a half winner of a capital prize.

There are lotteries which are said to pay, and pay promptly, but it is plain to be seen that this the Little Louisiana—so called—run by E. Fox & Co., Kansas City, is not one of them.—*Buffalo (N.Y.) Times*, Sept. 14.

WHERE SHE DREW THE LINE.

Her eyes were soft and dark as night,
Her raven tresses vying.
I took a seat beside my love,
And soon I fell to sighing.
She placed her hand within my own—
What thrills began to quiver
About my heart! Said she, "Dear John,
What is it makes you shiver?"

I scarcely knew, and so I said,
"I'm warmer than a cinder,"
And then a daring thought occurred—
Pray, what was there to hinder?
I bent above her ruby lips
To steal the tempting blisses.
"Oh, no!" said she, "it cannot be;
I draw the line at kisses."

Ah, who can tell the royal way
To manage pretty misses?
Just when you think they love you most
They draw the line at kisses.

The years may come; the years may go;
I'll ne'er forget our meeting.
Upon her cheeks a pretty glow—
The moments all too fleeting.
And oft my heart doth dream anew
Of aromatic blisses,
As when, her little hand in mine,
She drew the line at kisses.

—Chicago Dispatch.

Mrs. Sleuth; or, The Lady Detective.

"Ha!"

"You will not give me a million dollars?"

"No."

"I am your wife?"

"Yes."

"Therefore you are my husband?"

"It is so."

"And you will not put your property in my name?"

"Woman, what takest thou me for?"

"We will see."

* * * * * * * *

"Annette!"

"Yes, madam."

"Buy all the disguises in New York."

"'Tis as good as done."

"I may need one."

"Ha!"

"Put them in a Fifth avenue stage."

"I begin to comprehend."

"They will reach the Union League club by tomorrow evening."

"With industry—but it is quite four blocks."

"Attach my diamond revolver to my watch chain."

"Ha! the adventure is indeed hazardous."

"And put my knitting needle in its scabbard."

"I obey."

* * * * * * * *

It is a small room in the club.
Two men are playing cards.
The stakes are a million dollars.
They are not two men.
Nay, they are a man and a boy.
The man holds four kings.
The boy holds two aces.
But they look to the man like four.
He staggers from the table.
"I am ruined!"

* * * * * * * *

"It was I who won your million dollars."
"What, you, my wife?"
"Yes, I! Is my hat on straight?"—Truth.

A Sweet Samaritan.

Mrs. M.—No money left. It took all I had to buy fashion magazines.—New York Weekly.

Poor Boy!

Algy—A girl hugged me last night, Wegy.

Wegy (breathlessly)—Oh, Algy, was it weal nice?

Algy—No, Wegy, old chap, it wasn't. She was so wough!—Truth.

LIFE.

I have heard a lot of people say
That life is not worth living;
But none the less I go my way
Without the least misgiving.

I don't sit up night after night
To worry o'er the nation,
Or run and yelp around all day
To work its reformation.

I realize that things may run
In sev'ral diff'rent ways,
But don't propose on that account
To worry all my days.

Let those who think the world is wrong,
And can't sleep till its righted,
Go at it on the spot; I'm sure
I shall be most delighted.

But as for me, I am content
To take things as I find them,
If they are not to my sweet thoughts,
I simply do not mind them.

—J. Costerma in New York Sun.

LA BRETONNE.

One November evening, the eve of St. Catherine's Day, the gate of the Auberive prison turned upon its hinges to allow to pass out a woman of some thirty years, clad in a faded woolen gown and coiffed in a linen cap that framed in a singular fashion a face pale and puffed by that sickly hued fat which develops on prison regimen. She was a prisoner whom they had just liberated, and whom her companions of detention called La Bretonne.

Condemned for infanticide, it was exactly, day for day, six years ago that the prison van had brought her to the Centrale. Now, in her former garb, and with her small stock of money received from the clerk in her pocket, she found herself free and with her road pass stamped for Langres.

The courier for Langres, however, had long since gone. Cowed and awkward, she took her way, stumbling toward the chief inn of the borough, and with trembling voice asked shelter for the night. But the inn was crowded, and the aubergiste, who did not care to harbor "one of those birds from over yonder," counseled her to push on to the cabaret at the far end of the village.

La Bretonne passed on, and more trembling and awkward than ever knocked at the door of that cabaret, which, properly speaking, was but a cantine for laborers. The cabaretiere also eyed her askance, scenting doubtless a "discharged" from the Centrale, and finally refused her on the plea that she had no bed to give her.

La Bretonne dared not insist, but with bowed head pursued her way, while at the bottom of her soul rose and grew a dull hatred for that world which thus repulsed her.

She had no other resource than to gain Langres afoot.

Toward the end of November night comes quickly. Soon she found herself enveloped in darkness, on a grayish road that ran between two divisions of the forest, and where the north wind whistled fiercely, choked her with dust and pelted her with dead leaves.

After six years of sedentary and recluse life her legs were stiff, the muscles knotted and her feet, accustomed to sabots, pinched and bruised by her new slippers. At the end of a league she felt them blistered and herself exhausted. She dropped upon a pile of stones by the wayside, shivering and asking herself if she was going to be forced to perish of cold and hunger in this black night, under this icy breeze, which froze her to the marrow.

All at once, in the solitude of the road, she seemed to hear the droning notes of a voice singing. She listened and distinguished the air of one of those caressing and monotonous chants with which one soothes young children.

She was not alone, then!

She struggled to her feet, and in the direction from which the voice came and there, at the turn of a crossroad perceived a reddish light streaming through the branches. Five minutes later she was before a mud walled hovel whose roof, covered by squares of sod leaned against the rock, and whose window had allowed to pass that beckoning ray.

With anxious heart she decided to knock.

The chant ceased instantly and a woman opened the door, a peasant woman no older than La Bretonne herself, but faded and aged by work. Her bodice, torn in places, displayed the skin tanned and dirty; her red hair escaped disheveled from under a soiled stuff cap, and her gray eyes regarded with amazement the stranger whose face had in it something of touching loneliness.

"Good evening!" said she, lifting yet higher the sputtering lamp in her hand "what do you desire?"

"I am unable to go on," murmured La Bretonne, in a voice broken by a sob, "the city is far, and if you will lodge me for the night you will do me a service. I have money; I will pay you for the trouble."

"Enter," replied the other after a moment's hesitancy; "but why," continued she, in a tone more curious than suspicious, "did you not sleep at Auberive?"

"They would not give me a lodging," lowering her blue eyes and taken with a sudden scruple, "be—because, see you I came from the Maison Centrale."

"So! the Maison Centrale! but no matter—enter—I fear nothing, having known only misery. Moreover, I've a conscience against turning a Christian from the door on a night like this. I'll give you a bed and a slice of cheese.

And she pulled from the eaves some bundles of dried heather and spread them as a pallet in the corner by the fire.

"Do you live here alone?" demanded La Bretonne timidly.

"Yes, with my gachette, going on seven years now. I earn our living by working in the wood."

"Your man, then, is dead?"

"Yes," said the other brusquely, "the gachette has no father. Briefly, to each his sorrow! But come, behold your straw, and two or three potatoes left from supper. It is all I can offer you"——

She was called at the moment by a childish voice coming from a dark nook separated from the room by a board partition.

"Good night!" repeated she, "the little one cries; I must go, but sleep you well!"

And taking up the lamp she passed into the closet leaving La Bretonne crouched alone in the darkness.

Stretched upon her heather, after she had eaten her supper, she strove to close her eyes, but sleep would not come to her. Through the thin partition she heard the mother still softly talking to the child, whom the arrival of a stranger had wakened, and who did not wish to go to sleep again.

The mother soothed and fondled it with words of endearment that somehow strangely disturbed La Bretonne. That outburst of simple tenderness seemed to waken a confused maternal instinct in the soul of that girl condemned in the past for having stifled her new born.

"If things had not gone so badly with me," thought La Bretonne sorrowfully, "it would have been the same age as this little one here."

At that thought and at the sound of that childish voice a sickening shudder seemed to shake her very vitals, something soft and tender to spring up in that soured heart, and an increasing need for the relief of tears.

"But come, come, my little one," the mother cried, "to sleep you must go! And if you are good and do as I say, tomorrow, maybe, I'll take you to the St. Catherine's fair!"

"The fete of little children, mamma, the fete of little children, you mean?"

"Yes, my angel, of little children."

"And the day when the good St. Catherine brings playthings to the babies, mamma?"

"Sometimes—yes."

"Then why doesn't she bring playthings to our house, mamma?"

"We live too far away, perhaps, and then—we are too poor."

"She brings them only to rich babies, then, mamma? But why, mamma, why I say? I should love to see playthings!"

"Eh, bien! some day you may, if you are very good—tonight, perhaps, if you are wise and go to sleep soon."

"I will, then mamma; I will right away, so she can bring them tomorrow."

The little voice ceased; there was a long silence; then a long breath, even and light!

The child slept at last—the mother also.

La Bretonne only did not sleep! An emotion at once poignant and tender tore at her heart and she thought more than ever of that little one whom they said she had killed. This lasted till dawn.

Mother and child still slept, but La Bretonne was up and out, gliding hurriedly and furtively in the direction of Auberive and slackening her pace only when the first houses of the village came in sight.

Soon she had reached and was traversing its only street, walking slowly now and scanning with all her eyes the signs of the shops. One at last seemed to fix her attention. She knocked at the shutter and presently it opened. A mercer's shop apparently, but also with some toys and playthings in the window—poor, pitiful trifles, a pasteboard doll, a Noah's ark, a woolly, stiff legged little sheep.

To the astonishment of the merchant, La Bretonne purchased them all, paid and went out. She had resumed the road to the hovel in the wood, when suddenly a hand fell heavily upon her shoulder, and she was face to face with a brigadier of gendarmerie.

The unhappy one had forgotten that it was forbidden to liberated prisoners to loiter in the neighborhood of the Maison Centrale.

"Instead of vagabondizing here, you should already be at Langres," said the brigadier grufly. "Come, march; be off with you! To the road, to the road, I say!"

She sought to explain. Pains lost. At once a passing cart was pressed into service, La Bretonne bundled into it and in charge of a gendarme once more en route for Langres.

The cart jolted lumberingly over the frozen ruts. The poor La Bretonne clutched with a heartbroken air her bundle of playthings in her freezing fingers.

All at once, at a turn of the road, she recognized the cross path that led through the wood. Her heart leaped and she besought the gendarme to stop only one moment. She had a commission for La Fleuriotte, the woman that lived just there!

She supplicated with so much fervor that the gendarme, a good man at heart, allowed himself to be persuaded. They stopped, tied the horse to a tree and ascended the pathway.

Before the door La Fleuriotte hewed the gathered wood into the required fagots. On seeing her visitress return, accompanied by a gendarme, she dwelt open mouthed and with arms hanging.

"Hist!" said La Bretonne, "hist! the little one—does it sleep still?"

"Yes, but"——

"Then, here, these playthings; lay them on the bed and tell her St. Catherine brought them. I returned to Auberive for them, but it seems I had no right to do it, and they are taking me now to Langres."

"Holy Mother of God!" cried the amazed La Fleuriotte.

"Hist! be still, I say!"

And drawing near the bed herself, followed always by her escort, La Bretonne scattered upon the coverlet the doll, the Noah's ark and the stiff legged, woolly and somewhat grimy little lamb, bent the bare arm of the child till it clasped the latter, then turned with a smile.

"Now," said she, addressing the gendarme, vigorously rubbing his eyes with the cuff of his jacket—the frost, it seemed, had gotten into them—"I am ready; we can go!"—Translated from the French of Thuriet by E. C. Waggoner for Short Stories.

London and Athens.

On entering a London suburb the spirit of London meets you, takes possession of you and hurries you on in thought to meet the millions in its bosom. On entering the outskirts of Athens it is the spirit of the past which you encounter and which carries you back so far that the wearied mind turns and reposes in the present in keeping with the things animate and inanimate in its vicinity.—Gentleman's Magazine.

Better Than Most Other Reasons.

"Man," said Mr. Wickwire oracularly, "views woman as a being to be looked up to."

"Is that the reason he lets her stand up when he has a seat in the car?" asked Mrs. Wickwire, and her husband looked disgusted and said not a word.—Indianapolis Journal.

A Sign on Quaker Churches.

One of the good things noticed about the Quaker meeting houses during the yearly gathering of Friends in Philadelphia is that they all have a sign outside, "Seats Free," an example that might be followed by many other churches.

A Very Old Rule.

The oldest mathematical book in the world is believed to be the "Papyrus Rhind" in the British museum, professed to have been written by Ahmes, a scribe of King Ra-a-us, about the period between 2000 and 1700 B. C. This "Papyrus Rhind" was translated by Eisenlohr, of Leipsic, a few years ago, and it was found to contain a rule for making a square equal in area to a given circle. It was not put forth as an original discovery, but as the transcript of a treatise 500 years older still, which sends us back to, approximately, 2500 B. C., when Egyptian mathematicians solved, or thought they had solved, the problem of squaring the circle.—All the World Round.

The Queen Had No Change.

The English queen has an income of $5,000 a day, and yet she has had many queer little experiences of finding herself penniless in awkward situations. On one occasion she called a wayside mendicant to her carriage only to find that neither she nor the princess with her had a shilling, and this regal queen of England and empress of India was obliged to borrow some pence from the keeper of the tollgate near.—New York Sun.

Fish as Brain Food—She—I wonder why fish should be good for the brain? He—Perhaps because they live in schools from their earliest infancy.

THE FOUNTAIN HEAD OF STRENGTH

When we recollect that the stomach is the grand laboratory in which food is transformed into the secretions which furnish vigor to the system after entering and enriching the blood; that it is, in short, the fountain head of strenth, it is essential to keep this important supplying machine in order, and to restore it to activity when it becomes inactive. This Hostetter's Stomach Bitters does most effectually, seasonably, regulating and reinforcing digestion, promoting due action of the liver and bowels. Strenth and quietude of the nerves depend in great measure upon thorough digestion. There is no nervine tonic more highly esteemed by the medical fraternity than the Bitters. Physicians also strongly commend it for chills and fever, rheumatism, kidney and bladder trouble, sick headache, and want of appetite and sleep. Take a wineglassful three times a day.

Though a man may have a rasping voice
That like a scythe will mow you,
It's sweeter than sweet music when
He says, "Here's what I owe you."

DEAFNESS CANNOT BE CURED

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars; free.

Sold by Druggists, 75c.

Chicago people poke a great deal of fun at "sleepy Philadelphia," but Quaker City time is just an hour faster than theirs.

INSPIRE COURAGE.

For more than thirty years ALLCOCK'S POROUS PLASTERS have been doing their beneficient work, relieving pain, inspiring men, women and children with new hope and new courage.

Pain is a great discourager. When all the muscles are sore, it is hard to keep up hope. ALLCOCK'S POROUS PLASTERS and pain have no affinity for each other, one or the other must yield, and pain is the one to be defeated.

Placed high up between the shoulder blades and on the chest they are a sure cure for coughs; on the pit of the stomach they relieve indigestion; over the muscles they relieve strains and stiffness. Wherever there is soreness, they soothe and cure. BRANDRETH'S PILLS do not injure the system.

When a woman grows suspicious of her husband he stops telling her of the things he does which are absolutely innocent.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germe for Breakfast.

Use Enameline Stove Polish; no dust, no smell

YOU CAN SEE IT, perhaps, one of Dr. Pierce's Pleasant Pellets—but you can't feel it after it's taken. And yet it does you more good than any of the huge, old-fashioned pills, with their griping and violence. These tiny Pellets, the smallest and easiest to take, bring you help that *lasts*. Constipation, Indigestion, Bilious Attacks, Sick or Bilious Headaches, and all derangements of liver, stomach, and bowels, are permanently cured.

A SQUARE offer of $500 cash is made by the proprietors of Dr. Sage's Catarrh Remedy, for any case of Catarrh, no matter how bad or of how long standing, which they cannot cure.

CONSUMPTION.

While in the War

I was taken ill with spinal disease and rheumatism. I went home and was confined to my bed, unable to help myself for 22 months. Doctors failed to give me more than temporary relief. After great effort, I was able to get up finally and started to work at the machinist's trade. I was not well and a companion machinist advised me to take Hood's Sarsaparilla. I got a bottle and could quickly note a change for the better. I continued, and

APOSTROPHE OF TIME.

O spirit stern of time, in thy unceasing flight,
How fall the works and monuments of earthly
might!
'Neath thy rude hand all pleasures flee away
And happy yesterday turns dull today!
The sweetest joy becomes the saddest sorrow
In contemplation of the stern tomorrow.
Oh, stay awhile and help me banish worry.
In other words, don't be in such a hurry.
An instant linger—tarry, please! You won't?
Well, then, go chase yourself! Begone!
Avaunt!
—Albert E. Hunt in Philadelphia Ledger.

A Cure For Stammering.

A gentleman who stammered from childhood almost up to manhood gives a very simple remedy for the misfortune: Go into a room where you will be quiet and alone, get some book that will interest but not excite you and sit down and read two hours aloud to yourself, keeping your teeth together. Do this every two or three days, or once a week if very tiresome, always taking care to read slowly and distinctly, moving the lips, but not the teeth. Then, when conversing with others, try to speak as slowly and distinctly as possible and make up your mind that you will not stammer.

Well, I tried this remedy, not having much faith in it, I must confess, but willing to do almost anything to cure myself of such an annoying difficulty. I read for two hours aloud with my teeth together. The first result was to make my tongue and jaws ache—that is, while I was reading—and the next to make me feel as if something had loosened my talking apparatus, for I could speak with less difficulty immediately. The change was so great that every one who knew me remarked it. I repeated this remedy every five or six days for a month, and then at longer intervals until cured.—Good Health.

An Insurance Curiosity.

"Did you ever stop to consider," asked Lemuel Hunter, "why it is that when a man is burned out he always overestimates his loss about 200 per cent? This is more particularly the case with fires in frame building towns, where the loss to the building is generally assessed at between three and four times what it cost to erect it. I raised this question not long since with a man who was burned out. He said the loss to his building was $3,000, but he proposed to rebuild at an expenditure of $1,200 and have a better building. When I questioned the logic of his calculation, he promptly corrected me by pointing out that the real estate on which the building stood was worth fully $2,000, and although he didn't pretend to argue that the site had been burned up he seemed to think himself perfectly justified in including the value of the 25 feet frontage in his estimate of loss. No one was injured by the calculation, and the good man was perfectly justified in making it if he desired, but if his idea is a general one it is not surprising that losses generally are greatly overestimated."—St. Louis Globe-Democrat.

When the World Falls to Pieces.

The leading English scientists, Jones, Hilton, et al., are figuring on the probabilities of the earth finally collapsing as a result of the modern craze for tapping nature's great gas retorts. They argue that the earth is a huge balloon held up, in part at least, by heat and internal gases, and that when nature's great gas main is eventually exhausted the earth's crust may break in and fall into millions of fragments! Ugh! The very thought of such a calamity is startling. They argue that the steady belching forth of millions of feet of gas every hour of the day and night is surely causing a great vacuum somewhere not far beneath the surface, and that sooner or later the thin archway of earth crust will give way. Then will occur the grand climax of all earthly calamities.—St. Louis Republic.

Would Abolish the Ten Commandments.

Once, when being heckled during an election, a man suddenly shouted from the gallery, "What is Mr. Merry's opinion of the decalogue?" The candidate, turning to his agent, whom he always kept handy at such times, asked, "What on earth does the fellow mean by the decalogue?" The agent explained that the man probably meant something about Sunday trains and Sunday traveling, upon which the candidate replied to his questioner as follows: "I beg to inform my friend in the gallery that so far as I am concerned I would abolish the decalogue altogether."—Leeds (England) Mercury.

A Room In Buckingham Palace.

One's respect for the accommodations at Buckingham palace is considerably enhanced to read that over 200 women waiting to be presented to the queen were gathered in the apartment adjoining the throneroom on the last drawing room. When it is recalled that each of these women was accompanied by her court train, or rather that each accompanied her court train, it is seen how noble must be the dimensions of a room to accommodate 200 women and 200 court trains.—Exchange.

The denuding of the mountains of France of their covering of trees has caused destructive torrents to sweep over the neighboring plains, laying waste rich agricultural lands and producing immense losses.

On retiring let the air into the room by pulling down the window a short distance from the top and raising it equally from the bottom. This permits that free circulation most beneficial to health.

A "T" will work wonders if properly applied. It makes bough bought turns here to there, makes tone out of one and transforms the phrase "allow his own" into "tallow this town."

To preserve health is a moral and religious duty, for health is the basis of all social virtues. We can no longer be useful when not well.—Johnson.

A Maine farmer is making a good income by breeding swans, the market rates for which range from $40 to $75 a pair.

A Remarkable Funeral.

James Johnston, the man whose back was broken last summer by being thrown from a hand car on the Beech Creek railroad, died on Saturday at his home, near Kyler's mill. Johnston was buried by the township overseers of the poor. The circumstances attending the burial are noteworthy on account of the difficulties attending it. Johnston's house is on the right hand of Moshannon creek, in a wild, lonely spot, remote from other houses and almost inaccessible.

The only approach to it is by a narrow, rickety foot bridge which spans the creek, which on Saturday was swollen by the recent rains to a raging torrent. The coffin had to be carried across the bridge, and the task, after several attempts, was accomplished by making a harness of straps fastened to each end of the coffin and buckled around the shoulders of two men, who by clinging to the single handrail succeeded in getting across, although the frail bridge swayed and sank with their weight until the swift current splashed over it.

After the body was placed in the coffin the men started back. They found that with the additional weight of the corpse the bridge would not bear them, and, after several ineffectual attempts to carry it over, they finally got it over by rigging a harness to the stoutest man, who then dragged it over with much difficulty and peril.

There was no minister present, no mourners and no funeral services were held over the poor fellow's body.—Philadelphia Letter.

Hunting with Trained Bald Eagles.

An Indian boy belonging to the Sioux tribe has a pair of pets which are not only strange and interesting, but are useful as well. These are two large bald eagles.

The young Indians are fond of hunting, but are not allowed to own or carry guns, and the result is that they are compelled to use the bow and arrow, which they use with great expertness. The boy shot an old eagle and wounded it. It flew to its nest, and he followed until he saw where the home of the bird was. He then killed the wounded bird and waited until its mate appeared and also killed it.

Climbing to the nest he found two young ones, which he took home with him and began a course of training which has resulted in his having the birds so fully under control that they come and go at his command. He takes them out, and when he sights any quarry he turns his eagles loose, after fastening their beaks so that they cannot eat the animal, and the birds immediately give chase and bring down the prey.

The eagles are now about a year and a half old, and are large and strong enough to bring down a fawn.

The boy is the most successful hunter of the tribe, and never goes out without bringing home some game, from a rabbit to a deer. The officers at this place want the eagles, and have offered the boy what probably appeared to him to be fabulous sums for them, but he steadily refuses all offers.—Cor. Boston Globe.

A Sleep Walking Sunday School Teacher

A young lady of this place who is treasurer of a mission band in one of our Sunday schools, and who had about five dollars of the band's money in her possession, quietly performed a feat the other night that was quite dangerous. The lady referred to arose at a late hour, dressed herself, went to the bureau where she had placed the five dollars and took it to a little room in the house which the family did not occupy. Gathering together a few old skirts she wrapped the money up in them and then securely tied it with a string and placed it in a dark, hidden corner.

After this was accomplished she went into her brother's room, took his loaded revolver and started for the yard. It is not known just how long she was out of doors, but the next morning the revolver was found in a barrel at the rear of the lot. When the revolver was discovered in the barrel it dawned upon the young lady that perhaps some person had been in the house and taken her mission money, and she quickly went to the bureau where she had the money concealed. On reaching the drawer she found that it had disappeared. A thorough search was given and the money found in the place above mentioned.—Huntington Journal.

Coats and Overcoats.

A clothing dealer says that about one-fifth of the masculine portion of the city's population go through the winter without overcoats. In most instances the cause is the lack of money to make a purchase, but there are men who are able to buy but who refuse to wear a top coat. Some of these prefer two or more suits of underclothing to an overcoat. A great many whose occupation keeps them indoors constantly invest their money in street car rides on cold days and get along well enough without the big coat.

A well to do merchant scouts the idea of more than one coat at a time. He keeps an assortment of coats of varying weights and uses them in accordance with the high or low temperature. He insists that it is the only way to avoid colds, which comes from overweight of clothing that is used in all kinds of winter weather.—St. Louis Republic.

Some immense vegetables were lately exhibited at Great Falls, Mon. There is a sugar beet weighing twenty-five pounds, a twenty pound turnip, a five pound potato, a pumpkin weighing 120 pounds and a cabbage three feet in diameter, all raised in that vicinity.

The record made by the United States in the line of exportation of its own products during the past twelve months was greater than ever before made by any nation. The value of exports exceeded $100,000,000.

Annie R. Chittenden of Osceola has patented a road cart which is designed to relieve the animal of all strain and to obviate the disagreeable jar and other objectionable features of the carts now in use.

WARSHIP MUSTER

An Important Monthly Ceremony on Board of a Big Man-of-War.

FOLLOWING AN ANCIENT CUSTOM.

Every Man on Board Must Look His Very Best and Pass Under the Inspection of the Captain.

General muster is a ceremony of great importance on a man-of-war. Unlike other musters and routine drills which take place day after day with the utmost regularity, this grand function takes place not oftener than once a month. On most warships the first Sunday of each month is reserved for this purpose, but it often happens that two or three months elapse between general musters.

At three bells (9:30 A. M.) the call for "quarters" is sounded by the buglers and the men take their places in the different divisions. The sailors or deck hands who compose the guns' crews are stationed on the starboard side of the deck and are usually divided into four classes, known respectively as the first, second, third and fourth divisions. In charge of each is a deck officer, usually a lieutenant, and an ensign is assigned as junior officer.

On the port side of the deck are mustered the navigator's division, the forward powder division, the after powder division, the engineer's division, the marine guard, and, if on a flagship, the band.

The navigator's division is composed mostly of petty officers, such as ship's writers, quartermasters, carpenters, dynamo machinists, the ship's cook, signal boys, etc. When the ship goes into action their duty is to take charge of the navigation of the ship, thus relieving the sailors who belong to guns' crews. Their station at quarters is forward on the spar deck.

ALL NATIONALITIES REPRESENTED.

Next come the two parts of the powder division, composed of petty officers, cooks and servants. The officer of the division needs to be a linguist, for usually all nationalities are represented—Japanese, Chinese, Africans, Germans, Swedes, Russians, Greeks, Italians and occasionally an American. This is usually counted the "scrub" division of a ship, and the officers have a hard time making the men keep in presentable appearance. At target practice and other drills it is supposed to make the poorest record.

The engineer's division is composed of machinists, boiler makers, oilers, firemen and coal heavers, and is in charge of the chief engineer, with the junior officers of his corps as assistants. On the quarter deck the marine guard, "the bulwark between the wardroom and the forecastle," falls into line and the brilliant colors of their uniforms present a most gaudy appearance. If a flagship, the admiral's band, in a uniform resplendent with red trimmings, falls in farther aft under the break of the poop.

ALL OFFICERS IN FULL DRESS.

At general muster all officers are in full dress, with cocked hats and epaulets and gold lace on coat and trousers. The men must all be in their best and clean, with shoes polished and clothes well brushed. The uniforms worn must be strictly regulation. This is one of the hardest trials of a man-of-war's-man now—to wear a regulation flat cap. The new uniform adopted is said by them to be ridiculous, and no good sailor will wear one of these hats ashore.

After the divisions have been mustered they are marched aft and formed into a hollow square upon the quarter deck, and the chaplain reads the prayers, while the men stand with uncovered heads in respectful attitude. The divisions are then marched back to their stations and dismissed.

Hardly have the men broken ranks when the boatswain's mates' whistles are heard, followed by the gruff voices of the old seamen as they repeat the order "All hands to muster." The men then throng back and form just forward of the quarter deck. The petty officers form by themselves just forward of the mainmast. The ship's officers, according to rank, form on the starboard side of the deck. The executive officer, that person of great authority, steps forward and reads the "Articles for the Government of the Navy."

This is a long and tedious document setting forth the punishments to be given both officers and enlisted seamen for various offenses, ranging from wrecking a war vessel down to coming aboard intoxicated. The punishments are necessarily severe. Then follows the reading of the proceedings of all general courts martial held in the navy during the preceding month. Sometimes there are twenty or more of these, and the officer shows signs of fatigue before the task is completed.

MUSTER IN THE STARBOARD GANGWAY.

The reading of these rules and regulations is at last concluded and the executive officer, grown hoarse by reason of so much reading, heaves a sigh of relief.

The order is then given and repeated by the boatswain's mates for all petty officers to muster in the starboard gangway. Here, in two long ranks, are the men who have charge of much of the work done on board ship. At the end nearest the quarter deck stands the master-at-arms, and then come yeomen, writers, machinists, the apothecary, printer, painter, electrician, bandmaster, boatswain's mates, gunners' mates, quartermasters, oilers, water tenders and ship's corporals. These men are often Americans, and many of them are ex-apprentices. Their duties are important, and they are trusted more than the other members of the crew.

The paymaster or pay clerk starts to muster the crew, calling out each man's full name, and the latter answers with his rating. When the petty officers are all mustered, they are allowed to leave and go forward, always being cautioned to keep quiet.

Then follows a scene which reminds one of the old days of the navy—a custom hundreds of years old, borrowed originally from the English, like many of the modern innovations, such as the design of uniform. It is called "going around the mast."

When each man's name is called he answers with his rating, as "Ordinary seaman, sir," removes his cap and walks around the mast to the starboard side and goes forward. This is kept up until all—seamen, ordinary seamen, landsmen, coal heavers, firemen and bandsmen—have passed under the inspection of the captain, who stands near the mainmast intently watching and forming an opinion of each man as he passes before him. When all have gone forward the order is given by the executive officer to "pipe down," the shrill whistles sound, and general muster is over.—New York Recorder.

Another Entanglement.

First Fly—Will you marry me?

Second Fly—Alas! I cannot. I am stuck on this paper.—Truth.

Depredations of a Coon.

That coon of Rueger's, which has been sauntering around the lamppost on the corner of Ninth and Banks streets from time to time during the past three months, made things lively Sunday afternoon at Mr. B. A. Fox's bird store on Broad street.

Mr. Rueger got tired of the quadruped and wished to dispose of him. The coon was accordingly turned over to Mr. Fox, who was to sell him. He was kept at the bird store. Sunday afternoon, when everybody was away, there began a general havoc on the part of the animal. Climbing over a partition in a show window, he proceeded to chew up five Abyssinian rabbits. Only one of the pets was left to tell the tale. His coonship then dined upon a handsome Brahma cock in the rear of the establishment and afterward proceeded to deprive a beautiful tropical song bird of his plumage.

He next made an attack on a number of goldfish, and when his appetite was satisfied there wasn't a single representative of the piscatorial tribe left in the aquarium. Several other depredations were committed, and his coonship was making preparations to exterminate every valuable bird in the establishment when two festive coppers crawled over the transom and put an end to his calculations. He was carried back to Rueger's, but soon effected his escape and made it lively for the squirrels in the Capitol square. A small regiment of small boys were in pursuit of the animal, which with an all important air mounted the Washington monument and soon sat complacently on the top of George's head, eying his pursuers with an expression of mingled defiance and curiosity. He was finally captured.—Richmond Times.

Spohr and the Kings.

All are not kingly who wear a crown. At a court concert the Duchess of Gotha expressed in the curtest style her disapproval of the loud playing of Spohr, the great violinist and composer. While he was playing she sent a chamberlain to request him not to make so much noise.

The king of Wurtemberg was in the habit of amusing himself at a court concert by playing cards. Spohr, being invited to play before the king, informed the chamberlain that he must decline the honor unless the king abstained from card playing. The chamberlain was horrified, but the violinist insisted, and the king conceded the point. But in order that the royal time might not be wholly occupied in listening, he stipulated that the two pieces set down in the programme for Spohr should follow each other.

Nevertheless his majesty showed that the violinist's demand had ruffled the royal temper. Etiquette prescribed that the king should give the signal for applauding. At the conclusion of each piece the king gave no signal and a solemn silence reigned in the salon. The king had his small revenge.

The king of Bavaria was a gentleman. At a court concert he noticed that the usher had neglected to place a seat for Mme. Spohr, an excellent harpist, who was to accompany her husband. The king placed his throne chair on the platform and with the mild insistence of a gentleman compelled the lady to sit in it.—Youth's Companion.

The Everlasting "Why."

There is an ocean of the unfathomable in every raindrop, and God says today as he said in the time of Job, "If you cannot understand one drop of rain, do not be surprised if my dealings with you are inexplicable." Why does that aged man, decrepit, beggared, vicious, sick of the world and the world sick of him, live on, while here is a man in midlife, consecrated to God, hardworking, useful in every respect, who dies? Why does that old gossip, gadding along the street about everybody's business but her own, have such good health, while the Christian mother with a flock of little ones about her whom she is preparing for usefulness and for heaven—the mother who you think could not be spared an hour from that household—why does she lie down and die with a cancer? Why does that man, selfish to the core, go on adding fortune to fortune, consuming everything on himself, continue to prosper, while that man who has been giving 10 per cent of all his income to God and the church goes into bankruptcy? Before we make stark fools of ourselves let us stop pressing this everlasting "why."—Dr. Talmage in Ladies' Home Journal.

Washington a City of Churches.

There is no city in the United States which might be called the city of churches with more appropriateness than Washington. They are not particularly large or imposing, these Washington churches, but there is an immense number of them. As a matter of fact, the capital contains nearly 200 churches. The Methodist denomination claims 52. The Baptists come next with 45, then the Episcopalians with 26 and the Presbyterians with 21. The Roman Catholics have 13, the Lutherans 10, the Congregationalists 4, the Hebrews and the Christians 2 each and the Unitarians, the Universalists and the Swedenborgians 1 each. Besides these there are half a dozen nonsectarian bodies.—Washington Letter.

Respect For the English Language.

If we reverence our mother tongue as we ought, we will be on our guard not to insult it by violating its rules. We will not say, "You hadn't ought to do this," or, "He ain't a-goin to do that." We will avoid that last and worst error of the vulgar, the double negative. We will be above misplacing moods and tenses and putting the nominative case where the objective belongs by right.—Harper's Bazar.

Money Saved, Money Earned.

Mrs. Climber—My dear, Mrs. Highupp has had her portrait painted by a celebrated artist, and I haven't had a thing but common, ordinary, everyday photographs to show.

Husband (a wise man)—Huh! The idea of advertising to the whole world that her complexion is so bad it won't stand the camera!—New York Weekly.

PROVEN A MYTH.

A Thorough Search for the Famous Regley Mine Explodes a Joke.

AN OLD TRADITION IN CALIFORNIA.

A Miner's Yarn That Caused the Death of Scores of Prospectors on the Colorado Desert.

For many years past there has been a tradition that Pegleg Smith, a forty-niner miner, once discovered a mine of fabulous richness on the Colorado desert. This mine has been described as being of solid gold and has been the object of innumerable expeditions and great loss of life. This was the object of the Breedlove party's expedition, which ended in the death of all the participants.

Pegleg, who was widely known among the mining men, left a fairly good description of the landmarks and surroundings of his mine, but up to the present no one has ever been able to find anything to indicate there was any basis for his story.

A few months ago ex-Sheriff Martin Aguirre, Edward Mellus, F. C. Mellus and a well known prospector named Michael Kirby organized an expedition to search for the mine, having obtained maps and descriptions which gave them a reasonable certainty of finding the bonanza.

Ex-Deputy Sheriff Mellus, who has so rudely torn away the veil of romance which has surrounded the lost Eldorado for over 30 years, has been a crank on the subject since he was 16 years of age, 18 years ago. Just 10 years back he made his first search for the lost gold mine, taking the hidden spring as his objective point. According to reliable information, this hidden spring was in the locality of the mine, and it was necessary to find it on account of the lack of water in the desert. With the aid of an Indian, who was informed that Mellus was hunting mountain sheep, the spring was found in a little oasis covering about a quarter of an acre of territory. Satisfied with this result, Mellus returned to Los Angeles with the determination of resuming his search on the first opportunity. But funds were not plentiful, and he never had the opportunity until Judge Anson Brunson, the counsel of the Santa Fe company, offered to grubstake him and his companions in their hunt for the long lost mine.

Mellus, in company with the parties previously named, started out with four horses and eight burros for the Colorado desert. They made for a little valley known as the Vallecitos, intending to make that their headquarters. The journey was a long and rough one. Their progress was barred with the almost impenetrable jungles of cacti and prickly mescal plants, through which the treasure hunters had to hew their way. The season was the rainy one, and the travelers often rode day and night through the pouring rain without finding shelter of any kind.

At last they reached the little valley and made their camp before commencing their march across the desert. After a short rest the burros were reladen and a start made for the three buttes, which old Pegleg had described as being the locality in which he found the shining gold in heaps. Taking warning from the fate of the numerous prospectors who had lost their lives in the search, Mellus first saw to their water supply. Eight barrels containing 11 gallons apiece were packed on the burros, and the journey was begun.

Not knowing exactly how long it would be before they reached the spring, the party determined to husband their water supply, and for four days the unfortunate burros plodded along in the burning sand without a drop of water. From this spring, which is so carefully concealed by nature that a man may be parching with thirst within 50 feet of it and not discover its existence, they made their way to the three historical buttes along which old Pegleg had stated lay the gold. When they were reached, the party at once commenced their search.

Days and days were passed in fruitless hunting. There were no signs of gold. All of Pegleg's landmarks were found, but not the precious metal. The only approach to it was a decomposed ledge running northwest and southeast. The ledge was honeycombed throughout, and the prospectors dug to a depth of 20 feet, but when the dirt was washed not even a color could be found. All that remained were small garnets, none larger than a pin's head. The whole country for two miles around was thoroughly examined, and at last the disgusted treasure seekers packed up and made their way back over the desert. Speaking to a reporter, Mr. Mellus said:

"I want to say for the benefit of future prospectors that there is and can be no such place as the Pegleg mines. I have looked up old Pegleg's record since my return, and judging from the evidence of his friends and acquaintances the old man was a blamed old liar. He has been the cause of many a good man losing his life, and I want to say right here that he was a fakir of the first water.

"The only foundation I can find for the story is that years ago miners in going to Fort Yuma used to take the old Butterfield route, which leads in the direction of the supposed Pegleg mine. The Cahuilla Indians used to make a practice of ambushing these miners and robbing them of their gold dust. I know for a fact that 17 miners were shot down at one time. The Indians, afraid to bring back this dust at one time, used to bury it in the desert and account for their possession of it by stating that they had found a wonderful mine, the locality of which of course they would not describe. In my opinion, this is the source of the story of the wonderful Pegleg mine. Old Pegleg drew on his imagination, which was a good one. Why, he said he got lost and woke up one morning to find glittering gold all around him."

Mellus is confident that he reached the exact spot declared by Pegleg to be the site of his mine, and that his experience leaves no room for credence in the old miner's story.—Los Angeles Cor. San Francisco Examiner.

Would Probably Do Just as Well.

"Have you got any Gretna greens?" inquired the facetious customer with the basket on his arm.

"No, sir," answered the grocer. "Nearest I can come to 'em is parlor matches. Anybody waiting on you, ma'am?"—Chicago Tribune.

A Much Traveled Man.

Briggs—That fellow over there is one of the greatest travelers of modern times.

Griggs—Where has he been? Around the world?

The Accommodating Lightning.

"Humph!" said the lightning as he flashed through the skies. "What's that sign on that country house?" (Reads) "To rent. Ah! I'll take the hint."

And he did so.—Exchange.

A Romantic Story from Austria.

It is believed that influenza is answerable for both deaths—those of the Archduke Henry and his beloved consort—which, as announced, are the subject of widespread grief in Vienna. The archduke knew nothing of the death of his wife. The archduke's only child, Baroness Roineria of Waldeck, who had been deprived of both parents in such a tragic manner, says that they had a presentiment of their fate. The baroness' grief is heartrending. She is being consoled by the Duchess of Alencon, sister of the Empress Elizabeth.

The tragedy is intensified by the romantic history of the union of the archduke and the opera singer by the sacrifices the archduke had to make and by the exemplary happiness of the pair during the twenty-three years of their married life. They were idolized throughout the Tyrol, and in Vienna the tall, strong figure of the archduke, with his long white beard and blue eyes, was a familiar object. He made the acquaintance at Graz of the prima donna of the theater in that town in the drawing rooms of the Styrian nobility. He privately engaged himself to her just before he had to leave for Italy to fight for his country, and the girl in his absence was offered bribes to release him, but resolutely refused.

At last the pair were married in the private chapel of the archduke's palace at Bozen. Large black flags floated from the four corners of the Vienna Rathhaus as a mark of sympathy. Both bodies lay in state in the archduke's private chapel till Wednesday night. They were then conveyed to Bozen for interment in one grave beneath the chapel in the archducal palace, according to the wishes of the archduke. The Vienna papers express unanimous regret at the sad occurrence.—Pall Mall Gazette.

The Fever of Gain.

One of the brightest and busiest newsboys in this teeming town stands on the north side of Park place, just off Broadway, every afternoon and evening except Sundays. He is an Italian, and apparently not more than twelve or thirteen years old. During the year that he has been selling papers in that particular locality he has built up a trade that keeps him busy nearly all of the time. He is seldom heard to ask a passer by to buy a paper. A very large proportion of the men who take papers from him are his regular customers. His keen eye discerns them half a block away. He knows what papers they want and has them ready as the customer passes.

Most of the customers also have the exact price of the papers ready to drop into the boy's hand, and it is seldom that a word passes between the lad and his regular customers. One of the boy's regular customers observed on Friday evening that the little fellow had no overcoat and questioned him about it. "No, I am never cold," said the newsboy, his teeth chattering meanwhile. "But you look half frozen," persisted the customer. "You earn money enough to dress warmly and you must take care of your health."

"I take care of my business. I got no time to bother with my health," replied the boy in a tone that plainly indicated his desire that the subject should be dropped.—New York Times.

A Ghost at the Window.

A curious story is told in New Albany. On the night of Dec. 2 Mrs. Sophia Scharf, wife of Anton Scharf, died at her home in East Fifth and Spring streets, and the funeral took place several days after. The next Saturday, it is alleged, Mrs. Frank Zoeller, a daughter-in-law of the dead woman, residing on East Eighth and Sycamore streets, was surprised to observe a perfect representation of the head of her mother-in-law at the window of her house. The apparition was afterward seen by Mrs. Peter Weinman, Fritz Weinman, two daughters of Officer Dennis Gleason and several others.

After the second visit a perfect picture of the deceased was left on the window pane. Several persons, it is claimed, attempted to rub it off, but the picture remained until Saturday evening, when Joseph Scharf, a son of the dead woman, who had just arrived from the far west, having been called to his mother's funeral, passed his handkerchief over it, when it disappeared. The case is exciting considerable comment in that part of the city in which it occurred.—Louisville Courier-Journal.

Hydrophobia from a Snowball.

A strange case has come to light near Cairo, Pa. Howard Davis, aged eight years, has for some time past exhibited signs of hydrophobia. He has been in bed at the home of Mr. and Mrs. George Smith, who had taken him from the Fairmont home, and was barking and snapping like a dog. At times it was all those present could do to keep the boy in bed. The boy had been bitten in the hand by a dog in 1885, while he was in the family of Ezra Moore.

The present trouble is not thought to be hydrophobia by the attending physician. He says it undoubtedly resulted from a snowball, which hit the boy a hard blow above the heart. The marks of the blow were visible. The little fellow is resting easy at present.—Cairo Repository.

A Rock.

One of the biggest rocks ever moved in the course of railroad construction in this country was recently excavated on the line of the Mexican Southern by Colonel Lamar. The giant bowlder was 120 feet in height and measured 1,000 cubic meters. Six dynamite cartridges were placed under the rock after the men had excavated as much earth as possible, and were fired one after another. At the sixth explosion the big fellow rolled over out of the way.—Lower Californian.

Had Been Through Fairs Before.

The queerest deliverance from a pulpit recently reported was that of the Bath clergyman who exhorted his fair hearers not to get in a quarrel over the church fair they were getting up!—Lewiston Journal.

BURMESE MONKS.

A Brotherhood to Which Every Male of Burmah Belongs.

SUPREME DESIRE OF THEIR LIVES.

Privations That the "Phoongyees" Undergo.—How They are Regarded by the People.

The Burmese have a highly flourishing monastic institution, the members of which are styled "Phoongyees," a word signifying "great glory." The Phoongyee order is an absolute necessity under the present Buddhist dispensation, because no one can emerge from the whirlpool of ever recurring existence unless he abandon the world and become a recluse, a monk. For this reason every man with the least claim to respectability or good social standing in Burmah must go through the formality of assuming the yellow robe of a Phoongyee once in his lifetime, and join the religious brotherhood for a few days at least. This is generally done in boyhood.

These monks live in monasteries or "kyoungs," built away from the hum and buzz of towns and villages. Successful traders will oftentimes spend the better part of their gains in building a monastery, either as a means of acquiring merit or for the sake of prefixing to their name the honorable appellation of "Kyoung-taga," i. e., builder of a monastery. This they bestow on some favorite monk of theirs, who ipso facto is installed as superior of it. The order has a duly organized hierarchy, with a "great teacher" at the head of it, styled "Thathanapine Tsa-yah-dawgyee." After him come the "Gine-oks," or provincials, under whose direct jurisdiction are the abbots of the different monasteries. These last rule, in their turn, over the novices and other "Oopatzins," or simple monks.

The respect shown by the people in general to these monks amounts to veneration, to worship. In fact, the Assembly of the Rahans is one of the three precious things every Burmese is bound to venerate. They are addressed as Phra, i. e., lords. The person who addresses them, be he prince or plebeian, must approach them in a kneeling posture, with his hands joined and raised to his forehead—a form of salutation known in Burmah as "sheekoing"—and after making three different prostrations proffers his request. As a rule, no one goes to see a Phoongyee empty handed. The monk on receiving a present never acknowledges it. Sometimes he might deign to say "Thadoo, thadoo!" (well, well!), but never "Thank you!" The reason of this is that the monk confers a favor on the giver by affording him an opportunity of acquiring merit for his next existence.

The Phoongyees live exclusively on the liberality of their countrymen, who are very generous to them. As a compensation they teach children the first rudiments of reading, writing and arithmetic. By an imperative rule of their order the Phoongyees are obliged to beg their daily food. For this reason every morning, between 7 and 8 o'clock, they go forth in procession from their respective monasteries carrying a large lacquered wooden bowl, which they clasp with both hands in front of their persons and with slow steps, eyes down, mouth shut, solemnly pace the streets, halting from time to time before a door. They neither knock nor make their presence known by any sign whatsoever, but stand there as mute and motionless as statues.

Should no one come out and attend to them, they move on to the next house, where, perhaps, they will receive a cupful of boiled rice or curry, which they accept without betraying the least sign of gratitude or recognition—no, not even so much as looking at the donor. When they think they have enough for the day they return home in the same slow, silent and solemn manner as they went out. The senior members of the fraternity very often stay at home. But their wants are regularly and plentifully supplied by pious women who carry food and little dainties to them. A monk may have his fill from sunrise to noon; after that hour no more solid food must enter his mouth till next morning.

On entering the monastery the monks promise to observe poverty, chastity and seclusion. In common with every Buddhist, they are bound to the observance of the five great precepts, over and above these there are five others which concern them alone. These are, first, not to eat after midday, second, not to dance, sing or play any musical instrument; third, not to use cosmetics; fourth, not to stand in unduly elevated places; fifth, not to touch gold or silver. Of late years abuses have crept into the order making the last named precept almost nugatory. But they observe with scrupulous fidelity the other points of the law. Above all they are very particular with regard to their vow, if we may so call it, of chastity. Seldom or never one hears of a monk having broken it. In fact, he has no occasion for so doing, because if he cannot bear the restraints of a monastic life he is always at liberty to return to secular pursuits. This, however, is attended in Burmah, as everywhere else, with dishonor and disgrace.

To secure his monks from possible breaches of their vow of chastity, Gaudama, their founder, prescribes that when any one of them is obliged to converse with women he must screen his face with the fan he carries for that purpose; the conversation must not be prolonged beyond five or six words, and this, too, must be done where every one can see and hear them.

The life of a Phoongyee is, on the whole, uneventful and uninteresting. Most of the forenoon he spends in ministering to his bodily wants. After that he may, perhaps, talk a walk to some shrine, accompanied by a few of his disciples, or sit idly at home chatting with visitors or listening to the town gossip.

I must not forget to mention that he is bound to the daily recital of his "Kamathan," or book of devotions; also to say his Buddhistic formulas on his string of beads, with which he closes his spiritual duties for the day. On feast days he mounts a platform, upon which he sits cross legged, and putting his large palm leaf fan before his eyes he reads out portions of Gaudama's law of teaching to the assembled congregation. This is the sum total of his duties to them. Sometimes he is asked to funerals, when he reads Gaudama's teachings on the ills of life, and nothing more. It must be clearly understood that a Buddhist monk is not a priest in any sense of the word. He has not chosen a state of mortification and penance for the good of others—i. e., to minister to their spiritual wants—but for his own benefit; that he may the sooner extricate himself, so to speak, from the meshes of transmigration, and arrive at Nirvana-annihilation.—Catholic World.

Guarding Against Imposition.

Jeweler's Daughter—Before I consent I must have from you a sacred promise.

Her Adorer—What is it, love?

Jeweler's Daughter—That you will buy the ring from papa.—Jewelers' Weekly.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY.

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 17.....1893

California's yield of gold will this year be larger than at any time since the courts forced the suspension of hydraulic mining. An immense amount of prospecting has been done all over the Sierras. Large numbers of experienced Colorado miners have been wandering all over the State, and their reports are of a most encouraging character. It is high time that hydraulic mining should be resumed under the act of Congress recently passed for impounding the debris. This State is full of inexhaustible gold lodes besides, many of which are now being worded with satisfactory results. Mr. Alvinza Hayward and his business associates are deriving princely revenues from their gold mines. Mr Judah, the engineer who laid out the Central Pacific railway, was fond of saying that the day would come when a man could ride along the crest of the Sierras from the Oregon to the Mexican line without getting out of the sound of a quartz mill. While this prediction smacks a little of exaggeration it is substantially true. The gold deposits of southwestern Nevada and southwestern Utah will some day astonish the world, and their development will be greatly hastened by the completion of the Utah Southern railway.

Long time observance has made the last Thursday in November Thanksgiving Day. Presidents and Governors have respected the date without deviation. It has been left for Pennoyer, the Oregon gubernatorial ass, to fix a week earlier, while the President and Executives of all other States have named the conventional date. Perhaps to avoid any scandal the people and churches of Oregon will observe both days; but this will be a proceeding that will not reflect much courage. Then, too, we fancy that a large number of the clergy will find it very embarrassing to read from their pulpits the political proclamation of the Governor of Oregon.

The discovery of immense beds of nitrates within a short distance of the Nevada Southern railway is an incident of the first importance. One of these deposits is said to cover one hundred acres, and to range in depth from five to nine feet. It is estimated that this single deposit contains over a million tons of this valuable staple, which is sold by Col. North, the English nitrate king, for $45 a ton. That gentleman has to pay the Chilian government a royalty of $10 a ton, a sum which would cover hauling the nitrates to the next station of the Nevada Southern. With this great element of wealth added to the coal, iron and precious metals which will be developed by the extension of this railway the prospect becomes actually iridescent.

The President has commissioned O. M. Wellborn, Internal Revenue Collector for the First District of California. This means that John C. Quinn has been removed, and he ought to have been. He is a most disreputable person, as the San Francisco papers, regardless of politics, have shown; and besides he was an aggressive partisan who was continually manipulating a machine to control the Republican party. The new appointee was the unanimous choice of the California delegation.

Senator White should early propose and submit to Congress a bill to reimburse the settlers on the railroad lands for their cash outlay, and provide for the restoration of the rights of those who located their lands with their soldiers' homestead certificates. Quite a number of old soldiers used their homestead rights in locating on these lands and now they have to buy and pay for them in cash. Justice demands that their rights be restored.

Commissioner Miller of the Internal Revenue Department, Washington, says that he expects soon to take the necessary steps for the enforcement of the amended Geary law. We hope that Mr. Miller has a proper appreciation of what the word "soon" means. We are anxious that the Chinese should not have any further excuse for asking a further extension of time, and President Cleveland ought to be anxious, too.

And now Russia steps to the front and announces that silver is a good enough financial Morgan for her purposes. She is said to be ready to absorb $260,000,000 of the white metal. This will be pleasant news to the silver miner.

MAKING LACE PAPER.

MINNEAPOLIS HAS THE ONLY FACTORY OF THE KIND HERE.

How a New Industry In Which Germany Excels Came to Be Established In This Country—As Yet It Is In Its Infancy. Nice Work For Women.

Minneapolis can claim a monopoly in at least one industry. There is none like it in the country. Germany is the nearest competitor. The lace paper factory here is the only one in the country. How the industry came to be established here and the development of certain possibilities in regard to it make quite an original story.

A certain business man tolerably well known in Minneapolis once upon a time loaned some money and material to a Russian immigrant who was trying to start a greenhouse in St. Paul. The florist was very grateful for the help, but at the end of six months had not repaid any of the loan. The business man hunted him up and inquired wherefore this negligence. The florist explained his difficulties at some length, and sorrowfully averred that in addition to other burdens he had to support his brother.

"Why doesn't your brother go to work?"

"Pardon, sir. He is honest and industrious, but can find no work at his trade."

"What trade can that be?"

"He is a lace paper maker and there are no factories of that sort here, and he has not much chance at other trades where he has no skill."

An interview with the paper maker revealed some interesting facts, and after some investigation several Minneapolis capitalists concluded to start a factory to evolve the dainty confections that modern ingenuity says may be made from paper. The industry is still so new that its present condition may be regarded as only an earnest of the future.

The fad for fancy lamp shades makes a special department which was not at first contemplated. Crape paper develops in all the soft, dainty sheen of silk. Women are specially good at this branch of the industry, as it requires patience and that peculiar "knack" which no man ever had, and the woman who possesses it is luckier than if she had beauty, though she never thinks so herself.

Now, this business of making lamp shades and flower pots and paper flowers and dolls is light, clean work and pays well if a woman has the bent for that kind of work.

The prettiest lamp shades I ever saw were being made at the factory. The tobacco leaf forms the latest model. Two contrasting shades of crape paper form the leaf. It is cut in the proper shape, and a delicate wire forms the mid rib of the leaf and makes the shade substantial enough to stand wear. Four long leaves and four shorter ones droop from a common center and make the daintiest shade imaginable. I saw a tiny one of this same pattern for an incandescent light. The red leaves were lined with pale yellow, and how the electric light did glow through the blended colors! A skillful workwoman can only construct four or five of these shades a day. Their price consequently doesn't exactly bring them within the reach of all, but they promise to largely take the place of silk and illusion. The operative earns from $8 to $10 a week in the shade department.

Lace paper for lining the edges of boxes really forms the important part of this industry. Look at a bit of this dainty paper and see how faithfully it reproduces every thread of the lace from which it is copied. When people are told that these delicate patterns are stamped from engraved metal plates, they are apt to look incredulous. Still that is the process.

For many years Germany has controlled this industry. The consul at Berlin in his last annual report states that 7,000,000 pounds of lace paper are exported annually to the United States.

One fine day good fortune befell the industry. A man came in and asked for employment. He was a designer and engraver of plates from Germany. He declined to give any information as to how he knew the factory was in Minneapolis or why he came. He simply said they could try his work, and if they were satisfied he would stay. He has remained ever since. I saw him several times and didn't wonder that there was some hesitancy about engaging him. He weighs about 325 pounds. The face is intelligent and refined, but the bushy beard and long hair, combined with the muscular frame, give the man the appearance of one used to vigorous manual labor. Appearances are deceptive in this case, for he is an artist as well as an engraver, and knows every detail of the business.

He first sketches the design on paper, then takes a block of lead composition, similar to that used for newspaper cuts, and draws the exact pattern with a sharp steel point. Then, with finely graded chisels, he hammers out every little detail so exact that the tiniest thread of the finest lace pattern is visible.

To see the workman hammering out an intricate pattern one would think it an endless task. It is not, however, nearly so tedious as it looks. This engraver will make a plate 20 inches long by 2 inches wide in four days. All the edges of the pattern have to be made in sharp relief instead of being cut into the plate, as in ordinary engraving. This has to be done so that the sharp edges will perforate the paper when the cylinder passes over the plate.

Lace paper has its styles just the same as the real article. The young lady who gets her daily box of bonbons from the confectioner wants the lace edged holder to be in the latest mode. She can also select torchon, valenciennes, spanish, guipure, breton or any other style in the paper just as she can in the thread.

Among the pretty imported notions is that of a cornucopia with a deep lace edge and closed with dainty bows of satin ribbons. This is to hold matinee or theater allowance of candy and will probably be very popular.—Eva McDonald-Valesh in Minneapolis Tribune.

NOTICE TO CREDITORS

Estate of Thomas Williams, deceased.

NOTICE IS HEREBY GIVEN BY THE undersigned, Executrix of the last Will and Testament of Thomas Williams, deceased, to the Creditors of and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice to the said Executrix, at the office of Bennett & Forbes, Attorneys-at-Law, in the County Court House, at Independence, the same being the place for the transaction of the business of the said estate, in the County of Inyo, State of California.

SARAH ANN WILLIAMS.

Executrix of the last Will and Testament of Thomas Williams, deceased.

Dated at Independence, Inyo Co., Cal. November 8, 1893.

NOTICE TO BOND-HOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated the 6th day of October, 1893, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to cancel such bonds by the payment of the principal and interest accrued thereon.

Dated the 9th day of October, 1893.

D. J. HESSION,
Clerk of the Board of Supervisors of Inyo County, State of California.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m., an additional five per cent will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent will be added to the amount thereof; that all taxes may be paid at the time the first instalment as herein provided is due and payable.

J. S. GORMAN,
Tax Collector.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD,
Justice of the Peace of said Township.
E. SPENCER, Attorney for Plaintiff.

ORDER TO SHOW CAUSE WHY LEASE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate and Guardianship of Hatty Vagt, Lena Vagt and Jacob Vagt Minors.

Heinrich Glade, Guardian of the Person and Estate of Hattie Vagt, Lena Vagt and Jacob Vagt, minors, having filed his petition herein, duly verified, praying for an order authorizing him to lease certain real estate of said minors, for the reasons and on the grounds therein set forth, which said real estate is described as follows, to wit:

Lots Nos. 3 and 4 in the fractional North West quarter of Section No. 6 in Township No. 13 South, Range No. 35 East, M. D. M., containing 160 acres, all in Inyo County, State of California.

Wherefore it is hereby ordered that all persons interested appear before the Judge of said Superior Court on Saturday, the 18th day of November, 1893, at the Judge's Chambers in the Court House in the town of Independence, County of Inyo, State of California, at 10 o'clock a. m. of that day, then and there to show cause why the above described real estate should not be leased from the date thereof for the full period of 5 years, for the rental of $500 per annum, as stated in the petition of said Heinrich Glade, Guardian as aforesaid, now on file herein, to which for further particulars reference is hereby made. And it is further ordered that a copy of this order be published in the Inyo Independent, a newspaper published and printed in said Inyo County, for at least two weeks, said publication to be completed before the said 18th day of November, 1893.

GEO. M. GILL,
Judge of the Superior Court.

Dated October 31, 1893.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a **Curb** of long standing. Then I had a four year old colt badly **Sweeneied**; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a **Thoroughpin** and **Blood Spavin** on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Habhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

Estate of J. J. Morton—Order of sale of personal property.

WEDNESDAY Nov. 15, 1893.

Estate of J. B. Steward, deceased—Filed order of sale of personal property.

Estate of John Blair, deceased—Filed order of settlement of account and final distribution.

THURSDAY, Nov. 16, 1893.

Estate of John A. Hannah, deceased—Filed inventory and appraisement.

BORN.

MAIRS—At Independence, November 10, 1893, to Mr. and Mrs. O. I. Mairs, a daughter.

MARRIED.

BELL—VAGT—At Camp Independence, November 12, 1893, by Irv. H. Mulholland, J. P., Mr. Henry Bell of Big Pine and Miss Hattie Vagt of Camp Independence.

DIED.

PAYNE—At Fish Springs, November 11th, Mrs. Mary Payne, aged 86 years.

T. C. Boland of Keeler was in town one day this week.

Regular Saturday evening soiree at Mairs Hall to-morrow night.

Henry Rhine is expected to arrive from San Francisco to-day.

Regular meeting of Inyo Lodge No. 221 F. and A. M. to-morrow night.

See Hale Bros. new ad. this week and announcement of holiday goods.

Scott Broder came down from Fish Spring last Monday and spent the week in town.

The Baxter-Gilbert water suit is still occupying the attention of the Superior Court.

Tickets can now be obtained at all business houses in town for the domino ball on Thanksgiving.

A light skiffle of snow fell last night, a most unusual occurrence at this time of the year. Old timers predict a hard winter.

The Meads Bros. arrived from Mojave with their big team on Tuesday. They had on about seven tons of freight. A series of mishaps delayed them on this trip.

Capt. E. A. Reddy came in from Darwin yesterday to meet his brother, Hon. P. Reddy. He is in charge of the Defiance mine and reports matters progressing smoothly.

Plenty of snow in the canyons now means plenty of water in the valley next year. It is the early snow-fall that packs solid in the canyons and lasts into the following summer.

W. P. Yaney arrived from Bakersfield on Monday, having come up on Saturday's stage from Mojave. He reports the Inyo contingent in Kern county to be in a thriving condition.

The participants in the N. S. G. W. Dramatic entertainment to be given on the night of the 29th are hard at work getting ready for the occasion. Get your reserved seats in time.

Last Sunday morning at 11 o'clock a quiet wedding took place at the Vagt residence at Camp Independence. Henry Bell of Big Pine and Miss Hattie Vagt were united in matrimony in the presence of the immediate relatives of the contracting parties. A wedding breakfast was partaken of, after which the young people started for their future home at Big Pine. We wish them a long and happy life.

AS OTHERS SEE US.

The Los Angeles *Herald* contains the following article:

A. Schelling, the well known vinegar and pickle manufacturer of Los Angeles, lately sold his business to James Hill, a prominent vinegar and pickle manufacturer from Keokuk, Iowa, and spent a few days in Owens valley, Inyo County, for a rest. He returned from there this week and is fully satisfied that the Owens valley, which is of a mountainous scenery like Switzerland, though not developed yet, will in a very short time be as densely populated as any good country of the United States.

Mr. Schelling expresses the impression which he received from Owens Valley as follows:

I consider Owens Valley as one of the nicest, healthiest and most fertile countries I ever saw; a good home for the poor and for the rich. The elevation of the Valley is from 2600 to 4000 feet above sea level. This elevation, the good dry air and the total absence of fog make it one of the healthiest countries on earth. The temperature in summer rises as high as 100 degrees and falls in winter to 25 degrees.

Occasionally one or two inches of snow fall in the Valley, but it disappears soon after the sun has risen.

The heat during the summer is always moderated by an agreeable breeze from the snow capped mountains. In spring this breeze changes into a pretty strong wind, but not of a velocity to do any damage. Oct. 26th the thermometer at Citrus station showed 70 degrees F., at 8:30 a. m., and the weather was bright and clear. There was only one cloudy day during my presence sn Owens valley. The rainfall very seldom exceeds three inches. This dry climate makes Owens Valley exceedingly fit for drying fruits, especially for the culture of raisins.

The present population of Owens valley is about is about 4,000. There are about 800 Indians of the Piute tribe in the valley. They are all good natured and civilized. Their children attend an English school and are as intelligent as the white children.

Owens Valley could very easily support half a million inhabitants as it contains about 500,000 acres of good tillable land and plenty of mineral resources. The reason why it is not better settled is probably the want of communications with more densely populated counties, and therefore, the want of facilities for a good market.

As the valley is situated between two high mountain ranges, the Sierra Nevada on the west and the White and Inyo mountains east, it naturally has only two outlets—one toward the north and one south.

Toward the north a narrow gauge railroad—the Carson and Colorado—runs a train every other day from Keeler to Reno and vice versa, in connection with the Central Pacific railroad, but the charges of this railroad are so high that it is almost impossible for the farmers to ship their products to the principal market places of Northern California—Sacramento and San Francisco. At the Southern outlet of the valley is a stage road through the Mojave desert to Mojave, a distance from the southern part of the valley of about 100 miles. A four-horse stage is running between Mojave and Keeler, a little village on Owens lake. The stage leaves Mojave for Keeler every Tuesday and Saturday evening, and Keeler for Mojave every Monday and Thursday morning. It changes the horses four times on each trip, which is made in about 24 hours. A railroad is projected and franchised from Mojave to the Owens Valley, and as soon as this railroad is running the valley will come to the very front and be settled up rapidly.

The soil of Owens Valley is very productive if irrigated, and there is abundance of water to irrigate with. The water is taken partly from numerous mountain streams and partly from the Owens river which carries water enough to irrigate almost a million acres of land. An English syndicate intends to construct a big canal to convey part of the water of Owens river to a valley south of the Owens valley called Indian Wells valley. This valley contains about 350,000 acres of good government land, and will, after the completion of said canal become one of the finest countries in California.

In the upper part of Owens valley in Bishop, the largest town in the valley, with a population of about 1,000, are a good number of well cultivated farms, and there is such an abundance of water that in some places it is actually wasted. Very good settlements are also in Big Pine, Independence the county seat, Lone Pine, all on the west side of the river, and near Citrus and Alvord on the east side.

Stock raising is the principal occupation of the farmers in Owens valley, and the horses look very fine. The farmers in Bishop carry besides horses also a good stock of milk cows. They have recently paid especial attention to the butter and cheese industry by starting a creamery, and I believe this industry can, because of the abundance of very good feed, be made a success if properly managed. There are good openings in Owens Valley for well trained butter and cheese manufacturers.

Besides alfalfa they raise in Owens valley wheat, barley, oats, corn and vegetables. All these products grow to perfection; and the deciduous fruits, apples and pears, and also the grapes which have been raised there are of a very fine flavor. Peaches and apricots are a sure crop only in the southern part of the valley; but for grapes, both wine and raisin grapes, there is hardly a better country in California. A farmer told me he raised a bunch of grapes last summer which weighed eleven pounds.

The land along the Owens river is good for pasture. The higher located land is good for alfalfa, fruit and grapes. All the land contains more or less soda, but this does not injure the crops where there is no water standing on the land. The water can very easily be drained off as the land slopes towards the river. Alfalfa yields from five to ten tons per acre in one season, and corn and wheat about a ton. The prices for partly improved land, including water for irrigation, varies from $10 to $30 per acre, according to the quality. There is also lots of government land in the valley for which water can be bought at a reasonable price, but the best land is all located. There is a good chance in Owens valley for people with little money to get wealthy by and by. For people of means there is a very good chance for investments.

The White mountains and the Inyo mountains carry lots of minerals. The best mines which are operated at present are the Defiance at Darwin (silver and lead), the Georgia opposite Bishop (gold) and the Sacramento (gold). There is also a quarry of the finest Carrara marble opposite Lone Pine in the southern part of the valley, and a large deposit of borax in Saline valley, east of the southern part of Owens valley.

The Owens lake in the southern part of Owens Valley contains a a very high percentage of soda. An English syndicate bought all the land along the lake where they evaporate the water and manufacture soda.

J. J. Morton arrived at Keeler from Madera last Monday and came up to Independence next day. He says that people in Owens Valley may talk about hard times but they don't know anything about it. One must go away from here to understand it. Here everybody has plenty to eat, comfortable clothing, and the pauper class is a thing unknown; while west of the mountains there is a great deal of absolute want and misery. Mr. Morton expects to go back to Madera, where he is in the hotel business, in a day or two, but will return to Keeler in about a month and put a force of men at work on mining property of his at Snow's Canyon.

One by one the old pioneers are going to join the silent majority. Last Saturday night Mrs. Mary Payne died at the residence of her son-in-law, Thos. J. Goodale, at Fish Springs, where she has made her home for many years past. Mrs. Payne was one of the very early pioneers, having settled in the valley in 1864. Mr. and Mrs. Payne lived at one time on the site where the old adobe house owned by E. Robinson stood at the south end of Edwards street. She died in her 86th year and was buried in the Odd Fellows cemetery at Independence on Monday last.

Should work on the Salt Wells Valley canal begin it means employment for every spare team in Owens Valley. Horses must have feed, and that means a market for all the hay and grain in the valley. We know of only one man who has steadily thrown cold water on the enterprise and we cannot possibly see what he has to gain by the abandonment of the scheme.

Very encouraging reports come in from Modock. Both Fitzgerald and Gunn are doing very well and are taking out ore that will pay even at the present low price of silver and lead. The Sorba mine is said to be developing into a very valuable property, there being a large body of fine ore in sight.

F. Stock, C. Mulholland and three others whose names we have not learned, but who are understood to be contractors, will arrive at Independence on Sunday. It is believed that work will begin at once on the big canal. O. I. Mairs will go to Olancha to-morrow to meet the party.

A special half-fare rate will be made on the C. & C. at Thanksgiving to accomodate those who attend the festivities at Independence. The N. S. G. W. entertainment takes place on Wednesday night, the 29th.

NOTICE OF ADMINISTRATOR'S SALE OF PERSONAL PROPERTY.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 14th day of November, 1893, in the matter of the estate of John Morton, deceased, the undersigned, administrator of said estate, will sell at public auction, for cash subject to confirmation by said Superior Court on

TUESDAY, the 28th day of December,

1893, at the hour of 2 o'clock p. m. of said day, at the late residence of said deceased, in the town of Keeler, Inyo county, California, the following described personal property, to wit:

One billiard table, 2 chandeliers, 9 bar-room chairs, 2 heating stoves and pipe, 4 cuspidors, bar and bar fixtures, 1 desk, 1 ice-chest, 1 step ladder, 2 tables, 3 carpets, 1 lounge, 1 bureau, 1 washstand, 1 marble-top table, 7 parlor chairs 7 pictures, 1 bedstead and bedding, 1 parlor table, 1 cook stove and cooking utensils and 2 cupboards.

Dated November 15, 1893.

J. J. MORTON,
Administrator of the estate of John Morton, deceased.

P. H. MACK, Attorney for Administrator.

NOTICE OF SALE OF REAL ESTATE AT PUBLIC AUCTION.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 14th day of November, 1893, in the matter of the estate of John Morton deceased, the undersigned, administrator of said estate will sell, at public auction, subject to confirmation by said Court, the following described real property, situate, lying and being in the town of Keeler, County of Inyo, State of California, to wit:

Lots numbers Seven (7) and Ten (10) in Block No. 10, together with all and singular the tenements, hereditaments and appurtenances thereunto belonging or in any wise appertaining. Said sale will be made on the

30th Day of December, 1893,

At 10 o'clock a. m., at the Court-House door, in the town of Independence, in said county and State.

Terms of sale, cash, gold coin of the United States, ten per cent. of the bid payable upon day of sale, balance on confirmation by said Superior Court.

Dated November 15th, 1893.

J. J. MORTON,
Administrator of the estate of John Morton, deceased.

P. H. MACK, Attorney for the Administrator.

Royal Baking Powder

ABSOLUTELY PURE

BROTHERS.

Two Nice Girls Talk Over Their Uses and Misuses.

"Brothers are very useful sometimes," remarked the girl with the roses in her belt.

"Very," assented the girl with the shot silk gown, "but sometimes they are a little trying—I am angry with Phil just now."

"What has he done?" eagerly asked the girl with the roses in her belt. "Having a brother myself I think I can sympathize."

"I know. Well, you see it is this way: Young Coldcash likes me, I know, but he is so awfully bashful that he could not get up the courage to call, and, having a brother of my own, I knew it would be simply ruinous to get up an intimacy with his sister, so'——

"So you bribed your brother to ask him to come," put in the girl with the roses in her belt.

"Of course. I bribed Phil to do it by getting Louise an invitation to Aunt Kate's garden party."

"Well?"

"Well, he did it, and they got to be great friends—I didn't just want that, you know, for every time I would be getting a nice, quiet talk with him, that provoking brother would come and drag him away, saying: 'Come on, old fellow. I know you don't want to waste so much time on sis. She'll talk you to death if you let her.' Of course he was too bashful to say he wanted to stay'——

"How perfectly horrid! Why didn't you tell your brother?"

"I did, and the next time he said: 'Come on, old fellow. I can see you're dying to get away, and I'll make it all right with sis after you're gone.'"

"Well, I never! I hope you"——

"Oh, yes, I got even with him. I didn't waste any time on tears and reproaches. I just asked Louise over to stay all night with me."

"But I don't see"——

"Why, goosie, his room is next to mine, and we laughed and talked until 2 o'clock. He knows that I know all about that little affair of his at college last year, and he thought I was telling Louise about it and we were laughing at him. Oh, I tell you, he was fairly wild."

"I'm glad to hear it. Now, when my brother gets troublesome, I just ask the girl he used to be engaged to to spend the evening with me. Of course he has to take her home, and I nearly die of laughing over how awkward he feels."

"What a splendid idea! Still, brothers have their uses—one learns from them how to manage the other men."

"Doesn't one? Now, for instance, when they dine at the house, how would a girl know that they were dying for an after dinner smoke if she hadn't a brother?"

"Very true, and he would be cross and they would fall to quarreling before they knew it."

"Mercy, yes. Then, too, you can find out from your brother what they are really interested in, and it saves a lot of time not to have to feel your way from Shakespeare to the races and from politics to tennis to find what he wants to talk about."

"Indeed it does. It's awful, though, if your brother gets mad and tells"——

"Indeed it is. Mine doesn't dare to now, though, he knows if he does I will just tell Edith all about Fan. You see he has told her that he never proposed to any girl but her, and—well, I happen to have a letter from Fan telling me all about it."

"You are in luck. Why that letter ought to be worth a couple of bonnets and an escort to several parties a season."

"It is. I've only to mention it and I get whatever I want, though, of course, I only use it in extreme cases."

"Of course. He'd get accustomed to it if you used it too often. I do pity Stella."

"Why? She has three brothers."

"I know, but they are none of them in love, and she can't do a thing with them."

"But they will be some day. Well, I must go now. I've promised Phil to go with him to select an engagement ring. There's a silver hairpin that I need dreadfully"——

"But the ring you select will never suit Louise."

"Oh, that's all right. He doesn't know it, but I went to the shop with her yesterday, and she selected the one she wanted. In return she is to use her influence with Phil to make him get papa to take back what he said to poor, dear Fred. Goodby, dear."—Chicago Tribune.

A Cautious Preliminary.

"I want to see the editor," said the man with a club. "Is he in?"

"Yes, he is in," replied the intelligent office boy, "but you had better step into the room adjoining first and see Mr. Coke. He's a lawyer."

"What on earth do I want to see a lawyer for? It's the editor I came to see, and I'm going to thrash him."

"Yes, that's all right, but still you might do well to see the lawyer first. You might want to make your will. After you have seen the editor you may not be able to."—Brooklyn Life.

Appropriate Colors.

"I want some ribbon," she said, "to trim a baby basket, and I am undecided about the color."

"Baby basket!" said the clerk briskly. "Oh, yeller, by all means."

"Yes," she said, "but this is for a baby dog."

"All right," he said, "then purp'll do nicely."—Philadelphia Press.

An Ancient El Dorado.

On the identical spot where King Solomon procured "golddust, peacocks and monkeys," a syndicate with $5,000,000 capital stock issued and a ten stamp mill erected, has just pounded out $55,000. Mount Ophir, of scriptural renown, is close by. The old rocks, which were too low grade for King Solomon's reduction processes, are being ground up and they average half an ounce to the ton. This gold field of Solomon's, which has been idle all of the centuries until now, is on the Malay peninsula.

The people who have gone in to develop it have had to cut seven miles of road through the jungle and clear sixty miles of river. They are just beginning to realize on their investment. The company with the big capital has a concession on twenty square miles of this gold field. The formation is black slate. A shaft sunk 100 feet on the lode has uncovered enough ore to keep the mill going a year. The ore will yield two ounces to the ton. In one place on the concession there is a hill 250 feet high and half a mile long.

The company has tunneled into this hill about half way from the bottom and found ore ranging from seven pennyweights to seven ounces of gold. The reef varies in width from two to nine feet. Even the loose rocks scattered about on the hillside yield half an ounce of gold to the ton. The superintendent said to the American consul recently: "I did not think there was anything of this kind so extensive in the world. Wherever you try you find gold." Raub is the modern name of the ancient el dorado.—Wilmington Letter.

A Remarkable Stone Thrower.

It is supposed that we have no men nowadays who could compete on even terms with the old archers. A man named Uri Bailey recently died in Pennsylvania who was worthy of a place with the old time soldiers. His skill in throwing stones was said to be marvelous. He was mentally deficient, but a giant physically. His aim with stones at any mark or game was as unerring as that of the most skillful handler of the rifle. He annually bagged scores of small game—pheasants, rabbits, quails and squirrels, which he killed with stones.

He could kill a bird on the wing or a rabbit at full speed almost as easily as he could kill it at rest. He had a large leather pouch attached to one side of his coat, in which he on all occasions carried a good supply of carefully selected stones. An exhibition of his skill, which was always a favorite with him, was to set up a scythe blade, edge toward him, and at the distance of 100 feet cut apples in halves by throwing them against the edge of the blade.

He could almost exactly halve two out of every three apples he threw. Robin Hood's great feat of skill was to set up a peeled sapling at a considerable distance and split it with an arrow. We do not see that this is more difficult than splitting the apple on the scythe blade.

Why It Was Named Machias.

A good many people doubtless have wondered why Secretary Tracy named the gunboat launched at Bath, Me., the Machias. Machias people know why, and are very proud of the exploit of their ancestors, who within a few weeks of the battle of Concord fought a smart naval engagement and captured a British schooner which was blockading their port. The captain of the British schooner commanded the men of Machias to cut down the liberty pole which they had set up on their common. The men of Machias refused, and there was some skirmishing of an inconclusive nature.

Finally some bold spirits in the town fitted out a sloop and attacked the schooner, which was named the Margaretta. The engagement was brisk, and the Americans succeeded in boarding the schooner, drove her crew below and pulled down the British colors. Machias people claim that the Margaretta was the first British vessel captured in the Revolution, and their exploit is sometimes called "the Lexington of the Seas." Machias is an historical place, and if the gunboat is handled with the old Machias spirit she will give a good account of herself.—Boston Transcript

Boulanger Souvenirs Pawned.

A curious result of the decline and fall of General Boulanger has been brought to light in the public pawn offices. These state supported establishments, called generally monts de piete, have been inundated of late with busts and medallions of the defunct general. The pledges in marble, plaster of paris or bronze have been put in the clou by poor enthusiasts, who in the days of Boulanger's brief glory desired to have a memento before them of him whom they deemed to be the "coming man." One branch office in the Montmartre-Clignancourt district, where M. Boulanger was particularly popular, is said to have nineteen busts of the departed agitator.—London News.

The recent revolution in Brazil is another instance of the peculiar character of the government changes in the great South American republic, and the strange thing about them is that revolution follows revolution always without bloodshed. The late Dom Pedro abdicated and went into banishment without war; the president who succeeded him, and who undertook unsuccessfully to play the part of dictator, yielded to indignant popular opinion without shedding blood, and now another government has been set up, and so far the internal troubles have caused no blood shed.—Forum.

Visitors to Werkhojaust, Siberia, complain of the coldness of the place. The thermometer is said to have registered on occasions as low as 81 degs. below zero, and that the ground freezes to a depth of 400 feet.

The population of the Cherokee Nation, which has recently sold 6,000,000 acres of land to the government, is about 30,000. The Cherokees are a highly civilized tribe of Indians.

A Great Salt Lake In Siberia.

The great salt lake at Obdorsk is 9 miles wide and 17 miles long, yet except in a few places it is solidly roofed over with a deposit of salt which is getting thicker and thicker every year.

Our guide, who is an old man, said that he could remember when the salt crystals first began to gather upon the surface of the water. Year by year, owing to the evaporation of the water, the crystals became more numerous and then caked together till this great roof formed.

In 1878 the water beneath this salt crystal roof found an underground outlet into the River Obi. This lowered the lake's surface about three feet, leaving that distance between the water and the roof.

Looking down through one of the openings made for the purpose in the roof, we saw a low sided small boat. Our guide put us one at a time into the boat. We lay flat on our back and looked up at the curiously beautiful salt ceiling overhead. We propelled the boat by pushing with our hands against the irregularities of the roof.

The guide held a long rope attached to the boat to prevent our going too far and getting lost—a thing he said it was easy to do.

Many springs surround this lake. Their water flows over the roof and evaporates there, and thus continually adds to its thickness. After many years the springs will probably become choked with their own deposits, and then the whole will gradually become covered with earth, and so a great salt mine will be formed—a treasure for the Siberians hundreds of years to come.—Cor. Geographical Magazine.

People Who Whistle.

"Most people look upon whistling as a nuisance," said Herbert C. Sutliffe, "but there is no doubt that a whistling man has a good deal to recommend him. I have a friend who is a warden in a large penitentiary, and he states that in all his long experience he never knew a habitual whistler condemned to a term in the institution, and he says, moreover, that although the rules as to quiet and order are frequently broken he never remembers to have heard an attempt at a musical whistle within the terrible looking walls of the institution. Whistling seems to be the natural safety valve of good spirits and satisfaction, and the grumbling man couldn't whistle if he tried.

"I had a man to work for me once who was a model in every respect except that he kept my teeth constantly on edge by a series of whistling solos of anything but a cheerful character, although the good man was evidently trying to reproduce the latest operatic hits. I broke him of the habit by continuous scolding, but the man became so idle and indifferent in consequence that I was very glad to encourage him to resume a habit which at first had given me so much annoyance. I try to get out of the way when the spirit moves him to announce in whistling tones some important or romantic event, but I am perfectly certain that as long as he whistles he will work as hard as his hands and arms will let him."—St. Louis Globe-Democrat.

The Trouble With a Cold.

"S'matter?"

"I got an awful cold," replied Colonel Morney.

"Have you"——

"Yes, I have. I have polished my bronchial tubes with 'Conlin's Consumption Coughine."

"No, but have you"——

"Yes! Course I have. I've had goose grease rubbed all over my throat and chest, and I"——

"But, I say hold on, have you"——

"I tell you there's nothing I haven't tried. I took a hot bath, drank a pint of boiling lemonade and rubbed my hide almost off with Mustang liniment, but"——

"Now, listen! Have you"——

"Yes, I have. Tried them all, but they're no good. Why, last night I"——

"That's all right, but have you"——

"Have I what?"

"Have you time to go over to Flynn's and have something?"

"Why the deuce didn't you talk sense at the start?" responded the colonel. "I'm with you."—Exchange.

Colors of Sapphires.

Sapphires have of late years become fashionable gems. The blue of the sapphire is very seldom pure or spread over the whole substance of the stone. Sometimes it is mixed with black, which gives it an inky appearance, sometimes with red, which, although imperceptible by daylight, yet by artificial light gives it an amethystine appearance. Two sapphires which by daylight may appear of the same hue often differ extremely in color at night. If the stone be held in an ordinary pair of forceps an inch beneath the surface of very clear water, the parts of the stone colored and uncolored will be distinctly apparent. This remark applies to all other gems.—Cincinnati Enquirer.

The Growth of a Metropolis.

Things seldom seen in New York nowadays: A runaway, a man trying to ascertain where he is from the sign on a lamppost, sheep or steers being driven to slaughter houses, a man carried on a stretcher, girls selling newspapers, boys sweeping crosswalks, advertisements pasted on the curbstones, a torchlight parade, a chowder party keeping step coming home, a goat south of Fifty-ninth street, an omnibus on the west side of town, a barber shop in the second story of a building, or a woman as ready to take pennies in change in a street car as to give them for fare.—New York Sun.

Asking the Wrong Party.

"Some of you," said a political orator, "remind me of Johnny Bizirn, who undertook to break the yearling bull, and to make sure he did not get away tied the rope around his waist. The breaking process angered the yearling, and he split a crack in the atmosphere toward the swamp. Johnny only hit the ground in the high places. In their mad career they passed a neighbor, who yelled to John, 'Where are you going?' 'Blanked if I know,' he replied as he sailed through the air. 'Ask the bull.'"—Northwest Magazine.

Not a Paying Occupation.

Hicks—What a chance for a fellow to grab these women's pocketbooks that they hold in their hands so temptingly!

Wicks—Excellent, as you say. An industrious thief might snatch scores of 'em every hour and make as much as half a dollar a day.—Boston Transcript.

DIVORCE IN BURMAH.

An Original and Exhaustive Method of Settling Family Troubles.

In Burmah, as in civilized Europe, suspicion often disturbs the family circle, but instead of filling lawyers' pockets and giving society papers highly spiced paragraphs the following effectual mode of divorce procedure is adopted: The family relatives on both sides are called in—even distant cousins living a long way off—and many are the long journeys made in jolting bullock carts, and many the animated discussions by the cigar puffing circle of relatives squatted ceremoniously on the bamboo matted floors.

If an amicable settlement can be obtained thus—and very difficult it is to smooth down the quarrels, as a rule, for the Burmese are a spirited race—the elders or patriarchs of the village or district are called in, and after the circumstances are explained arbitrators are appointed from among them, who proceed as follows: Two candles—wax if possible, but generally rushlights—are selected of equal length and thickness, and being simultaneously lighted are placed on the table if the establishment boasts of one; if not, on the floor.

This is done with the greatest gravity, care being taken that neither party has any advantage over the other in the shape of drafts through the doors and crannies, and that all present are seated at sufficient distance to prevent their breathing from affecting the flame. The gradual burning down of the flames is then watched with breathless and solemn silence, which culminates as one or the other of these slowly burns down and splutters out its life in the waters of the basin in which it is fixed.

A deep "Ah!" a gutteral sigh of relief, greets this termination, and if it be the husband's candle that burns out first he and his relatives walk slowly out of doors, solemnly and silently, leaving his better half in possession of the goods and chattels contained therein. If the wife's candle expires first, she and hers do likewise, and with a small present to the judges and umpires the divorce is completed.—Chicago Herald.

Advance In the Value of Pictures.

At the sale of the art collection of the late Mme. Denain, once a famous actress of the Theatre Francais, a comparison of prices with those obtained at the auction of the Didier collection in 1868, from which most of the paintings, etc., brought to the hammer were derived, is most instructive as showing the wonderful variations in the value attached to masterpieces of art. Thus "The Four Seasons" (Prudhon) brought 80,000 francs, against 33,500 francs in 1868; a portrait of Mme. de Sombreval and of her son (Nattier), 40,700 francs, against 6,000 francs; a portrait of Rembrandt (by himself), 40,000 francs, against 4,000 francs; "The Rainbow" (Th. Rousseau), 17,500 francs, against 4,700 francs; "A Riverside View" (Bonington), 17,500 francs, against 4,200 francs; "The Reconciliation" (Fragonard), 16,200 francs, against 1,450 francs; portrait of Mlle. Olivier (Greuze), 15,000 francs, against 6,500 francs; portrait of a Monk Confessor (Rubens), 12,800 francs, against 2,000 francs; "A Forest Landscape" (Diaz), 12,500 francs, against 3,000 francs. On the other hand, a few works by Prudhon and Decamps were knocked down at prices far below those obtained in 1868, and a portrait of a girl by Velasquez, presumably his daughter, was sold for 10,000 francs, against 15,100 francs at the Didier sale.—London Telegraph.

Roses All the Year Round.

Splendid as the blooms of the June ones are, we want roses all summer long, hence have to look to the teas, Chinas, Bourbons and similar ones to give them to us, and they won't disappoint us. Summer roses, as we call them, bloom from first to last, giving us their smaller, though sweet scented, flowers until freezing weather comes. When the cool nights of fall come, they make a glorious display of flowers, allowing of the cutting of many a bouquet. The well-known Hermosa, Louis Philippe, Malmaison and Agrippina are members of this class. Other good representatives are Appoline, Edward Desfosses, Louise Odier, Bougere, Caroline Marniesse, Homer, Gloire de Dijon, Mme. de Vatry, Souvenir d'un Ami, Marie Ducher and Sombrieul. These are all hardy in this latitude with but little protection, and in many places with no protection at all.—Joseph Meehan in Pittsburg Dispatch.

THE WORLD'S FAIR.

California always to the front, was conspicuous in its exhibit of California made machinery. One very noticeable exhibit was the Hercules Gas and Gasoline engine, manufactured by Palmer & Rey Type Foundry, San Francisco, Cal. Send for catalogue.

To what base uses we may return a ratio, as Hamlet observed, is apparent by about 16 to 1.

SAFE, SURE AND SPEEDY.

No external remedy ever yet devised has so fully and unquestionably met these three prime conditions as successfully as ALLCOCK'S POROUS PLASTERS. They are safe because they contain no deleterious drugs and are manufactured upon scientific principles of medicines. They are sure because nothing goes into them except ingredients which are exactly adapted to the purposes for which a plaster is required. They are speedy in their action because their medicinal qualities go right to their work of relieving pain and restoring the natural and healthy performance of the functions of muscles, nerves and skin. Ask for ALLCOCK'S, and do not be induced to accept a substitute.

BRANDRETH'S PILLS are safe and sure.

"The race problem has a bright outlook in Roanoke." "Yes, it's the burning question there."

DEAFNESS CANNOT BE CURED

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars; free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

It is much easier for foreigners to acquire our bad habits than our good ones. The French engineers now visiting Philadelphia are all whistling "After the Ball."

CALIFORNIA AT THE WORLD'S FAIR

It will surprise many a Californian to know that from San Francisco was sent the Hercules Gas and Gasoline Engine to be exhibited at the Fair, and that these engines are being sold throughout the Eastern States as well as California, and are manufactured in California. Send for catalogue to Palmer & Rey Type Foundry, San Francisco, Cal.

In Court—"What's your age, madam?" "A witness doesn't have to testify against herself, does she?"

THE FOUNTAIN HEAD OF STRENGTH

When we recollect that the stomach is the grand laboratory in which food is transformed into the secretions which furnish vigor to the system after entering and enriching the blood; that it is, in short, the fountain head of strenth, it is essential to keep this important supplying machine in order, and to restore it to activity when it becomes inactive. This Hostetter's Stomach Bitters does most effectually, seasonably, regulating and reinforcing digestion, promoting due action of the liver and bowels. Strenth and quietude of the nerves depend in great measure upon thorough digestion. There is no nervine tonic more highly esteemed by the medical fraternity than the Bitters. Physicians also strongly commend it for chills and fever, rheumatism, kidney and bladder trouble, sick headache, and want of appetite and sleep. Take a wineglassful three times a day.

Few men on this terrestrial ball
Lose reason had at fate to flout.
He lived and died esteemed by all—
You see he never was found out.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germe for Breakfast.

Use Enameline Stove Polish; no dust, no smell

ABOVE EVERYTHING ELSE,

Dr. Pierce's Golden Medical Discovery purifies the blood. By this means, it reaches, builds up, and invigorates every part of the system. For every blood-taint and disorder, and for every disease that comes from an inactive liver or impure blood, it is the only remedy so sure and effective that it can be *guaranteed*.

If it fails to benefit or cure, you have your money back.

These diseases are many. They're different in form, but they're like in treatment. Rouse up the torpid liver into healthful action, thoroughly purify and enrich the blood, and there's a positive cure. The "Discovery" does this, as nothing else can. Dyspepsia, Indigestion, Biliousness; all Bronchial, Throat, and Lung Affections; every form of Scrofula, even Consumption (or Lung-scrofula) in its earlier stages; and the most stubborn Skin and Scalp Diseases, are completely cured by it.

CURE THAT COUGH WITH SHILOH'S CURE

25cts., 50cts., and $1.00 per Bottle. One cent a dose.

THIS GREAT COUGH CURE promptly *cures* where all others fail. Coughs, Croup, Sore Throat, Hoarseness, Whooping Cough and Asthma. For Consumption it has no rival; has cured thousands, and will CURE YOU if taken in time. Sold by Druggists on a guarantee. For a Lame Back or Chest, use SHILOH'S BELLADONNA PLASTER 25c.

SHILOH'S CATARRH REMEDY. Have you Catarrh? This remedy is guaranteed to cure you. Price, 50 cts. Injector free.

"August Flower"

My wife suffered with indigestion and dyspepsia for years. Life became a burden to her. Physicians failed to give relief. After reading one of your books, I purchased a bottle of August Flower. It worked like a charm. My wife received immediate relief after taking the first dose. She was completely cured—now weighs 165 pounds, and can eat anything she desires without any deleterious results as was formerly the case. C. H. Dear, Prop'r Washington House, Washington, Va.

DOCTOR Pardee's Remedy, THE GREAT CURE —FOR— INDIGESTION and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR Scrofula, Rheumatism, Salt Rheum, Neuralgia, And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO., 9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE STATIONARY AND MARINE ENGINES.

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

July Days.

Softly drone the honey bees;
Blossom scented in the breeze;
Golden is the grain.
Over all the faintest haze
Rests, and song birds pipe their lays
In a sweeter strain.

From the meadows come the scent
Of the new hay, clover blent—
In th[illegible]
Fleecy clo[illegible] at sea,
Floating o[illegible]
Or at a[illegible]

Nature now is doubly dear
To my soul, for doubly near,
At July's behest,
She has come, and coming brings
Surcease from all weary things—
Blissful sense of rest!

—John Kendrick Bangs in Ladies' Home Journal.

Whistler's Frank Criticism.

A Paris letter says that Whistler seriously criticised one of Dannat's pictures in a Paris art exhibition a week or so ago, and the next day a mutual friend mischievously introduced the two men. Meantime the censorious expressions of the former had been widely repeated. "Glad to meet you, Mr. Whistler," Dannat is reported as having said, "particularly glad at this moment, as I hear you have been running down my pictures behind my back."

"Yes," returned the adept in the gentle art of making enemies; "I did say something rather harsh about it, and it was behind your back, as I never before had the pleasure of seeing you face to face.

"Now that I do see you, I will do you the favor to tell you the contribution you have sent to this salon has no business here. This is a collection of pictures, and you should be informed that half a dozen figures outlined on a wall do not constitute a picture. Something of intelligent composition, some attempt to represent an idea, some respect for the truths of nature are prime requisites, and your flat drawing over there does not embody any of these qualities. Good morning, Mr. Dannat!"

Mosquitoes That Never Lived.

Some of the good people of Stratford, Conn., decided this year to drain about forty acres of marsh land and had the necessary ditches dug. Afterward some of the ditches were partially filled up and the marsh water stagnated therein. On examination the water was found to be a saturated solution of mosquito larvæ. The local scientists focused their powerful intellects and microscopes upon a specimen of the water and figured it out that the prospective mosquito population had been 20,000,000 to the acre.

As there were forty acres drained, the appalling fact is apparent that 800,000,000 promising members of the mosquito race, who might have done good and telling work upon the Connecticut country boarders this year, were thus cut off before their youth had a chance to flower or even to sprout, or, to come down from metaphor to fact, to crack the shell of the embryotic state. Among other things, this little story teaches us to keep away this summer from undrained marshes.—New York Tribune.

A Potato Vine Imitating the Lemon Trees.

J. W. C. Pogue brought in to Visalia this morning a remarkable freak of nature in the shape of a potato vine upon which was growing potatoes in all stages of development, from the size of a marble to one as large as the average Early Rose. The vine was discovered in Mr. Pogue's lemon grove. The seed planted was of the Early Rose variety, and some of the potatoes will be planted out to see if they will reproduce. When the vine was pulled up a few small potatoes were found at the root, but on the vine there must have been a hundred. The only explanation Mr. Pogue can offer is that the potato must have thought it to be its duty to produce lemons, as is was surrounded by that fruit, and that it made an honest effort in that direction. —Visalia Times.

Where Flies Come From.

If by stealth a man should let in a little light and air—that is a man's idea of cooling a room, to open it wider than the Chicago exposition and let in all the dust and heat and noise and flies and glare the street can pour into it—he is discovered every time. She whose genius had made every room in the house a storage warehouse for night air comes in and wonders "Where all these flies came from?" He, with extravagant gesticulation, doesn't know—at least he says he doesn't, and doesn't care, which is true; what he wants to know is when they are going back again?—Robert J. Burdette in Ladies' Home Journal.

The Latest Horror.

Scientists have built for advertisers, by an arrangement of mirrors, reflecting glasses and lights, a sort of gigantic magic lantern, by which images can be thrown upon the clouds, so that advertisements in letters 100 feet long will be visible over a dozen counties. On the bosom of an advancing cyclone horrified humanity of the future will be able to read in gigantic letters "Use Blank's Chest Protector," "Try Bragem's Pills."—Minneapolis Journal.

The Y. M. C. A. in France.

The cornerstone of the new building of the Paris Young Men's Christian association has been laid with appropriate ceremony at 14 Rue de Trevise. The efforts in promoting the good work have evidently been most successful, and the undertaking is sure to have the good wishes of the community at large. —American Register.

After a long consideration of the matter, the Italian government has decided that 6½ millimeters is the best size for the bore of the new rifles for use in that country.

Statistics carefully compiled show that within three years 5,000 people have lost their lives in western Pennsylvania because of weak dams.

A shad 26 inches long, 3½ inches thick and weighing 9 pounds 4½ ounces was caught in the Hudson river recently at Esopus, N. Y.

A Wonderful Carpet.

There will be on view in the afternoons of the next few days what may probably without any exaggeration be called the finest Persian carpet in the world. This is the Holy Carpet of the Mosque of Ardebil in Persia—a carpet which for size, beauty, condition and authenticated age is entirely unrivaled by any known example.

The dimensions of the carpet are 34 feet 6 inches by 17 feet 6 inches. The ground of the body of the fabric is of a rich blue, covered with a floral tracery of exquisite delicacy and freedom of treatment. A center medallion of pale yellow terminates on its outer edge in sixteen minaret shaped points, from which spring sixteen cartouches—four green, four red and eight cream; and from two of these again are, as it were, suspended and hanging in the direction of the respective ends of the carpet, two of the sacred lamps of the mosque. But the most extraordinary detail of all is the pale cream cartouche placed within the border at the top end of the carpet, bearing its inwoven inscription, which is thus translated: "I have no refuge in the world other than thy threshold. My head has no protection other than thy porchway. The work of the slave of this Holy Place, Maksoud of Kashan, in the year 942."

Now 942 of the Hegira is 1535 of our era; so that the carpet was actually in existence, in the mosque of the sacred city of the Suffavian dynasty, at the time when Queen Elizabeth sent Anthony Jenkinson on an embassy to Shah Tamasp. It need not be said that carpets thus signed and dated are extremely rare, and are historically important as forming the points de repere for the students of oriental art.—London Times.

The Largest Aerolite.

What is believed to be the largest aerolite ever known to have fallen is lying in the Caspian sea, a short distance from the peninsula of Apsheron. The aerolite made a terrific noise as it rushed through the air with incredible speed, and the white hot mass made a light that illuminated the country and sea about for a great distance. Those who saw it were were struck dumb with consternation. When it struck the water immense clouds of steam arose, and the hissing could be heard for a great distance. Huge masses of water were thrown upward, and the sight to those who were not frightened was a most beautiful one.

So enormous is the aerolite that it projects twelve feet above the water, and save for its fused black crust, which gives it the appearance of having been varnished, it has every appearance of being one of the usual rocky formations met with along the coast. Scientists are deeply interested in the phenomenon, and a number of them are making preparations to visit the peninsula to examine the aerolite.—Cable Letter.

Decorating Snowdon.

A correspondent, who apparently is an enthusiastic Londoner, keenly alive to the possibility of improving our metropolitan monuments, and is at present on a tour in North Wales, writes that not only has a great flagstaff been erected on the highest peak of Snowdon, but a flag of extraordinary size has been hoisted upon it. He was present at the inauguration, and thinks that its folds floating in the wind "add considerable to the majesty of the unrivaled scenery."

An American traveler in Egypt once remarked that the pyramids were very good in their way, but would show off the desert better if they had a coat of paint. Snowdon has been decorated at much less trouble and expense, and may now be congratulated on having an important omission in its original design thus satisfactorily rectified. The "Standard on the Braes o' Mar" may hence forward hide its diminished head.—London Telegraph.

The Mice Pest in Scotland.

The report comes from Scotland that the hill grazings and rough pastures of six whole counties are overrun by mice—rats of a smaller growth. In two counties alone they have virtually taken possession of 90,000 acres, and it has been proposed that the affected ground be burned, lest the vermin move upon the planted fields and destroy the seed corn. Suppose in their migrations they have contracted some contagious disease, such as diphtheria or tuberculosis, what is to prevent the spread of these plagues among the now healthy peasantry of Dumfries, Roxburgh, Kirkcudbright, Peebles, Selkirk and Lanark?—Dr. S. E. Weber's Lecture.

A Dog's False Teeth.

A faithful old house dog owned by Melchoir Brown, of Reading, is more than a dozen years old. He lost all his teeth a long time ago and had great trouble in eating. Mr. Brown recently took the dog to a well known local dentist and had a full set of false teeth made for the animal, which he now uses with as much skill as any person could. At first it required considerable watching to prevent the dog from swallowing his grinders, but he soon grew accustomed to them. His master is now trying to teach him to take them out and wash them with his tongue.—Pittsburg Chronicle.

Death from a Horsefly's Bite.

The sad death of Mr. F. J. Woods, Mr. Balfour's private secretary, from erysipelas supervening on the bite of a gadfly, is announced. The bite of gadflies is not usually considered poisonous, and it is supposed that the one who attacked Mr. Woods had been on a diseased animal. The most common species is Tabanus bovinus, and they are very troublesome to horses and cattle in the fields, especially in warm weather. —Pall Mall Gazette.

A Seasonable Discussion.

First Boarder—I wonder what makes this strawberry shortcake so heavy.

Second Boarder—Don't know, but it isn't the weight of the strawberries on top, anyhow.—New York Weekly.

GOSPEL OF WORK.

Emile Jola's Masterly Speech Before the Student's Association.

THE GOAL OF FUTURE WRITERS.

Relation Between Science and Happiness Explained.—Work is the Law of the World.

Emile Zola, the famous novelist, presided at a dinner given by the Students' association of Paris. In the course of the evening he spoke as follows:

Did science ever promise happiness? I do not think so. Science promised the truth, and it is questionable if happiness can be made out of facts. To be content with them even for a day one must possess a stoicism, an absolute unselfishness, a serenity of intelligence possible only to the highest minds. Therefore a despairing cry goes up from suffering humanity. How, it asks, can we live without delusions and illusions? If there is not somewhere a world where justice reigns, where the wicked are punished and the good rewarded, how endure the abominations of human existence? Nature is unjust and cruel. Science ends in the monstrous law of the survival of the strongest. Reasoning thus, recoiling from realities as yet ill explained, they seek a dream, put confidence in the out of sight and hope to satisfy in the beyond their yearning for fraternity and justice.

This despairing appeal for happiness, rising on every side, moves me infinitely. Already music has responded to it, literature is trying to satisfy the new thirst, and art is changing to show its sympathy. It is the reaction against naturalism, which is, they say, dead and buried. At any rate the movement is undeniable. It is felt in all the manifestations of mind, and unless it is taken into account, studied and explained the outlook for the morrow is hopeless.

I, being an old and rugged positivist, see in all this only a halt in the march ahead. Indeed it is not even that, for our libraries, laboratories, amphitheaters and schools are not deserted. What reassures me most is the fact that the social ground is unchanged. For a new art to flourish, for a new belief to give humanity a new direction, there must be a new soil for them to germinate and grow in. Ours is still the democratic soil whence the century rose. Faiths are not resuscitated, and only a mythology can be made of a dead religion. The next century will affirm this one. What I will concede is that in literature we brought the horizon too near, and personally I regret having endeavored to limit art to proved verities.

The new men, by re-extending the horizon, have regained possession of the unknown and the mysterious, and they have done well. Between the truths acquired through science, which are not to be shaken, and the truths to be conquered tomorrow from the unknown, which in their turn will become immovable, there is a land of doubt and inquiry. This land belongs as much to literature as to science. Into it we can go as pioneers, doing the work of precursors and interpreting, according to our talents, its unknown forces. The ideal is only the unexplained. It is well enough to invent solutions for the unknown, but we have no right to put in question and so deny facts already verified. As science advances the ideal retreats, and it seems to me that this slow conquest, though we have the melancholy certitude of never knowing all, gives life its only reason, its only joy.

In these troublous days youth is told to believe, but nobody tells it exactly what to believe. Believe, they say, for the sake of the happiness that comes from believing, and most especially believe in order that you may learn to believe. The advice is not bad in itself. It is certainly a great joy to repose upon the assurance given by any faith, no matter what. The difficulty is that one cannot believe by being willing to do so. Faith is a wind that blows where it listeth, and there only.

In conclusion let me offer you a creed—the creed of work. Young men, work! I am aware that no counsel could be more banal. In every school at the end of every term it is given to every boy, and every boy hears it with indifference. But let me, who have never been anything except a worker, tell you the reward I have gained from the long toil whose effort has filled my life. The world was harsh to me at first. I have known poverty and despair. Later my existence was a battle, and even now the fight goes on and my work is questioned, contradicted, insulted. Through it all my support has been incessant work, regular, daily, for an end never forgotten. How often have I seated myself at my table, tortured by some great pain, physical or moral! And each time, after the first minutes of agony, my task has proved a solace, has given me strength to continue the struggle and await the morrow.

Work is the law of the world—the guide that leads organized matter to its unknown goal. Life has no other reason for being, and each of us is here only to perform his task and disappear. Calm comes to the most tortured if they will accept and complete the task they find under their hands. This, to be sure, is only an empirical way to live an honest and almost tranquil life, but is it nothing to acquire moral health and by solving through work the question of how to secure on earth the greatest happiness thus escape from the danger of the dream?

I have always distrusted chimeras. Illusion is bad for a man or a people; it puts an end to effort, it blinds, it is the vanity of the weak. To remain among legends, to contemn realities, to believe that dreaming of strength gives force—we have all seen to what disasters these things lead.

The only strong men are the men who work. Work alone gives courage and faith; it alone is the pacificator and the liberator?

The Deadly Gimlet Knife.

The gimlet knife is a weapon so dangerous that its manufacture is forbidden by law. This is one of the smallest fighting knives used by any people of the earth and one of the most deadly. In length the knife is longer than a gimlet, so that it can readily be concealed inside the waistband of the trousers. The handle is not set on parallel with the blade as in an ordinary knife, but at right angles like that of a gimlet; hence the name. The handle is grasped with the blade between the second and third fingers, the upper part of the blade being drawn down to a shank so as to prevent cutting the fingers when the knife is so held. The blade when in position represents merely an extension of the axis of the arm and is not held at right angles with the arm, as the villain in the play holds his knife.

The blade is made of the best razor steel, is double edged for the lower two-thirds of its length and is as keen as a razor. It is not dagger pointed, but has the stronger formation of a rounding point. The blade is short, but long enough to inflict a fatal wound, and so strong and keen that it will divide a rib under a powerful blow or cut through any garment like so much paper. The peculiar position of the handle leaves nothing for an adversary to grasp at except the blade, so that it is almost impossible for the wielder of the knife to be disarmed, the more so as the handle curves in at the end, giving the fingers a better hold upon it. A good gimlet knife costs $5 or more. —Louisiana Cor. Chicago Times.

Result of a Good Turn.

"A good turn will always turn up so that you will never get the worst of it," said Frank Painter of Como, Colo. "How do you suppose one of the best fellows that ever lived became a rich man? It isn't a long story, but it shows to a finish that a square act never goes astray, even if it does take some time in finding its way around. Jere Jackson came out to Colorado in the early days without a cent to save his life. He knocked around for a year and a half and lived from hand to mouth. We all liked him, and we knew it wasn't his fault that things didn't turn his way, and none of the boys would refuse him shelter when things came particularly hard. Well, one day Jere struck out. He was disgusted with the world in general and with Mr. Jackson in particular.

"While plodding along in a lonely part of the country a couple of days after that he came upon the dead body of a miner lying in the road. 'Poor devil,' thought Jere, 'I suppose that's how I'll fetch up.' He started in to give the dead stranger the attention that he'd like himself and was soon digging a grave for a man he had never seen before. He didn't dig far though—hardly two feet. He had run across gold—good, solid gold. He buried his unknown friend in another hole and quit the first one a rich man. A good turn even to a stranger will never give you the worst of it."—Pittsburg Post.

Coughs and Their Cure.

There are few disorders more teasing to the sufferer and to those about him than a cough. A slight hacking cough is often a bad habit. When it is at all under control of the will, it should be sternly repressed. Sometimes the uvula, the pendulous part of the soft palate at the back of the mouth, becomes relaxed, the point touches the tongue, producing a tickling sensation which requires a cough to relieve it. A little dry tannic acid put in a quill and blown on the uvula will contract it, or half a teaspoonful of the powder mixed with two teaspoonfuls of glycerin stirred into half a glass of warm water and used as a gargle.

When a cold has been taken and there is cough with soreness of the chest, bed should be prescribed for fear of a severe attack of bronchitis. Soak the feet in a pail of hot water in which is dissolved three tablespoonfuls of mustard and rub the chest with warm camphorated oil.—Ladies' Home Journal.

The Riches of Uninhabited Nicaragua.

Mr. J. Crawford, a well known resident of Managua, has completed an interesting tour covering about 12,000 square miles of territory of the republic of Nicaragua. Mr. Crawford reports that the uninhabited central mountainous part of the country is very rich in agricultural lands excellent for raising coffee, tobacco, grapes, almonds, corn, potatoes, vegetables, sugar cane, rice, cocoa, indigo, plantains, mangoes, oranges, limes, lemons, bananas, etc. In the forests are to be found mahogany, cedar, rosewood, walnut, india rubber, nispero, guanacasca, etc. Its lodes are rich in gold and silver, while large deposits of marble, granite and magnesian limestone are to be found.—Panama Star and Herald.

No Consideration.

Husband—Where is the hammer?

Wife—You had it yesterday.

"I'm not asking where it was yesterday."

"You had it yesterday, and no one else has had it since."

"Huh! Well, if you had the least bit of consideration for my feelings you would have used that hammer for something or other after I got through with it, and then you would know where it is."—New York Weekly.

AMERICA'S ITALY.

A Colony of Italians in the Suburbs of New York City.

BRIGHT COSTUMES OF THE PEOPLE.

If You Have Traveled in Italy You Find the Same Picturesque People on the Banks of the Bronx.

When Adelina Patti, a swarthy, black haired little girl of twelve, was playmate to a dozen residents of Washingtonville, who remember and talk of her, the Pattis were almost the sole Italian residents there. Should the Pattis return to live in the peak roofed, red brick house at Washingtonville they would find hundreds of their own country folk in the neighborhood now. The population of the village has nearly doubled within four years, and most of the newcomers are Italians. During the same period people of that race have invaded and seized a considerable part of the beautiful Bronx valley between Woodlawn and Williams Bridge.

The kind of free masonry that exists among Italian laborers brought these people to Washingtonville when the village borrowed $25,000 to be expended on public works, and when that money has been exhausted the newcomers will move on to some other point where a year's work awaits their hardy muscles. In the valley between Woodlawn and Williams Bridge the settlement has an air of permanence. Meanwhile suburban New Yorkers are learning what is the genuine life of the Italian peasant. The key to much that seems strange in the conduct of the Italian immigrant in New York is to be found in the fact that he is endeavoring to live, in a hostile climate and amid intensely urban surroundings, the simple, open air life of rural Italy.

The long established French colony at Williams Bridge looks with astonishment at the conduct of the Italian interlopers. Cafe au lait and sou le plat have been served for breakfast so long on the banks of the Bronx, and a dinner, marked with orderly progression from soup to benedictine, has become so much a part of daily life that the simplicity of garlic and black bread is not understood. But Italian life in the Bronx valley is the more picturesque from its simplicity, since it is thus nearer the life that the people lived in homes beyond the seas. Folks that know the upper part of New York only by the map fall into ludicrous errors. The map plots it down truthfully enough that the Bronx at and above Williams Bridge, before plunging into the romantic wilderness of Bronx park, forms the eastern boundary of the annexed district. But the map says never a word of a broad, green meadow extending more than a mile from Williams Bridge to Woodlawn. The map is equally forgetful of the fact that the meadow is sprinkled with clumps of the noblest elms, and that the Bronx meanders through it in serpentine beauty, crossed here and there by rustic log bridges that lead to New York.

Only half a block east of the Harlem station at Williams Bridge a flight of steep steps leads down to a light footbridge across the Bronx. That bridge leads out of New York into the wilds of Westchester and New Italy. As far as the eye can see stretches a grass edged footpath, now descending deep into the valley, now chased to the upland by the encroaching stream. High on the hillside are the new dwellings built by speculators. Lower are the simple cottages of earlier Williams Bridge, and perched on a steep bankside in the loveliest part of the valley is an odd little watchmaker's shop, with a sign proclaiming that the artificer within repairs jewelry and sets diamonds. The Bronx valley in that part has exactly the aspect of an English common. It is almost without inclosures, although here and there well built stone sustaining walls indicate the terraced grounds of some former prosperous resident. The Italian homes straggle along an irregular street at the brow of the hill. All keep goats and chickens, the former apparently for milk, and there is a well stocked junkshop on the roadside.

In summer women, barelegged, but otherwise gayly clad in the fashion of their race, walk steadily down the steep bank with burdens on their heads to do the family washing in the stream. Black browed, unshaven men sit on the porches or gaze from the windows while the women toil at their household duties. Dozens of women trudge the valley morning and evening in search of dandelion greens. Each gatherer of greens wears an apron and carries a caseknife with well sharpened point. Each apron is folded into a bag, and the women walk singly or in pairs, half stooping and ready to reach down and cut close to the ground any dandelion leaf that may show itself. The women are marvelously deft at the work, and they carry home many bushels of wholesome food in their capacious aprons. Millet, the artist of peasant life, would have found a congenial subject could he have stood in the Bronx valley and watched a pair of stooping gatherers of greens outlined against the sky as they moved along the brow of the hill above.

In the very midst of the valley and far below the Italian homes on the hillside is the house of a French market gardener. It was a picturesque place before he rented out its clapboards to patent medicine makers, but its southern gable and eastern garden are suggestive of homely comfort. A barefoot girl, in a gown of peasant blue, helps the Frenchman hoe his potatoes. Around the house extends the well worn paths of the valley like little brownish yellow streams. The Frenchman's chickens have the run of the whole valley, and his geese plow the Bronx, leading a fluffy flock of young. Two rods across the stream from the Frenchman's peaceful farmhouse is New York city, and just across the busy railway the green slopes of Woodlawn cemetery rise a hundred feet. From the Frenchman's garden to Woodlawn station is five minutes' walk by a path among rocks and beneath the shade of trees.

The Italian colony at Washingtonville is within easy distance of much fine woodland, and on all the ways that lead to the woodlands may be seen scenes from the peasant life of Italy. Whether the men work or are idle, the women are ever busy, and when not occupied with immediate household cares they are out gathering greens or fagots. No Italian household spends much money for fuel. The women ransack the woodlands and carry home on their heads great bundles of fallen limbs. It is not unusual to see an Italian woman, clad in the characteristic costume of her country, her ears weighted down with cheap jewelry and at her heels a brood of children, staggering homeward, her apron bulging with greens, her head swaying with a load of fagots that would not be light for a stout man.—New York Sun.

When first taken from the mines, opals are so tender and friable that they may be picked to pieces with the finger nail.

Painting the "Queen's Taxes."

One Monday morning Wills, the painter, arrived early at his studio and found in an armchair by the fire an unexpected guest. He had an appointment with a sitter of a very different sort. This one explained his presence by saying succinctly that he was the queen's taxes. The ready check book was produced, but the cautious bailiff refused to abandon his distress. Wills got a neighbor to go for him to the bank and waited his return by his own fireside.

On the easels were portraits, in various states of completion, of beautiful young women—commissions which at that time flowed in fast. But with its back against the wall was a more ambitious work, a magnum opus, and dearer to the painter's heart. Danton and Andre Chenier were standing in the tumbril that was dragged slowly to the place of judgment. All round them the Paris mob, surging, hissed and hooted; the poet's sensitive face showed nervousness and anxiety, but Danton was bold and defiant. The figures in the tumbril the painter had got almost to his satisfaction. But he had not yet found a type of face that quite expressed the ignoble rancor and cruel, eager vindictiveness of the revolutionary mob.

As he looked at the bailiff comfortably lolling back in the armchair its owner had an inspiration. Wills begged his visitor to mount the dais, lifted the great canvas on the easel, and when the obliging neighbor returned from the bank with the cash for the check he found the man in possession posed in an attitude of great discomfort, but obviously flattered to have his portrait taken, and eager to serve his queen and his own interest at the same time. That bailiff was a frequent sitter in the Avenue studio whenever he could spare the time from the pursuit of his public and his profession. I think he found Wills paid better than the queen's government.—Pall Mall Gazette.

A Coincidence.

Here is a case of coincidence. Two college men who were graduated in the same class met for the first time since their graduation at a dinner. When they had been in college together they were constantly getting mixed up. Not because they looked alike or talked alike or acted alike. But their names are very similar, and when one man used to get a low grade he always declared the other man had got his grade, and if one man was summoned before the dean it always turned out that the wrong man had received the summons.

When the two men met at dinner each began a confession to the other that each had been receiving the other's wedding invitations, etc., from classmates, for the same fate had pursued them after graduation. The trouble was, just as it had been in college, that the wrong addresses were given to the men. In the class reports issued by the secretary of the class after graduation the addresses had again been mixed up.

Now the coincidence comes in that neither man knew that his rival in trouble lived in New York, and that both said they would at once set the secretary aright as to the addresses. Remember these men had not met in several years, but upon going to their offices one day after the dinner they found reports of the secretary which had just come by mail, and for the first time their names and addresses were given correctly. Did the coming report, of which they knew nothing, make them meet, or did their meeting and talk make the report for the first time correct? But then it was a coincidence.—New York Tribune.

A War Reminiscence.

"Grant had been pounding us pretty lively for some time in sixty-four" said Major Hugh Colquitt, youngest brother of the Georgia senator, who went into the Confederate service on his brother's staff at the age of fifteen, "but at Cold Harbor we held a practically impregnable position. Some negro troops had succeeded at one point in getting into the ditch beneath our parapet, and while they remained there were comparatively safe. They were so close to us that we could hear them talking together. Finally they decided to attempt to scale our ramparts and force an entrance into our works.

"We could hear them, though we couldn't see them. Their plan was to mount by one another's shoulders until the topmost man should be able to scramble on top of the parapet, and then make a dash at us. They put it into operation, and soon we saw the head and shoulders of a gigantic negro appear above the top of the parapet. Some of the boys wanted to seize him and pull him as a prisoner, but he made too tempting a mark. A dozen rifles cracked as one, and the daring negro tumbled back a corpse. As he fell we heard a voice in the ditch exclaim:

"'Dar, now; dey done kill Corp. Dick, de gamest man in de comp'ny!'

"That remark passed into a byword in the army of northern Virginia during the rest of the war."—Washington Post.

Japanese Lacquer.

All are familiar with the beautiful lacquer with which Japanese trays, boxes and cabinets are treated, and which is so different in appearance and touch to the varnish common in Europe. The exact process by which it is prepared is said to be kept secret by the expert Japanese workers; but it is known that the raw material comes from a tree known to botanists as the Rhus vernix.

Professor Rein some years ago planted a number of these trees in the Botanical garden at Frankfort, and there are now growing there from this stock several healthy trees, some of which are thirty feet high. Some sap has been taken from these trees and sent to Japan for trial by native artists, and it remains to be seen whether the foreign growth will yield a serviceable lacquer. —Chambers' Journal.

A Generous Empress.

It is said that one morning at breakfast a general related to the emperor the misfortunes of a brother officer, who "because he had not 15,000 francs must be dishonored." While the emperor questioned further particulars of the story, the Empress Eugenie flew to her room, and returning with a package of bank notes, said, "Take them, general, and never tell me his name." Even now she does not know the name of the man she befriended. —Exchange.

They Should Go Out Together.

Mrs. Harvier thinks that husbands and wives should share each other's pleasures, and that wives should not spend all their time at women's teas, receptions and societies, while husbands staid at men's clubs, but that they should go together, have mutual friends and joys as well as responsibilities.—New York Sun.

Paper Trunks That Last.

Trunks are now made of paper pulp that has been subjected to great pressure, in the same manner as the material used for the manufacture of paper car wheels. Owing to the tenacity of the paper it is practically impossible to injure a trunk made of this material.—New York Journal.

A SEASIDE FANCY.

I would, O Sea, thy destinies were mine
To shape for one short day. I'd give to thee
The rest which I am sure thou'ldst not decline
If thou to have thy way were wholly free.

This endless beating on the sandy shore,
This constant undulation on the deep,
The never ceasing din of thy dull roar,
Do testify the vigil thou dost keep.

Methinks if thou couldst in quiescence lie
For one full day 'twere better for mankind—
For them that dwell the sounding coast hard by,
For them that homes unfathomable find.

And so I'd say, had I the sovereign power,
Were all that is subjected to my will
For but one day, one minute or one hour,
"Whilst I am reigning, Sea, do thou be still."

—John Kendrick Bangs in Harper's Weekly.

Teaching the Child to Talk.

The work of teaching children how to speak correctly belongs primarily to the home life, and is as surely one of its duties as anything else pertaining to the household. Of course, the first obligation rests upon the parents themselves to be patterns of correct speech before they try to develop it in the children. Be sure they hear the English language spoken clearly, pleasantly and accurately at the table and the fireside, and unconsciously they will become accustomed to expressing their thoughts in much the same style.

It is well to remember that as soon as a child begins to frame its mouth for talking, direct training in the art should be aimed at. There seems to be a notion in some families that a little child cannot be petted and spoken to in a common sense fashion, and as a rule the baby of the home is addressed by those around it in terms which can only be described as idiotic.

During the first four or five years of his life a child should be addressed in pure Anglo-Saxon speech—words of one or two syllables—given with the right inflection and emphasis, so that a solid foundation of simple but intelligent utterance may be laid. After that words of foreign derivation may be introduced, but the more these are dabbled with the greater is the need of attention and caution.

But correct speaking not only implies right pronunciation of words, but also their proper disposal, and here the hint may also serve for the "children of a larger growth," who ofttimes display a wanton carelessness in clothing their ideas and giving expression to them.—Hall's Journal of Health.

Hardened to Cold.

Frequently, when we could not expose our ears for two minutes without having them frozen, says a traveler in Siberia, the natives would go for an hour at a time with their hoods thrown back from their heads, and when it required constant watchfulness to keep our noses from freezing they did not appear to notice the temperature at all.

One morning in January I stood in perfect amazement at their disregard of the low temperature. They worked for at least half an hour with bare hands packing up the tent and utensils, handling the packages and lashing them together with icy seal thongs without experiencing the least apparent inconvenience, while I partly froze my fingers striking a light for my pipe with a flint and steel, the whole operation taking not more than three minutes.

The night before, happening to go out of the tent after our men had retired, I passed their camp, which was near by. Their fire had burned to a pile of embers, barely affording me light enough to distinguish the sleepers. They were lying coiled up on small deerskins, with their backs to the embers and their fur coats thrown loosely over their naked bodies.

The coat of one of them had slipped almost entirely off his body, leaving his back and shoulders exposed to a temperature of 18 degs. below zero, Fahrenheit, and though his hair was frosted, he snored as soundly as if in comfortable quarters.

She Doted on Style.

There is one member of the Metropolitan club who is happy because he has at last a good joke on his wife. She is a handsome and well informed woman, but she has no pretensions to literature, being devoted to pretty gowns and the things pertaining thereto. Being one day in Brentano's, she picked up a little book entitled "Herbert Spencer on Style," and bought it, delighted to be able to know what such an eminent scientist had to say on her favorite topic.

What was her disgust on reaching home to find that, instead of giving the latest fashions, it was full of dry literary dogmas? The worst of it was that her husband entered and discerned the situation at a glance. And now if any discussion on les convenances or the last fad is mooted he always inquires with a significant smile, which causes the whole story to come out:

"Well, my dear, what does Herbert Spencer say on the subject?"—Washington Post.

Two Kinds of Pineapples.

There are two kinds of pineapples, the birdseye and the sugar loaf. The former are not often brought to this market from the fact that they do not bear transportation so well as the sugar loaf, being much more apt to spoil in transit. In the extreme south and West Indies, however, they are far more highly esteemed for dessert than the sugar loafs, which, in turn, are much better suited for preserving. In the home of the pineapple, the sugar loafs are eaten raw only when the birdseye variety cannot be obtained.—St. Louis Globe-Democrat.

Tea in the Time of Buddha.

At the time of Buddha China was enjoying a large foreign commerce in tea. It was carried by her junks to Japan, Corea, Tonquin, Anam, Cochin, Burmah, Siam, India, Ceylon, Persia and Arabia. According to one record it was sent to a great black river country west of Arabia, from which it was separated by a long and very torrid sea, which must have been Egypt. It was carried by caravans to Manchuria, Mongolia, Kuldja, Tartary, Thibet, Persia and northern India.—Philadelphia Times.

Newfoundland dogs were originally natives of that country and Labrador, from which circumstance they received their title. In the same manner the noble St. Bernards are so called from the famous monastery of that name in the Alps.

A pig's tail is said to unerringly indicate the condition of the animal. If it hang loose, it shows that the pig is not well, and that its food should be changed. If it be coiled tightly the pig is healthy and happy.

A packing paper impermeable to water can be made as follows: Take unsized paper and coat it with an aqueous solution of dextrine. When dry apply a layer of siccative oil paint.

Africa comes to the front with a plant which drives mosquitoes away. It is a musk scented plant, the branches of which, carried about the person, will frighten away mosquitoes.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 24 1893

When Congress meets again there is sure to be introduced the familiar bill to annex Utah to Nevada. It is wonderful how much trouble Nevada causes Eastern Congressmen and newspapers. The spectacle of the small population of the State and its depressed industries appears to inflict a sense of personal injury on the Atlantic strip, and it is considered there a patriotic duty to discuss means of depriving Nevada of Statehood. That less than fifty thousand people should have the representation in the Senate as New York's and Pennsylvania's millions is considered an outrage, the protestors forgetting that had small States not been assured equal representation with the large ones in the Senate, there would have no Constitution and no Union. Moreover, the Senate has not suffered at Nevada's hands. On the average she has sent men to that body who have sized up very creditably with their confreres from other States. Jones and Stewart, for instance, can stand comparison with Hill and Murphy and Cameron. Nevada, small as is her population, supports her State Government, pays her Federal taxes, and is quite capable of minding her own business and taking care of herself. She is simply in hard luck at present. The State has immense resources, agricultural as well as mineral, and will come out all right in the end. To talk of handing her over to the Mormans is to contemplate a crime. The Nevadans, if they are not numerous, assay high in manhood, and they have the last say as to what shall be done with their State's sovereignty. They will keep it and guard it.

A Chicafio dispatch says that the contents of the cipher message from Envoy Willis to the Secretary of State are now known, and that it conveys the information that the provisional government of Hawaii will not turn over the government to the deposed queen unless compelled to do so by superior force of arms. We don't know what amount of credence is to be placed in this dispatch, but if it is authentic then the President cannot carry out his determination to replace Liliuokalani on the throne without committing an act of war upon an independent State. This would bring the administration upon very delicate and dangerous ground, and the next session of Congress would have something to say that might not be very reassuring to the President.

The official proceedings of the International Irrigation Congress held at Los Angeles, California, October 10th to 14th, have just been issued in pamphlet form. The book contains nearly two hundred pages and embraces the call for the Congress, the address of welcome, a list of delegates, permanent organization, address of the president, formal opening address, resolutions introduced by members, addresses by foreign delegates and by American delegates; principal discussions, address to the country, national executive committee, organization of the committee and the plan of work for the next Congress. The discussions cover a wide range of topics on irrigation topics and the book contains matter of deep interest to all the citizens of the arid States.

The governments of Europe are alarmed at the number and character of the dynamite outrages recently perpetrated in Spain and France, and are trying to devise measures that will arrest these murderous exhibitions of malice on the part of anarchists. They may not succeed in putting an end to dynamite outrages, but they must do something to allay the universal feeling of insecurity that pervades the people. The Marseilles and Barcelona affairs show how daring and desperate these dynamitards are becoming.

It is said that a great deal of dissatisfaction is manifesting itself in Mexico to the arbitrary rule of Diaz, and that a strong revolutionary sentiment in in the north eastern states is liable to break into open revolt at any time. We have no doubt that Diaz rules with a firm, strong and inexorable hand; but as an offset to this he has advanced Mexico as a nation during his presidency to a more exalted and respected position than she ever held before.

The great agitation over closing the World's Fair Sundays has shifted to San Francisco.

A Great Salt Lake in Siberia.

The great salt lake at Obdorsk is 9 miles wide and 17 miles long, yet except in a few places it is solidly roofed over with a deposit of salt which is getting thicker and thicker every year.

Our guide, who is an old man, said that he could remember when the salt crystals first began to gather upon the surface of the water. Year by year, owing to the evaporation of the water, the crystals became more numerous and then caked together till this great roof formed.

In 1878 the water beneath this salt crystal roof found an underground outlet into the River Obi. This lowered the lake's surface about three feet, leaving that distance between the water and the roof.

Looking down through one of the openings made for the purpose in the roof, we saw a low sided small boat. Our guide put us one at a time into the boat. We lay flat on our back and looked up at the curiously beautiful salt ceiling overhead. We propelled the boat by pushing with our hands against the irregularities of the roof.

The guide held a long rope attached to the boat to prevent our going too far and getting lost—a thing he said it was easy to do.

Many springs surround this lake. Their water flows over the roof and evaporates there, and thus continually adds to its thickness. After many years the springs will probably become choked with their own deposits, and then the whole will gradually become covered with earth, and so a great salt mine will be formed—a treasure for the Siberians hundreds of years to come.—Cor. Geographical Magazine.

People Who Whistle.

"Most people look upon whistling as a nuisance," said Herbert C. Sutliffe, "but there is no doubt that a whistling man has a good deal to recommend him. I have a friend who is a warden in a large penitentiary, and he states that in all his long experience he never knew a habitual whistler condemned to a term in the institution, and he says, moreover, that although the rules as to quiet and order are frequently broken he never remembers to have heard an attempt at a musical whistle within the terrible looking walls of the institution. Whistling seems to be the natural safety valve of good spirits and satisfaction, and the grumbling man couldn't whistle if he tried.

"I had a man to work for me once who was a model in every respect except that he kept my teeth constantly on edge by a series of whistling solos of anything but a cheerful character, although the good man was evidently trying to reproduce the latest operatic hits. I broke him of the habit by continuous scolding, but the man became so idle and indifferent in consequence that I was very glad to encourage him to resume a habit which at first had given me so much annoyance. I try to get out of the way when the spirit moves him to announce in whistling tones some important or romantic event, but I am perfectly certain that as long as he whistles he will work as hard as his hands and arms will let him."—St. Louis Globe-Democrat.

The Trouble With a Cold.

"S'matter?"

"I got an awful cold," replied Colonel Morney.

"Have you"——

"Yes, I have. I have polished my bronchial tubes with 'Conlin's Consumption Coughine."

"No, but have you"——

"Yes! Course I have. I've had goose grease rubbed all over my throat and chest, and I"——

"But, I say hold on, have you"——

"I tell you there's nothing I haven't tried. I took a hot bath, drank a pint of boiling lemonade and rubbed my hide almost off with Mustang liniment, but"——

"Now, listen! Have you"——

"Yes, I have. Tried them all, but they're no good. Why, last night I"——

"That's all right, but have you"——

"Have I what?"

"Have you time to go over to Flynn's and have something?"

"Why the deuce didn't you talk sense at the start?" responded the colonel. "I'm with you."—Exchange.

Colors of Sapphires.

Sapphires have of late years become fashionable gems. The blue of the sapphire is very seldom pure or spread over the whole substance of the stone. Sometimes it is mixed with black, which gives it an inky appearance, sometimes with red, which, although imperceptible by daylight, yet by artificial light gives it an amethystine appearance. Two sapphires which by daylight may appear of the same hue often differ extremely in color at night. If the stone be held in an ordinary pair of forceps an inch beneath the surface of very clear water, the parts of the stone colored and uncolored will be distinctly apparent. This remark applies to all other gems.—Cincinnati Enquirer.

The Poverty of Printed Language.

"God will keep up his end of the row if you give him a chance." That was the language used by Moderator Craig in his sermon, which had direct reference to the controversies before the general assembly. As it appears in print the sentence requires an expository note. Whether the word "row" rhymes with "how" or "hoe" becomes an important question.—Washington Star.

Strength of the Horse.

A horse can draw on the worst kind of earth road about four times as much as he can carry on his back. On a good macadamized road he can pull 10 times as much; on a plank road 25 times as much, and on a street railway 58 times as much.—Chicago Journal.

Beware of This Road.

Dora—What road did you travel over?

Clara—The North Southern railroad, and I'll never patronize that line again either. Their caramels are horrid.—Good News.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD,
Justice of the Peace of said Township.
E. SPENCER, Attorney for Plaintiff.

NOTICE OF ADMINISTRATOR'S SALE OF PERSONAL PROPERTY.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 14th day of November, 1893, in the matter of the estate of John Morton, deceased, the undersigned, administrator of said estate, will sell at public auction, for cash subject to confirmation by said Superior Court on

TUESDAY, the 28th day of December,

1893, at the hour of 2 o'clock p. m. of said day, at the late residence of said deceased, in the town of Keeler, Inyo county, California, the following described personal property, to wit:

One billiard table, 2 chandeliers, 9 bar-room chairs, 2 heating stoves and pipe, 4 cuspidors, bar and bar fixtures, 1 desk, 1 ice-chest, 1 step ladder, 2 tables, 3 carpets, 1 lounge, 1 bureau, 1 washstand, 1 marble-top table, 7 parlor chairs 7 pictures, 1 bedstead and bedding, 1 parlor table, 1 cook stove and cooking utensils and 2 cupboards.

Dated November 15, 1893.

J. J. MORTON,
Administrator of the estate of John Morton, deceased.
P. H. MACK, Attorney for Administrator.

NOTICE OF SALE OF REAL ESTATE AT PUBLIC AUCTION.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 14th day of November, 1893, in the matter of the estate of John Morton deceased, the undersigned, administrator of said estate will sell, at public auction, subject to confirmation by said Court, the following described real property, situate, lying and being in the town of Keeler, County of Inyo, State of California, to wit:

Lots numbers Seven (7) and Ten (10) in Block No. 19, together with all and singular the tenements, hereditaments and appurtenances thereunto belonging or in any wise appertaining. Said sale will be made on the

30th Day of December, 1893,

At 10 o'clock a. m., at the Court House door, in the town of Independence, in said county and State.

Terms of sale, cash, gold coin of the United States, ten per cent. of the bid payable upon day of sale, balance on confirmation by said Superior Court.

Dated November 15th, 1893.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hahhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north-west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Hetchland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and alls bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, Nov. 17, 1893.

Estate of G. W. De La Matyr, deceased—Filed petition for letters of administration.

Estate of John A. Hannah, deceased—Entered order confirming sale of real estate.

THURSDAY, Nov. 23, 1893.

Hoskins vs. Gleen—Filed Commissioner's report of sale of real estate.

DIED.

SMITH—At Lone Pine, November 23, Everatt L. Smith, a native of Massachusetts, aged 49 years.

CASCILLO—At Lone Pine, November 22, Pedro Cascillo, a native of Mexico, aged about 70 years.

—The deceased had lived at Lone Pine for many years and was highly respected and esteemed by all. He was strictly honorable in all his dealings and had many warm friends.

Fred Burckhardt of Lone Pine was in town yesterday.

Supervisor Wilson was up from Lone Pine on Tuesday.

Ben Williams came down on Wednesday's train from a visit to Bishop.

J. A. McKenzie came up from Lone Pine yesterday, returning to-day.

Special rates on the C. & C. to the celebration at Independence next week.

Angus McDonald came down from Big Pine on Wednesday, returning yesterday.

Andy Dell and Wils. W. Yandell are down from Bishop and will return to-morrow.

Ben H. Yandell and Henry Rhine got home last Friday from a visit to San Francisco.

J. D. Lewis Esq. came down from Bishop on Wednesday and expects to return to-morrow.

A. O. Collins passed through town last Monday on his way to Tulare county. He will be back in about two weeks with a fine imported Clidyesdale stallion.

W. R. Johnson left Keeler on Thursday's stage for Los Angeles where he will meet a sister whom he has not seen for twenty years, who is there visiting relatives and friends.

The weather continues very pleasant. There has been but one or two stormy days, and that was the same storm of last week that passed over the whole of Southern California.

Fred Schabbell has been suffering from a severe attack of inflammatory rheumatism for several days past. He expects to start in a few days for Los Angeles in the hope that the warmer climate will prove beneficial.

Instead of "sitting around waiting for the boom" would't it be better to assist those who are devoting themselves to the improvement of the country? Or at the very least desist from the constant effort to render such work futile.

Last Friday there was quite a fall of snow at Riverside, San Bernardino and Redlands. Great anxiety was caused for the safety of the orange crop. The oranges are now beginning to get ripe, the crop is very heavy, and a frost would have caused great loss. No damage is reported, however.

John McSweeny got home last Monday from a visit to Sacramento and Davisville. He brought with him the trotting stallion, Albenton, 4,023. The horse is too well known to Inyo county horsemen through the performance of his colts at the last Fair to need any further mention.

Coming up from Mojave last Saturday night the stage passed several parties camped by the way. About fourteen miles this side of Mojave a large party was camped. There were two or three big tents and several wagons. All the people passed were coming this way.

It may be well to observe that the "terrific north wind" and snow and cold the *Index* publishes to the world was felt in a more marked degree at San Bernardino, where snow also fell at the same time, and where it *is* supposed to be an "orange climate."

The Nevada Southern.

Yesterday C. Mulholland filed in the Land Office at Independence maps of the first and second sections of the Nevada Southern Railway. This is in reality the Los Angeles and Salt Lake Railway. Thirty miles of the road are already completed and in successful operation. The road is constructed in the most substantial manner and the engines and other rolling stock are all first-class. A new locomotive was put upon the road recently that is one of the finest engines yet built in America. Work on the road is going ahead steadily and contracts are already made for delivering coal at Los Angeles in 1894 from the Utah coal fields. No road yet built in Southern California excites more interest than this line, or is regarded as of more importance. At Los Angeles, Pasadena, San Bernardino and other towns meetings of all the leading bankers, merchants and property owners have been held in the past two weeks, heartily endorsing the road and promising material aid. Through Nevada and Utah similar meetings have been held and the same hearty indorsement and support offered the enterprize.

A Responsible Firm.

Fruit growers at Lone Pine, Independence, Big Pine and Bishop have recently been written to by the firm of Haley & Chase of Los Angeles. The firm wants to know what kinds and qualities of fruits could be suppled here, with a view to making purchases. The names of the orchardists were given to Haley & Chase by C. Mulholland, and in order to protect the people here he asked for reference as to the financial standing of the firm. Many references were given and among others the Southern California National Bank of Los Angeles. This is one of the strongest banks in the City and the vice-president told Mr Mulholland that the firm of Haley & Chase were good for any amount from twenty to forty thousand dollars and their checks on the bank would be honored promptly. It would therefore appear that it will be perfectly safe to do business them should they make any purchases here.

Rich Gold Diggings.

Good gold diggings have recently been discovered in Redrock cañon. About one mile below the stage station a narrow cañon runs north at nearly a right angle to the main cañon. Up that narrow cañon about one mile is the placer ground. The discoverer in four days took out one hundred and fifty dollars. He took the gold to Mojave and sold it there. Then with a partner he started back to his claim, and in two days the two men took out two hundred and sixty dollars. They put the gold bearing dirt into sacks and carried it down to the stream in Redrock cañon, where they washed it out. Some of the sacks of dirt yielded forty dollars worth of gold. The report of this rich find had the usual effect of causing a rush to the ground, and last Sunday it was told at the station at Redrock cañon that two hundred men were already there prospecting and locating claims. The claim is about twenty-five miles north from Mojave.

The Bodie Railroad.

The *Miner* of last week says: "E. L. Reese, superintendent of the B. & B. railroad left yesterday for San Francisco. Mr. Reese informs us that the company recently formed in San Francisco to build a narrow gauge railroad in this county and to engage in the sale of lumber has not yet fully matured its plans, but it is the intention to build a road to connect with the C. & C. The point of connection has not yet been decided upon, but it will be near either Benton or Bishop, probably the latter. The rails on this end of the B. & B. will be taken up and used for the new road. Whether this work will be carried through next year will depend upon the condition of Bodie at that time, but Mr. Reese thinks it will be delayed till that time."

Work to Commence.

D. H. Irland arrived at Independence on Tuesday from Los Angeles. He is now preparing to begin work on the big Canal intended to reach Indian Wells valley. Mr. Irland says he will shortly put a large force of men and teams to work and will continue operations all winter. That the people of this valley will be glad to see this work go ahead need not be said. It will make a market for all kinds of farm produce. Farmers will also find employment for their horses for several months at a season when they can be spared from farm work. Mr. Irland was accompanied on the trip up by C. Mulholland, A. Corter and F. Brooks. The latter is now employed in making lines for the canal.

School Report

Following is the report ending the second month of school at Milton District, Miss Leora Collins, teacher.

Whole number enrolled	39
Average number belonging	37
Average daily attendance	36
Percentage of attendance	97

Those on the roll of honor are: Frances Aguirre, Kate Arcularius, Margie Bell, Grace Collins, Hattie Glade, Carl Walter, Ira Smith, Edna Partridge, Paulita Aguirre Jacob Vagt, Bertha Partridge, Lee Bell, Henry Glade, Minnie Smith, Grace Smith, Arther Smith.

Are Still Paying Well.

The gold claims at Fish Springs continue to yield good pay ore. From two tons of ore run through an arastra Scott Broder cleaned up $197.11. Tracy & Cunha worked 14 tons that averaged $68 per ton. James Daley took out about the same gross amount and he is now ready to make another clean-up from a run of ore that will yield as well as the former. All the claims at Fish Spring are reported to be looking well.

Miss Clara Eldred has been down from Big Pine for a couple of weeks. She is reporting the Gilbert—Baxter water suit in the Superior Court for practice. She promises to become an expert stenographer.

It is passing strange that any man can can be so far actuated by motives of revenge as to constantly endeavor to injure a large and valuable enterprize that will confer a great benefit upon the people to whom he looks for support.

The domino ball at Mairs' hall next Thursday evening will be a grand success. Quite a number of visitors from Lone Pine, Keeler and Georges Creek will attend, and the townspeople are busy getting their costume ready. Excellent music will be furnished and a good floor for dancing. Tickets are on sale at all the business houses in town.

As a result of the robbery at Bishop recently James Islay and George W. Hughes are now in the County Jail awaiting trial and Constable Smale left Sonora yesterday with Jones and Payne, who are also charged with complicity in the affair. Islay and Hughes had a preliminary examination in Justice Dunlap's Court at Bishop last week, District Attorney Forbes appearing for the prosecution and J. D. Lewis Esq. for the defense. The parties named were all partners of, or in the employ, of the man who was robbed.

Mr. Armstrong, one of the party who recently bought the Sorba mine at Darwin, brought his wife and son up from Mojave on the stage last Saturday night. The family will live at Darwin for the present. Mr. Armstrong says that since his party obtained possession of the mine the work done has developed a very extensive and valuable ore body. Enough ore is now in sight to be worth several times the price paid for the mine, and in addition to that enough ore is already taken out to pay the purchase price.

James A. McKenzie and wife have got back home from the big fair at Chicago. They came up from Mojave last Saturday night. They found the buildings and exhibits so immense as to be bewildering, and it required many visits before anything like a clear and connected conception of the whole could be formed in the mind. It would take the study of a life time to examine all the exhibits in detail, and it was an education of a life time to visit the fair.

A telegram from Lone Pine to Public Administrator Howell yesterday announced the death at that place of E. L. Smith. It has since been ascertained that the deceased had been ill for several days with pneumonia, from which dread disease he was unable to rally. He had been in the livery stable business at Lone Pine for about two years and from being attentive and obliging was very popular. His only enemy was himself. He had no relatives so far as known.

The N. S. G. W. Dramatic Company are hard at work on the drama and farce to be presented next Wednesday evening. Rehearsals are in order every evening, and the scenery has been painted and arranged in a most attractive manner. Anybody desiring reserved seats should secure them at an early date as they are nearly all disposed of. A social dance will follow the performance. Tickets for sale at Rhine's.

Last Saturday a party of railroad surveyors came through Walker's Pass from the west and camped at Coyote Hole. They left next morning for Mojave. The leader of the party declined to give any information beyond the fact that he is running a line for a railroad. It is asserted at Mojave that this party are in the employ of the Santa Fe and that the Company are now getting ready to extend their line to San Francisco.

A. L. Conklin returned from his visit to Bakersfield yesterday. The report here as to the illness of his mother were entirely without foundation, as she never was in the enjoyment of better health. Arrangements have been made to send over the trotting stallion, "Patsy", and a full sister to that horse. Marshall Naylor will take the animals to Bakersfield and handle them.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin, and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

W. K. MILLER, Propr.

At Chicago Royal Leads All.

As the result of my tests, I find the **ROYAL BAKING POWDER** superior to all the others in every respect. It is entirely free from all adulteration and unwholesome impurity, and in baking it gives off a greater volume of leavening gas than any other powder. *It is therefore not only the purest, but also the strongest powder with which I am acquainted.*

WALTER S. HAINES, M. D.,
Prof. of Chemistry, Rush Medical College,
Consulting Chemist, Chicago Board of Health.

All other baking powders are shown by analysis to contain alum, lime or ammonia.

ROYAL BAKING POWDER CO., 106 WALL ST., NEW-YORK.

CHILDREN'S COLUMN.

An Experiment with Broom Straws.

The boy stood before the mantelpiece and rested his hands lightly upon it. Between the thumb and finger of each hand he held the end of a smooth broom straw about eight inches long.

"Now hang these two bits of straw across this one, one at each end, by my fingers," he said.

I picked up the two bits. They were each about two inches long, doubled in the middle, making in shape the letter V. I hung them across the long straw as commanded, their ends just touching the mantel.

"Make the points incline toward the center—just a little," ordered the boy. Command comes natural to him. The queer thing is that people don't often protest.

I turned the points toward the center—just the tiniest bit. Then a funny thing happened. Slowly, slowly, as if by some irresistible impulse, the two little pointed bits of straw began to move along their support. They went at about the same rate, their legs moving along the mantel, their heads pointed toward the center of the straw.

"Well—I—declare!"

"Steady, steady," said the boy, flushed and laughing.

The two little broom straws walked along. Walked! Yes, they seemed to do just that. If ever things in this world appear to know their purpose and move steadily toward it those two broom straws did. They walked evenly along, met in the center, and, their points touching, stood still, forming a pyramid.

"There!" cried the boy, triumphantly.

He lowered his long straw, drew it out and the little pyramid stood erect, made so apparently by its own volition.—Harper's Young People.

The Little Fishers.

All day Noel and Zalie tried and failed to catch fish, as their father had said he would give them sixpence for each fish they caught. The next day, however, the fish were more lively, and twice seemed as if they were trying to grasp Zalie's bait.

Noel really did get a bite at last, and when he jerked his rod to his surprise a little, shining fish was on his hook. It wriggled so that he thought it must be in pain, so he threw it back in the water.

Their father was pleased at their success, but more so that they had given the little fish its life, and he gave Noel the sixpence, which he cheerfully divided with Zalie.

A Good Summer Name.

Some years since, a Nottinghamshire clergyman, in baptizing a baby, paused in the midst of the service to inquire the name of the infant, to which the mother, with a profound courtesy, replied:

"Shady, sir, if you please."

"Shady!" replied the minister. "Then it's a boy and you mean Shadrach, eh?"

"No, please your reverence, it's a girl."

"And pray," asked the inquisitive pastor, "how happened you to call the child by such a strange name?"

"Why, sir," responded the woman, "if you must know, our name is Bower, and my husband said as how he should like her to be called Shady because Shady Bower sounds so pretty."—London Tit-Bits.

Easy Conundrums.

What kind of pins make good pies? Pippins.

When is man the sweetest? When he is candid (candied).

Why should we think that a locomotive can hear? It always has an engine-er.

When may we eat witches without being cannibals? When we lunch on sandwiches.

Where should sorrowful people go? To the Cape of Good Hope.

Why is today like a blacksmith? Because it is sure (shoer).

What periodicals are always out of health? The weekly (weakly) newspapers.

The Jumping Bean.

The government authorities at Washington are experimenting with a vegetable rarity called the "jumping bean." It placed on a smooth table it keeps constantly on the move, jumping about, turning over and performing all kinds of acrobatic tricks.—Exchange.

In London they are successfully lighting their omnibuses by means of electricity from storage batteries. The apparatus consists of a five cell secondary battery, which gives a current of one amphere at ten volts for fifteen hours.

Guests at Camp Nineteen.

CHAPTER I.

TWO TATTERDEMALIONS.

"Dad," she said.

A gust of March wind caught up a bushel of the dust from an Arkansas road, threw it into the air, kept it whirling high for a minute, and then let it settle to the ground. As this dense clouding of the highway slowly ceased two pedestrians developed into view, as though materialized on the spot, by some whimsical phenomenon, from that which the Bible says we all are and shall return to. That the dust was a corporal part of these persons was not hard to believe, for the new deposit merely mixed itself with that which had previously whitened their heads, shoulders and other places of chance lodgment. They did not take the trouble to brush any of it off their clothes. They clapped their hands together, and having thus shaken it from those members they rubbed it from their faces.

One of them was a man who strutted so pompously that more of the dust remained on his breast than on his back; but if his over erect posture came of personal pride it must have been accompanied by abundant mortification, for dilapidation was disclosed wherever the dust did not hide his frayed and discolored suit. But the frock coat was closely buttoned over a figure which it fitted by original design, not by second hand chance, and the trousers, although they had not retained their shapeliness equally well, had been made from a measurement of the same legs which they had too long enclosed. The decay was not careless; it was unavoidable. The prosperity of the man and the endurance of his clothes had evidently passed away together, and only the length of time that had sufficed to bring the wearer and the worn to a state of harmonious ill fortune remained a matter of estimate. In one particular, however, his aspect did not show any unsightliness. Scissors and razor were still his to use. His hair was cropped neatly close, his mustache drooped gracefully at the sides of a smoothly shaven chin, and the gray of both was in an effective contrast with the redly sunburned complexion.

The companion of this unrelaxed effigy of dignity was a contrastingly lissome girl, 16 years old, if judged by her face, but less if measured by her small stature, on which the tatters of a once jaunty jacket and gown were no disfigurement; whose countenance was not a loser of prettiness through tan or freckles; whose hair wrapped her head with brown and was powdered like a court beauty's with the dust, and whose feet stepped as lightly in a pair of shattered shoes as though newly slippered. She was the fairest of tatterdemalions.

"Dad," she said, and then stopped to fleck a grain or two of the small cyclone's deposit from her lips; "dad, this eight mile tramp's just about six miles too long."

"Daughter," he responded, as he shifted the strap of a shabby leather bag from one shoulder to the other, "don't say 'tramp'—please to don't say 'tramp.' Say trudge, if you object to calling it a walk, or mention it as a saunter—a stroll—anything that doesn't make us out vagabonds. We mustn't confess before we're convicted."

"Whatever 'tis, tramp or trudge," the girl retorted, "it's something we've got to do; so let's jog along."

The father's tone was a little querulous, although he tried to speak jocosely, and the daughter's smile was something like a peevish grimace; but as they walked along the girl took hold of the bag to relieve the man of some of its weight, whereupon he gently removed her hand and held it in his own.

Telegraph poles made hundred yard measurements along the road, with their still sappy surfaces of hemlock from which the bark had lately been removed and the small rounds of freshly pounded earth at their bases outlined sharply by the surrounding turf, showing that the work had not been done long. The evidences of newness increased steadily, and when the pedestrians had gone a mile further they came to the men who were making this line of telegraph from civilization across the boundary into the transitional territory of Oklahoma. There were several canvas top prairie wagons standing in a row, and the horses belonging to them, unhitched but still harnessed, were nibbling the grass near by.

Other vehicles consisted merely of heavy running gear, on which lay loads of the barked trunks of tall, straight trees ready to be set up, and still others were freighted with wire and the appliances for stretching it from pole to pole. Two tents of the army pattern had been pitched where a big, old tree overhung them and close to a brook which seemed to be constantly washing itself, so clean did the water look, with its underlay of white pebbles and its borderings of very green grass. A roof of canvas was over a long table of adjustable boards, on which tin plates and cups were ready for the meal which two men were cooking at a portable stove. Some tethered cows and sheep and a stock of canned eatables in a box wagon showed how little dependence for food was placed on the route. This movable encampment had been located for the night, and the sun had already sunk into the distant edge of rank grass. Not a sign of cultivation or permanent habitation was in sight, and the unfenced roadway was no more than a wide abrasion in the prairie, where the "boomers" had dragged their way toward the land of vague promise. This was the nineteenth nightly place of stop, and therefore was called Camp Nineteen. The last one had been named Eighteen and the next would be Camp Twenty.

Half a hundred men were erecting poles a short distance further along, but the wire had not been carried beyond the spot where the night camp was fixed, and there the only person besides the busy cooks immediately discernible when the pedestrians arrived was a young man busy at a telegraphic instrument. A tripod made the legs of a small table, and on it was the apparatus for sending and receiving messages over the wire, which was brought down from the last pole to which it had been adjusted. The operator's name was William Brown, and it goes far toward describing him to tell that in the rough and impolite company of telegraph constructors he was called Will Brown and not Bill Brown. No doubt some of this consideration on the part of men given to hard nicknaming was due to young Brown being the electrician of the expedition, and therefore a scientific mystery to most of them; but more than that, his unvarying suavity of manner, modesty of speech and careful retention of eastern deportment characterized him so markedly as to make "Bill" a misnomer and "Will" appropriate.

"Look, dad," the dusty girl whispered to her companion as her eyes fell on Will Brown; "we haven't seen a thing like that since we quit railroad tracks and took to footprints. Isn't he pretty?"

"He glads my eyes, daughter—he glads my very gaze," the man returned, eying the busy operator, who had not yet seen them."

The cause of the weary traveler's gladness was understood by the girl when she saw him advance with an enlivened stride, and heard him say briskly: "Ah, a telegraph station, eh? That is fortunate. Is this a money order office, my young friend? I would like to send a message to Fort Smith at once for a transfer of funds."

Will Brown straightened from his bent posture over the instrument, looked at the exaggerated dignity of the inquirer with a twinkle of merriment in his honest blue eyes, and urbanely replied: "This isn't a money order station; it isn't any sort of station; it's just the temporary end of the line and doesn't take any business."

"Oh, don't say that—pray don't say that," and the disappointment of the applicant looked like genuine anguish. "I shall be distressed—we shall be distressed—daughter and I—if we can't get a remittance by wire." Will Brown's eyes turned to the girl, and saw in her face as woebegone an expression as she could command without hurting her prettiness. After a pause, to let the young man appreciate the comeliness of the maiden in spite of her bad attire, the father continued: "We have walked six miles this afternoon and intended to go as far as Wealth City."

"Wealth City?" came in a guttural voice from the center of a clump of low bushes, and then a red face, fringed with whiskers from one side of a straw hat brim around to the other, and stubbled over with an unshaven week's beard, lifted into view. "What 'n t-h-u-n-der's Wealth City?" the grim voice demanded, spelling out the first syllable phonetically, with heavy emphasis on each letter and an equal stress on the rest of the word.

The rise of this individual was so much like that of a jack-in-a-box caricature that the girl exclaimed, like a surprised child, "Oh, that's funny!" and one of her feet leaped clear of the ground in a little caper of merriment. The object of her glee displayed no resentment. He was amiably drunk and disposed to gratify, with all particulars about himself, the curiosity which he had aroused.

"My name's Old Jugg Brown," he sententiously said, addressing himself directly to the girl, and speaking as a human exhibit in a museum might in lecturing on itself. "I was born Brown, and now they call me Old Jugg because I'm such an almighty hard drinker. Yes; I'm Old Jugg Brown, and this young gentleman is my son. I'm proud of my son, and he ain't proud of me. He's a reformin' me, Will is, but I got hold of a bottle o' whisky, and I've been drinkin' here in the brush."

He told this as something that had casually happened to him, something regretable, and yet nothing that he could have been expected to prevent. He held up the half emptied bottle and swayed with it to and fro until the son took it from him and smashed it on a stone. He regarded this summary action apathetically until the aroma of the spilled whisky reached his nose, and then he sniffed feebly, his bland smile changed to a grotesque pout, and he sank slowly down into the bushes as though an invisible hand was shutting him down into his box.

"I was saying that we meant to get to Wealth City before night," the strutting stranger resumed. "We understand that Wealth City is a new name for a sudden place—the name about a day old, and the place something like a week. I will not conceal the fact that we are—in a sense—well, call us fortune seekers, and we haven't yet found it. May be it is in Oklahoma, and what we wish is to get there. At this moment," and here he snapped a thumb and finger of each hand airily, "we are tired, we are hungry and we are penniless."

Will Brown was not unaccustomed to wandering adventurers in a similar plight, and he would have repulsed this man, doing it not the less decidedly because politely; but at that instant the girl settled to the ground very limp and prone, but falling into far too graceful a pose to make it possible that she was careless about it. Her fatigue was pitifully genuine, however, and the sight of beauty in distress—although also in rags—was an appeal which Will made no effort to resist.

"You're welcome to a dollar," he said, holding forth a coin instinctively toward the girl, but relinquishing it to the ready hand of her less charming parent. "If you'll give me your name," he added, in a sudden attempt to give to his sentimentality a commercial turn, "I'll make a memorandum of the loan and expect you to pay it sooner or later."

"My name?" was the forcedly glib response; "oh, yes, my name. Well, you see we are traveling incognito. Poverty is ever sensitive, you know—ever sensitive. In the last shuffling of the cards, somehow, we've been dealt clear out of the game. I ought to be a winner, but—heigho! Well, call me by what name you please"——

"Call him Jack High," came drowsily from the bush.

"I'll call you Jack High," assented Will Brown, making an entry in a note book, "and, Jack High, you owe me one dollar."

Jack High twirled the dollar and made it pass deftly in and out between his fingers as no man other than a practiced handler of gambling chips would be likely to. He seemed about to toss it back to the lender, or donor, but slipped it into a vest pocket instead and blithsomely said: "My daughter is a genius, sir—a genius. She sings, she dances—she will go into Oklahoma, my young friend, like a revelation of melody and a disclosure of grace. It may be that her talent must submit to offensive environment for a while, and indeed I may confess that our immediate expectations as to Wealth City are centered in a concert hall said to have just been opened there; but all Oklahoma is ours, and we shall speedily possess it. Jack High, sir, and—and"——

"Call her Deuce Low," was the sleepy suggestion from Old Jugg Brown in the bushes.

"Jack High and Deuce Low," cried the shabby adventurer, exhilarated by the possession of an unearned dollar, and he was about to impulsively declare that the card named couple would win the game, but he checked himself and chose other language. "They will conquer prosperity in Oklahoma—will Jack High and Deuce Low. Oh, yes."

(TO BE CONTINUED.)

Justice Hornblower.

W. R. Hornblower, the new supreme court justice, is a little man physically—that is, he comes only about up to the shoulder of an ordinary man. To make up for it, however, he has a most extraordinary nose. It is very long and very thick and comes down almost to the end of his upper lip. Otherwise Mr. Hornblower looks more like a clergyman than like a lawyer, a trait probably due to his early training. His father is a preacher, and he himself studied for the ministry before he turned his attention to the law.—Chicago Herald.

CALIFORNIA AT THE WORLD'S FAIR.

It will surprise many a Californian to know that from San Francisco was sent the Hercules Gas and Gasoline Engine to be exhibited at the Fair, and that these engines are being sold throughout the Eastern States as well as California, and are manufactured in California. Send for catalogue to Palmer & Rey Type Foundry, San Francisco, Cal.

Those who habitually ask advice never remember it when they win nor forget it if they lose.

KIDNEY TROUBLE.

Some most excruciating pain comes from derangement of the kidneys. This is the testimony Senator Henry C. Nelson of New York as to the value of ALLCOCK'S POROUS PLASTERS in such cases:

"On the 27th of February, 1883, I was taken with a violent pain in the region of the kidneys. I suffered such agony that I could hardly stand up. As soon as possible I applied two ALLCOCK'S POROUS PLASTERS, one over each kidney, and laid down. In an hour, to my surprise and delight, the pain had vanished and I was well. I wore the plasters for a day or two as a precaution, and then removed them. I have been using ALLCOCK'S POROUS PLASTERS in my family for the last ten years, and have always found them the quickest and best remedy for colds, strains and rheumatic affections. From my experience I believe they are the best plasters in the world."

BRANDRETH'S PILLS tone up the system.

There are reasons for believing a person never feels smaller than when covered with a revolver.

DEAFNESS CANNOT BE CURED

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars; free.

F. J. CHENEY & CO., Toledo, O.
Sold by Druggists, 75c.

An Extraordinary Woman—"Yes, sir, my wife is a most extraordinary woman. When I proposed to her what do you think she said?" "This is so sudden,' of course." "No, sir; she said, 'I expected this.'"

S.S.S.

THE WORLD'S FAIR.

California always to the front, was conspicuous in its exhibit of California made machinery. One very noticeable exhibit was the Hercules Gas and Gasoline engine, manufactured by Palmer & Rey Type Foundry, San Francisco, Cal. Send for catalogue.

A disturbing feature of the love feast between France and Russia is that France is providing the love and Russia is doing the feasting.

THE FOUNTAIN HEAD OF STRENGTH

When we recollect that the stomach is the grand laboratory in which food is transformed into the secretions which furnish vigor to the system after entering and enriching the blood; that it is, in short, the fountain head of strenth, it is essential to keep this important supplying machine in order, and to restore it to activity when it becomes inactive. This Hostetter's Stomach Bitters does most effectually, seasonably, regulating and reinforcing digestion, promoting due action of the liver and bowels. Strenth and quietude of the nerves depend in great measure upon thorough digestion. There is no nervine tonic more highly esteemed by the medical fraternity than the Bitters. Physicians also strongly commend it for chills and fever, rheumatism, kidney and bladder trouble, sick headache, and want of appetite and sleep. Take a wineglassful three times a day.

Not the Same—"Have you paid in your coal yet?" "No; but a tramp did last night." "Did what?" "Layed in my coal."

SURE CURE EOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germe for Breakfast.

Use Enameline Stove Polish; no dust, no smell.

DON'T LISTEN to the dealer who is bent on bigger profits. The thing that he wants you to buy, when you ask for Dr. Pierce's Favorite Prescription, *isn't* "just as good." Proof of this is easy. The only *guaranteed* remedy for the ailments of womanhood is the "Favorite Prescription." If it ever fails to benefit or cure, in making weak women strong or suffering women well, you have your money back.

Anything "just as good," or as sure to bring help, could be, and would be, sold in just that way.

This guaranteed medicine is an invigorating, restorative tonic, especially adapted to woman's needs and perfectly harmless in any condition of her system.

It builds up, strengthens, regulates, and cures.

For periodical pains, bearing-down sensations, ulceration, inflammation—every thing that's known as a "female complaint," it's a remedy that's safe, certain, and proved.

DOCTOR **Pardee's Remedy,** THE GREAT CURE —FOR— **INDIGESTION** *and Constipation.*

A Regulator of the Liver and Kidneys

A SPECIFIC FOR Scrofula, Rheumatism, Salt Rheum, Neuralgia, And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO., 9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE

STATIONARY AND MARINE **ENGINES.**

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

When Learning Was Despised.

Abraham Fabert, who in the seventeenth century became a marshal of the French army, lived in an age when learning was despised and mere animal courage won the plaudits of court and people. "The king has no need of philosophers in his armies," said one who knew the signs of the times. "He wants soldiers, stirring, active and resolute men. Debaters are only useful in the schools."

It was at this period that the Marquis of Cramail, at a critical moment, addressed his rear guard, imploring them not to ride away from the field, and his eloquence was at once destroyed when some one cried:

"Why listen to him? He has written a book!"

"I mend my pen with my sword," said a noble of the time to a poet, and the retort was prompt:

"Then I am no longer astonished that you write so badly."

But young Fabert, who became a private at the age of 14, was determined to master all the branches of his profession from the simplest to the most complex. He fulfilled all his practical duties perfectly, and at the same time studied with unfailing zeal. He taught himself the rudiments of geometry, fortification and drawing. He read history, studied German, Spanish, Italian and Flemish and was always eagerly seeking to improve his knowledge of geography.

"This," he used to say, "is as necessary to an officer as arms are to the soldier."

The result was that when France needed the service of a trained mind and well disciplined will Fabert was at her service. Moreover, he was the first marshal who rose from the ranks.—Youth's Companion.

A Commencement Costume.

A pretty commencement gown may be made of white embroidered muslin, the tiny flower being done in white, and upon close examination proving that it is a forgetmenot. The skirt, which is full and round, just barely escapes the floor. At the foot it is finished with five narrow "milliner's folds" of white satin. A quarter of a yard above these are three narrow folds, and a quarter of a yard above these is one. The bodice is round and belted in with a broad, white satin belt laid in fine folds like those on the skirt. Just in front, where it fastens, are four white satin ribbon bows knotted in the square style, so that they look like forgetmenots themselves.

The gown is open at the throat, turned over in very broad revers, faced with the muslin and outlined with Irish lace, that has the stitches necessary to keep it in place hidden under folds of the satin. The sleeves are very high puffs of the satin, reaching quite to the elbows, and below them fall frills of Irish lace. The gloves are white undressed kid, and the fan is a white gauze one. The slippers are white satin and the stockings white silk. The hair is parted in the center, drawn back and arranged low on the neck in a loose knot.—Isabella Mallon in Ladies' Home Journal.

A Napoleon of Literature.

The man was as thin as a rail and had the cadaverous look of a poet out of a job. At least that's the way he appeared to the editor as that gentleman raised his eyes from his work to see what it was shuffling across the floor toward his desk.

"Good morning," said the visitor.

"Good morning," responded the editor.

"You are the editor," said the visitor inquiringly, half in doubt. "Yes, I know you are. I can always tell an editor by his intellectual expression. I have here, sir, an article for the press."

"Prose or poetry?" queried the editor, not regarding the flattery.

"Both, sir; a combination effort, I may say."

"Ah, you must be a genius?"

"Well, sir," and the visitor plumed himself, "I am considered by my friends a Napoleon of literature, sir."

The editor didn't like that a little bit.

"Um," he said, looking him over. "Um, I didn't know you were a Napoleon, but I knew you were a bony part of literature. Anybody could see that with half an eye."—Detroit Free Press.

The Government of Spain.

The government of Spain is a limited monarchy under the constitution which was drawn up and proclaimed in 1876. The power to make laws belongs to the cortes, which consists of a senate and a house of deputies, the senators numbering 360 and the deputies 431. The senators are of three classes—those holding office in their own right, those nominated by the crown and those elected by the civil and ecclesiastical corporations of state. In the election of deputies all male Spaniards may vote under certain restrictions, and deputies are elected in the proportion of one deputy to every 50,000 souls of the population. Both houses of the cortes meet every year, and the ministers are responsible thereto.—New York Sun.

Went After Dinner.

Patrick—It's poor advice ye've been givin me. Didn't ye say th' best toime to ask a mon a favor was afther dinner?

Bifkins—I certainly did.

"Well, Oi wint to ould Buffers wid th' schmallest koind av a request, and he refused. It was afther dinner too.

"Are you sure he had had his dinner?"

"Faith it's little Oi know about ould Buffers' ingoin's and outcomin's, but Oi had moine."—New York Weekly.

Getting Points From the Savage.

It is said there is a tribe in Africa where speakers in public debate are required to stand on one leg and are not allowed to speak longer than they can stand in that position. With all our boasted civilization we discover every now and then points in which savages surpass us.—Exchange.

The Great Difference.

"There is not much similarity between our ways of earning a livelihood," said the dentist to the paint manufacturer.

"No," admitted the manufacturer, "there is not. I grind colors while you cull grinders."—Indianapolis Journal.

ON THE SUWANEE.

Life Along the Banks of Georgia's World Famous River.

POOR AND SHIFTLESS SETTLERS.

How the Prosaic "Crackers" Regarded a Yankee Who Sought in Vain for Their Pride in the Stream.

All the world knows of the Suwanee river through the song that has immortalized the stream, but not one in ten can tell you where the Suwanee river is, where it rises or whither it flows. As a matter of fact the map shows that it rises in Georgia, flows south through Florida and empties into the gulf of Mexico.

Along its banks in Florida the land is low and marshy, and there is not much in the scenery to inspire sentiment, tender or pathetic. In Georgia there are many pretty spots along its banks, but the trouble of reaching them takes away, in a great measure, the enjoyment they impart.

I was disappointed in the river and its scenery, but what the river lacked the natives along its shores made up to me. The "Cracker" has often been delineated and his characteristics commented on at length, but he never strikes you twice alike and is therefore always an object for interest and study. An unconquerable dislike for labor and a contentment that strangles ambition at its birth are the most prominent traits of his character.

Why I should be poking along the river and paddling up and down without any apparent motive and taking pictures was something that they could not guess without doing some thinking, so they let it go as a mystery, and when a man is on mysterious business in that part of Georgia they take it for granted that he is hunting for stills.

One old fellow who was sitting on a log deluding himself with the idea that he was fishing became so interested in my operations for taking a photograph that I could not resist the temptation to add a little by way of extempore moves to the process. For a time I was fearful lest he should dislocate his neck trying to watch me, as I was behind him. Finally he compromised with his anatomy by straddling the log. I knew that he was just dying with curiosity to know what I was doing, but wanted me to tell him without his asking.

I carefully measured off a triangle with a leg of the tripod and then set the camera within the mystic lines. Then I stood at each corner of the triangle, where I had driven a little stake, and waved my arms in the air. I paid no attention to the audience. Then I focused the camera and made the exposure incidentally. Then I laid a little train of magnesium powder from the camera to a hollow tree near by and fired the train. There was a line of smoke, but of course no flame showed. Then I walked to the hollow in the tree and apparently took from the cavity a dark, flat bottle—it was full.

Without a word I walked up to the old man, who had not let a move escape him, unscrewed the top and handed him the bottle. He took it, looked at me, smelled of it—when he handed it back there was not a drop in it—all in silence. Without saying anything I saw who the joke was on, put the bottle in my pocket, gathered up the camera and walked away. When I got behind some bushes, I turned and looked back. The old man was trying to pry that dead tree open with his fishing pole.

One man that I met was not at all impressed by the fact that fate had domiciled him near the rippling waters of the celebrated stream. I opened conversation with him.

"A great river, this?" waving my hand over the river.

"Yep."

"Known all over the world, wherever the English language is spoken."

"Guess so."

"And 'The Suwanee River' will be sung while the language exists."

"What's that yer drivin at?"

"Why about this river—the Suwanee river."

"That ain't no river."

"Why, that's the Suwanee river."

"No, 'tain't; that's ther branch."

"That is no branch; that is the main river."

"I tell you, mister, that's the branch. There ain't no S'wanee river 'bout here."

"Did you ever hear of the Suwanee river?"

"Nope."

"Did you ever hear the song, 'The Old Folks at Home?'"

"Nope."

"Do you like singing?"

"Don't mind a leetle of it sometimes."

"All right. I'll sing 'The Old Folks at Home' for you."

I straightened up and began to sing. Before the first verse had been killed he grew uneasy and shifted from one foot to the other, so I did not attempt the second, but asked:

"How do you like that?"

"Tolerable."

"Would you like some more?"

"No, you needenter mind."

"Very well, but you want to remember that this is the Suwanee river, one of the most celebrated rivers in the world, and you ought to be glad that you are so fortunate as to live near such a celebrated stream."

"Glad I'm livin here! Why, mister, I'm that dinged pore that I can't live nowhere else."

I left him. He was too prosaic and ran crossgrained to the romance I was looking for. That night when I returned to my boarding place they said a man had reported a crazy Yankee running at large along the branch and cautioned them to look out for him as he might be dangerous. They asked if I had seen him. I had not.

It is not to be wondered at that the poet expressed the liveliest kind of a longing for the old folks at home and took it out in longing if he was wise. He may have gamboled along the river with his little brother in innocent childhood, but when he began to hustle for the luxuries of life "along the Suwanee river" was not the place for him to hang out.

We know, however, that affluence is not necessary for the existence of happiness, and though the farmers along the Suwanee river do not count their cattle on a thousand hills or contemplate garners filled to bursting, yet they are happy and contented—the happiness of ignorance, the contentment of laziness. But the source of the fountain is not questioned as long as its waters satisfy.—Edwin Ralph Collins in Newark (N. J.) News.

J. E. Baker is in favor of dropping the name "New Whatcom" and employing that of Whatcom, and as a starter he proposes the omitting of the "New" on all letter heads, billheads, circulars and advertisements. All the newspapers in Washington persist in ignoring the "New," as no "new" city in America, save New York, ever amounted to much.

A Queer Occupation.

There is a man who holds the position of agent for a popular preacher of this city. He was a college graduate and had studied law, theology, horses, music, the drama and had tried the newspapers, all without success. Then he made the discovery that the preachers were the hardest pushed of all professional men for ideas to incorporate into their sermons. "Now this," says the agent, "is what I do. A preacher hires me to wander about town and report to him little incidents or queer ideas that strike me. He takes these and weaves them into his sermons. For instance, a preacher who has a large congregation with much visiting to do could not, if he were so inclined, visit all the public meetings, the resorts of gamblers and drunkards, the factories and the slums of the city.

"I am the eyes through which he sees these things, and using my information he speaks learnedly and intelligibly of all phases of life and sets his congregation a-wondering where he gets time to see so much. He is thus enabled to interest every element in his congregation, appearing to the sporting man as a sport, to the athlete as an enthusiast in athletics, to the musician as a musician and to the theater goer as one well versed in the plays of our day. I also tell him what the people are saying about him, and so he is able to talk to the different classes in a way that leads them—ignorant of my offices as a go between—to think him really wonderful in reading their thoughts. I am liberal in my ideas."—Cincinnati Times-Star.

All Big Stores on One Side of a Street.

Doubtless there are reasons for the fact that all the great retail dry goods houses in Broadway are, with a single exception, on the west side of the street. It can hardly be that their location on the west side is merely the result of chance or coincidence, for the great establishments of the same class in Sixth avenue are also on the west side of the street. In other cities the same thing may be observed. Nearly all great retail establishments front eastward, rarely to the west and still less frequently to the north. What is the reason? Can it be due to superstition of trade, or is it the result of some more practical consideration? The most likely explanation is that merchants prefer stores fronting eastward on account of the better light thus obtainable.

"It is my observation," remarked a veteran merchant, "that women do the more important part of their buying before noonday. They seldom purchase but trifles or unimportant articles after noon. Costly dresses, wraps and luxurious fabrics are sold for the most part in the forenoon. Hence an easterly light is not only desirable, but almost indispensable. The dealer who builds on the west side of the way has an eye to the morning sunshine and to business."—New York Herald.

Superstition of the Unlucky Thirteen.

When King Arthur founded the famous round table, he requested Merlin, the enchanter, to arrange the seats. Merlin arranged one set of seats to represent the apostles; 12 were for the faithful adherents of Jesus Christ and the thirteenth for the traitor Judas. The first were never occupied save by knights distinguished for their achievements, and when a death occurred among them the seat remained vacant until a knight surpassing him in heroic and warlike attainments should be considered worthy to fill the place. If an unworthy knight sought the chair, he was repelled by some magic power.

The thirteenth seat was never occupied but once. The story goes that a haughty and insolent Saracen knight sat down upon it and was immediately swallowed up by the earth. Ever after it was known as the "perilous seat," and, brave as the celebrated knights of the round table are said to have been, not one ever had the courage to sit on the thirteenth chair, and the superstition against it still survives.—Pittsburg Dispatch.

Why Not "Steam Whales?"

We land creatures are very proud of ourselves. We think we are so superior in every way to the creatures that dwell in the seas, and when we discover that we can make a steamship, which under favorable conditions can travel from New York to Queenstown in a trifle under six days, we call that vessel an ocean greyhound. Why we should give a greyhound the credit for all the speed in creation—among living things—is not quite clear to those who know something about whales. The whale is not only a creature of great strength, but he is one of the most rapid of moving things. He can go faster than a locomotive when he gets his muscular steam up, as you will see for yourselves when you realize the fact that the whale moves through the water with a velocity which, if continued at the same rate, would enable him to encircle the whole earth in less than 14 days. Considering this, one might properly ask: Why ocean greyhounds? Why not "steam whales?"—Philadelphia Press.

Superstitious People.

Whatever else we have become, whether better or worse, one thing is certain—we have become superstitious. The superstitions of the cultured class are now many, and they are all of recent introduction. I should like to show how and why this new superstitious spirit has grown up among us. It is a passing fad—played at rather than believed in, yet with something of the old terror in it.

N. B.—I have just read the above sagacious remarks to a lady, and she replied: "Yes, you are very likely quite right; it is all very silly. At the same time, I should not like to be married in May." So—you see.—Walter Besant in London Queen.

Preparing For Contingencies.

Two well known members of the racing set were discussing Donnelly's fall and its consequences when Roulette went to grass in the hurdle race at Clyde park. Said one, "I have noticed that if a fellow is half shot he generally comes off light."

"So have I," returned his friend. "A man who's half shot never hurts himself." Then, as a happy thought seemed to strike him, he added, "And as accidents are always liable to happen, even to the most careful, let's go and take a peg."

And the two men jogged contentedly off to the clubhouse.—Boston Herald.

Paying Him In His Own Coin.

"My dear," he said, with that nasty, nagging sarcasm some men resort to, "please don't surprise me any more with a box of cigars of your own selection."

"I won't, love," she replied, with the sweet, simple frankness of a woman, "if you promise not to surprise me again with a spring bonnet of your own selection."—Detroit Free Press.

Early Translations of the Bible.

In 170 years after the death of Christ the whole Bible had been translated into Latin by some unknown writer into what is now known as the old Italic version. By the year 200 it was extant in Greek, Syriac and Latin, and by the ninth century in 13 languages.

TEACHING SEWING

Young Women Show Buyers of Machines How to Use Them.

A GOOD FIELD FOR BRIGHT GIRLS.

Every Sewing Machine Headquarters Now Employs Many Women Who Do Nothing but Teach.

The sewing machine teacher is an indispensable adjunct of the sewing machine office. She is invariably a young woman. You seldom hear of her, it is true, unless you have bought a new machine and want to learn how to use some of its new and intricate attachments. Yet there are several thousand of her in Gotham. From fifteen to a hundred teachers are employed in each office, according to the business done.

Her work consists in following up every machine sent out either on trial or sold on the installment plan. Her work is partly to teach its uses, partly to see that it is properly cared for and that it has not been taken on trial with no intention of buying, and simply because the family had some sewing to do and saw a chance to do it without paying for the use of the machine.

As yet no statistics have been gathered about the sewing machine teacher. She has not even attracted the attention of any of the numerous societies which devote themselves to investigating the working girl. The sewing machine teacher is one of the newer of the four hundred or more occupations into which women have entered in the past three decades.

It is also one in which women have a monopoly. Except in the case of heavy factory machines, all the teachers are of the gentler sex. She has some interesting experiences too.

HER DUTIES.

At 8 in the morning she is expected to be at the company's office. There she reports the number of places where she called the day previous, how long she spent in each place, what sort of care is being given the machines, if it be a machine placed on trial, whether the party is likely to buy or not, or whether they have just got it because they want the use of it for nothing. Then she is given a list of new machines sent out in her district. It is nearly 9 o'clock when she starts out. She is expected to call in twenty or thirty places before quitting work at 6 o'clock. As a matter of fact, she manages to give seventeen or eighteen lessons on an average each day.

Her salary is not an exorbitant one, though she seldom complains of it. She certainly is better off than the factory or salesgirl. She must be able to speak two languages at least. In the up town districts English and German are indispensable. Down town, English and German and ability to make herself understood to the Italians and Russians of the sweat shops are requisite.

As a rule a girl takes up the role of sewing machine teacher when she is between seventeen and twenty years old. Usually she sticks to it too. In a large up town office is one young woman who has been thirteen years in the business. She receives a salary for her work, and in addition is given an agent's commission for all the machines sent out on trial which she succeeds in selling. She likes the work, and considers herself pretty well fixed. Her estimate of her earnings gives an average of twelve dollars a week.

The beginner is given six dollars a week. This is increased gradually if she seems likely to be a successful teacher, for there's a knack about teaching the intricacies of gusset and seam as well as in every other trade, until the maximum salary of nine dollars is reached. Some of the teachers become very expert in their knowledge of the machines, and are as capable of taking them apart and repairing them as the machinist who constructed them.

OPPORTUNITIES FOR GOOD.

The sewing machine teacher has some interesting experiences in the rounds of her work. She gets a knowledge of life, miserable and poor life usually, and an insight into the home life of the poor, strange customs and general human nature that she could acquire no other way. It requires a certain amount of philosophy, too, to make her a successful teacher. As likely as not her first assignment will be to a dark and dreary back room in a tenement house, where a poor mother is trying to support her little ones making clothing for the stores. She has bought a sewing machine with newer improvements, with which she hopes to accomplish more.

The sewing machine teacher must in all probability listen to the whole story. And if she be at all sympathetic, and the woman is unable to keep up her installment and loses both new and old machines, the occurrence is apt to have a depressing effect. Or she may have to go to a sweat shop where everything is overcrowded and generally disagreeable. Or, again, it is a quiet, pleasant little home nest where a little woman is anxious to help the strong right arm by doing her own sewing at home.

Yet the many contrasts, the heartrending tales and the contact with hard, unlovely poverty seldom makes the sewing machine teacher unwomanly or bitter. She is a jolly, happy, sympathetic woman with a great well of thankfulness in her heart because her own lot is so much easier than some others.

Sometimes she makes good use of her powers of observation, and the results make startling little stories. For a newspaper woman there is nothing like the occupation of the sewing machine teacher as a means of gaining useful knowledge.—New York News.

Evening shoes are more often than not made of the same material as the dress they are destined to be worn with. The trimming runs to embroidery rather than to bows and buckles. A pretty shoe, called the Hussar, is black patent leather slashed with gold, blue or bright red. Velvet shoes may be commended to those who prefer to study comfort before appearance. Morocco shoes with jet butterflies on the toes may be had in bright red, light blue, old gold and in gray. A satin shoe, which is just as piquant as it is pretty, has a rather high front, embroidered on both sides, and long silk laces that are twisted several times around the ankle and tied in a bow. Another example in satin is covered with a fine network of gold. It is just the sort of shoe to wear with a dance dress.

The shape of the hand is taken as a guide to character; so the shape of the foot should be. Quick witted, sprightly women are never flat footed; dull ones generally are. Flat feet are not pretty, but they may be improved by instep pads. These can be had at any bootmaker's. The smartest boots are patent leather and glove kid, with pointed toes, and are much arched beneath the instep. Spats and gaiters are to be much worn with shoes. They are made in several shades of tan, in black and in dark blue. I dare say they are comfortable, but they make the ankles look big and clumsy.

What Whalebone Really Is.

Owing to a popular misconception this substance, whose more appropriate name is "baleen," has been called "bone," while it really contains no bone whatever in its composition. It resembles rather a number of hardened hairs cemented together by a sort of gum. Chemically it consists of a basis of albumen hardened by phosphate of lime, the latter, however, in very small quantity. It takes the place of teeth in certain species of whales, especially the Greenland and southern whale.

A full grown Greenland whale yields about a ton of the substance. The whaling vessels usually bring it in pieces of ten or twelve blades each, but sometimes, if the voyage is long, the sailors have time to strip off each blade and divest it of its hairs. In preparing them for use the blades are cleaned and softened by boiling for about two hours; while still hot they are fixed in large wooded vises and shaved into the required sizes.

These slices or strips are dried smooth by steel scrapers and polished with either emery or dry quicklime. Besides its original usage in stiffening corsets and the waists of ladies' dresses, whalebone or baleen is employed in making walking sticks, snuff boxes, covering telescopes and whip handles, and even making some kinds of artificial flowers. The fibers detached in slicing the blades are used instead of bristles in cheap brushes, and sometimes instead of hair in stuffing mattresses.—St. Louis Post-Dispatch.

Undoubtedly Upper Crust Girls.

One of the greatest social puzzles to European strangers in San Francisco is to classify our women by their looks and dress. The average globe trotter fails utterly to distinguished the Four Hundred from the 400,000.

A startling case of this inability of the European tourist was related the other night in a prominent club by a swell visitor from across the herring pond.

"Deucedly queer girls you have in San Francisco," said the loyal subject of Victoria.

"How so?"

"I was out in Pawk this morning, you know, and I saw two deucedly pretty and modest looking girls riding bicycles up a hill, you know, and they looked so jolly and innocent that I couldn't help remarking, 'Very hawrd work, ladies,' and what do you think was the reply?"

"What?"

"'Yes, bloody hard work, cully, and—poor pay.'

"Do you think they were respectable girls?" asked the puzzled tourist.

"Oh, certainly. No doubt of it. Regular upper crust. In fact the style that takes the whole bakery, as you might say, when they go out."

The observant globe trotter made a note of the incident, and it will doubtless appear in due time in book form under the heading, "Eccentricities of the San Francisco Aristocracy."—San Francisco Chronicle.

Ancient Laws and Lawmakers.

In ancient days nobody but a lord was deemed worthy to establish rules of conduct for the people, and very crude rules they were too. The Greeks at the time of the Trojan war, the Jews, the Irish and the Anglo-Saxons placed a money value on every crime which man committed. Thus it cost about $65,000 of our money to murder a king and only $4,000 to kill a priest. If the fine was not paid, then the friends of the king or the priest could fall on the murderer and kill him. If one man scratched another's face he had to pay for it. Such were the laws of the lords, but as civilization advanced and the common people got seats in legislative assemblies, criminal jurisprudence took on dignity and wisdom. Now we have good laws and virtuous lawmakers, as a general thing, but we still maintain the notion that a lord is better than anybody else.—Cleveland Leader.

In the Wilderness.

An Englishman traveling through the wilds of British Columbia waxes facetious about the appetites of himself and his companions. Plenty of hard work in the open air is well known to be a pretty good prescription for dyspepsia, and so it proved in the present case.

He says: "Jim was an invalid when he came out, and still professed to be dieting himself with great strictness under a set of rules laid down by his medical adviser. For a long time we tried in vain to detect from his behavior what those rules might be, and at last we have discovered them:

"Eat whatever you fancy; it is the only safe rule. Drink whatever you like, so long as it is the best. Do both every time you get a chance."

Cigars Six Feet Long.

Some large cigars have been made for trade advertisement purposes, much too unwieldy to smoke, although composed of the best materials. In Malta it is a common practice for tobacconists to exhibit in their windows large specimens for this purpose. Some are six feet in length, ranging in diameter from six inches, enlarged models of the best brands made in the island.—Boston Globe.

Not All English.

Little Miss Wayupp—Is your butler English?

Little Miss Highupp—N—o, but his clothes is.—New York Weekly.

USE THE MAILS.

Clever Swindlers Who Keep the Postoffice Officials Busy.

METHODS OF "GREEN GOODS" MEN.

How They Evade Being Prosecuted.—Strange Ways That Some of Their Schemes are Discovered.

The United States government is an unwitting party to many a swindling scheme of which the public never hear, for the mails are used by many rascals with many plans to exchange experience for money. The so called "green goods" men form the bulk, perhaps, of those who use the mails to deceive. The number of these rascals is considerable, and each of them has a dozen aliases. As soon as the postal authorities learn that a certain address is that of a "green goods" man, they no longer deliver letters to it, but in many cases the knowledge comes to them only after the swindlers have used the mails extensively.

From long contests with the United States authorities, the men who pretend to sell counterfeit money have become exceedingly shrewd and to catch one of them and to fasten guilt upon him is a difficult task. The victims always come from places at some distance from this city, and are naturally loath to prosecute the rascals, because to do so they must admit that they wanted to become parties to a swindle.

Occasionally letters reach the dead letter office which tell the tale of a swindle planned but not carried out. One of these was received not long ago. It was addressed to a man at a hotel in the interior of this state, and contained a check for seventy-five dollars and instructions to the man, who purported to be the traveling agent of a Beaver street firm. The letter was written on a regular sheet, bearing the printed name and address of the firm, and gave the agent minute directions to guide him. The envelope bore in the upper left hand corner the name and address of the firm also.

A SHARP PRACTICE.

Everything about the letter seemed regular, but the missive reached the dead letter office because there existed no such firm as the one by which the letter was apparently sent. The scheme was this: A well dressed man would arrive at a hotel, and the next day a letter would come for him. He would open this letter in the presence of the clerk or proprietor and take a check from it. The hotel man, on seeing the letter and the envelope, would feel satisfied that the check was good, and would cash it, retaining the few dollars due him. That same day the agent would leave the place, and in a day or two the hotel man would learn that the check was worthless. In the case of the letter of this kind which reached the dead letter office the rascal had no doubt failed to connect with the missive sent to him by his confederate.

A swindler with a more ingenious and dangerous game flourished in this city not long ago. He sent letters to merchants in various places ordering goods, and signed the name of a large firm which is perfectly respectable. The swindler, however, gave a different address from the right one of the firm, and made his scheme the more deceptive by having appropriate letter heads printed. The merchants who received his orders would look up the firm in the book of a mercantile agency and find it marked "A1, from $200,000 to $250,000." The book gives no addresses, hence it would naturally be supposed that that of the swindler is the one of the real house.

Ordinarily, the merchants would send the goods to the address of the swindler, who would sell them and disappear before the notes he gave in payment fell due. In this case, however, the man had a little misunderstanding with the postal authorities.

DETECTING RASCALS.

Assistant Postmaster James Gayler, whose years of service as a postoffice inspector have made him quick to detect a swindling scheme, demanded some explanation from the fellow. Without waiting to tell how his firm happened to have the same name as that of the one with which Mr. Gayler was familiar, the rascal quietly skipped away and forfeited the replies to his letters. The merchants were thus saved the loss that would have otherwise resulted.

A game with which Mr. Gayler is familiar from his long and varied experience is that of the man who says in his letter, "I inclose five dollars," and then forwards the missive without putting the money into it. The fellow's letter arrives without the inclosure, and then a vigorous complaint is made to the postal authorities. Sometimes it is impossible to prove whether the money was placed in the letter or not, but occasionally the ingenuity of a postoffice inspector lays the scheme bare.

Mr. Gayler has discomfited not a few men who were loud in their denunciation of the mail service, among the cases being that of a soldier in the rebellion. He had lost his pay by gambling, instead of sending it to his wife. He boldly, however, wrote to her, saying that he inclosed eighty dollars in the letter. The page was smeared with mucilage, but the envelope contained no money.

The wife made a complaint to the postoffice authorities, and Mr. Gayler was instructed to look up the case. He did so, and happened to call on the woman when her husband was at home on a furlough. The man was positive that he had put the money in the envelope.

"In what denomination were the bills?" Mr. Gayler asked him.

"There were two forty dollar bills," answered the soldier.

"Are you sure?"

"Yes, certain," said the man, and Mr. Gayler spent no more time on the case, except to offer the soldier fifty dollars for every forty dollar bill he could find.—New York Tribune.

An American Girl Singer.

Rita Elandi, who sang before Queen Victoria recently with success, is an American girl—Amelia Louisa Groll, of Cleveland. Miss Groll was presented to the London public without the customary booming, and scored a most remarkable triumph there as in other European cities. Her career in Europe has been one of hard study, gradual success and telling triumph.

The artist who has the honor to sing before her majesty is taken to the castle by royal conveyance, served with a magnificent dinner in the queen's presence and audience chambers by the officials of the lord steward's department, photographed in costume, presented to the ladies of the court, and rewarded with some valuable souvenir, which to Miss Groll took the form of a diamond bracelet. And yet "they say" the queen pays nothing for her amusements.—London Letter.

A MONK'S HEROISM.

Father Xavier's Grand and Noble Deeds During the Spanish Floods.

In contrast to the numerous instances of cowardice and panic among laymen during the terrible floods which devastated portions of the far province of Toledo, the conduct of many of the priesthood was conspicuous for bravery and devotion to duty, and the name that such scenes bring about above all others in this noble work is that of a humble Franciscan monk of Consuegra, Father Xavier. There is no exaggeration in saying this single brave man saved scores of lives by his individual efforts on the night of the calamity. No risk was too great for him to dare in the the hope of saving the life of some unfortunate wretch borne toward destruction by the resistless deluge.

The monk related a thrilling story of one particular case which had impressed itself upon his memory more strongly than any other. He had already helped a number of poor, helpless creatures to places of safety, and was clinging in an almost exhausted condition to some floating beams, when he thought he heard above the noise of the rushing flood the voice of a woman invoking the aid of the Virgin. At last he reached a balcony where a woman was clinging to the iron railing, bearing on her shoulders a girl of twelve, who was already half unconscious and half drowned. The mother, clasping her child, had been swept by the flood against the balcony, and had clung there in the face of the rising waters, which must have soon overwhelmed them. The first impulse of the priest was to seize both and endeavor to bear them to a place of safety, but the mother cried:

"Take my daughter first."

Finding urging useless, the monk took the child upon his shoulders, promising the mother that after bearing her to some secure resting place he would return.

Often they were entangled in the branches of trees or were struck by floating wreckage, but after many hairbreadth escapes the current cast them upon the shore. Another perilous voyage through the flood brought him back to the balcony whence he had rescued the little one, but the heroic mother was a corpse. Her arms, rigid in death, still clung to the railing. Hoping that it might be possible to resuscitate her, the priest took the body on his back and once more breasted the flood. The spot where he had left the child was reached after many difficulties, but the girl, probably too dazed to heed his injunction, had vanished. Turning his attention to the mother, he found that she was beyond hope; the body was quite cold.—Cor. London Spectator.

Two Cures for Corns.

"An absolute and permanent cure for corns," says a woman who knows, "is the rest cure. If you can go into a fortnight's seclusion, giving out that your ankle is sprained, and keep the corn foot in a stocking and wear bedside slipper, without pressure, and using only when walking about the room, the corns will disappear and not return. All inflammation subsides first and the corn becomes loose and easily detached, and that is the end of it."

The same authority gives as a sovereign cure for soft corns the constant wearing of a bit of old linen saturated every morning with sweet oil. From the beginning the pain of the infliction ceases, and after a time the corn itself loosens and falls out. Both these remedies are from good authority and will bear trial—the first one, perhaps, being rather difficult of accomplishment, since many of the acids and corn salves sold irritate and produce soreness, and the knife of the chiropodist is apt to afford merely temporary relief.—Her Point of View in New York Times.

Corns Are Bound to Be.

No sort of shoe has yet been invented which will prevent corns. No matter how well fitting the shoe may be it will always pinch or rub somewhere, and when it does a corn is the inevitable result. Even if people were to throw away their shoes and go barefoot they would have as many corns as ever, the only difference being that the corns would be shifted from the top and sides to the bottom of the foot and become worse, for stone bruises and blisters on the sole are only modified corns. There have been corns ever since there were feet to grow them on, and as long as feet hold out corns will always be an abundant crop.—Interview in St. Louis Globe-Democrat.

Good Talkers.

Considering what a beautiful instrument is speech, and how closely it may express every thought and fear and hope, it is astonishing how awkwardly and carelessly it is employed. A good talker—not a profuse conversationist nor an orator, but one who expresses himself in clear and simple words—imparts so much pleasure that it is much to be regretted that the species is so rare.—Blackwood's Magazine.

Car Heaters.

In France a system of heating cars has been proposed by which lead gratings of high resistance are placed inside radiators from which the heat is diffused through the car.—New York Telegram.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 1 1893

A law of considerable importance to miners and prospectors hereabouts was passed at the recent extra session of Congress, and having been approved by the President is now in force. This law suspends for the present year Section 2324 of the Revised statutes, requiring work to the amount of at least $100 yearly to be done upon mining claims in order to hold possession of them. No mining claim will be liable to forfeiture for failure to do the yearly assessment work this year—except in the state of South Dakota—provided the claimant shall file before December 31st in the land office where the original location was filed, notice that he intends in good faith to hold and work the claim. This bill, which was introduced by Mr. Bell of Colorado, was generally advocated by the representatives of the mining States on the ground that many miners would be this year, in consequence of the depressed condition of the silver mining industry, unable to put in the assessment work, and would therefore be compelled to lose claims which they had discovered, which would be an addition to the hardship of their present condition. These representations were generally accepted, and the bill met with no opposition. South Dakota was exempted from its action on the statement of its Senators that the mining claims in that State were very generally the property of non-residents who were able to meet the requirements of the statute.

There is more of a boom in gold mining in this State than there has been in twenty years. In Grass Valley and Nevada City, Nevada County, and in Forbestown, Butte County and a few other prominent places, the hotels are so full that guests have to take their chances on cots in the halls, etc. People are coming from all directions looking for gold mines. They are not only coming from Colorado, Utah, Montana, Nevada, Idaho and Washington, but from the large cities of the east also. There are men also from France and England and from Mexico and Central America. Gold mines are in demand, and there are more of them in this State than in any other part of the Continent. The large majority of our claims are still undeveloped and need capital to make them remunerative.

Martin Kelley of the "Republican boss" firm of Crimmins and Kelley, sued the San Francisco Examiner for $75,000 damages for calling him a thief, and alleging that he stole a fire engine from the city. At the trial the witnesses gave him such an all around bad character, as a liar, thief, perjurer, briber and the like, that it took a jury just six minutes to decide that he could not be libeled. He will, however, continue to control the destinies of the G. O. P. in San Francisco and incidentally throughout the State.

Up to recent date about one million one hundred thousand applications for pensions had been filed at Washington At the rate such applications keep piling up, every name that had been enrolled in the United States service during the late war will soon be filed claiming a pension. None know so well as the veterans who did real service on land and sea how utterly undeserving of pensions are thousands of those claimants, and none are so indignant and disgusted with their impudent claims.

The hard times are not without their compensations The Italian Government opposes emigrating to the United States "on account of the economic conditions prevailing there." If the other European Governments should follow suit they would greatly oblige. The supply of immigrants for some time past has been in excess of the demand.

In Germany, it is said, the method in vogue for securing the verdict of a jury is much different from that practiced in this country. When the vote is seven to five the casi is referred to the court for decision. If eight ballots are cast against the accused he is found guilty, but if the vote is equally divided the prisoner is acquitted.

The diabolical energy and bloodthirsty disposition of the French and Spanish anarchists appears to call for some heroic remedy. A little of the American medicine known as Judge Lynch s specific might have some salutary effect on the situation

A TRAPPIST REFECTORY.

Cold and Gloomy Surroundings and a Scanty Bill of Fare.

We reached the Trappist refectory. A great cold room, with whitewashed walls and five long, narrow tables, with benches on each side, stretching from end to end, was the place where the monks took their very frugal meals. The tables were laid for the first meal. There were no cloths, and it is almost needless to add that there were no napkins, although these are considered so essential in France that even in the most wretched auberge one is usually laid before the guest. Trappists, however, have little need of them.

At each place were a wooden spoon and fork, a plate, a jug of water, and another jug—a smaller one—of beer, and a porringer for soup, which is the chief diet of the Trappists. Very thin soup it is, the ingredients being water, chopped vegetables, bread and a little oil or butter.

Until a few years ago no oily matter, whether vegetable or animal, was allowed in the soup, nor was it permissible, except in case of sickness, to have more than one meal a day, but the necessity of relaxing the rule a little was realized. Now, during the six summer months of the year, there are two meals a day—namely, at 11 and 6, but in winter there is still only one that is called a meal, and this is at 4. There is, however, a gouter—just something to keep the stomach from collapsing—at 10 in the morning. No fish, nor flesh, nor animal product, except cheese and butter, is eaten by these Trappists unless they fall ill, and then they have meat or anything else that they may need to make them well. There is, however, very little sickness among them.

The living of each Trappist probably costs no more than sixpence a day to the community. Assuming that the money brought into the common fund by those who have a private fortune—the fathers, as a rule, are men of some independent means—covers the establishment expenses, and the taxation imposed by the state, there must remain a considerable profit on the work of each individual, whether he labors in the fields or in the dairy and cheeserooms, or concerns himself with the sales and the accounts, or, like the porter at the gate, tests with an instrument the richness of the milk that is brought in by the peasants, lest they who have been befriended by the monks in sickness and penury should steal from them in return.

To devote this surplus obtained by a life of sacrifice, compared to which the material misery of the beggars whom they relieve is luxury, to the lessening of human suffering, to the encouragement of the family, offering the hand of charity to the worthy and the unworthy, expecting no honor from all this, and not even gratitude, is a life that makes that of the theoretical philanthropists and humanitarian philosophers look rather barren.—Temple Bar.

Origin of the Peach.

Nothing is now more universally accepted than the fact that the peach is an improved variety of the almond. The almond has a thin shell around the stone, which splits open and shows the stone when mature. This outer skin has simply become fleshy in the peach, so that it is all that gives it its specific character. It seems now clear from investigation in the history of ancient Babylon that in their gardens, nearly 4,000 years ago, the peach was cultivated then as it now is.

It must have been many years before this that the peach was improved from the almond, and this fact goes to show the great antiquity of the fruit. Possibly gardening in some respects, at least so far as it relates to many of our cultivated fruits, was as far advanced 6,000 or 8,000 or perhaps 10,000 years back as it is today.

Phœnicians, many thousands of years ago, as is proved by the records, had in their gardens almonds, apricots, bananas, citrons, figs, grapes, olives, peaches, pomegranates; and even sugar cane was in extensive cultivation. Certainly this shows how far advanced these nations were in garden culture many years ago. —Detroit Free Press.

Musical Tones.

A stringed instrument suspended in a favorable position near a pianoforte will sound when tones corresponding to the open strings are produced on the pianoforte. The volume of the answering tone will depend upon atmospheric conditions, the quality and color of the persuading tone and the sensitiveness of the responding material. There is a familiar anecdote told of a famous tenor, who by singing the tone that was consonant with that of a wineglass, could make the glass shiver so violently that it would fall to pieces. It is because of this tonal sympathy that the cause of a harsh, rattling tone that may suddenly appear in a pianoforte is detected with difficulty. Though it may appear to be in the instrument, it is often far away and may come from a loose globe or pendant on a chandelier. Even a key in a door has been known to be the guilty cause.—St. Louis Globe-Democrat.

Big Guns Don't Last Long.

An English authority, in speaking of heavy guns, says that the 110 ton gun, 16¼ inch bore, will fire 95 ordinary rounds, after which the gun is unfit for further service. The 67 ton gun, 13½ inch bore, will fire 127 rounds, and the 45 ton gun, 12 inch bore, will fire 150 rounds before becoming useless. The cost of the British 110 ton gun is $82,500. That of the 67 ton gun is $54,500, and that of the 45 ton gun $31,500.—Jalapa Journal.

Collar Mad.

Honora—Oh, missis, Mr. Vanderwater has hung himself to the chindeloor, an his eyes do be stickin out like taycups.

Cholly Vanderwater (after being cut down by a committee of boarders)—What means this wude intwusion? I am pwepawing my neck foh a highah callah, and I do not wish to be interwupted. Go 'way!—New York Recorder.

BREATH IN DEAD MEN

STARTLING RESULTS OF A NEW JERSEY DOCTOR'S EXPERIMENTS.

He Has Made a Simple Apparatus With Which the Lungs May Be Put to Work After They Have Once Stopped—It Is Not Patented and Any One Can Make It.

Dr. Edwin De Baun of Passaic, N. J., makes the announcement regarding the time honored statement that a man has died from lack of breath—that if breath was all he needed he should have lived.

Considering that air is the most plentiful resource of nature, having, as political economists would say, no value because of its abundance, one would think that Dr. De Baun had made no particular discovery. But there is more in his statement than is apparent at first.

From time immemorial physicians have directed their ingenuity toward an effective application of this wealth of air, but without satisfactory results. Cases of suspended animation come under their notice every day. Men are rescued from the water after a hard battle with the waves, their lungs filled with water, the life's action suspended. In the majority of instances restoration of animation cannot be effected. The lungs may be emptied of the water; the life giving air, so abundant, is at hand—and if it could only be forced into the organs and respiration started life could be renewed. Physicians' efforts to solve the problem have been unceasing, but, says Dr. De Baun, misdirected.

When a man is rescued from the water, the first thing done is to empty the lungs of water by rolling him on a barrel or lifting him from the ground head downward. Then he is laid on his back, the arms raised to expand the lungs and a rythmic contraction and expansion of the chest walls effected by alternate pressure and relaxation. Sometimes the forcing process has been kept up for hours with ultimate success, but considering the possibilities recognized in artificial respiration the results have been far from encouraging.

Dr. De Baun has worked on an entirely new line, and the result of his experiments and observation is a method of internal respiration, which, he claims, cannot possibly fail. His attention was first directed to the subject by a case of suspended animation in a newly born child. It has been the practice in such cases to force air into the lungs of the infant by breathing into its mouth and then contracting the lungs by pressure upon the chest. But this has been found not only intensely disagreeable, but highly inefficient.

Dr. De Baun decided to try a new expedient. He passed a small rubber tube through the nose of the infant and down into the throat. Closing the mouth, he forced air through the tube from a rubber bag, inflating the lungs; then, releasing the pressure from the mouth, found, as expected, that the elasticity of the muscles of the chest caused immediate contraction of the lungs, forming a complete respiration. This was kept up for 45 minutes, when natural respiration had been restored, and a life had been saved. Since then Dr. De Baun has perfected this hastily improvised apparatus and finds that animation may be often restored within 15 minutes.

The apparatus is as simple as it is ingenious. It consists of a long rubber tube, near one end of which is a piece of soft rubber with which to cover the mouth and nose. At the other end are two rubber bulbs. After the tube has been inserted between the teeth, and the mouth and nose covered slightly, the lower bulb is compressed, forcing air into the second bulb, which acts as a reservoir. This second bulb is much more elastic than the other and maintains a steady pressure of air through the tube. It is covered with loose netting, which acts as a sort of safety valve against overpressure. The tube is fitted with a stopcock that may be used to lend force to the first few respirations.

A few compressions of the lower bulb are sufficient to fill the lungs. Then the pressure on nose and mouth is relaxed, and the lungs are emptied by the natural elasticity of the muscles of the chest. This elasticity remains even after death, and with this instrument it is quite possible to make a dead man breathe regularly as long as the application continues. In some of the doctor's experiments on dead bodies this simulation of life has been absolutely startling.

It is not for dead men, however, that the "insufflator," as it is called, has been devised, but for men who have been brought apparently to death's door by asphyxiation from gas and water. In the latter case the lungs must first be emptied. The apparatus weighs but a few ounces. It is not patented, as Dr. De Baun is a strict observer of medical ethics, which declare that the discoveries of a physician belong to the world. He is treasurer of the state board of medical examiners of New Jersey and has invented several valuable surgical instruments and devices.—New York World.

The Agricultural Profession.

The educated agriculturist is slowly but surely drewing the uneducated and unthinking man from the field. With the retirement of every quack and the corresponding advent of the thinking man on the farm arena is elevated the whole agricultural profession, which is thus brought one step nearer its true position that it justly held in Roman times—the foremost rank of all the world.—Science.

A Skillful Ironer.

Augusta Slevin, who is employed in one of the hygienic laundries of New York, can iron 108 shirts in a day. She is a blond, with big, brown eyes; young, slender almost to delicacy, and could hold her own in any beauty contest.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893. A. C. McDONALD.

Justice of the Peace of said Township.
E. SPENCER, Attorney for Plaintiff.

NOTICE OF ADMINISTRATOR'S SALE OF PERSONAL PROPERTY.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 14th day of November, 1893, in the matter of the estate of John Morton, deceased, the undersigned, administrator of said estate, will sell at public auction, for cash subject to confirmation by said Superior Court on

TUESDAY, the 28th day of December,

1893, at the hour of 2 o'clock p. m. of said day, at the late residence of said deceased, in the town of Keeler, Inyo county, California, the following described personal property, to wit:

One billiard table, 2 chandeliers, 9 bar-room chairs, 2 heating stoves and pipe, 4 chromos, bar and bar fixtures, 1 desk, 1 ice-chest, 1 step ladder, 2 tables, 3 carpets, 1 lounge, 1 bureau, 1 washstand, 1 marble-top table, 7 parlor chairs 7 pictures, 1 bedstead and bedding, 1 parlor table, 1 cook stove and cooking utensils and 2 cupboards.

Dated November 15, 1893.

J. J. MORTON.
Administrator of the estate of John Morton, deceased.
P. H. MACK, Attorney for Administrator.

NOTICE OF SALE OF REAL ESTATE AT PUBLIC AUCTION.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 14th day of November, 1893, in the matter of the estate of John Morton, deceased, the undersigned, administrator of said estate will sell, at public auction, subject to confirmation by said Court, the following described real property, situate, lying and being in the town of Keeler, County of Inyo, State of California, to wit

Lots numbers Seven (7) and Ten (10) in Block No. 19, together with all and singular the tenements, hereditaments and appurtenances thereunto belonging or in any wise appertaining. Said sale will be made on the

30th Day of December, 1893,

At 10 o'clock a. m., at the Court-House door, in the town of Independence, in said county and State.

Terms of sale, cash, gold coin of the United States, ten per cent. of the bid payable upon day of sale, balance on confirmation by said Superior Court.

Dated November 15th, 1893.

J. J. MORTON.
Administrator of the estate of John Morton, deceased.
P. H. MACK, Attorney for the Administrator.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1894, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hahhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and alls bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

Geo. M. Gill, Superior Judge.

TUESDAY, Nov. 28, 1893.

Estate of E. L. Smith, deceased—Filed petition for letters of administration.

WEDNESDAY Nov. 29, 1893.

Estate and guardianship of Hattie Vagt et als.—Administrators' account ordered settled and allowed. Ordered that administrators' be authorized to lease real estate.

MARRIED.

MERONEY--JAMES—At Independence, November 30th, by Hon. George M. Gill, Charles S. Meroney and Miss Sarah James.

W. W. Watterson of Bishop is in town.

Ed Walker came up from Olancha yesterday.

Work will commence on the big canal next week.

Ben T. Williams has gone to Los Angeles on a visit.

Charley Meroney of Keeler spent several days in town this week.

Al Staudinger and wife arrived at Keeler last Monday from Chicago.

J. G. and J. H Dodge were up from Lone Pine last Tuesday.

The prospective ditch building is stirring up an interest in land matters.

Mrs. J. S. Gorman has been quite ill during the week. She is now improving.

Mrs Charles Parsons and Mrs. Frank Andrews are visiting friends at Independence.

S. A. Densmore has been on the sick list for some time. He is now able to be around.

Mrs. E. A. Gifford and Miss Grace Gifford are visiting friends at Independence and vicinity.

The dramatic entertainment on Wednesday evening was a brilliant success. The social, ditto.

Mrs. James Jones and Miss Steele came down from Fish Spring yesterday and attended the domino ball last evening.

Mrs. James Malone arrived home last Friday from a visit to her daughter, Mrs. D. McSweeny at Sacramento.

M. B. Miller came up from Los Angeles last Monday. He is interested in building the proposed canal to Indian Wells Valley.

James McBride of Bishop came down on Wednesday's train and attended the Thanksgiving celebration at Independence.

W. H. Avery of Los Angeles is at Bishop. He was here last May and now says he has come back to invest in real estate in Owens Valley.

Messrs. Miller and Carter went to Lone Pine yesterday to secure appliances—scrapers etc.— to begin work on the new canal next week.

A. J. Davis came in from the Minnietta last Sunday. He is suffering from a touch of lead poisoning but will be all right again in a few days.

Among other visitors at Independence for the Thacksgiving festivities are Mr. and Mrs. George Drake and Miss Ritta Drake of Bishop.

The local Justice Court had a wholesale job this morning. Four chinymen were arrested for "doing up" a fifth. The respective trials and hearings were set for Monday.

The south bound train now arrives at Independence station at 4:35 p. m. which is 55 minutes later than formerly. There is no change in the departure of the train going north.

William T. Coleman died at San Francisco on the morning of Novemember 22. At one time Mr. Coleman had large interests in Inyo county owning extensive borax fields near Death Valley.

H. W. Blanks arrived from Los Angeles yesterday. He is concerned in enterprises connected with the big canal. Mr. Blanks is accompanied by his wife. They will stay at Independence for some time.

Value of Irrigated Lands.

The census returns show that in round numbers the total investment in productive irrigation systems utilized in 1889, in whole or in part, was up to June 1, 1890, $29,611,000. Their value at that date was $94,412,000, showing an apparent profit of $64,801,000, or 218.84 per cent. The aggregated first cost of the irrigated lands, with their water rights has been ascertained to be $71,490,000, and the value of the same on June 1, 1890, was $296,850,000, showing an increase in the value of the land and water rights of $219,360,000, or 238.08 per cent. The land irrigated in 1889 was worth nearly four times what it cost. The total expenditure for water, including the maintenance and repair of ditches, in the arid States in 1889 was $3,794,000 and the total value of the products $53,057,000. No other interest can show such vast gains on the capital invested. As the yield from irrigated land increases largely in the first two or three years after the water is first applied later figures would show still larger gains from products of the land. The value of irrigated land also increases rapidly as the area is extended and in this direction also later figures would show immense gains on the capital invested.

No Assessment Work This Year.

The bill in regard to assessment work on mining claims was passed by Congress in October. Be it enacted, etc.—That the provisions of section numbered 2324 or the Revised Statutes of the revied Statutes of the United States, which require that on each claim located after the 10th day of May, 1872, and until patent has been issued therefor, not less than $100 worth of labor shall be performed or improvements made during each year, be suspended for the year 1893 so that no mining claim which has been regularly located and recorded as required by the local laws and mining regulations shall be subject to forfeiture for non-performance of the annual assessment for the year 1893: *Provided*, That the claimant or claimants of any mining location, in order to secure the benefits of this act shall cause to be recorded in the office where the location notice or certificate is filed, on or before December 31, 1893, a notice that he or they, in good faith, intend to hold and work said claim: Provided, however, that the provisions of this act shall not apply to the State of South Dakota.

A Grand Success.

It is a difficult task to describe the dramatic entertainment presented by the N. S. G. W. on Wednesday evening. The ordinary stereotyped phrases would fail to describe the pleasure of the audience. The stage setting and appurtenances were in themselves excellent, but the drama "Caste" and the farce "To Oblige Benson" were rendered in a manner seldom attained by amateurs. It may not be invidious to remark that S. W. Austin's rendition of "Eccles" was admirable. The house was crowded and most of the audience remained after the play and participated in a social dance, which lasted till about four o'clock in the morning.

A Jolly Good Time.

The domino ball at Mairs Hall last evening was a most decided success. The guests arrived early and by 10 o'clock a large company had assembled. At 11 o'clock the order for unmasking was given, and the committee on prizes consisting of P. W. Bennett Esq., W. A. Lamar Esq. and County Treasurer Bunney announced the prize for best sustained gentleman character should be awarded Walter Ober and best sustained lady character to Mrs. S. C. Mulholland. Quite a number of visitors were present from outside towns and all enjoyed themselves immensely.

This morning the case of J. Brown vs. the Hannah Estate was called in the Superior Court. The following jurors were selected to try the case: W. H. Powers, S. J. Newlon, Fred Albers, J. McSweeny, B. Aguirre, J. B. Shipley, T. Ferguson, C. A. McKay, W. D. Roberts, Fritz Meyer, Mark Hand, H. A. Free. These jurors were not sworn to try the case but were kept in attendance till the water suit shall be finished. The remainder of the venire were discharged.

T. W. A. Wilson and his sons-in-law, C. M. A. Nelson and John Donevan reached Independence last Sunday from Los Angeles. Mr. Wilson had been present at the Irrigation Congress at Los Angeles when a speech was made on Owens Valley that induced him to come here with a view to staying. The party have since gone north to examine the northern end of the valley.

It is highly probable that the total output of gold in this State during the year 1893 will greatly exceed that of the previous year. Some of the large mines have greatly increased their product this year and are making fine records. This will doubtless encourage others to invest with the result of starting up many old mines and the opening of new claims.

Word was brought from Keeler Wednesday night that Niel McLean had been very badly hurt. He was kicked by a horse over the heart and it is feared that he has sustained severe injuries. Dr. Louise L. Woodin went down at once. Ed. Walker came up yesterday morning and reported that he was a little better.

Choice steers are quoted in San Francisco at 4 to 4½, medium steers at 3½ to 4. The wool market is reported looking up. Choice San Juaquin wool quotations are 9½ to 11.. The highest price quoted is 15 and lowest 9.

J. A. Yeryington has been selected to attend to Nevada's exhibit at the Midwinter Fair. He returned from the World's Fair last week, where his efforts to assist Nevada were unceasing and will be of great benefit to the State.

M. Moriarity came over to Independence last Monday and went north Tuesday morning accompanied by Miss Ella T. Malone. They were met at Belleville by a sister of Mr. Moriarity and the party went on to Carson, where the young people were married on Wednesday evening.

The most favorable reports continue to be received from the Modock and Darwin mines. Neil McLean has an eighteen animal team steadily at work hauling ore, and there is enough in sight to keep him busy all winter.

The Reno *Gazette* says that Nevada is about 26,000 head of beef cattle short of the annual amount marketed. Omaha buyers have been in that state recently and took out about 30 cars of mixed beef.

MISCELLANEOUS.

NOTICE TO CREDITORS.

Estate of Thomas Williams, deceased.

NOTICE IS HEREBY GIVEN BY THE undersigned, Executrix of the last Will and Testament of Thomas Williams, deceased, to the Creditors of and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice to the said Executrix, at the office of Bennett & Forbes, Attorneys-at-Law, in the County Court House, at Independence, the same being the place for the transaction of the business of the said estate, in the County of Inyo, State of California.

SARAH ANN WILLIAMS.
Executrix of the last Will and Testament of Thomas Williams, deceased.

Dated at Independence, Inyo Co., Cal. November 8, 1893.

NOTICE TO BOND-HOLDERS OF THE BONDED INDEBTEDNESS OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

PURSUANT TO AN ORDER OF THE Board of Supervisors of the County of Inyo, State of California, dated the 6th day of October, 1893, notice is hereby given to the holder or holders of existing bonds of the County of Inyo, State of California, that unless the said holder or holders of said bonds shall within thirty days after the service of this notice present the bonds held by him or them to the Board of Supervisors of said County, at the office of the County Treasurer of said County, in the town of Independence, and consent to a reduction of the interest thereon to a rate of Four per cent. per annum, the said Board of Supervisors will proceed to cancel such bonds by the payment of the principal and interest accrued thereon.

Dated the 9th day of October, 1893.

D. J. HESSION.
Clerk of the Board of Supervisors of Inyo County, State of California.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1833, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent. will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent. will be added to the amount thereof; that all taxes may be paid at the time the first instalment as herein provided is due and payable.

J. S. GOFMAN,
Tax-Collector.

The Most Successful Remedy ever discovered as it is certain in its effects and does not blister. Read proof below.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a **Curb** of long standing. Then I had a four year old colt badly **Sweenied**; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a **Thoroughpin**, and **Blood Spavin** on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

DR. B. J. KENDALL CO.,
Enosburgh Falls, Vermont.

SOLD BY ALL DRUGGISTS.

WE WANT YOU

to act as our agent. We furnish an expensive outfit and all you need free. It costs nothing to try the business. We will treat you well, and help you to earn ten times ordinary wages. Both sexes of all ages can live at home and work in spare time, or all the time. Any one any where can earn a great deal of money. Many have made **Two Hundred Dollars a Month.** No class of people in the world are making so much money without capital as those at work for us. Business pleasant, strictly honorable, and pays better than any other offered to agents. You have a clear field, with no competition. We equip you with everything, and supply printed directions for beginners which, if obeyed faithfully, will bring more money than will any other business. Improve your prospects! Why not? You can do so easily and surely at work for us. Reasonable industry only necessary for absolute success. Pamphlet circular giving every particular is sent free to all. Delay not in sending for it.

GEORGE STINSON & CO.,
Box No. 488, Portland, Me.

MONEY Beginners earn from $23 to $50 per week, and more after a little experience. We can furnish you employment, and will teach you free. You work in your own locality, wherever you live. Both sexes all ages. We start you. $5 outfit free. Can work in spare time, or all the time. Full information FREE. TRUE & CO., AUGUSTA, MAINE.

AS THE HOLIDAY TIME APPROACHES

The question of all is, what gift to buy for relatives and friends? A glance through our catalogue will give you wide range for selection. **Send for Samples and Catalogue, which we mail FREE on application.**

Highest of all in Leavening Power.—Latest U. S. Gov't Report.

Royal Baking Powder

ABSOLUTELY PURE

For Wearers of Diamond Studs.

When the last race had been run and the result announced at Latonia, there was a big rush for the train standing opposite the grand stand. In a trice the cars were filled and the platforms crowded.

The train had just started when a man on one of the forward cars convulsively clutched at his shirt bosom, and then the air was rent with that old squeal, "My studs have been pinched!" and a well dressed man slid off the train, which passed rapidly on, leaving him standing on the end of the platform. His name was not learned by the reporter.

Detectives Rohan of Chicago and Crawford and Schnucks were standing on the platform of another car and soon heard of the little episode. They went through the train, but could recognize no dips and so could do nothing.

"Well, it seems to me," said Detective Rohan, "that if any one has got a good stone, which is the same as money, he should take care of it. There is no use in having stones pinched."

"Some of the late settings have screw fastenings, so that a dip to get them must cut the twist, and few dips are going to carry pliers," said Detective Crawford.

"I'll tell you something that is better than that," said Detective Rohan. "When a man puts his diamond stud in his shirt front, if he will only screw it into a little wad of cotton at the back no clip can get it out. A little cotton batton would save many a fine stone."—Cincinnati Enquirer.

A Definition For the Art of Doctoring.

It is the individuality of cases, the fact that to one patient we must give a teaspoonful of medicine, while the next will take two, that is at the basis of the ultimate failure of all "cure alls." And, oddly enough, it is this very individuality of cases, bringing with it to the physician so many hours of anxious thought, that makes him reach out and welcome the new treatment.

He is so terribly anxious to relieve his patients, to do them good, that in the blind maze of uncertainty in which he finds himself he hails with delight anything that promises hopefully. The practice of medicine might be defined not unfairly as a succession of conundrums presented for solution, with death to the patient as the penalty for failure. Who, then, may blame the physician for welcoming that which calls itself the key? It is the fashion to blame physicians for their ready adherence to the new, but it is an unjust fashion when the facts are considered.—Cyrus Edson, M. D., in North American Review.

The Primeval Atmosphere.

An article by Dr. Phipson in The Chemical News contains a bold suggestion that at remote periods the atmosphere contained a very large amount of carbonic acid, and, in fact, consisted principally of that gas, nitrogen and vapor of water. The crust of the earth may thus have possibly cooled and solidified in an atmosphere containing a large proportion of carbonic acid. In volcanic regions enormous quantities of this gas are still given off, and the hypothesis is largely supported by the important part which carbonic acid is known to play in the formation of many crystals.

Panic During an Earthquake.

I was staying on the Riviera when the famous earthquake of 1888 occurred. I was awakened by a shock which dashed two pictures off the wall of my room and upset the wash hand stand. While I was striking a match another shock strewed me and some chairs among some fragments of broken crockery. I had presence of mind enough to remember that during an earthquake you are no safer in the streets than in a covered building; so I dressed without mad precipitancy, and, after a desperate struggle to open my door—which had got jammed—walked down stairs.

The sight was one never to be forgotten. Men, women and children in dishabille were huddled in the front hall, crying, shrieking and praying. Some had bolted out of doors with hardly any clothes on and had made for the sea, where they clamored to go out in boats. Among the panic stricken folk was an old gentleman in pyjamas, who had come down the stairs three steps at a time. But on reaching the hall he exclaimed that he had forgotten something and must go back. His friends shouted to him that the upper stories were dangerous, but he turned a deaf ear, bounded up stairs and presently returned panting. The thing which he had forgotten was his set of false teeth.—Cor. San Francisco Argonaut.

Boggs—You might talk until doomsday and you couldn't convince me that dueling isn't murder?

Biggs—All right. I'll take you over to France with me and let you see some of it. —Troy Press.

A LIFE INSURANCE POLICY.

Every man ought to have one, but a long step towards that is the possession of ALLCOCK'S POROUS PLASTERS. It is certain that they prolong life, by relieving the strain that comes from continued suffering.

Many a man can endure a sharp disease better than he can the wear and tear of pains, little in themselves, yet constant in their strain upon the system.

A weak back, stiffness of the joints, soreness of the muscles, seem to many unworthy of special notice. Yet they do not a little to exhaust the powers of physical endurance. ALLCOCK'S POROUS PLASTERS relieve them at once, and no wise man will fail to use them on the first sign of pain. It is a very small premium that he has to pay.

BRANDRETH'S PILLS will cure indigestion.

Visitor—You oughtn't to keep the pigs so near the house. Countryman—Why? Visitor—It isn't healthy. Countryman—That's where you are wrong; them pigs ain't never had a day's illness.

Bird Life In London.

The rooks, after an absence of some years—how many we cannot really commit ourselves to say—have returned to Kensington gardens and established a flourishing little colony of some 11 nests in the trees on the west side of the broad walk, between the old banqueting hall and the Bayswater road. It is curious that the bird population of London seems still to be undergoing a process of change, some species being largely on the increase, while others are decreasing in numbers, or have quite recently disappeared. The wood pigeons afford the most noticeable example of increase in numbers, as they are now fully established, not only in the parks, but also in many of the squares which have trees suitable for them to build in, and they have extended their range well within the city boundary.

They may always be seen in Palace yard, Westminster, and for the fourth year in succession a pair are nesting in the elm tree over the fountain at the end of Great George street. Blackbirds and thrushes, though by no means so noticeable as the pigeons, are certainly on the increase in the parks, owing, no doubt, in great measure to the fact that many inclosures planted with shrubs have been made of late years. They are far from uncommon. Indeed one morning not long since we saw no less than five cock blackbirds engaged in a tussle under the trees near the flower walk in Kensington gardens. Tits of two species—the great tit and the blue tit—have lately been largely on the increase in Kensington gardens.—London Saturday Review.

A Lightning Calculator.

The accounts that have appeared in the daily press of the extraordinary performances of the French calculator, Jaques Inaudi, are in no way exaggerated. In fact, it would be difficult to exaggerate this man's extraordinary powers. He seems to possess an unlimited faculty of carrying and manipulating figures in his head, and the faculty is the more extraordinary in that Inaudi is an uneducated man, who is said not to have learned to write until he was 18 or 20 years of age. I witnessed the exhibition of his powers at the Hotel Victoria. His concluding tour de force comprised the working of a series of sums in addition, subtraction, multiplication, division and square root. The addition comprised six lines of five figures, the subtraction two lines of about 18 figures, and so on, and of the two square roots given him to find, one was the root of a number beginning with 31,000,000.

The whole mass of figures having been read out to him, Inaudi repeated them from memory, and then proceeded to work them out, which he did correctly in about six minutes. While so engaged he answered questions put to him by persons in the room. He mutters figures rapidly in an undertone while calculating, which seems to bear out the theory that his mental process is based upon a memory of the sound of the figures rather than a mental picture of their shapes. —London Truth.

The Two Big Oceans.

When the Panama canal was first proposed there was a great cry about the dangers courted in opening up such a "ditch," some extremists declaring that the "lives of millions of human beings were at stake." This general alarm was caused by the argument that the waters on the Pacific side of the isthmus were hundreds of feet higher than were those on the Atlantic side and that the great rush of waters to even up the difference in the level of the two oceans would drown all southern North America and most of Mexico and Yucatan.

Would be engineers and sensational editors passed their opinions or wrote editorials on the subject. It now transpires, as a result of actual survey, that the Atlantic and not the Pacific is the higher of the two oceans and that in place of the difference being hundreds of feet, as had been affirmed, the surface of the water on the east side of the isthmus is exactly 6½ feet higher than it is on the western side.—Philadelphia Press.

How Some Journalists Work.

Those people who are always complaining of the inaccuracy of newspaper writers ought to be impressed with this story of M. de Blowitz, the famous correspondent of the London Times, which I heard the other day from an American writer who knows the journalist intimately: "One night while I was visiting Blowitz," says my informant, "a bit of news came to him by wire. It consisted of only a few lines, and I supposed of course that he would simply wire it on to his paper and do nothing more about it, but instead of that he took a cab and drove all over Paris, from the house of this statesman to that, in order to verify the report. It was midnight before he was satisfied that the report was authentic and allowed it to be dispatched.—New York Cor. Literary World.

The Growth of the Postal System.

Less than 50 years ago there was really no postal system in this country. Previous to 1847 the mails were carried by private firms, and rates varied according to distance. Carriers often traveled on foot or horseback, and the progress was slow. In 1846 some of the post offices issued stamps of their own, called "provisional issues." The adhesive stamp was first used in this country in 1847, and prepayment was made compulsory in 1856. In 1863 the stamp containing the head of Andrew Jackson was issued, and from then until 1885 the style adopted contained the profiles of presidents of the United States.—Public Opinion.

A Natural Mistake.

Bingo—Who was that woman you just tipped your hat to?

Von Blumer—My cook. I thought she was my wife.

Bingo—How did you make that mistake?

Von Blumer—She had on my wife's clothes.—Cloak Review.

Guests at Camp Nineteen.

By FRANKLIN FILE.

The appetizing fragrance of coffee came from the open kettle on the stove, and the two cooks were seen to be active in putting the meal on the table.

"Will they sell two suppers for a dollar?" Deuce Low asked, raising her eyes to Will Brown; and when he did not answer instantly she eagerly suggested: "Well, then, say one supper and a half?" She rolled partly over and rested her chin in her palms, while her elbows settled into the turf. "I'd rather get half a supper than none."

Will Brown felt like a boyish playfellow of this coaxing little creature, notwithstanding his twenty-two years, and he stood with arms akimbo looking down into her wistful face with a juvenile impulse to share with her whatever he had to eat.

"I don't think you can buy any supper here," he said, "because we don't make a business of selling them. But we'll feed you for nothing." His glance turned to Jack High, and he less hospitably added: "And you, too. But in that case what use is my dollar to you? You might pay it back now, you know, and get it off your mind."

A droll leer prefaced Jack High's reply. "You're right as can be. I'll satisfy the debt and give you, likely's not, your money over again for interest."

Deuce Low rolled over on her back and gazed idly skyward like one for whom the proceedings had taken an uninterestingly usual turn.

"That's generous," and Will Brown laughed.

"I will shift the dollar from one hand to the other—thus," and Jack High slowly transferred the silver coin from palm to palm; "and you can easily follow it with your eyes, as you see. Here it is and there it is, here it is and there it is, and where is it now?" He closed both hands and held them forward. "Choose, and if you're wrong I owe you nothing; if you're right you get $2."

"One now and the other when?"

"One now and my word of honor, sir, for the other."

Will Brown laughed again, and clasped one of the fists in his own. "The dollar's in this one, of course," he confidently declared.

But it was not. The open hand was empty, and from the other the dollar slipped into the deft palmer's pocket.

Will Brown had obtained at the cost of only a dollar the information that Jack High was a professional rogue. The young gentleman's habitual politeness was instantly at a strain under which it was in danger of giving way, and thereupon, if the job of kicking the rascal out of the camp seemed repulsively rude, he might request the less heedful workmen to perform it in his stead. The company of linemen, teamsters and diggers were just then coming from the point where their day's work had ended. Deuce Low arose as she saw them approaching, and the movement drew Will's eyes away from the object of irritation to one of admiration.

"Supper's ready," he quietly said: "step this way."

CHAPTER II.

THINGS THAT THE MOON SHONE ON.

The viands of the supper at Camp Nineteen differed hardly any from those of its eighteen predecessors, and the sameness of the fare had begun to offend those of the party accustomed to any degree of luxurious variety; but this time there was one feminine eater and her presence made the occasion almost a convivial banquet. Deuce Low had a seat on the rough bench at the end of the table with the magnates of the camp. She was at the right hand of Boss Donald, the chief of the party. Next to her on the other side was Will Brown, who treated her as his own guest, and his courtesies kept Donald, who was not a smooth man, from treating her with a flippancy which her worn clothes and battered father would otherwise have incited. Directly across the table was Jack High at elbows with a black whiskered foreman or contractor named Aleck Wiams, whose part in the expedition was to provide workmen and conveyances for transporting and planting the telegraph poles.

Jack was loquacious and Wiams was reticent; so they were paired happily for supper conversation, because nearly all the speech was by one and the listening almost wholly by the other. From further down the long table, even from where the merest manual laborers sat at the other end, came glances of curiosity and the sounds of uncommon vivacity, all caused by the tattered girl, to whom Will Brown could not have been more deferential if her gown had been silk. The eating was unprecedentedly hearty, in consequence of the zest imparted to the general appetite, and it was twilight by the time the table was quitted. Almost immediately a full, unclouded moon began to illumine the camp, and a breeze so faint as to hardly make the long shadows of the foliage waver in the grass carried away the heat which the sun had left behind.

There was no chair in Camp Nineteen. But Will Brown politely conducted Deuce Low to a spot of grassy upholstery at the foot of a tree, where she might sit with her back comfortably against the smooth bark. The moon beautified the face into which it shone. The sunburnt skin became alabaster, the hair showed its brown tints glossily, and the eyes glistened with reflected light. Whatever she thought of these advantages, or of the still more potent one of being the only girl her companion had seen in weeks, the consciousness was not divulged in her resting, careless attitude, nor in her childishly unalert manner. Will stretched himself on the grass before her, and by chance or choice he lay in the shadow of the tree's trunk. He fancied that from his comparative obscurity he could gratify his admiration of the illumined face without breaking etiquette's law against staring. They talked trivially of their immediate surroundings, then about each other a little and at length Will said:

"By what name may I call you?"

"Oh, Deuce Low," she lightly replied.

"That's an insulting sort of nickname," he protested.

"I don't think so," she answered. "If my tall dad was to be called Jack High wasn't it well enough to name his short daughter Deuce Low? I haven't always found so much consideration as that since we started from Omaha for Oklahoma."

"And what makes you go to Oklahoma?"

"By what name may I call you?"

"Well, we're alone in the world—dad and I; and we're rovers—yes, adventurers. Dad thinks we may prosper in the new territory. I've a voice to sing with, and feet to dance with"——

"And a face to bewitch with."

Instantly the glistening in the girl's eyes increased, as there was the sudden moisture of tears to reflect the moonshine, and she was silent. The young man had spoken so honestly that he did not perceive how his blunt compliment had pained her. He went on: "Your father—while you're singing and dancing in some Oklahoma concert hall—what will he be doing for an income?"

She was resentful. Should he not have already found out by her improved language and her decorous manner toward him that she was by education and experience better than the condition of wayfaring in which she had come to Camp Nineteen? Yet he could mention her pretty face as directly as though she had already reached Oklahoma and they were chance acquaintances across a table in a concert hall. Her desire to impress him favorably was gone, and without a waver of gaze or voice she shortly answered: "My dad's a gambler, and he's down on his luck. If he's to play for grubstakes he'll do three-card-monte in the streets till I get an engagement. If he strikes it rich enough he'll deal faro in a den of his own."

"And you?" Will exclaimed, shocked by what she had said and her way of saying it, but with no idea that she had spoken otherwise than heedlessly; "what does he intend to do with you?"

"Didn't you yourself say I had a face to bewitch with?" and she held her visage still for him to examine. "Oh, Dad 'll do very well with me in Oklahoma."

Meanwhile that reprehensible father was seated with Aleck Wiams ten rods distant. A flat stone was between them, and on its smooth surface were the cards and cash of a game of poker. The moon made light enough for the players, and they were engaged so earnestly that no other talk than the play required was indulged in. When they spoke it was in very low voices, too, and it was manifest that they did not care to be discovered. Neither man could have told, if he had tried to, exactly how the game had been brought about, nor could either have recalled anything in his own case but eagerness for it.

Jack High had airily remarked at the beginning, as he drew his only dollar from a vest pocket, "There's plenty where that came from," and so there was if he meant the government mint; but Wiams did not demand an insight of the pocket, and so the first bluff in this game of poker was made and won by the professional gambler. Nor did he require other capital than that single dollar. He played to the end of the first hand with only the coin and promissory words, and afterward he had a steadily increasing number of bank notes provided by Wiams' losses. Luck and skill allied themselves on his side of the stone, and his accumulation of one dollar and two dollar bills at length bulged the pockets that had been empty before.

"Oh, here you be, gents?" and the intruding figure of Old Jugg Brown stood before the players. "Yes—here you be."

His inebriety had passed off, and he was not only sober but also pompous with the official duty of being the night watchman of the camp. He was too untrustworthy to be hired for regular work, manual or mental; yet on his son's account, and under the regulating influence of that circumspect young man, he was employed to guard the portable property of the expedition while the rest of the company slept. He was now making his first slow, sauntering round for the evening, and he promptly intermitted his patrol to sit down.

"Playin' fer keeps, too," he continued, with wistful eyes on the several bills that lay on the stone.

"Hush!" said Wiams, and Old Jugg obeyed, for Wiams was a man of importance.

"Hush!" said Jack High, but this time Old Jugg was about to flout the command, for who was this frayed vagabond that he should presume to dictate silence?

At that instant Jack High won a stake, and wadded the money into a pocket already full.

"G-r-a-cious g-u-d-ness!" Old Jugg exclaimed, indulging his mannerism of spelling out the first syllable with more convincing emphasis than orthography, yet keeping his voice down to a hoarse whisper; "but you're a winner, sure—sure. You didn't have a dollar when you struck the camp"——

"Pray, don't interrupt us," Jack High hastily interposed.

"Oh, don't let me pester you. What I want's to jine in—to jine in."

"Can't be done without money," said Wiams, who knew that Will Brown's discipline of the erring father permitted no money to him when within a day's walk of a barroom; "so you're barred out."

Old Jugg heaved a deep sigh and walked away only to return five minutes later. He squatted by the stone, covertly disclosed a gold watch in his palm and said, with a flabby attempt at braggadocio, "Does my watch go for ten dollars? Say, does it go?"

(TO BE CONTINUED.)

"The times were so hard"
('Twas the sportsman who spoke)
"That even the records
All seemed to get broke."

A minister in Machias, says he can always preach a better sermon with a few dollars in his pocket.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

THE WORLD'S FAIR.

California always to the front, was conspicuous in its exhibit of California made machinery. One very noticeable exhibit was the Hercules Gas and Gasoline engine, manufactured by Palmer & Rey Type Foundry, San Francisco, Cal. Send for catalogue.

It is the man who believes something who does something. A man on the fence has no moral weight.

THE FOUNTAIN HEAD OF STRENGTH

When we recollect that the stomach is the grand laboratory in which food is transformed into the secretions which furnish vigor to the system after entering and enriching the blood; that it is, in short, the fountain head of strenth, it is essential to keep this important supplying machine in order, and to restore it to activity when it becomes inactive. This Hostetter's Stomach Bitters does most effectually, seasonably, regulating and reinforcing digestion, promoting due action of the liver and bowels, strenth and quietude of the nerves depend in great measure upon thorough digestion. There is no nervine tonic more highly esteemed by the medical fraternity than the Bitters. Physicians also strongly commend it for chills and fever, rheumatism, kidney and bladder trouble, sick headache, and want of appetite and sleep. Take a wineglassful three times a day.

"Yes, he did have quite a sum in cash, but he flung the money to the winds." "How?" "He bet on the yacht race."

DEAFNESS CANNOT BE CURED

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars; free.

DOCTOR Pardee's Remedy, THE GREAT CURE —FOR— INDIGESTION and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism, Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO., 9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE STATIONARY AND MARINE ENGINES.

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

MY LITTLE KING.

I met a king this afternoon;
He had not on a crown indeed,
A little palm leaf hat was all,
And he was barefoot, I'm afraid.

But sure I am he ermine wore
Beneath his faded jacket's blue,
And sure I am the crest he bore
Within that jacket's pocket too.

For 'twas too stately for an earl—
A marquis would not go so grand—
'Twas possibly a czar petite,
A pope, or something of that kind.

If I must tell you, of a horse
My freckled monarch held the rein,
Doubtless an estimable beast,
But not at all disposed to run.

And such a wagon! While I live
Dare I presume to see
Another such a vehicle
As then transported me!

Two other ragged princes
His royal state partook—
Doubtless the first excursion
These sovereigns ever took.

I question if the royal coach
Round which the footmen wait
Has the significance on high
Of this barefoot estate!

—Youth's Companion.

His Plaintive Plea.

He had loved her very tenderly and for a long time, but she had scorned him. He was no worm either, for he would have turned when trod upon, but she recked not this. It was enough for her that she did not care for him. This is usually enough for any woman; also for any man when the boot is on the other foot, for of such is the kingdom of Cupid.

His condition had at last become unbearable to him, and he resolved to win all or lose all. It was late one evening when the fateful moment came.

"Will you marry me?" he asked her in pain, untrimmed English, for he could trust himself to nothing in the ornamental line.

She spurned him scornfully.

"No!" she replied, with sarcastic, hateful, cruel emphasis, "No!"

The word pierced the heart in his bosom. His lips quivered, and at first he could not speak.

"Have you no more to say?" he asked at last plaintively.

"No, sir," she replied. "What more could I say?"

Again he shrank at the cruel thrust.

"I didn't know," he murmured tremulously, "but I think you might have said 'No, I thank you.'"

Then he fled away so weary with disasters, trigged with fortune, that he would set his life on any chance to mend it or be rid of it.—Detroit Free Press.

A Custom That Is Very Old Indeed.

A bride made the confession to a group of young women who gathered around her after the wedding ceremony and the congratulations had been said and owned up to having worn a yellow garter for two years, that she had counted the stars and carried out the various bits of lore that are prophetic of a speedy marriage and happiness ever after.

She wore something old and something new.
Something borrowed and something blue.

on her wedding night, and, moreover, wore a silver coin—a Columbian half dollar—in her shoe. She was showered with the usual amount of rice when it came time to get into the carriage and drive away for the honeymoon trip, and had old shoes and good wishes enough sent after her to make the after years joyous ones if they all hold good, and, moreover, when she opens her trunk and traveling bag and the bridegroom opens his umbrella enough rice will come to light to make their first rice pudding, and the shoe strapped on the outside of the trunk will tell its own tale.

It is strange how much enjoyment one gets out of such harmless things, but the custom lasts, and the older it grows the more rigidly it is adhered to.—Buffalo News.

What She Would Do.

Every one has noticed the growing height of each successive year's bevy of debutantes, and the younger generations promise to be quite as tall if not taller than their predecessors. "Is it possible you are only 12?" said a small woman to a little girl who was more than an inch taller than herself. "How big you are!" "Oh, do you think so?" answered the child. "Why, my friends consider me quite short. They are nearly all of them taller than I am." "Good gracious!" exclaimed the little woman in dismay. "What Brobdingnagians you will all be, and how will you get partners? If you were my child, I would put a brick on your head!"—Chicago Tribune.

The Great Mistake Columbus Made.

Schoolmaster—Why was it that his great discovery was not properly appreciated until long after Columbus was dead?

Nineteenth Century Schoolboy—Because he didn't advertise, sir.—London Tit-Bits.

Natural.

Castleton—I hear you are engaged to Miss Biggerolle, the girl you went horseback with so much last summer. How on earth did you manage it?

Summit—I couldn't help it, old man. We were thrown together so much.—Truth.

The highest waves ever met with in the ocean are said to be those off the Cape of Good Hope. Under the influence of a northwesterly gale they have been known to exceed 40 feet in height.

Timber of the tamarisk or shittim wood has been found perfectly sound in the ancient temples of Egypt in connection with stonework which is known to be at least 4,000 years old.

The last words of Marie Antoinette were: "Lord, enlighten and soften the hearts of my executioners. Adieu forever, my dear children; I go to join your father."

I wonder why it is we are not all kinder than we are. How easily it is done. How instantaneously it acts. How infallibly it is remembered.—Drummond.

Oxford, England, which is by many regarded as the greatest university, has 21 colleges and five halls.

Legerdemain That Failed to Work.

The bright young man—who isn't so very young either—was fortunate enough to secure a seat right in the midst of Deacon Huggum's young ladies' Bible class and by their arch manners was so far decoyed from his usual staid indifference as to try and make himself agreeable.

The speaker of the evening pleaded most earnestly the cause of sweet charity and made the last remaining quarter and nickel burn in the scribe's pocket.

When the deadly contribution box began its gyrations in his isle, the newspaper representative began to chuckle under the mellowing influence of a happy thought. He would execute a neat little piece of legerdemain with that quarter and 5 cent piece, and while properly impressing his fair neighbors with the larger coin would really drop in the smaller.

He held the quarter daintily between his thumb and finger and pressed the 5-cent piece between his third finger and his palm. There was a click of a coin in the bottom of the box, a rather unusual twist of a large cuff and a bland smile on the reporter's face.

A second later the young man started as if he had been shot and turned excitedly toward the deacon, who was now two seats behind him.

He had dropped in the quarter!

The deacon mistook the gesture as a sign that the young man had been overlooked, and again he thrust the box under the reporter's nose.

What did he do?

Just what you would.

He put in the nickel.

And walked home.—Boston Herald.

Curiosities of Glycerin.

One of the great advantages of glycerin in its chemical employment is the fact that it neither freezes nor evaporates under any ordinary temperature. No perceptible loss by evaporation has been detected at a temperature less than 200 degrees F., but if heated intensely it decomposes with a smell that few persons find themselves able to endure. It burns with a pale flame, similar to that from alcohol, if heated to about 300 degrees and then ignited. Its non-evaporative qualities make the compound of much use as a vehicle for holding pigments and colors, as in stamping and typewriter ribbons, carbon papers and the like.

If the pure glycerine be exposed for a long time to a freezing temperature, it crystallizes with the appearance of sugar candy, but these crystals being once melted it is almost an impossibility to get them again into the congealed state. If a little water be added to the glycerin, no crystallization will take place, though under a sufficient degree of cold the water will separate and form crystals, amid which the glycerin will remain in its natural state of fluidity. If suddenly subjected to intense cold, pure glycerin will form a gummy mass which cannot be entirely hardened or crystallized. Altogether it is quite a peculiar substance.—Good Housekeeping.

Forewarned of Her Child's Death.

A few months after my father's death the infant son, who had been pining himself ill for "papa," was lying one night in his mother's arms. On the next morning she said to her sister, "Alf is going to die." The child had no definite disease, but was wasting away, and it was argued to her that the returning spring would restore the health lost during the winter. "No," was her answer. "He was lying asleep in my arms last night, and William (her husband) came to me and said that he wanted Alf with him, but that I might keep the other two." In vain she was assured that she had been dreaming; that it was quite natural that she should dream about her husband, and that her anxiety for the child had given the dream its shape. Nothing would persuade her that she had not seen her husband or that the information he had given her was not true. So it was no matter of surprise to her when in the following March her arms were empty and a waxen form lay lifeless in the baby's cot.—Mrs. Annie Besant.

Tragedy of Literary Disappointment.

An English periodical says disappointment in authorship over there sometimes has tragic results. Recently a gentleman committed suicide because he had had an article rejected, and a confectioner's assistant shot himself because, though he had written several books, they were all rejected. The article goes on sagely: "Yet he went on writing to the last, unable to see that he was producing what was not wanted. Nowadays there is a market for what is good in any class of literature, and the writer who cannot secure a publisher may rest assured either that he is not ready for a public appearance, or that he has been denied the gifts with which he fancies himself to be endowed."

The Dwarf Palm of Algeria.

The dwarf palm, which furnishes considerable quantities of fiber, grows in great profusion in Algeria and is one of the principal obstacles to the clearing of the land, so thickly does it grow and so difficult to pull up. Its roots, in shape resembling carrots, penetrate into the ground to the depth of a yard or more, and when its stem only is cut it sprouts out again almost immediately. As its name indicates, this palm is very small, and can only attain a certain height when protected, as in the Arab cemeteries, for example.—Monde Economique.

Saved by a Nickel.

At Longview, Tex., while Jim Vines was fooling with a revolver it went off, and all that saved his life was a nickel which he had in a pants pocket. The ball struck the coin and glanced down his leg, making a long blue streak

Accommodating.

He was evidently a very obliging boy, for when he applied to the merchant for a position and was asked his age he replied:

"Oh, sir, I shall be whatever age you wish me to be!"—Harper's Bazar.

AIDS CRIMINALS.

Miss Linda Gilbert and Her Noble and Unselfish Labor of Love.

EXCELLENT RESULTS OF HER WORK.

A Woman Who Is Well Known and Respected in Every Criminal Court in New York City.

Miss Linda Gilbert, the woman who wears the title of "The Convicts' Friend," and whose unselfish efforts in behalf of the criminal class have won for her the admiration and respect of every philanthropic minded citizen in the country, unaided and alone has for years devoted herself and her fortune to ameliorating the condition of the outlawed classes. Many a criminal has she brought back to his better self and restored to the respectable society from which he had fallen.

So well has she become known to these outcast people, too, that her simple name is a power among them, and neither bolt nor bar is so effectual a protection to a dwelling as the mere fact that she is one of its occupants. They reverence her as they do nothing else on earth or heaven, and it is not strange that they do, for plunging down into the depths, as she has to effect their rescue from their evil ways, she has seemed to them in her white robes of a spotless womanhood a ray from the divine love.

She was born in New York city, of a family which has won considerable distinction in the field of invention, the elevated railroads now so widely in use in our large cities having originated with one of her near relatives. At an early age she was taken by her parents to Chicago, where she was given an excellent education in the convent of St. Mary's, and she was but seven years old when on a visit to the jail of that city her sympathies were first excited for the unhappy tenants of our large prisons. She at once secured permission to take to them books and little delicacies, and as she grew older she continually, in unobtrusive ways, ministered to their comfort, until, on attaining to womanhood, she devoted herself entirely to the work of bettering their condition on a wider field and wherever her influence could be made to extend.

HER EARLY WORK.

Her plan was "to remove the conditions that produce crime by a wholsesome system of industry and culture," and her first step was to reach the prisoner in his prison by giving him to read good books that would lift him above his wretched surroundings and inspire him with a desire for a better life when his term of imprisonment should be over. To do this she sought to place libraries in every jail and prison in the country. Care for the prisoner's family was also included in her plan, and the securing of respectable employment for him on his release from prison. Up to this time, working almost entirely alone and relying well nigh altogether upon her own resources, she has placed more than 50,000 volumes in various prisons and restored hundreds, even thousands, of criminals to be respected and useful members of society.

On one occasion as she was passing along Broadway she was accosted by a young man whose face she did not at first remember. She passed him, but she noticed that he turned about and followed her. She paused and asked his name, when she recalled him as an ex-convict whom she had once known in prison. He told her that since his release he had tried to do honest work, but as none would employ him when they learned of his former life he had been obliged to resort to his old criminal ways for a livelihood. He had, he said, just committed a robbery, but the sight of her had brought back his desire for an honest life, and he wished to restore his plunder.

She went to the man who had been robbed with his property, which was of the value of $309. He was glad to get it, but at first was obdurate in insisting that the criminal should be punished. At last, however, he yielded to her questions, if he would not think it hard should one of his own sons be thus treated when coming back to right ways like the returning prodigal; and he not only forgave the convict, but added $50 to a like amount of Miss Gilbert's own funds with which she proposed to set the penitent thief in a small cigar business. He has been prosperous, and now, with a wife and two interesting children, he is respected and trusted by all who know him.

INTERVIEWS A BURGLAR.

Another interesting case is that of a manly young fellow for whom she secured work after he had served a term in prison for burglary. She sent him to a farmer in Illinois, whose daughter became devotedly attached to him. Her parents were willing he should marry the young woman, but before he asked her to do so he wrote to Miss Gilbert, asking if he should not disclose his history. She told him to do so, and they were married with the full approval of the young girl's parents. He was prosperous, and is now a prominent member of a Baptist church in the neighborhood.

Her chief instrument in dealing with the criminal is kindness. With the most hardened she never uses a harsh word, and so potent has been her method of treatment that she approaches the worst cases with absolute fearlessness. An instance of her power and her self possession was given in 1882, when her house in New York was entered by a burglar. At dead of night she was awakened by a noise in her chamber, and raising herself upon her elbow she saw a stalwart man ransacking her bureau drawer. He was in the act of appropriating a valuable gold watch, when, rising from her bed and approaching him noiselessly, she laid her hand upon his shoulder, saying: "Do you know that you are robbing your best friend? I am Linda Gilbert."

The man crouched upon the floor speechless, while she struck a light, and, pointing to a chair, told him to be seated. Then she drew from him his story. He was, he said, not an habitual criminal, but an honest laborer out of work, and he had resorted to crime to feed a starving wife and children. Not questioning his statement, she led him noiselessly down to the kitchen—for her father and another gentleman were asleep in the house—and there she filled for him a basket of provisions, and adding to it a five dollar greenback, told him to come to her again if he should fail to soon secure work. Thus she dismissed him to a better life.—New York Advertiser.

A nervous headache may be greatly relieved by the application of hot water to the temples and the back of the neck, particularly if a hot foot bath is used at the same time.

Some one has cynically said that the United States government builds its military stations on land that would otherwise remain vacant through sheer worthlessness

The English In Africa.

The idea of an Anglo-African empire stretching from the Nile down to Cape Town, along the course of that river and embracing the interior lakes, is captivating, and I am not surprised that it should find advocates. But it is not business. We are already the masters of larger areas in South Africa than are ever likely to become Anglo-Saxon colonies. In Asia we have above 200,000,000 of subjects, who are ruled by a bureaucracy with an army to maintain it. Egypt can only be ruled by us in the same way, and I am convinced that we do not add to the strength of the empre by including in it fresh subject races, but very much the reverse. Egypt for the Egyptians, not Egypt for us, should be our aim, and the sooner that we come to some agreement with the European powers to convert it into another Belgium the better will it be for us.

So, too, in equatorial Africa we have absolutely nothing to gain by acquiring sway over millions of quarreling Mohammedans and pagans, some of whom are ready to call themselves Protestants, provided that we will help them to mastery. The notion that we gain by such annexations is as absurd as it would be to plunge our hands into a hornet's nest in order to extract honey. Were I a jingo I hope that I should have the sense to seek to acquire something worth having. Just as, were I a pickpocket, I should put my hand into a pocket with a full purse in it, not a barbed hook.—London Truth.

Paper Pulp From the Poplar Tree.

Attention is being more than ever directed to the best methods of wood pulp production for the manufacture of paper and to most profitable sources of supply present and future. A drawback to the use of pine is that the wood needs to be treated chemically before it is ground into pulp, or before it is placed in the digester for the manufacture of either chemical or sulphite pulp. Spruce is admittedly most superior as a wood pulp for white paper.

Hemlock cannot be used to advantage in connection with spruce pulp for the reason that its fiber is more brushy, having less strength than that of spruce, and there is also a red coloring matter in connection with hemlock which it is difficult to remove by chemicals. In the first experiments with wood pulp in this country poplar appears to be the most desirable wood and was most sought after for the purpose. It produces a soft feeling pulp and requires less chemicals to bleach it than other woods, yet it lacks the element of strength and is thus inferior to spruce.—New York Telegram.

Just Before an Earthquake.

An earthquake is likely to be attended with great atmospheric disturbance, such as explosions, thunder, lightning, etc. At Millittello there was an explosion in the fog which overhung the city for several days before the great earthquake, many houses having their roofs and upper stories completely ruined as the result hours before the shock which completed the awful work of destruction. In other instances queer looking clouds, in some cases not larger than a good sized balloon, will hang over a spot threatened by an earthquake for several days prior to the beginning of the terrestrial disturbances. This was the case at London in the year 1149, at Munster in 1612, at Lisbon and at Riobanda, South America. At Dunstal, England, all the water in the lake "stood up like a pyramid to the height of 100 feet," and in several cases all the water was thrown out of the wells.—St. Louis Republic.

Poor Economies.

Whatever else you hoard, do not include in the list old medicine bottles. The cost of these when perfectly new is very trifling, and the futility of saving them against a possible errand to the chemist's is very apparent. Nor should tacks taken up when you remove carpets from the floor for the annual or semiannual shaking be put aside for a second use. A new paper of tacks should be used whenever a carpet is relaid.

I once knew a woman who made one match, by careful economy, serve three separate lightings. Yet she went to her grave with the spirit of a pauper, and a bevy of spendthrift cousins swooped down on her fields and barns as eagles on the prey.—Harper's Bazar.

A Conservative Bookseller.

It is no part of our intention to presume to mention "the best hundred books" nor to disparage unduly the works of modern authors. But when there is so much that is standard in our language, so much that has stood the tests of time and trial, it is impossible not to sympathize with that bookseller, justly proud of his conservative tendencies in the matter of literature, who replied, on being asked for a copy of a modern theological novel, "I sell nothing which time has not mellowed."—Chambers' Journal.

Where a Daily Beats a Weekly.

"I see you take The Daily Itemizer. Do you ever find anything in it you want to know?"

"Yes, I did yesterday. I couldn't remember what day of the month it was, and a glance at the date line told me."—Exchange.

INVITING OLD AGE.

Some of the Many Ways in Which Women Lose Their Youth.

BURDENED WITH HOUSEHOLD CARES

Mothers Neglect Their Own Needs in Exaggerated Devotion to Home and Children.

The oldest woman I ever knew was 28. At marriage the graces of girlhood passed forever from her life. Economy became the god enthroned on every altar of her home. Ruffles and ribbons were the insignia of levity and extravagance. Dresses robbed of a yard or two grew ungracefully short and narrow. Books and papers were regarded as luxuries—not necessities. An hour spent in reading left a feeling of guilt for wasted time. Devotion to "Will and the children" came to mean self assumed slavery. Luster left the eye, elasticity the frame. Through a mistaken sense of duty she grew unkempt, narrow souled, repulsive. It has been said that the true age is what we look and feel. I have known sweet, fresh faced women of 70 who were younger than she.

In the great middle class of America the wife too often invites age by concentrating all ambition in money getting. To save the wages of servants she destroys the joy of life, the buoyancy of health. Pushing the growing daughter to the front, she sees less and less of society, dresses with increasing plainness and sinks to a household drudge, self made and valued at her own estimate.

Thirty-five has no more right to the styles and tone of 70 than to those of 17. The appropriation of the one is scarcely less ridiculous than the assumption of the other. Far better than the expensive boarding school is the example of the mother in imparting to the daughter the faultless taste of dress, the gentle repose of manner, the gracious spirit so admirable in woman. A part of the money devoted to the education of the daughter would be well spent in procuring to the mother the time for self culture. As the fair, snowy page is not so useful or beautiful as the one written with pure, uplifting thought, so the immature maiden is less valuable to home and society than the ripe, cultured woman.

People of 40 and 50 should not shelve themselves and claim the immunities of age. They are in the midday of life; the time for the exercise of knowledge, power, grace and beauty, for the uplifting of humanity. These gifts may be enhanced by dress and manner. The influence of the attractive, self respecting wife, mother, sister or friend is more potent for good than that of the one with neglected person and unlovely mind.

Discontent invites age. Indulging the unrest of the dissatisfied is destructive to looks and temper. In his "Story of a Country Town" Mr. E. W. Howe says, "Be contented if it kills you." The advice is not so bad as it looks. Contentment and stagnation are not necessarily synonymous. One may be free from worry while striving for higher planes or work. Woman should have the courage of repose. It is infinitely better than the morbid conscientiousness that goads to endless toil. Effective work requires effective rest.

Judicious mental work may help to lift one out of the ruts of premature old age. Read and think of what you read. Don't use your mind as if it were a sieve and you were trying to see how much you could pour through it. There is a belief extant that knowlege, if gained at all, must be acquired in youth. Fallacious theory! Behold Galilei at threescore and ten pursuing his studies with unflagging zeal, Cato beginning Greek when advanced in years, Ogilby commencing classical studies when past 50! Gladstone is as much the student today as when the bloom of youth mantled his cheek.

Be kind to the feelings and fancies of youth. If they prove perennial, so much the better. Don't forbid yourself glad, recreative thought and action. Don't be ashamed to make yourself as pretty as you can. A sensible woman may feel a thrill of pleasure innocent as a maiden's when receiving a glance of respectful admiration from a manly man. Smile without affectation, be pleasant without being silly—in short, be young as long as you can.—Alva Rosse in Kate Field's Washington.

Cradles Hundreds of Years Ago.

In manuscripts of the ninth and tenth centuries we had pictures of cradles formed of part of a tree trunk dug out, with holes bored through the sides for the passage of straps intended to tie the baby down in his bed. These dug out cradles are still common in modern Greece. When we come to consult the manuscripts and bas-reliefs of the fifteenth century, we notice that the cradles are no longer mere baskets or beds on rockers, but little swinging beds suspended between two pillars, the prototype of the modern berceloonette.—Harper's Bazar.

Yes, It Is Strictly Grammatical.

The following is quoted from a leading article in the New York Tribune:

"By his death the community loses the foremost and the best of American actors, and one of the greatest tragedians that have ever lived."

To settle a dispute, will you kindly state whether the above is strictly according to English grammar?—New York Sun.

How a Spaniard Smokes.

The Spaniards are the most expert smokers in the world. A Spaniard takes a heavy pull at his cigarette, inhales it, takes up a wine skin or wine bottle, pours a half pint down his throat, holding the vessel a foot from his mouth and not spilling a drop, and then with a sigh of satisfaction closes his eyes and exhales the smoke from his nose and mouth in clouds. He will also inhale the smoke, converse for a few minutes in a natural manner, and then blow out the smoke.—El Paso Tribune.

FEMALE, WOMAN, LADY.

The Distinction Between Several Words and How They May Be Used.

An interesting discussion is going on in the columns of some newspapers over the use of the words "lady" and "woman." There is no real difference as to the occasions upon which each word is to be used, but there is a frank acknowledgment upon the part of some that they do not use the word "woman" where their good sense tells them that they should, for fear that it might give offense to the person to whom it was directed "as not sufficiently polite."

There are certainly no words so abused as "woman," "lady" and "female." Among certain people the use of the second of these terms is like the wearing of fine clothes or jewelry. Originally belonging to a superior class they insist on appropriating it to themselves as proof that they are the equals of any other social body. Now, while all that may be true enough and while class distinctions have no place in this country this use of the word has led to some strange and amusing confusions. The humorist who depicted the servant as addressing her mistress, "Mam, the laundry lady is a-wanting to speak to the woman of the house," did not have to depend upon his imagination for his facts.

As absurd things as that may be heard in any one of the large dry goods stores in town any day, and almost any newspaper will yield a rich specimen or two. Bishop Warren, referring to this same point, says that he glanced at the wall opposite him at the moment and saw a diploma from the "—— Female academy," and then turned to a bookcase and read as the title of one of the volumes there, "Female Holiness." In the report of a southern woman's Christian temperance union convention appears the fact that "Mrs. Blank was chairlady."

Now the proper word in all this is "woman." That is always and ever right. Than it there is no nobler or stronger word in the English language. "Man" is a general word as well as a particular one, and as such includes both sexes, so that the term "chairman" signifies no subservience of one sex to the domination of the other. If called upon to address a stranger, a woman, then the proper word is "madam" and not "lady, this way" and "lady, that way," as so many ushers appear to think to be the only solution to the problem of address.

"Female" is never to be used as a synonym of "woman." It is a term common to one-half of the animal creation, and to apply it to woman as the substantive of designation is an insult. "Lady" is applicable to every well bred and educated woman, but it is something that is reserved rather for social usage and has not the sturdy strength and nobility of "woman."—Boston Journal.

Color Protection From Intense Heat.

With reference to the protective effect of certain colors against the sun's rays, years ago on my way to India the second time, having already been invalided home once from the effects of the sun, it occurred to me to try the photographer's plan. I reasoned to myself that since no one ever got sunstroke or sun fever from exposure to a dark source of heat or even to one which, though luminous, possessed no great degree of chemical energy—the furnaces in the arsenal, for example—it could not be the heat rays, therefore, which injured one, but must be the chemical ones only.

If therefore one treats one's own body as the photographer treats his plates and envelops one's self in yellow or dark red, one ought to be practically secure, and since the photographer lined the inside of his tents and belongings with yellow it was obviously immaterial whether one wore yellow inside or out. I had my hats and coats lined with yellow, and with most satisfactory results, for during five years and even extreme exposure never once did the yellow lining fail me, but every time that either through carelessness or overconfidence I forgot the precaution a very short exposure sufficed to send me down with the usual sun fever. Many friends tried the plan and all with the same satisfactory results.—Cor. Lahore (India) Civil and Military Gazette.

Sleeping Under Feathers.

Years ago we used to smile with conscious superiority at the idea of the Dutch sleeping under a feather bed instead of over it. The idea of sleeping upon a hard mattress and climbing under a soft one seemed rather an anachronism and a singular perversion of common sense, but the introduction of down or feather comfortables is simply the utilization of that knowledge of things which some of the older countries had long ago known. Feathers are exceedingly warm, and a covering made of them superinduces and retains the heat in the human body.

A curious claim is now made for a new comfortable of down. The makers assert that their product retains all the natural warmth, but allows the impure air to escape from the bed, how or wherefore we are not informed.—Upholsterer.

Velocity of the Earth.

The highest velocity attained by a cannon ball has been estimated at 1,622 feet per second, which is equal to a mile in 3.2 seconds. The velocity of the earth at the equator, due to its rotation on its axis, is 1,000 miles per second, or a mile every 3.6 seconds. Therefore it has been calculated that if a cannon ball were fired due west, and that it could maintain its initial velocity for 24 hours, it would barely beat the sun in its apparent journey around the earth.—Philadelphia Press

What a Bad Digestion Does.

All life looks black to a miserable man with a stomach in which his food lies like lead. Woe to his companions if they expect good fellowship from him! Woe to his wife unless she has the womanly intuition that will make her humor him as though he were a cross baby! Man delights him not, nor woman either; nor is he best pleased with himself, though he jealously demands homage from others.—New York Ledger.

STAMPEDE FREAKS

Exciting Scenes Among Vast Herds of Savage Prairie Cattle.

PICTURES OF TERRIBLE SIGHTS.

Famous Route of an Ill Fated Army Supply Train.—Incidents That Resulted in Stampedes.

Ever since Washington Irving's "Tour of the Prairies," Kendall's "Santa Fe Expedition," or the beginning of the "drive" of vast herds of Texas cattle from the southwest to the cold climate of the north, where their horns were frozen off and where many an owner's pocketbook was stiffened in death, a lively interest had been taken in what is called a "stampede" or scare of animals in herds.

A stampede of a vast herd of the American bison, that twenty-five years ago roamed by millions in the interior of the continent, was an every day affair. Now such an occurrence has passed away forever. What caused the huge beast, accustomed to the tornado, the vivid lightning, the terrible hail that frequently accompanies the sudden, short storm of the prairies, to stampede at apparently nothing, is one of those problems that admit of no solution. Sometimes it is caused by a flash of lightning from a dark cloud; again the cry of a starved wolf, or the appearance on the horizon of a single figure, or, perhaps, something as insignificant as the barking of a prairie dog sitting on the edge of its burrow.

A herd once started, frequently the whole prairie for miles became absolutely black with the fleeing beasts. There was nothing so indescribably grand, yet so awful in its possible results. The earth, shaken by the heavy, rhythmic tramp of their hoofs upon the hard ground, fairly reverberated as they passed a given point. Woe to him that stood in the way of the mighty throng of infuriated animals; nothing but annihilation, absolute and complete, his portion.

Frequently the long army supply train of an Indian expedition, composed of six mule teams (that of the winter campaign of 1868-9 was a mile long in four columns, or four miles long when strung out in a single line), was the scene of "stampedes." The picture presented when the frightened animals dashed away from the "trail," to be tied up in a confused mass of wagons, harness, men and mules cannot be portrayed by any pen.

Captain Ovenshine, now lieutenant colonel of one of the infantry regiments of the regular army, received from the writer, at Fort Hayes, Kan., five or six teams of the character described, in the winter of 1868, to transport some campequipage from that post to Fort Dodge, on the Arkansas. When the train had covered about half the distance—forty miles—one afternoon, just before going into bivouac, a portion of the animals stampeded and nothing could be discovered of their whereabouts.

Twenty years afterward some of the settlers near where now the town of McCracken, Rush county, is situated, were surprised to find in a ravine, or small canyon, the almost disintegrated remains of several six mule army wagons, the skeletons of over thirty mules and the iron parts of harness. These fragments were a portion of the train that had stampeded so many years before.

Cattle have the "affliction," so to say, to break out when least expected. One may travel for a week, believing that one's animals have been completely cured, when suddenly, from some atmospheric influence or other unforeseen and unaccountable circumstance, away they go. The devices for breaking it up are many. Lamp lights are used, noises such as singing, etc., are employed, but nothing has ever yet been discovered that is an infallible preventive.

It was formerly the custom of vendors to send herders to help start from the neighborhood or "off the range," as it was termed. These occasions were always considered a holiday, and "night herding" was an excitement eagerly sought. The "watch" on one occasion, which consisted of two or three reliefs, had donned their leggings and spurs, partaken of a cup of exhilarating coffee, and sung their tour through. The cattle were resting very quietly, as is their custom at first, only rising to turn from one side to another. As the "drive" continued on its tiresome way the duty became monotonous, the herders became grum, voiceless, eager only for their watch to end.

On the night in question the owner of the herd, remembering the previous quiet of his animals, bethought himself of what was afterward known on the "trail" as the "bell racket." He purchased a large cowbell for each horse, to serve the double purpose of a soothing noise for the cattle and, if the boys were wakeful, he would know by the melody of the bells that they were in motion, attending to their duty riding around. Unfortunately, in this "outfit" there was a big, burly negro, intent only upon sleep and shirking. He conceived the brilliant idea of disengaging the bell from his horse's neck and fastening it to his stirrup, so that he could keep up the motion with his foot and nap a little at the same time.

On this particular night he was slumbering sweetly. His horse, quietly cropping the grass, happened to stray into the middle of the peaceful herd. At this juncture the negro suddenly awakened and, discovering where he was, began to shake his bell violently. The noise of course started every steer to his feet and away went the frightened animals on a run.

In a moment every horseman in the entire "outfit" was in pursuit, with each individual bell jarring discordantly and adding new terror to the stampeded herd. The pursuers soon became aware of the folly of following a flying herd with such a noise, so they abandoned their instruments.

Another stampede was caused by a herder who carried a cap and ball pistol and an old fashioned powder horn in his waist belt. One night it had rained very hard and dampened his powder. He thought he would dry it by his "watch fire." It dried, of course, but with such a noise that the whole herd stampeded.

One night a herder rose too close to the cattle. His horse stumbled and fell against a sleeping steer. Then there was a roar as if all the thunders of Mount Olympus had spoken. Away went the herd, every man running with it to the "trail," about half a mile distant, where they met other herds, with herders singing their lullaby in front of the infuriated animals.

Phosphorescent scintillations fairly blazed from the black beasts, and the air was redolent with the odor of bruised horns, more terrible, but not as searching, as that from a western packing house. All attempts at "holding" them that night were perfectly futile, so the men were "called off" to sleep with their boots on just wherever they happened to be, ready for a daylight chase in the mornnig.—New York Times.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 8 1893

In the President's message to Congress he says: "The recent repeal of the law requiring the purchase of silver bullion by the government made an entire change in the complexion of our currency affairs. I do not doubt that the ultimate result of this action will be most salutary and far reaching. After the recent financial perturbation, time is required for the re-establishment of business confidence. When, however, through this restored confidence, the money which has been frightened into hoarding places, is returned to trade, a survey of the situation will probably disclose the safe path leading to a permanently sound currency, sufficient to meet every requirement of our increasing population and business. In pursuit of this object we should resolutely turn away from alluring and temporary expedients, determined to be content with nothing less than a lasting and comprehensive financial plan. In these circumstances I am convinced that a reasonable delay in dealing with this subject, instead of being injurious, will increase the probability of wise action."

The President recommends the further postponement of the Brussels monetary conference and suggests that a general authority be given the President to invite other nations to such a conference at any time when there is a fair prospect of accomplishing an international agreement on the subject of coinage. He also recommends that the existing statutes governing the issuance of goverment bonds be amended, as the authority of the Secretary of the Treasury is not sufficiently clear.

"While we should adhere to the principle that only the necessity of revenue justifies an imposition of tariff duties and other federal taxation, and that they should limited by strict economy, we cannot close our eyes to the fact that conditions have grown up among us, which in justness and fairness call for discriminating care in the distribution of such duties and taxation as the emergencies of our government actually demand. Manifestly, if we are to aid the people directly through tariff reform, one of its most obvious features should be the reduction in present tariff charges upon the necessaries of life.

"The benefits of such reduction would be palpable and substantial; seen and felt by thousands, who would be better fed and clothed, and better sheltered. Not less related to our people's prosperity and well being is the removal of restrictions upon the importation of raw material necessary to our manufactures. The world should be open to our natural ingenuity and enterprise, but this cannot be while federal legislation, through the imposition of high tariff, forbids to American manufacturers as cheap materials as those used by their competitors. It is quite obvious that the enhancement of the price of our manufactured products resulting from this policy, not only confines the market for these products within our own borders to the direct disadvantage of our manufacturers, but also increases their cost to our citizens."

The New York World has the following to say concerning the late William T. Coleman: "The only office the late W. T. Coleman ever held was that of vigilante in California's riotous times, but it was generally believed some years ago that he would accept a Presidential nomination if tendered him on a golden platter. He was a man of iron nerve, and was a conspicuous figure not only as a leader of vigilantes in 1856, but also in new York during the time of the draft riots. In San Francisco, sixteen years ago, he did more than any one else to restrain the sand-lot mob, which, at Dennis Kearney's prompting, was eager to loot the homes of the millionaires on Nob Hill."

The committee of ways and means has come to a very sensible conclusion on the income tax question. Instead of imposing a tax on individual incomes it will be confined to the earnings of corporations, to inheritances, and, we hope to large holdings of land in foreign hands for purposes of speculation. It would be a capital idea, besides, to swoop down heavily on absentee landlords, like William Waldorf Astor.

Governor Waite of Colorado has issued a proclamation giving women the right to vote at all elections in that state hereafter. The woman suffrage amendment carried at the late state election by over six thousand majority. Colorado thus joins Wyoming.

A MAN IN PETTICOATS

THE QUEER NOTION OF AN OLD SOLDIER CITIZEN OF MAINE.

He Has a More Costly Feminine Wardrobe Than Any Woman In Town—Visions of Lace, Ruffles, Etc.—Weighs 180 Pounds, but Wears a Woman's No. 6 Shoe.

Commander James Robbins of the local post G. A. R., Cooper's Mills, Lincoln county, in this state, is one of the prominent men of his community, a citizen generally esteemed as a man of integrity and intelligence. Mr. Robbins has a brilliant war record as a member of the Thirtieth Maine. He has lived in the village since 1883 and is a jeweler. His house is a neat cottage house on the brow of the hill as one drives into the Mills. In the narrow front hallway is Mr. Robbins' bench, lathe and tools, and here you will find him placidly working away at the tiny wheels and springs.

If you are on sufficiently intimate terms with Mr. Robbins you will find him indulging in his hobby. He has one, like the most of us. In his case the hobby is startlingly picturesque, and it may be safely said that he is the most original man in the state of Maine, so far as his curious fancy is concerned. He wears petticoats. Not when he goes down street for the mail and to do his marketing. At these times he slips on the masculine pantaloons. Yet he does not wear his trousers, even, like ordinary masculinity. No suspenders for him. He wears a sort of dress waist, and his trousers are buttoned tightly about his hips. He always wears a woman's number six shoe, with high heels and graceful, slender shape. Mr. Robbins weighs something like 180 pounds, and the effect produced by those shoes peeping coyly out from beneath manly trouser legs is startling, to say the least. Mr. Robbins doesn't mince or toddle, and his shoes seem to fit him pretty well.

He reserves his petticoats for the sanctity of the home circle, for the partial retirement of his orchard and for calls upon neighbors with whom his acquaintance is close. Mr. Robbins isn't squeamish about showing himself in petticoats. He enjoys wearing them, he has worn them when opportunity has presented all his life long, and he wears them scientifically too. In the first place, there's no half way business about it. Every detail of feminine attire is there, and Mr. Robbins is rightly fussy about the details.

There is no woman in Cooper's Mills who owns so many dresses of such excellent material as does the commander of the Cooper's Mills post. He takes pride in having only the best. His lingerie is elaborately tucked and ruffled, edged with lace and fashioned according to the most approved models of any lady's wardrobe. The material is of the finest quality, and when Mr. Robbins lifts his skirts the eye gets a vision of ruffles, lace and "all such like" of dazzing whiteness and immaculate smoothness.

He is very particular about his ironing. Everything must be starched "up to the handle," whatever that is, and sometimes Mrs. Robbins finds her hands full and her clothes horse loaded down like a pack donkey. Amazed neighbors, who were not fully aware of the extent of Mr. Robbins' hobby, have been obliged to ask for more details, when Mrs. Robbins has laconically informed them that "it is Jim's ironing." Mr. Robbins' hosiery is of the long sort, and it is currently rumored that the stockings are hitched up at the sides. His corsets he has made especially for his girth, and these he wears continually. His shape is fairly good, especially when he dresses up for afternoons.

In the morning he wears print gowns, for he assists in the housework. Almost every morning Mr. Robbins in his print gown is seen sweeping off the piazza and whisking about the kitchen. He wears petticoats at home almost exclusively, putting on his garb as soon as he enters the house. For afternoon wear his gowns are elaborate. Some of them are made by Mr. Robbins, and some are fashioned by local dressmakers. One cashmere dress is quite a favorite, and this is frequently worn by Mr. Robbins when he promenades in the orchard. He has lots of these good clothes, all of fashionable cut, puffed sleeves, and with all the fixings that go to lend grace and dignity. Usually he wears an apron and especially so when at his bench. The apron is white ordinarily and has a bib with ruffled straps and pockets. Therefore does Mr. Robbins present a somewhat unique appearance as he works away of afternoons or sits and converses with his wife.

Look at the gown and you see a stylishly attired woman, but the face is very mannish indeed. Mr. Robbins would be marked in any crowd. His face is full, and he wears a jet black mustache that possibly owes its color to art. His hair is long, black and curly, his voice is deep and full, and there's nothing effeminate about him except his attire.—Lewiston Journal.

Soapstone In China.

The Chinese in utilizing soapstone, which is found in their country in large quantities, make of it trays for pens, slabs for rubbing ink, flower vases, incense boxes, sandal wood burners, flower baskets, candlesticks, chessmen, cups, bowls and lamps, all sorts of emblems, animals and the idols which the disciples of Confucius revere with so much favor.

A Hard Problem.

A certain debating society is discussing the question as to which is the angrier—the husband who goes home and finds that the dinner is not ready or the wife who has dinner ready and whose husband does not come home. It is believed that the debate will end in a draw.—Worthington's Magazine.

Just the Time.

Jack—How would it do for me to speak to your father tonight?

Jess—Best time in the world. He got the bill for my new bonnet just before we started for our drive.—Exchange.

GREELEY AND RAYMOND.

A Philosophical Dissertation on the Merits of the Two Great Editors.

There is not a paper in all this country that possesses the individuality that characterized the New York Tribune when Horace Greeley was its editor or The Times when edited by Henry J. Raymond.—Kansas Commoner.

The day of great newspapers, edited by great editors, such as Horace Greeley and Henry J. Raymond, has passed away.—Chicago Tribune.

We had the pleasure of knowing both Greeley and Raymond. We were more intimate with the first named of these contemporary editors than with the other. They were able, sincere, energetic, public spirited Americans. Neither of them was a cherub. Mr. Greeley, good man! said "damn" more than once as we regret to remember, and when he called Raymond "the little villain" that cool headed man retorted in language which many people have forgotten. The two did not get along very well together when one was editor of The Tribune and the other among his assistants, nor afterward when they were editors of rival papers, though both were of the same party. Neither of them was an "ideal editor," or a very deep thinker, or a first class statesman or a notable scholar.

Greeley was a stronger and more stirring writer than Raymond, but Raymond was a far more skillful editor than Greeley. Greeley was more fervent in mind than Raymond; Raymond was more judicious and nimble than Greeley. Raymond, when he was a member of the legislature, and the speaker of the assembly, and the lieutenant governor of the state, and a member of congress, and a delegate to state or national conventions, gave evidence that he was greatly more ingenious in politics than Greeley, who, indeed, during the brief period of his service in congress, did not win distinction. Raymond always kept up a close intimacy with those astute political managers, Thurlow Weed and William H. Seward, while Greeley was unable to stay long in the "political firm of Seward, Weed & Greeley," in which, as he said when he left the concern, he had been a "junior partner."

Greeley was more of a philosopher than Raymond, who, in turn, was more of a man of affairs than Greeley. Greeley was often compared with Benjamin Franklin, though he did not possess Franklin's scientific quality; Raymond might be compared, in many respects, with Franklin Pierce, though he was not of Pierce's politics. Greeley had certain eccentricities of manner and action; Raymond was always regarded as a very level headed man. Both of them belonged to the antislavery school in politics; but Greeley's fervor in the cause far surpassed Raymond's. Greeley had in his earlier years been a champion of "social reforms" which were bitterly denounced by Raymond, who, however, in the latter years of his life, began to look with favor upon certain theories of socialism. Greeley was negligent in his dress; Raymond was natty. Both Greeley and Raymond were founders of New York daily papers which still exist, but neither of which is now characterized by the traits of its founder.

We agree with The Kansas Commoner that none of the New York papers now possesses the individuality of Greeley's Tribune or Raymond's Times, and no one of them can possess it, for both of these memorable individuals long ago departed for "the undiscovered country from whose bourn no traveler returns" after it had been their lot "to grunt and sweat under a weary life," but that is not a reason why we should despair of the American press. We may yet have editors not unworthy to be compared with the greatest and best we have ever had.

A true man was Horace Greeley, strong, earnest and good—honored be his memory! An able man was Henry Jarvis Raymond—clear headed, quick witted, reasonable, temperate, genial and highly accomplished—let his name shine in the editorial galaxy!—New York Sun.

A Dance Without a Smile.

They have a singular kind of dance conducted on the greens of country villages in Russia. The dancers stand apart, a knot of young men here, a knot of maidens there, each sex by itself, and silent as a crowd of mutes. A piper breaks into a tune, a youth pulls off his cap and challenges his girl with a wave and a bow. If the girl is willing, she waves her handkerchief in token of assent. The youth advances, takes a corner of the handkerchief in his hand and leads his lassie round and round.

No word is spoken, and no laugh is heard. Stiff with cords and rich with braids the girl moves heavily by herself, going round and round, and never allowing her partner to touch her hand. The pipe goes droning on for hours in the same sad key and measure, and the prize of merit in this "circling," as the dance is called, is given by spectators to the lassie who in all that summer revelry has never spoken and never smiled.—New York Ledger.

The Ruling Passion.

Mr. Theosoph—Speaking of the mysterious, I knew an adept who predicted that he would be taken sick on a certain day, at a certain hour, and would die exactly 2 hours and 10 minutes later. Everything occurred just as he foretold. What do you think of that?

Mr. Hardhead—He must have been a New York man who had lived in Jersey and had become accustomed to doing everything on schedule time.—New York Weekly.

She'll Know Him Again.

When the king of the Belgians stopped in tavern at Spike during a recent rainstorm he overheard the hostess remark: "I've seen the mug of this tall fellow before." Ere leaving the place the king presented the hostess with a bust of himself and later forwarded a large photograph, with his autograph.—Exchange.

Improving the Breed.

"Why do you cut up such antics when you feed your turkeys, Mr. Farmer?"

"Oh, I'm trying to make game of them."—Washington Star.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893. A. C. McDONALD.

Justice of the Peace of said Township.

E. SPENCER, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1894, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 16 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 88-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispicada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and alls bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.

Executor of the Last Will and Testament of John Allen Hannah deceased.

COURT NOTES.

Geo. M. Gill, Superior Judge.

TUESDAY, Dec. 5, 1893.

Estate of J. M. Hay, deceased—Filed petition for order assigning estate, value less than $1,000.

Bar silver, 69¾.

Henry Malone is down from Fish Sprins.

Congress met in regular session on Monday last.

Mark Hand came up from Lone Pine yesterday.

T. F. A. Connelly was in town during the week.

Rob't O'Neal of Bishop spent several ays in town this week.

S. G. Sneden Esq. was down from Bishop early in the week.

Matters are looking brighter on the Comstock than for several years past.

Rev. J. H. De La Matyr of Bishop spent several days in town this week

M. Reddy came in from Darwin yesterday to see his uncle, Hon. P. Reddy.

Chas. M. Green and Supervisor Wilson were up from Lone Pine on Tuesday.

Sheriff Gorman was out of town several days this week summoning a grand jury

Mr. and Mrs. G. P. Bourland were down from Bishop a few days ago on land business.

C. Mulholland returned to Los Angeles on Wednesday's train. He expectf to remain there for a considerable time.

This office acknowledges the receipt of wedding cake with compliments of Mr. and Mrs. C. S. Meroney. They will please accept our hearty felicitations.

D. Stubblefield has been seriously ill for a week past with pneumonia. He has had the best of care and medical attendance and this morning is reported improving.

The town of Greenfield, Nevada (Pizen Switch) was almost entirely destroyed by fire on Monday of last week. It is supposed to be the work of an incendiary.

Two bands of horses went through town this week en route for Los Angeles. One was owned by Rowan and Cardinel of Bishop and the other by M. Hofreuter of Los Angeles.

We are glad to welcome back the *Territorial Enterprise* to our list of exchanges. After a lapse of nearly a year it is again in the journalistic field advocating the interests of Nevada.

A message from the telegraph operator ot Haywards says: "John Broder is paralyzed, but is now much better." Mr. Broder has many friends here who hope that he will speedily recover.

Albert Briggs, formerly a merchant of Bishop, has been sojourning in Hawthorne dusing the past two weeks. He recently returned from a trip to Central America and is in poor health.—*Bulletin.*

Jack Davis is at work with his teams on the Big Canal. The company has sent to San Francisco for twenty-two additional scrapers with double trees, chains, harness etc., so that a considerable additional force can be set to work.

The taking of testimony in the Baxter—Gilbert water suit was concluded on Wednesday and counsel were engaged yesterday and to-day in argument. It is expected that the case will be concluded to-morrow and submitted.

There will be an egg party given at the residence of A. N. Bell at Camp Independence next Friday evening, December 15th. There will be a basket supper, each lady to bring an egg with her name and weight written upon it. The object of the party is procure funds to buy a new stove for the Camp Independence school.

The *Territorial Enterprise* says: "If favorable indications and the opinions of prominent mining men are to be relied upon the Comstock is on the eve of another period of prosperity equal to that which followed the discovery of the ore body on the 1650 level of the Consolidated California and Virginia mine in 1886, and a well informed operator predicts that the recent marked advance in share values is only the beginning of a far more important upward movement."

THE FORMAL OPENING

Work on the Big Canal to Indian Wells Valley Begun.

On Tuesday a party went to the point on the river where the head of the Indian Wells Valley Canal is located. This is at a point about one mile below the old Crysopolis mill. At the request of the builders C. Mulholland accompanied the party and delivered an address, of which a synopsis is given. At the conclusion of the address the first sod was turned, and the work was declared duly opened.

THE ADDRESS.

"The pages of history are filled with glowing accounts of armies in all the pomp and circumstance of glorious war. Multitudes of men in the flower and prime of life brought together to destroy each other; countless treasure created by toiling millions squandered to gratify the ambition of a monarch or even to glut the vengeance of a mistress whose ire had been excited by a taunt against her want of virtue; these have been the causes of some of those bloody pageants on which so many famous historians have loved to dilate.

"But far greater have been the causes and deeds for which humanity has reason to be truly thankful. Not the horrors of the battle-field, not dying the green sward red with the blood of the true and the brave, not the cries and tears from breaking hearts; but the comfort and plenty produced by tilling the soil, the fixed homes, the well regulated and law abiding society growing out of agriculture, the schools and churches, the peace and safety born of and necessary to farming pursuits, these are the themes on which history should love to dwell.

"Far more worthy of honor are the men whose lives are spent in efforts to extend the boundaries of cultivated lands, than the warriors whose greatest ambition is to extend the territory over which despots may rule. But surely the honors due such benefactors of the human race are greater still when they go beyond limits where nature has already prepared such conditions that the land needs little more in the way of preparation than plowing and seeding. Where deserts stretch away beyond the range of vision, in seeming hopeless aridity, the judgment that can see conditions whereby such wastes can be transformed into the most fertile lands bearing flowers and fruits and other products in rich profusion, and the solitary plains comfortable homes and populous towns, such order of mind as can forecast all this is not less high than the mind that can plan a battle. Nor is the courage that can venture fortune and reputation in such enterprises less deserving of honor than that needed to lead armies to battle. No work ever engaged in by man is of greater dignity than that of making arid lands fertile. To cover the desert with fertility and beauty is akin to creative power, and the men who accomplish such results do the greatest homage to their Creator and become fellow workers with Him for the good of humanity. It is true that many such great enterprises are already accomplished in California and in other lands. It is also true that all such works produce great wealth and much profit to the men who carry them to a successful issue. But in awarding honors for great deeds the highest have ever been conferred upon those who most nearly equaled the achievements of other great men who have preceded them. Here and now we are about to break ground for the beginning of one of the greatest irrigating works yet undertaken in California. Other like enterprises are now in progress that will cost more, very much more money to carry them to completion. But in the extent of land to be irrigated, this will take rank as one of the greatest works in the State. We are all familiar with the Indian Wells Valley, that great tract that lies about thirty-five miles south from Owens Lake. We have seen its thousands of acres in the spring covered with wild flowers of the most brilliant hue. We have seen at all seasons great herds of cattle roaming over it, but not a human being in sight, not even a solitary herdsman. Beautiful as that great tract is when glowing in all the rich hues of spring and early summer, pleasing as it may be to see the herds of fat cattle later in the season, no one can look over the wide expanse without wishing to see the solitude made populous, and fields of waving grain, orchards and vineyards taking the place of the grasses and shrubbery that now cover the plains. The hand of science is now put forth to convey the fertilizing waters that will make this wide area bloom in perennial beauty; that will fill the land with comfortable homes, instead of the lonely camp of the herdsman; that will make the school and church bell ring out over a region where none of the sweet sounds of civilization have ever been heard. This grand valley will be within a very few hours travel of the city of Los Angeles when about fifty miles of railroad shall be built across a nearly level plain. With the water to fertilize and railroad to give swift and easy access, the rapidity with which population will increase and improvements be made will be more like the effects of a delightful vision than sober facts, the results of far reaching wisdom and carefully planned enterprise

"For years past we have ardently wished for more direct connection by rail with Los Angeles. Nothing will so much hasten the desired end as the building of this canal. The men who planned and have now begun this work say that just as soon as they can turn their attention to another object they will give all their energy to pushing forward a standard gauge railroad from the south. These men have already spent several thousand dollars here in preliminary work, and every dollar of that is equivalent to so much clear gain for the country. The further prosecution of the work will make market for all sorts of farm produce, and will provide work for men and animals from now till spring, if farmers who may engage in the work can then spare time from work upon their farms. Every man who now owns land in Owens Valley knows that the completion of this work will add much to the value of every acre of land he may possess. More than this, he knows that the very beginning of this work has already added to the value of his possessions. This is another good reason why the enterprise should have the hearty goodwill of all the people of the Valley. But in speaking of "good will" it may be well to state that no more is meant than pleasant and kindly relations between the people and the men engaged in the enterprise. No other favors are asked, and it would surely be to the interest of all good citizens to frown upon any captious or unreasonable opposition, should any such be offered. But there is not the slightest probability of anything of this kind coming from any man who wishes well to the people of Owens Valley.

"With these few remarks I now declare the work of the Mount Whitney and Owens Valley Canal duly opened."

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of November, 1893.

Mean barometer	30 12
Highest barometer	30 40
Lowest barometer	29 12
Mean temperature	49.0
Highest temperature, 13th	73 0
Lowest temperature, 17th	24 0

Greatest daily range temp'ture, 29, 13th.
Least daily range temperature, 14°, 17th.
Prevailing direction of wind, N. E.
Total movement of wind, 4659 miles.
Extreme velocity of wind, direction and date, 60 miles N E. on 15th.
Total precipitation, .12 inches.
Number of days on which .01 inch or more of precipitation fell, 2.

Number of clear days	23
Partly cloudy days	6
Cloudy days	1

Dates of frost, 25.

P. T. JENKINS, Observer,
Weather Bureau.

James Haley and family camped at Independence Wednesday night on their way to Los Angeles. Mr. Haley was a resident of Honey Lake Valley for many years; he says that country is very dull and he is looking for a new home. It is quite likely that he will return to Owens Valley in the spring. He has ten head of fine work horses, with good wagons and harness, and some loose stock.

The Most Successful Remedy ever discovered as it is certain in its effects and does not blister. Read proof below.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin, and Blood Spavin on the same joint, and to-day no one can tell which one it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

DR. B. J. KENDALL CO.,
Enosburgh Falls, Vermont.

SOLD BY ALL DRUGGISTS.

California State Analyst.

Royal Baking Powder is Superior to all in Purity and Strength.

"For purity and care in preparation the Royal Baking Powder equals any in the market, and our test shows that it has greater leavening power than any of which we have any knowledge."

W. B. Rising

Prof. Chemistry, University of California,

Analyst California State Board of Health, etc., etc.

No careful housekeeper can afford to use any baking powder but Royal.

They Didn't Like It.

"Of course," said Mr. Brown, a real estate agent, "curious things happen in my business, just as in every other. Now, I fully expected to rent that top suite of rooms in the Perpendicular building to a society that wanted to hire some clubrooms, but it voted not to take them."

"What was the trouble?" asked a listener.

"There's no elevator in the building, and the members wouldn't climb the stairs."

"What did you say the name of the society was?" some one asked.

The real estate agent looked pensively at a letter which he held in his hand and read, "The Eastern Massachusetts Branch of the American Pedestrian and Mountain Climbing association."—Youth's Companion.

Too High Living.

Tramp—Little girl, is there any cottage around here where I can get a plateful of anything besides chicken and asparrow grass? For the last week I've had nothin but asparrowgrass an chicken, chicken an asparrowgrass. If you could only tell me where I could strike a plate of good, old fashioned beef, or even a simple salad, I'd bless you!—Life.

Hard to Please.

A San Francisco man had been in bed for several months with a malady that made him very nervous and irritable. His wife and daughter ministered to him assiduously, but were sometimes at their wits' end in trying to satisfy his capricious desires. As the young lady said once, her father was "so unreasonable that he would scold if an angel were waiting on him." One night when the mother and daughter were both thoroughly tired out a young man, a friend of the family, was called in to watch with the sick man for six hours after midnight. The invalid's wife instructed him about the medicines and especially cautioned him to be careful about disturbing the patient.

"He is very irritable," she said. "Don't speak to him except when he speaks to you, and if he is asleep when the time comes for him to take his medicine don't disturb him."

"And by the way," she added as she was about leaving the room, "you may like something to read. Here is Mark Twain's 'Roughing It.' It will amuse you, but you mustn't laugh while reading it, for Mr. J—— will fancy you are laughing at him and will be very much annoyed."

The young man performed his duties to the best of his ability, but on going away in the morning was thanked rather curtly by the invalid. As soon as he was gone Mr. J—— broke out:

"See here, mother," said he, "don't ever send that numskull to watch with me again."

"Why, father, what do you mean? Wasn't he attentive? He didn't go to sleep, did he?"

"No, no, no. But I was awake for two hours, and I watched him reading Mark Twain's book all that time, and"——

"But, father," interposed Mrs. J——, "I gave him that book to occupy his time. He"——

"Oh, yes, yes. That's all right, but that fool sat there for two hours reading that book and never smiled once."—San Francisco Call.

Out of Place.

A man who had lost his way in a trackless forest came suddenly upon the signs of civilization.

Many lights blazed, and sounds of revelry burst upon his ear.

He was very glad.

Advancing toward the festive scene, he was presently rooted to the spot.

"Merciful heavens, this"——

There was much of anguish in his tone and manner.

——"is no place for a man."

In the garish gleam of the flaring lights he had read that a summer hotel was before him.

Turning upon his heel, he plunged again into the wilderness.—Detroit Tribune.

A Way Out.

Tenant—See here, Mr. Landlord, the people on the floor above dance and jump around all night, and we can't get any sleep. Isn't there anything that can be done?

Landlord—Certainly there is. Either take the flat above them or dance and jump around all night yourselves and keep the people below awake.—Harper's Bazar.

Johnnie—Mamma, this book says knowledge is power.

Mamma—And it is, my child.

"No, mamma, it isn't. I know there is a pie in the pantry, but I can't get it."—Yankee Blade.

A Question of Shortness.

Dinkle—It's a strange thing to me how a short man always wants a tall girl.

Dunkle—Humph! It's a strange thing to me how a short man wants any girl. I'm blamed if I do when I'm short.—Buffalo Courier.

A Payment He Preferred.

Hunker—I asked old Mr. Munn if I might pay my addresses to his daughter.

Spatts—What did he say?

Hunker—He suggested that I pay my debts first.—Detroit Free Press.

Guests at Camp Nineteen.

By FRANKLIN FILE.

With a quick look of inspection, but without touching the watch, Jack High remarked that as for him he never rejected a gentleman's collateral. It was Aleck Wiams who should have declined the offer, because he recognized the watch at a glance as belonging to Boss Donald, and instantly reasoned that Old Jugg, made desperate by a possible chance to get some whisky money, trusting to luck to restore the timepiece, and induced by his ravening appetite for alcohol to lapse in his redeeming quality of honesty, had sneekingly stolen it. But Wiams assented to a third hand at the game, and the watch figured in lieu of money in Old Jugg's bets. But not for long. Its thief, who viewed himself as a boomer, was soon an unperturbed player, with the watch safe in his pocket and a dozen bank notes besides. Something like $500 had been won from Wiams by the two others when the loser remarked that he had lost enough, and the game was stopped.

"I've divided all my ready money between you," he said, "and pay day for my gang is day after next."

"I'd enjoy lending you something," said Jack High.

"Not a bit more'n I would, Mr. Wiams," said Old Jugg Brown.

"No, thank you,' was the reply. "You haven't bankrupted me, and I'm not whimpering. Good night to you," and he strode away to his tent.

The two winners were very jocular. They linked arms as they strolled along. Then Brown thought of the watch and got away from his companion long enough to replace it where it belonged, but he was back again in a minute. It was 10 o'clock and the camp was nearly all asleep. Those who were only dozing as yet were first to hear the low, soft commencement of a song.

"That's my daughter's voice," Jack High remarked with proprietary pride.

Other listeners, and especially those whom the melody awakened from slumber, may have drowsily imagined that it was supernal; but as the singing grew louder and stronger, and the words of a familiar sentimental song were enunciated, the hearers recalled Deuce Low and knew that she was the vocalist. It was an agreeable disturbance of the quiet of the night, and when it ceased the unseen audience clapped hands and made a great outcry of delight. Then, afraid that the hubbub would keep the singer silent instead of inciting her to begin again, the men ceased their noise and waited. The two fathers found their boy and girl still at the tree. Deuce sat leaning against the trunk as they had left her, and the moonbeams had not ceased to glorify her face, into which an expression of tranquility had come. An ineffable tenderness had softened the pretty lineaments and all trace of disingenuousness was gone. It was as though the woman, which she had hardly become, had sung a lullaby to the child, which she had barely ceased to be, and so a serenity of repose had settled down upon the poor little adventuress. The shadow of the tree had shifted with the higher rise of the moon, leaving Will Brown out in the light; but he no longer took care to screen his rapt regard of his guest, and this may have been because he perceived that he was not a consequential factor in producing her placid contentment.

"You nor me hain't held as pretty a pair ez them," whispered Jugg, his exultation over the game asserting itself in his language.

"They'd be winners, sir; winners," Jack asserted, vivaciously.

"My son's a p-r-ince," and Jugg's paternal vanity easily likened his gracefully posed son to some vaguely remembered hero of lime lit theatricals.

"And my daughter's a p-r-i-n-cess," retorted Jack, adopting the other's spelling out whim of speech rather mockingly and with immense emphasis on that syllable which made the word exclusive to femininity.

The two men were not likely to be harmonious in eulogium of their offspring. They were silenced, however, by the youngsters themselves, who began to sing together. It was a ditty with nonsensical words but a captivating melody, and the night air received it with all acoustic kindness; with discrimination, too, for it carried the tuneful notes far beyond the reach of the doggerel rhymes. At the end of the verse what sounded for an instant like an echo, but which developed into a refrain by a third singer, came from the distance. The voice was high and strong, with a strenuous unction seldom heard elsewhere than at a religious camp meeting, and with the unmistakable twang of an Afro-American. Will and Deuce sang another verse and again the approaching voice repeated the chorus with ariose vim. The campers emerged from their tents and wagons, the sentimental loungers at the tree stood up, their fathers joined the increasing group and all watched the persons who were coming into view on mustang ponies.

One of these was the assertive vocalist, and she looked more like a witch than a siren as she rode into the throng. She was a negress, with the sooty blackness of a native African, but without the usual accompanying ugliness of face. Half a century had not bent her stalwart form, and as she alighted from the horse she stood a physically commanding figure, even in a gathering of men. A bright handkerchief turbaned her head and a gaudy shawl wrapped her shoulders.

"I'se glad to see yo'sels, an' I's hopin' my singin' hasn't 'sturbed yo," she said oratorically. "When I heahs music I caint try to hold my gawp—deed I caint. Dough singin' haint my perfes'n'ble 'ployment. I'se a houdoo fortin' teller."

Her companion was a man of 30, with shaven yellow face, but with none of the facial characteristics of a mulatto. His garb was that of a cowboy. He still sat astride his horse, in silent scrutiny of the company, and this singular eying of the campers would not have passed unnoticed if the negress had not been engrossing the general attention.

"What's your night riding for?" Boss Donald roughly demanded to know. "Are you sure you haven't stolen these horses? I guess you'd better stay with us till morning, to see if somebody doesn't come chasing you."

"Chasing us?" and the yellow man's first utterance was quizzical. "We ain't chased—we chase." He checked himself abruptly, and added in a docile tone: "Oh, we'll stop the night with you if you want us."

"He's my son," the negress volubly resumed. "Deed, fo'ks, he's my son. We's trabblin' towa'd Oklahoma."

"Fortune seeking?" Will Brown suggested.

"An' fortin' telling, boy," and she chuckled over her own wit. "Who wants Queen Sheeb t' prophecy? Er does yo' ruther buy a houdoo cha'm?"

The superstitious instinct of a gambler spoke out in Jack High. "What you got, auntie?" he asked.

"Genuwin houdoo luck cha'ms, sah. Nebber fail, sah," and she brought out a handful of small bags. "Made o' rattler skin, sah, an' filled wid seben luckies—hahd to get, sah, an' cheap at a dollah."

"All alike?" and he examined the charm bags with his eyes, seemingly averse to touching the uncanny things.

"Jes' alike, sah—fr'm crow's tongue t' dead chile's toe nail, dey's ebery one got de right seben ingred'nts into 'em. An' dey was put t'gedder wif de true houdoo cer'mony at de tu'n ob de moon."

Jack chose one of them, put it into his pocket, and handed a paper dollar to Queen Sheeb. Old Jugg Brown bought one, too, and also paid for it with one of the dollars won from Aleck Wiams. The yellow man slid out of his saddle and eyed the money as it was received by the negress. His eagerness was very demonstrative. He took the two notes from her hand and held them up for a close inspection, searching for some peculiarity of their print. Then he became suddenly domineering in manner and dictatorial in tone.

"I want you, and you," he cried, indicating the two men who had bought the charms. "This is counterfeit money, and I've got a warrant for your arrest."

"For my arrest?" gasped Jack.

Old Jugg was dumb with amazement.

"Here's the document," the stranger said, producing a crumpled but still legal looking paper. "It calls for John Doe and Richard Roe, and the names will do for you, I guess. I'm a deputy sheriff and government detective, and you'll let me search you, if you please."

He went at the searching in such a prompt, professional way that the astounded men offered no objection. He first took all the money from Jack High, examining and marking it piece by piece, and then he seized upon Old Jugg Brown's winnings in the same methodical manner.

"How do we know who and what you are?" Boss Donald interposed. "I don't believe I'll let a pair of fortune telling tramps fool with this camp."

"Old Hannah is in the houdoo line," was the fellow's calm explanation. "I'm only a sort of traveling partner. Of course I ain't her son, and of course the yellow on my face is butternut stain. I've been sent to do this job neat, and I've done it. Here's my credentials," and he submitted a metal shield and a document to Donald.

"But you've blundered, my capable friend," said Jack, with professional calm. "The money may be bogus; I don't know, for we have only just won it at poker from Mr. Wiams."

"That's a fact," Jugg hoarsely added; "we just won it from Mr. Wiams."

Aleck Wiams walked into the assemblage. "What's that you're saying?" he exclaimed. "You've been playing poker with me? Why, I haven't touched a card in months. And you, Jugg—where could you get money to start in with? If you two are in a scrape it won't help you out to go to lying. I was fast asleep from 8 o'clock till I heard the singing."

CHAPTER III.

THE CANVAS JAIL.

"Father, this young lady is Miss Wallace."

One of the prairie wagons was made a prison for the two captives. The walls were only canvas, and the entrance had nothing more like bars than the crossings of cord that tied the flaps together. But Deputy Sheriff and Detective Alloway re-enforced the cloth with human safeguards. Boss Donald was convinced of the prisoners' probable guilt, and he felt that it was right to lend four workmen to the duty of patroling around the wagon until morning. He had no sympathy for Jack High, and not much for Old Jugg Brown; and his rude kindliness to Deuce and Will found expression in a brusque command to clear away from the vehicle containing their despised fathers.

(TO BE CONTINUED

An Editor's Mistake.

The editor of a weekly journal lately lost two of his subscribers through accidentally departing from the beaten track in his answers to correspondents. Two of his subscribers wrote to ask him his remedy for their respective troubles. No. 1, a happy father of twins, wrote to inquire the best way to get them safely over their teething, and No. 2 wanted to know how to protect his orchard from the myriads of grasshoppers. The editor framed his answers upon the orthodox lines, but unfortunately transposed their two names, with the result that No. 1, who was blessed with twins, read, in reply to his query: "Cover them carefully with straw and set fire to them, and the little pests after jumping about in the flames a few minutes will speedily be settled," while No. 2, plagued with grasshoppers, was told to "Give a little castor oil and rub their gums gently with a bone ring."—Boston Traveller.

Husbands of Famous Women.

From an article on "Unknown Husbands of Famous Women" we learn that Mr. Humphry Ward is an art critic of The London Times and is author of quite as many books as his wife; that the husband of Mrs. Lease of Kansas lives in Topeka and says, "It's all right for my wife to make speeches, but it's the drug store, just the same, that keeps things a-running;" that the husband of Margaret Deland is a hustling advertising agent and won fame by devising the "flying wedge" in football; that the husband of Mrs. Van Rensselaer Cruger (Julien Gordon) is Colonel S. Van Rensselaer Cruger, manager of the vast Trinity church corporation in New York city, and that Mr. Burton N. Harrison is a New York attorney, and that "when his wife's literary work is mentioned he is dumb."

Repairs to a Chimney.

"I don't see why all masons shouldn't live in gilded palaces," observed a house owner, looking over the paper presented to her. "One of our chimneys blew down in a furious windstorm, and I had to have it repaired. This bill is set forth thus: Brick used, 15 cents; work, $12."—New York Times.

When a great merchant of Liverpool was asked by what means he had contrived to realize the large fortune he possessed, his reply was, "By one article alone, in which thou mayest deal, too, if thou pleasest—it is civility."—Bentley.

The wealth of the Russian state church is almost incalculable. It could pay the national debt, amounting to nearly £200,000,000, and still be enormously wealthy.

Eudoxus, born 406 B. C., was the first man known to history to explain planetary motion and to make a map of the heavens with the planets and fixed stars marked.

FAR AND WIDE.

Not on this broad continent alone, but in malarial breeding tropical regions, in Guatemala, Mexico, South America, the Isthmus of Panama, and elsewhere, Hostetter's Stomach Bitters affords to inhabitants and sojourners protection against malaria. The miner, the freshly arrived immigrant, the tiller of the virgin soil newly robbed of its forests by the axe of the pioneer, find in the superb antifebrile specific a preserver against the poisonous miasma which in vast districts rich in natural resources, is yet fertile in disease. It annihilates disorders of the stomach, liver and bowels, fortifies those who use it against rheumatic ailments breed and fostered by outdoor exposure; infuses genial warmth into a frame chilled by a rigorous temperature, and robs of their power to harm morning and evening mists and vapors ladden with hurtfulness; strengthens the weak and conquers incipient kidney trouble.

Good looks, to be permanent, must begin on the inside.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY.

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON,
Notary Public.

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

F. J. CHENEY & CO., Toledo, O.

Sold by druggists, 75c.

Dunraven, tell us, ere you fly,
Do you pronounce it Valkyrie,
Or, as maintained by some most fiery,
Is your yacht christened the Valkyrie?

IMITATORS AND IMPOSTORS.

The unequalled success of ALLCOCK'S POROUS PLASTERS as an external remedy has induced unscrupulous parties to offer imitations, which they endeavor to sell on the reputation of ALLCOCK'S. It is an absurdity to speak of them in the same category as the genuine porous plaster. Their alleged equality with ALLCOCK'S is a false pretense. The ablest medical practitioners and chemists and thousands of grateful patients unite in declaring ALLCOCK'S POROUS PLASTERS the best external remedy every produced. Ask for ALLCOCK'S, and accept no other.

BRANDRETH'S PILLS act upon the whole system.

Many a girl who marries for leisure repents in haste.

CALIFORNIA NOT TO BE OUTDONE AT THE WORLD'S FAIR.

One very noticeable exhibit at the World's Fair was that of the Hercules Gas and Gasoline Engines, manufactured by the Palmer & Rey Type Foundry in San Francisco, Cal. Send for catalogue.

Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

THE S.S.S. MARK

CURES SCROFULA

Mrs. E. J. Rowell, Medford, Mass., says her mother has been cured of Scrofula by the use of four bottles of S.S.S. after having had much other treatment, and being reduced to quite a low condition of health, as it was thought she could not live.

S.S.S. Cured my little boy of hereditary scrofula which appeared all over his face. For a year I had given up all hope of his recovery, when finally I was induced to use S.S.S. A few bottles cured him, and no symptoms of the disease remain.

INHERITED SCROFULA

MRS. T. L. MATHERS, Matherville, Miss.

Our book on Blood and Skin Diseases mailed free. SWIFT SPECIFIC CO., Atlanta, Ga.

ELEVATOR ACCIDENT.

George L. Waters, who was accidentally killed in the elevator of the Thurlow Block, San Francisco, on the 7th inst., held two policies for $2000 on his life in the Mutual Benefit Life Insurance Company of New Jersey, both of which policies had lapsed by non-payment of premiums in November last. Nevertheless both policies will be paid in full—$2000—to his daughter under the admirable non-forfeiture and extension system of this grand old New Jersey Company with over $52,000,000.00, solid assets. The payment of these lapsed policies in full without any sort of action by the assured, not as an act of grace and favor, but as a matter of contract and legal obligation, furnishes the very best illustration of the practical operation and value of the non-forfeiture and extension system of this company. For full particulars see specimen policy and strong points published in the 1893 "San Francisco Directory," pages from 1514 to 1524. Said Directory at Weil's, Fargo's Country Agencies. James Munsell, Jr., Manager, 415 Montgomery Street, San Francisco.

FOR SALE.

An engine that in simplicity is a marvel and is supplanting all other engines of its character. The manufacturers of the Hercules Gas and Gasoline Engines can show results which are an assurance that their engines are the best. Inform yourself and send for catalogue to Palmer & Rey Type Foundry, San Francisco, Cal.

Try Germ for Breakfast.

Use Enameline Stove Polish; no dust, no smell

SOMETHING UNUSUAL, as a medicine, is Dr. Pierce's Golden Medical Discovery. And, because of that, there's something unusual in the way of selling it. Where every other medicine of its kind only *promises*, this is *guaranteed*. If it ever fails to benefit or cure, you have your money back.

It's the only guaranteed remedy for every disease caused by a disordered liver or impure blood. Dyspepsia, Biliousness, the most stubborn Skin, Scalp and Scrofulous affections, even Consumption (or Lung-scrofula) in its earlier stages, all are cured by it.

It purifies and enriches the blood, rouses every organ into healthful action, and restores strength and vigor. In building up both flesh and strength of pale, puny, Scrofulous children, or to invigorate and brace up the system after "Grippe," pneumonia, fevers, and other prostrating acute diseases, nothing can equal the "Discovery."

You pay only for the *good* you get.

DOCTOR

Pardee's Remedy,

THE GREAT CURE —FOR— INDIGESTION

and Constipation.

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism, Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO.,
9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE

STATIONARY AND MARINE **ENGINES.**

Can be used in City or Country, Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

THE RAIN.

We knew it would rain, for all the morn
A spirit on slender robes of mist
Was lowering its golden buckets down
Into the vapory amethyst
Of marshes and swamps and dismal fens,
Scooping the dew that lay in the flowers,
Dipping the jewels out of the sea,
To sprinkle them over the land in showers.
We knew it would rain, for the poplars showed
The white of their leaves, the amber grain
Shrunk in the wind, and the lightning now
Is tangled in the tremulous skeins of rain!

—T. B. Aldrich.

THE LODGER.

I felt the moment I saw him that Dr. Arnold was not an ordinary man. He hired my first floor and put a bell and plate on the door, as if in search of patients, but he seemed comfortably off, if not wealthy. He brought a quantity of things into the house, though I considered my two parlors well furnished. First came a desk, then a bookcase and lastly a wagon load of huge trunks.

The front parlor was his office, the back his surgery and he used the extension for a bedchamber. I was delighted when I caught sight of the rooms after the doctor and his colored servant had arranged them. The doors and windows were all draped with magnificent curtains or portieres made of rich stuff, embroidered in strange patterns. Goblins, birds, butterflies and queer creatures such as I had never seen or heard of reveled all over the curtains, which were formed of heavy, dark green silk. Much of the embroidery was in gold and all the portieres were finished with heavy gold bullion fringes. Then there were rugs and mats so brilliant and beautiful that they seemed to my eyes handsome enough to be framed like pictures.

The thought came into my mind that the doctor's wealth must be unbounded, and I felt I must respect even if I did not like him.

As I gazed the servant came in with his stealthy step, as noiseless as a snake. He bowed and addressed me in broken English.

"What Missy Sahib wishes?" he asked, in his smooth, oily voice.

I disliked the man as much as I did his master. He was not like any colored man I had ever seen. He was tall and thin and his long face always wore a smile, but his eyes were like a snake's, and so were his movements, and his long, straight hair seemed glued to his narrow head.

"Nothing. I am only admiring the rooms. Those curtains are beautiful."

"They are from my country," he said, bowing, as if I had paid him a compliment.

"And what country is that?"

"India. I am a Hindoo."

After that I did not see much of master or man. They had paid the rent and gave no trouble. The servant waited on his master and they were very quiet lodgers, for the doctor had scarcely a patient.

After they had been two months in the house the doctor sent me word that he would be absent a few days and did not wish any one to enter his rooms. Now I should have mentioned that I am a woman and I must also confess that I inherit my own share of Mother Eve's curiosity, so as soon as I saw the doctor go out of the house I was determined I should examine his apartments at my leisure. Mustapha, the man, however, remained behind, and I had to possess my soul in patience till he should be out of the way.

The opportunity came three days after the doctor's departure. Mustapha came up to inform me that he was going out for a short time.

No sooner was he out of the house than I took my bunch of keys—for, like most landladies, I have a spare key for every room in the house and take care to go through them, for an unprotected woman does not want to harbor anarchists without knowing it—and unlocked the door of the extension.

Dear me! What heaps of beautiful things there were in those rooms. China so fine and thin that it looked as if a breath would destroy it, odd images of gold and silver, bronzes, dishes and figures, and most of the idols—for such I afterward learned they were—had great, gleaming eyes, made of precious stones, that seemed to follow me about and made me nervous.

I took my time and was in the front parlor when I heard a carriage drive up to the door, and peeping out what was my horror to see the doctor alight in company with Mustapha and a stranger. Before I could move they were in the house. I darted behind a portiere, trusting they would soon go out, for I hate to be caught in any act that looks mean, and I resolved to make my escape as soon as I had the place to myself.

To my surprise, Mustapha proceeded to lock the door—the curtains were already close drawn before every window—and he lit two or three large lamps, which gave out a delicious perfume which caused my head to swim.

He then took out a copper brasier and kindled a fire in it. The flames shot up and the perfume grew stronger and seemed to fill the rooms with moving forms amid the smoke. I stood like a person bewitched and Mustapha began to chant in some outlandish tongue.

The doctor stood motionless, his great, hollow, gray eyes fixed on a hideous image that stood on a pedestal. His long, thin face wore a terrible expression, his hair seemed to stand on end and a ghastly grin distorted his features.

At length the Hindoo stopped his chant and the doctor turned to the stranger, who was a fine looking elderly gentleman, but who seemed dreadfully nervous and pale.

"That rite is complete. It is a portion of the worship of the goddess Siva."

I nearly screamed out. So they were worshiping that ugly image in my back parlor? Worse was to come, however. The man placed a queer shaped teakettle over the coals, and soon it began to sing as if a Christian woman was going to make a civilized cup of tea.

"Now for an experiment," said Dr. Arnold, and Mustapha drew forward one of the enormous trunks. It was covered with a tiger skin, which he threw aside.

"Examine your seals," said the doctor. "See if they have been tampered with."

"No."

The stranger looked paler and seemed more nervous every moment.

He had examined the seals on the locks of the trunk carefully. It had three.

"They are just as they were three months ago today?"

"Yes."

The doctor struck a match and lit a taper. He held the flame to the red wax and the seals melted.

"Unlock the trunk."

The stranger drew a key from his pocket and did so with trembling hands.

The lid was thrown back and Mustapha, assisted by his master, drew a shapeless form from the trunk and laid it on the carpet.

I believe my tongue clove to the roof of my mouth or I should have screamed. The form was inclosed in a large box and it was a dead body.

"Examine these seals also."

Around the mouth of the bag a rope was tied and the knots were sealed like the trunk.

"Three months ago," resumed the doctor, "my daughter, who was born in India and is of the religion of Shamin, took upon her a vow to perform this sacrifice in honor of the great goddess Siva. She closed her throat by swallowing strips of linen after the manner of Hindoo fakirs. She then threw herself into a cataleptic state, and I, in your presence, sealed her nostrils with plugs of flax steeped in wax. I then inclosed her pulseless and rigid form in this shroud, the seals of which are still intact. I shall now restore her to life."

Meanwhile Mustapha had been busy mixing a paste of flourlike stuff and boiling water in a shining brass bowl.

The doctor broke the seals and drew down the shroud, revealing the form of a woman. Her face was shriveled and brown like a mummy. As I stood, hoping I was in a horrid dream, he went on: "Observe that this body is cold and pulseless as it was when I placed it in that trunk three months ago."

The stranger bowed. He seemed on the point of fainting.

The doctor calmly drew the plugs of flax from the nostrils and opened the mouth. The tongue was doubled back, and he restored it to its natural position. He then took the paste from the servant and poured some of it over the head and emptied the kettle over the body. Again and again he applied the paste, and at length said calmly, "The pulse is beating and respiration has commenced."

Mustapha handed him a goblet full of a beautiful rose colored liquid, and he poured it down the throat of the body. In a moment the corpse opened its eyes, the face grew lifelike and the hands began to twitch.

At the sight of this I fell senseless. When I was restored to consciousness I found myself lying on a lounge; the doctor was bending over me and the large trunk was removed.

I gazed around in bewilderment. The lamps still burned and the copper brazier stood beside the ugly idol which made me shiver as it seemed to watch me with its sinister eye.

"You have disobeyed my orders and have suffered for it," said the doctor coolly as he offered me wine.

I waved him away and rose to my feet.

"You must leave my house this very day," I exclaimed.

"Very good. And you—must be silent." He gave me such a fearful look I grew cold all over.

A shrill laugh sounded near me, and looking around I caught sight of the dead body.

Dead no longer! A living body with a dark, evil face and deep, glittering eyes.

"You see, madam," she said, in a mocking, devilish manner, "you feel the effects of our experiment more than I do. Shake hands and assure yourself I am alive."

"No," I said indignantly. "I renounce the devil and all his works. Begone out of my house!"

I left the room and crept up to my bed, where I lay for weeks. My faithful servant Maggie nursed me back to health, but my mind was ill at ease.

I determined to hear the worst and asked her one day suddenly, "Has the doctor gone and taken all belonging to him?"

"Yes, ma'am; the day you took sick, and do you know that he had a daughter with him? I was struck when I saw her go out, for she did not come in the carriage that day. I saw them come in."

"What did she look like, Maggie?" I asked faintly.

"Awful thin and dark as an Indian, with horrid looking eyes, like coals of fire."

The doctor had left a note for me. It contained $500. On the paper wrapped around the bills was written, "Be silent or beware."

I have been silent for years, but tell my story now to let people know what strange things can happen in a large city like New York.—Mrs. K. F. Hill in New York Mercury.

Money In China and Egypt.

Coins were made in China so long ago, it is said, as the year 2250 B. C., but they could not have been other than portions of metal cast into portable shape, such as were all the earliest moneys. In Egypt, the cradle of civilization and commerce, strange to say, there was no imperial coinage. Copper, silver and gold were used as elsewhere, to indicate values, but they were manufactured into lumps, shaped sometimes like brick, and in the case of gold and silver were molded in rings, like the ancient Irish money of ten centuries ago. It appears almost inconceivable that a people who created the pyramids and erected such magnificent temples should have been entirely ignorant of coins.

Yet it is certain from the statements of Herodotus that such was the case. The first coinage of money in Egypt was not struck to assist the Egyptians themselves in their commercial dealings, but rather because the foreign merchants with whom they traded, the Greeks and the Phoenicians, demanded some media which would have the guarantee of its value apparent on it and which would circulate for that value.—Brooklyn Eagle.

A Home Catarrh Cure.

Sometimes simple old fashioned remedies are as efficacious as serious drugs. A cure in use for years for catarrhal colds and mild bronchial affections in a certain household is to inhale the fumes of singed mullein leaves. Scatter the leaves on a hot shovel or stove lid and breathe in the the smoke which will arise. In all ordinary cases it will bring speedy relief. In the family referred to the mullein is gathered in the late summer and dried, but the Shaker pressed mullein to be had at any druggist's is as good.—Her Point of View in New York Times.

Hard to Believe.

A station master requested an increase of salary and threatened to leave if he didn't get it.

The superintendent replied to his request by relating a story.

"When I was a young man," said he, "I once did as you are doing—I told the superintendent of the line I was then working on what you have told me. He refused my demand and I left, and would you believe it—that railway line is running yet?"—London Tit-Bits.

The Pit Diamond.

The Pit or Regent diamond belonged to the French crown jewels. It was bought by the Duke of Orleans, then regent of France, of Pit, the governor of Fort St. George, for £125,000. When in the rough the stone weighed 450 carats. The cutting alone cost $10,000.—St. Louis Republic.

Lemons for Cleaning Gas Fixtures.

To clean brass gas fixtures rub them with cut lemons, and then wash them off in hot water.—New York Journal.

RIDING A 'GATOR.

A Florida Man Who Thinks Nothing of Mounting the Saurian.

NO DANGER WHILE IN THE WATER

Vault Lightly to the Animal's Back, Press Your Thumbs Over His Eyes and Say "G'lang."

If the ancient writers and painters who depicted men on horseback as centaurs were now living what a field they would find in Florida for originating new forms of life, provided they followed the idea developed in the production of the creature that was part man and part horse! Here, for instance, they could see men riding huge saurians across a lake without either reins or saddle, some coming from the depths of the ocean mounted on gigantic turtles weighing as much as Clydesdale horses, and others straddling a jewfish, shark or porpoise, or being towed behind an enormous sea devil in a cockle shell of a boat or in a large schooner.

Tampa boasts of a colored citizen who has no more fear of an alligator than he has of the harmless lizard, and will attempt to ride one any day for a small sum of money. His method of riding the reptile is to enter a lake or pond where the species congregates, select a large one, jump on its back quickly and pressing his thumbs on its eyes, urge it shoreward.

An employee of the South Florida railroad, whose name I have received permission to use, informed me that he had often mounted old bulls in the lakes of Hernando county and ridden them ashore without any trouble by simply pressing his thumbs on their eyes and urging them forward with his heels or shouts. He found it far easier work to mount than dismount, for as soon as his saurian steed touched the shore it tried to seize his leg by bringing its tail and head suddenly together and rolling over and over like a barrel going down hill. This is the ordinary method employed by alligators for capturing their prey or enemies, and as its efficacy depends on the prompt conjunction of jaws and tail, the stroke may be readily avoided by a little "figuring," to use Mr. Stafford's expression.

According to Mr. Stafford, all he had to do when in want of an aquatic mustang was to enter a half dried pond, pick out the largest and laziest saurian he saw there, mount it promptly and point its head landward. The mounted animal, according to his statement, makes no fuss about moving wherever it is directed while in the water, but the moment it touches land it uses every effort to throw and devour its jockey.

It is possible to ride an alligator some distance overland by tying its muzzle, as it does not attempt to do any injury until it can throw its open mouth and long tail together by a sudden sweep to one side. Mr. Stafford, who is, I believe, a native of Florida, a veteran hunter and an expert alligator jockey, relates an anecdote which shows that saurian riding is as dangerous as Irish steeplechasing when the mount is sulky or wounded. He had ridden an alligator ashore during one of his hunting trips, and as it was rather large and its skin, as a consequence, usually valuable, he decided to kill and flay it near the pond.

After emptying the contents of his rifle into its head and assuring himself of its being dead, he drew his knife to flay it; but he had hardly touched the head ere the alligator returned to life, and seizing him by the coat sleeve commenced rolling over and over. The second or third roll took the sleeve off his coat and dislocated his arm, and on being set free in this unexpected manner it did not take him long to scramble out of reach of the furious reptile. A physician who was hunting with him set his arm in a few moments, and when that was done the jockey poured lead into his late mount until he was sure that its ferocious spirit had fled.

A man who has shot alligators for their hides told me that the animals were harmless in winter and inclined to avoid a contest with men at all times unless they were wounded or defending their young. They are worse in the pairing season than at any other, the bulls being then unusually petulant, more than ordinarily stupid and stubborn and inclined to resent any intrusion on their grounds. Yet by boldly facing them they can be forced to run, and may even be mounted and ridden ashore, provided there are no females in the vicinity.

He once tried to ride an old bull toward a landmark that loomed above all other objects on the flat shore of a lake on a dark night, and wondered why his steed tried so hard to turn away from it whenever the thumbs were lifted off the eyes, but he was able to account for it readily a few moments later, when an enraged female that was guarding the landmark, which was her nest, rushed open mouthed and grunting like an insane grizzly, and sent her conqueror precipitately to the rear and its jockey deep into the mud.

Fortunately for him the assailant was more enraged at the bull than at the jockey and followed it several hundred yards, charging at intervals and thrashing it vigorously with her tail whenever she got an opportunity. The male was driven almost across the lake before she decided to return and attack the man but he was running on shore for dear life long before she had given up the pursuit of the steed.

The rider said he had seen many desperate charges during the civil war, but that he never was in one that so completely benumbed his faculties as the charge of that "big mouthed squaw 'gator." He thought he could ride a male saurian at any time of the year but that no man living could retain his seat for any length of time on the back of a female that was defending her nest or was accompanied by her young.—Cor St. Louis Republic.

In eight Kansas cities woman voters outnumber the men.

SO CALLED UNLUCKY DAYS.

Many Days In the Year Are Said to Blight the Lives of Heedless Lovers.

There are certain dates upon the calendar which cannot be fixed upon for "the happy day," because hoary tradition has decided otherwise. If the subtle fever of matrimony is working in your brain, consult the following list of unlucky days and be governed accordingly: Jan. 1, 2, 4, 5, 7, 10, 15; Feb. 6, 7, 18; March 1, 6, 8; April 6, 11; May 5, 6, 7; June 7, 15; July 5, 19; Aug. 15, 19; Sept. 6, 7; Oct. 6; Nov. 15, 16, and Dec. 15, 16, 17. These particular days are warranted to blight the lives of the truest lovers ever seen.

But they are not the only snares which threaten the matrimonially inclined. Read this little verse:

Monday for wealth,
Tuesday for health,
Wednesday the best day of all;
Thursday for crosses,
Friday for losses,
Saturday no luck at all!

Hyman has a deep seated grudge against the latter part of the week. No good and sufficient reasons can be advanced for this partiality, but as marriage is not often an affair of the reason it would be well perhaps to respect the caprices of its particular deity.

Having learned the particular days to be avoided, the feverish lover may think that he can breathe freely. Not yet! The plot still thickens. He has yet to learn that the old Romans started the idea that June was at the top notch as a propitious month for matrimony, and that May was correspondingly below par. This complicates matters even more, but the tangle is still further aggravated by the moon, that potent factor in all human affairs.

If the individual who is credited with inhabiting the land of green cheese were a woman, it would help out the theory that a wedding should be celebrated only when the moon is full. That would gratify a woman's proverbial desire to have a good view of such affairs. At any rate such is the superstition that nothing short of the full light of the sanguine moon can dispel the clouds which seem to hang over the voyage of wedded life.

Probably by this time the lover who would a-wooing go is in the depths of despondency, but the end is not yet. Here is another warning which cuts the matrimonial season down to still narrower limits:

Marry in Lent,
And you'll live to repent.

No wonder that unhappy marriages are so common and the divorce lawyers so sleek and well fed. There seems to be no forgetmenot crop of days "that grow for happy lovers." But if the lovers are really determined to wed they can probably, out of all these unlucky conditions, sift some day to which no penalty attaches, and having settled that point turn their attention to other utterances of Sibylline tradition.—New York Sun.

Perpetual Motion Reward.

I am often asked the question, How much money do the different governments of the world offer for the discovery of perpetual motion? To all such I invariably give this answer: There is no patent law relative to perpetual motion machines. Neither is there a fixed sum of money offered by any government for the invention of such an unheard of contrivance. As early as 1775—118 years ago—the French Academy of Sciences refused to even consider the claims of the so called perpetual motion inventors. A valuable reference work before me in making mention of those who are experimenting in that direction says: "They have an idea that some immense government reward has for years been laid aside for the successful inventor. Unhappily this idea is as fallacious as the grand delusion itself."—St. Louis Republic.

Booth's Loss When Barrett Died.

Mr. Barrett's death, for which Mr. Booth was entirely unprepared, was a terrible shock to the survivor and a blow from which he never fully recovered. The gentle spirit of "The Man of Airlie" seemed to haunt in the most pleasant way his old apartments adjoining those of Mr. Booth at The Players, and more than once after Mr. Barrett had passed away, when some heavy truck in the street had jarred the building and caused the strings of the automatic harp upon his closed door "to play sweet music," Mr. Booth has turned his sad face toward it and has said with a smile, "There comes poor Lawrence now."—Harper's Weekly.

Work For a Painstaking Jeweler.

Not very long ago a London newspaper announced that a jeweler of Turin had made a tugboat formed of a single pearl. The sail is of beaten gold studded with diamonds, and the binnacle light at the prow is a perfect ruby. An emerald serves as its rudder, and the stand on which it is mounted is a slab of whitest ivory. The entire weight of this marvelous specimen of the jeweler's craft is less than half an ounce, but the maker values it at £1,000.

Forgot Himself.

She—My husband is a brute!

Friend—All men are brutes, my dear.

She—Mine is simply abominable! I asked him if he did not think you were as pretty as I, and he said, "Yes."—New York Weekly.

GAMINS OF ROME.

They are a Constant Source of Delight and Torment to Travelers.

THEIR WAYS OF EARNING A LIVING.

Clever Little Children Who Grow Up From Early Childhood Homeless and Without Restraint.

"Street gamins in Rome," the reader may think, "are probably not very different from street gamins elsewhere—curious, impudent and a nuisance generally."

They certainly are endowed with those qualities most generously, nor are they all as handsome and interesting as the familiar "Roman Boy," with large, dreamy eyes, long, black locks, and the stereotyped high pointed hat, which may be seen in oil, aquarelle or copper in the windows of almost every art dealer.

Early in the morning these little fellows begin their day's work. The first thing to be done is usually to secure breakfast in some way from one of the numerous herdsmen who daily bring their goats to the city and milk them in the street, one by one, as they find customers on their route. When the herdsman for a few moments leaves his flock to deliver milk and solicit new orders, the watchful, half naked boys will dart out from a corner or alley, squat down and suck the fresh, warm milk from the full udders. When the indignant rustic appears with his long staff to punish the juvenile marauders, they are off and vanish as quickly as they appeared.

Strengthened by their primitive meal, they now begin the more legitimate part of their day's work. The newspapers are brought out and sold under deafening yelling. Other youthful street hawkers appear with a variety of wares, such as pins, toothpicks, pictures of saints, busts of Victor Emmanuel and Umberto, lottery tickets, etc. Some of the most enterprising make rhymes on the list of their wares and sing the same lustily to some popular opera melody.

With an experienced eye they spot every foreigner who comes within sight, and know to perfection how to take advantage of his peculiarities. When I one day during my stay in Rome got into a dispute with a cabman because he, in addition to the regular fare, demanded buona mansia—a tip—a little fellow six or seven years old came up and said in a paternal, assuring tone:

"Sixty centime is enough, sir. The rascal is very impudent; don't you give him any more."

In the same breath he asked me for a soldo for the service rendered. I handed him a coin, laughing at his grand airs, and he received it with a condescending gesture as he patronizingly said:

"Grazie, signor! a revider." (I will see you later, as we would say.) Then he hastily made his departure, for the driver reached for his whip and was going to pay him for his untimely meddling. I had walked only a short distance when another boy was at my side.

"Si, signor, you are quite right; this is the road to St. Pietro and the Vatican—give me a soldo!"

What a logical argument! I drove him off of course. But a few minutes later a third one bounded forward.

"Your boots, sir! your boots!"

I am not so extravagant as some of the native Romans, who have their boots polished several times in a day, and I tried to ignore him. Then he appealed to my self respect.

"But, my lord, such boots!" he exclaimed reprovingly, as he trotted along by my side. "Oh, Dio mio! what nasty boots! Oh, Santo Madre di Dio! what boots! I really pity you, sir. Indeed! such boots! In fato! I am sorry for you!"

All this was uttered in a tone of the most profound moral conviction, the most disinterested fellow feeling of regret and sympathy, as if I were a friend whom he had met on a forbidden way. But when also this appeal failed he dropped behind a few steps and changed his tactics to a very noisy persecution:

"Just look at that American! One can always tell an American by his dirty boots."

That was too much for me. I concluded to let the little imp shine my boots rather than see the entire American people expelled from the family of well polished nations.

These children, bold and full of vulgar bombast as they are, must not be judged too harshly. It must be remembered that most of them are orphans. They have to make their own living, and therefore often spend their childhood in the streets, where they make their way as best they may. Then, too, a little friendly encouragement changes them into the most amiable and obliging little beings. A couple of soldi or a cigarette makes them the most painstaking guides and trusty messengers.

Where do all these homeless boys sleep? There are plenty of quarters for the night in Rome. Among the pillars surrounding the ancient buildings, the church portals, the recesses about the chapels, the niches of the numberless saints—all these are excellent lodging places. Only the Coliseum with its eighty portals makes an exception, for one of them is the guardhouse of the police, and in Rome, as elsewhere, a natural instinct forbids the street arabs to mingle too freely with even the humblest of city officials. After the day's battle some of these homeless boys will lie down and sleep in the doorway of the nearest house, and it is not an uncommon thing, when one comes home late, to stumble over a pair of small brown legs, whose owner mechanically reaches out with his little hand and in a sleepy voice says, "Un soldo, signor!"

Thus passes day after day for the street boys in the Eternal City. They grow up in a constant fight for existence. The street is their home and their school. They go through life with an imperturbable sang froid that is simply enviable. They know of no other burden than the care for the necessities of the moment, and among them a cigar or a cigarette is the most serious. Then they become young men well equipped with practical knowledge of the world and with health. They are qualified with almost everything except to sit still and be idle. Excellent servants, good soldiers and hard working men generally grow out of these street boys. As a matter of course, also dead beats and criminals.—New York Tribune.

A Georgia Cow That Gives Butter.

A cow that gives milk which changes to butter without churning is a rare thing. Lawson E. Brown of Rozier says he has one. When the milk is strained off after milking, the cream which rises on it is very thick, changes, or rather hardens, into the consistency of butter and is used as butter without going through the process of churning.—

A Wise Provision.

Mr. Baldie—I have discovered that baldness is a wise provision of nature.

Philosopher—That's a discovery surely.

"Yes. You have noticed doubtless that I am bald as a billiard ball as far down as the rim of my hat, but below that the hair grows as luxuriantly as ever."

"Yes, that is usually the case."

"Exactly. Well, now comes my discovery. Barber shops are often drafty, you know."

"Very frequently."

"Too true. Sure to give folks influenza, pneumonia and I don't know what all."

"Drafts are always dangerous."

"That's it. Well a baldheaded man can have his hair cut without removing his hat."—New York Weekly.

Sure of It.

Miss Youngbred—George says he proposed to some one the other night.

Miss Oldboy—Well, I wasn't the one.

Miss Youngbred—I thought not. He said he got jilted.—Truth.

How a Young Doctor Diagnosed.

Young Doctor to Patient—Let me look at your tongue. H'm—troubled with dyspep——

Patient—Not a bit. I can eat sole leather.

Young Doctor—Let me feel your pulse. H'm—wakefulness at night?

Patient—Sleep like a top.

Young Doctor—Let me see your tongue. H'm—dizziness and pains in——

Patient—No.

Young Doctor—Let me feel your pulse. H'm—easily tired, with an indisposition to mental exertion of any——

Patient—No.

Young Doctor—Let me see your tongue. H'm—headache and stiffness of the——

Patient—Haven't had a headache in 25 years.

Young Doctor—Let me feel your pulse. H'm—you are using too much tobacco.

Patient—Never touch it in any shape.

Young Doctor—Let me see your pulse—er—I mean your tongue. H'm—too much confined to your desk. You need fresh air and——

Patient—I'm a letter carrier.

Young Doctor—Let me feel your tongue—that is, I should say your pulse. H'm—you have a tired feeling come over——

Patient—Never.

Young Doctor—Let me see your—never mind, your tongue. Feverish at times, with a desire for water.

Patient—No, beer.

Young Doctor—Do you drink beer?

Patient—Oh, yes.

Young Doctor—To excess?

Patient—No.

Young Doctor—Tell me how many glasses a day?

Patient—Sometimes more and sometimes fewer.

Young Doctor—I thought so. We members of the medical profession are seldom deceived in our diagnosis of a case.

Patient—Am I in any danger, doctor?

Young Doctor—No immediate danger, but it's lucky you called me in!—Yankee Blade.

Too Sympathetic.

In Liverpool recently a sentimental young lady from town was on the Cunard steamship quay, where she saw a young girl sitting on a trunk in an attitude of utter dejection and despair.

"Poor thing," thought the romantic lady, "she is probably alone and a stranger. Her pale cheeks and great sad eyes tell of a broken heart and a yearning for sympathy."

She went over to the traveler to win her confidence.

"Crossed in love?" she asked sympathetically.

"No," replied the girl with a sigh, "crossed in the Servia, and an awfully rough passage too!"—London Spare Moments.

Piscatorial Item.

Mr. Hudson Rivers is an enthusiastic fisherman, and he always manages to bring home fish. A few mornings ago, being fully equipped with rod, etc., he stopped on his way to the fishing boat at a Harlem fish market.

"What can I do for you today?" asked the urbane proprietor.

"Put aside that big striped bass until I get back. I am going to catch him while I am out at the fishing banks today."—Texas Siftings.

Married Lovers.

Bilkins—There goes Jack and his wife. Mighty few people love each other as they do.

Wilkins—Then why do they fight like cats and dogs all the time?

Bilkins—They are jealous of each other.—New York Weekly.

Matrimonial Item.

Mr. Chumly—How are you coming on with your lawsuit? You know you told me that Sharke had swindled you out of $10,000.

Mr. Manygirls—Oh, we have made a compromise. He has married my eldest daughter.—Exchange.

A Leading Question.

Miss Pinkerly—Isn't it a pity that all the good looking people can't be bright, and all the bright people good looking?

Young Tutter—Yes, indeed it is, Miss Pinkerly. But tell me, if you had your choice, which would you be?—Life.

Too Personal.

Mrs. Flockton—I wonder is it true? People say that you sometimes go to sleep over your sermons.

Parson Dulleigh—People, I suspect, judge me by themselves.—Boston Transcript.

No Doubt of It.

Quericus—I wonder who originated the word "henpecked."

Witticus—Can't say. The first rooster I should imagine.—Vogue.

An Absorbing Occupation.

"Your husband doesn't go out nights any more?"

"No. I've bought him a meerschaum pipe to color."—Truth.

A NOMADIC RACE.

Origin, Manners, Customs and Method of Living of the Gypsies.

INDUSTRIOUS IN THEIR OWN WAY.

The General Impression Regarding These People is Wrong.—Do not Like Civilization.

A reporter has had the novel pleasure of passing an evening with a family of genuine full blooded gypsies at their home in this city.

To the average reader this statement will not appear particularly startling nor interesting, for the average reader is probably not sufficiently conversant with gypsies and their ways to be interested in a family of them which journeyed across the water to make a new home in the United States.

It is safe to say that the popular idea of gypsies is far from being correct. All have seen our wandering nomads traveling along our highways or bivouacking in their filthy tents and still more filthy camps. Ask ten people what a gypsy is and six of them will substantially say:

"People who travel about the country and exist by doing as little work as they can and by stealing all they can lay their hands upon."

This impression is all wrong and there are few, very few, genuine gypsies in this country.

Gypsies are a distinct race and nationality in themselves; as distinct as the Germans are from the Chinese or the Russians from the Americans. They are suppose to come, as their name indicates, originally from Egypt. They have a language of their own, the Romanee chick, or "Gypsy tongue," which is still preserved and spoken almost as purely as it was centuries ago. It is made up of the Egyptian, Hindoostanee, Roumanian and other languages.

Gypsies are scattered over all Europe, and there are today over 70,000 of them on that continent. It is not known when first they left their native country and began to make their appearance in Europe. They entered Germany in 1122, and as early as 1531 many of them were in Scotland, following the occupations of actors and dancers and tinkers. They are known to this day in Scotland as "tinklers." The better and more progressive class of gypsies seem to have adopted Great Britain as their home. While the men have as a rule followed horse trading as a business, and the women fortune telling and basket making, they have turned their hands to nearly all trades and occupations.

NEITHER POOR NOR LAZY.

Gypsies have figured as engravers, metal and iron workers, actors, artists, musicians, clergymen, evangelists, carpenters, physicians and so on. Working upon iron and metals appears to have been their forte, however, next to dealing in horses. In 1726 they cast a large bell at Edgehill, and at about the same period they practiced engraving on pewter, lead and copper. Gypsies also conducted an iron foundry near St. Andrew's. In Hungary, in 1496, they made bullets and cannon balls.

No one should for a moment think that gypsies are either poor, careless as to their personal appearance or shunned socially by the people with whom they come in contact. Many gypsies are very "well fixed" financially, and few if any in Europe or on the Continent are not well supplied with all the necessaries of life. They own valuable horses, fine wagons and caravans, comfortable tents and furnishings. In return, they have been entertained by kaiser and pope on the Continent, and by dukes and earls in England.

One Charles Bosworth, a gypsy "king," lived and flourished at Rossington in Yorkshire in 1709. According to all accounts Charles was a roistering blade and enjoyed himself to the utmost. History informs us that he "was a mad spark, mighty fine and brisk, keeping company with a great many gentlemen, knights and esquires." An idea of the social standing of the gypsies can be formed when in 1750 the Prince and Princess of Wales journeyed to Norwood to visit "Queen" Margaret.

Like the Jews, the gypsies have for centuries been a greatly oppressed race, and great injustice has been done them. As late as 1872 forty-seven of them were arrested in Germany upon various charges and imprisoned. When they came to trial not one of the charges could be sustained and they were all released.

HOW THEY LIVE.

As a rule the gypsies are superior to many of the people whose countries they pass through. They are bright and extremely courteous.

They remain frequently several weeks in one camp. Reaching a town they hire a camping ground, which is usually a large field affording sufficient pasturage for their horses and donkeys. The tents are pitched, the camp made and then the men begin to buy and sell horses—this in England and Scotland is called "coping," it being difficult to cope with a gypsy on horse dealing—and the women devote their spare time to basket making and fortune telling. There is a throng of visitors about their camp the greater portion of the time, and a tribe usually takes more money out of a town than it brings in.

The camp is a model of picturesqueness. The tents are small affairs, the grassy soil being the floor, generally covered with dry leaves gathered from the neighboring hedgerows. In front from a tripod hangs a large kettle, and the women wearing dresses and shawls of bright gay colors combine to make the scene a most cheery one. The gypsies are great tea drinkers and brew the beverage in a way that would have delighted the heart of "Sairy Gamp."—New York Recorder.

Miss Dickens, writing of her father, declares that in the Little Nell of "Old Curiosity Shop" is reproduced much of the character of her Aunt Mary, a sister of Mrs. Dickens, who died when little more than a child.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY.

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 15 1893

Senator Perkins has put himself on record as a man of sense. The latest interview had with the Californian will bring small comfort to the minds of his associates who believed that he would be found on their side when filibustering tactics were resorted to in the Senate. Mr. Perkins says the majority in Congress indicates the state of the national mind at the last election and that the the Democracy should be given an opportunity of showing what it can do in the way of correcting tariff abuses. "Dilatory tactics," he says, "are against good judgment and opposed to the will of the people and ought not to be indulged in." That comes as near being the remark of a statesman as anything that has been uttered in this year of grace. That a small minority, absolutely unable to control the will of the majority, and opposing the wishes of the people who elected them should be allowed to waste the time of Congress in wordy warfare, passes understanding, Had the national mind been impressed with the views of those who form the minority, they would not be occupying the cipher side of the numerical strength of Congress. The rebuke administered by the Californian is a severe but merited one. We believe that the Senate is not the place to make politics in the present unsettled condition of the country; it should be the desire of every Senator who has the national welfare of the country at heart, to push to a vote any measure that is offered in good faith for the benefit of the people. Nothing good is ever accomplished by dilatory tactics; the business of the nation is suspended; in the heat of debate honorable Senators forget that they are not hoodlums and doff the toga to take up the battle with their fists; the country is treated to scenes that do much toward reconciling the people to the prize ring, and shame and dishonor come to the highest legislative body in the world. Senator Perkins is right. The majority rules; the minority can cast its vote in opposition, but it should leave to the nation the task of proving that the majority is in error.

From the dispatches it is gleaned that the mass of the Brazilian populace favor a monarchy. Whether this be true or not, and whether the struggle now going on results in the end of the present praetorian system of a government and the re-establishment of a monarchy, it is evident that it is the result of the high-handed and autocratic demeanor of President Peixoto. The Brazilian people during the reign of Dom Pedro manifested their desire for a republican form of government. Dom Pedro saw it long before he was compelled to withdraw. There is no reason to suppose that the Brazilian populace have changed their minds. It is very natural that they should prefer an elastic monarchy, such as existed under Dom Pedro, to the rule of a dictator such as President Peixoto has demonstrated himself to be. The Brazilian people have not had a fair trial of a republic, and could they secure a popular form of government such as they desire, they would have no use for a monarchy, liberal or otherwise.

There are signs in nearly all the shoe manufacturing towns of the northern and Atlantic States of improvement. Some factories are beginning to run full hours, others employing more men. Factories whose owners failed and which with machinery are for sale, are being examined by capitalists proposing to incorporate companies to work them. Strangely enough too, in the general outcry against dull times some manufacturers are contemplating making additions to their buildings, to give them room for larger trade.

Senator Jones, of Nevada, says that his observation of financial affairs confirms him in the opinion expressed by himself and other silver advocates prior to the passage of the bill repealing the Sherman purchasing silver act, that there will be no material revival of business because of that action by Congress. He says that he does not expect to see any legislation which will materially help silver during the present administration.

A man up north had two wives and one mother-in-law killed by a runaway horse. He was again married last week. He still owns the horse.

An Iowa woman has been driven insane by the cross-examination of a lawyer. That's what comes of coming in contact with the bar.

A BALLAD OF LIGHT HOUSEKEEPING.

'Tis a subtly sweet suggestive phrase,
But the simple soul who is lured thereby
Will make a sorrow for many days.
In secret oft will he moan and cry
And vote the thing a tremendous lie,
For it means, this phrase that sounds so fair,
A world of trouble and toil and care
And a wild distracting wish to go
Away from it soon and anywhere.
I speak of the things whereof I know.

It means all little transparent ways
To hide away from the common eye
The fact that your bread and butter stays
In your desk; that you bake and boil and fry
In a single dish. It means to try
To hang your garments, the best you wear,
In a folding bed, that last despair
Of honest souls; and, bitterest blow,
It means a kitchen parlor air.
I speak of the things whereof I know.

It means to shrink 'neath the stern amaze
Of the lordly butcher's and baker's eye,
Apologizing in meek dispraise
For your modest wants. To rave or sigh
Over the pangs of the boughten pie.
'Tis to pray a strong, heav'n reaching prayer
For the meal a man pronounces "square,"
And to be once more in life below
Free from that peace destroying snare.
I speak of the things whereof I know.

ENVOY.

Ye who have 'tempted this life to share,
Pause ere ye enter the tiger's lair;
Consider the truth I fain would show.
For with hand on heart I firmly swear
I speak of the things whereof I know.

—Carlotta Perry.

A Mother's Way.

When the Rev. Horace Bushnell was a boy, he was very desirous of knowing something about music. No one in the family could teach him, however, and his mother, with that divine patience and insight which belong to mothers in general, found that if the lad was to have his wish at all it must be through her. She obtained a book and soon taught him all she knew—the scale, the keynote and how to find it, and the time of the notes.

This was only "book learning," however, and the question was to adapt it to the use of the voice. Little Horace wanted to sing by note, and that his mother could not teach him. She could sing by ear, however, and the two hit upon a species of reverse process. The mother sang familiar tunes, and the boy watched the notes, observing how the intervals and time ran along, and, as he expressed it, "soon began almost to sing with us."

And from singing airs they knew into notes that bore no meaning they finally learned to sing airs they did not know out of similar notation. The method had been unlocked, and further progress was easy. The mother's heart had found out the way.—Youth's Companion.

A City of Roof Gardens.

The majority of the houses in Buenos Ayres have but one story, whose flat roof serves all the purposes of Yankee lawns and door yards. While the patios are frequently utilized as dining and sitting rooms, it is the universal custom to promenade in the cool of the day on the housetops, to sit there at morning and evening enjoying the refreshing breezes, extensive views and varied panorama in the street below. The children find their favorite playground on the roof. There the nurses bring their infant charges, the seamstress her sewing and the maid her mistress' bedraggled finery to put in order again. The clothes are dried and aired and ironed atop, and during the "heated term" of this dewless latitude thousands bring up their beds and sleep with starry sky for a counterpane.—Philadelphia Record.

Too Sweeping.

After his return from his first lecturing tour in this country, the late Matthew Arnold visited old Mrs. Proctor, the widow of the poet, "Barry Cornwall," and mother of Adelaide Proctor. Mrs. Proctor, who was then 80 years old, in giving Mr. Arnold a cup of tea asked him:

"And what did they say about you in America?"

"Well," replied the literary autocrat, "they said I was conceited, and they added that my clothes did not fit me."

"Well, now," retorted the old lady, "I think they were mistaken about the clothes."—New York Mail and Express.

Chattel Mortgages.

A man who gives a chattel mortgage should always examine it carefully to make sure it is not "on demand." Sharp money lenders who loan funds on chattel mortgages often try to have this clause inserted, and when it is the borrower may expect to part with his chattels at almost any moment. It is a trick by which advantage is often taken of the unwary.—St. Louis Globe-Democrat.

Bound to Have a Nap.

Conductor (giving him a shake)—Tickets!

Sleeping Suburbanite (pushing his hand away)—No, you don't, Maria! If you want that baby walked with, you can walk with him yourself. I'm going to get some sleep tonight, by jocks, if I miss 50 trains!—Chicago Tribune.

Efforts to domesticate the quail have been persisted in by many people, but generally with indifferent results. Robert Jenkins of Richmond, Ind., however, claims to have recently tamed a brood of quail, who live on his premises, showing no indication that they prefer the woods and fields.

Every crowned head of Europe, with the exception of that of Turkey, is descended from one of two sisters, the daughters of Duke Ludwig Rudolf of Brunswick-Wolfenbuttel, who lived about 150 years ago.

At Aix-la-Chappelle there is a newspaper museum founded by Oscar von Frockenbeck, which contains files of specimens of more than 17,000 different newspapers.

London has a new organization, whose name indicates fully its purpose. It is called the National Society For the Checking of Abuses of Public Advertising.

It is said that two-thirds of all the cotton duck produced in the world is made within 20 miles of Baltimore.

HIS WIFE SHAVED HIM.

She Wasn't Going to Be Late to Church if She Knew It.

The story was told by a talkative man who was evidently from the country. The barber drew it out by the usual question asked of new patrons, "Do you shave yourself?"

"Not much," was the reply. "Does my face look as if I did?"

The barber confessed that his face was in good condition, whereupon the talkative man added, with a chuckle:

"And I don't usually get shaved by any barber, either."

"How's that?" asked the barber.

"My wife shaves me," answered the talkative man, with another chuckle. "She's done it every day for five years," he added, "and I ain't never had any reason to complain of her work."

"Who taught her the trade?" asked the barber, becoming interested.

"Learned it herself. It came about this way: One Sunday morning soon after we were married I started off to a barber shop to get shaved before going to church. The shop was crowded, as I knew it would be. But as I'd never been any great churchgoer I didn't hurry. I waited for my favorite barber, who of course was everybody's favorite too. And when I finally got home it was pretty late. I thought my wife would get tired of waiting, you see, and go on to church alone, expecting me to follow. But she hadn't. She sat with her things on, and when I saw her I was prepared to catch it," and the talkative man giggled reflectively.

"And did you catch it?" prompted the barber.

"Well, she wanted an explanation, and of course I told her the usual story about having to wait.

"'Well,' says she, 'you won't do no more waiting around barber shops while you and I live together. You can shave yourself in future.'

"'No, I can't,' says I. 'I cut my face.'

"'Then I'll shave you,' says she.

"'You can't,' says I.

"'Yes, I can,' says she, 'and I will.'

"I thought the best way to convince her and keep peace in the family was to let her try it once, so the next Sunday I submitted, telling her beforehand that if she didn't give me a clean shave and no cuts, I wouldn't go to church. Well, sir, she gave me as good a shave as I ever got from a barber, and after that I let her keep it up, and I've never been sorry for it. I tell you, it's a luxury there can't many poor men afford."

"Next!" said the barber.—Buffalo Express.

Cotton Factory Experiments.

A system of moistening the air of a cotton factory—as is required in some departments of a mill before blowing it into the rooms—has been the subject of much experiment. It has been found that, if a jet of steam or vapor is discharged into the main duct any degree of humidity desired can be obtained, but all the air is moistened alike, being distributed to the different rooms by the risers leading thereto. That, however, which is best adapted for one department in a cotton mill may not prove equally favorable for another.

Then, too, the introduction of moisture at this point may work disastrously to the walls of the ducts and risers. It is now found that this objection may be overcome at a small expense, by carrying a steam pipe down through each room and putting opposite each opening in the flue, through which the air enters the room, an outlet with valves for regulating the flow of the steam. In this way the exhaust steam from the engine which drives the blower flows into the room, and being caught up by the current of air passing from the flue is thus distributed throughout the room. Experience with this plan through cold weather has proved its peculiar value.—New York Sun.

Dentists' Secrets.

A long chapter of dentists' secrets—the secrets revealed to them by customers made unconscious but talkative by gas—has been revealed by a conscienceless tooth puller up in Pittsburg. One society young lady swore several lines of blank spaces while a tooth was being drawn. A burglar taken from jail to have a tooth pulled confessed all the details of his crime when under the "influence" and parted with 10 years of liberty. Occasionally men want to fight and are very strong; others are jolly and confidential.

The most interesting story of the series is this, told by one dentist of another: "I know of a young dentist who was head over heels in love with a pretty girl, but he could never make any headway with her. He was bashful. That was the main trouble. One day she came to him to have a tooth pulled. He administered gas, and before she revived she let enough drop to assure my friend that if he proposed he wouldn't be rejected. She is his wife today, and if it had not been for the gas I don't suppose the wedding would ever have come off."—Washington News.

Princess Hohenlohe's Inheritance.

Princess Hohenlohe, the wife of the governor general of Alsace-Lorraine, inherited from her uncle, a Russian general, estates in Russia worth 30,000,000 or 40,000,000 rubles. Under the Russian law foreign nonresidents cannot hold property, and the princess is compelled to sell her estates at once. She asked the czar to grant her a little time, as the financial stringency, which prevails in Russia as well as in this country, has made real estate hard to dispose of. The czar, however, for political reasons, refuses to grant the extension, and the woman may be able to realize only 15,000,000 or 20,000,000 rubles from her heritage.

Why Ambition Is Honored.

"Why do we honor ambition and despise avarice, while they are both but the desire of possession?" inquired a friend of Richard Brinsley Sheridan.

"Because," answered he, "the one is natural, the other artificial; the one the sign of mental health, the other of mental decay; the one appetite, the other disease."

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JUD COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein, within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover of you the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD.
Justice of the Peace of said Township.
E. SPENCER, Attorney for Plaintiff.

NOTICE OF ADMINISTRATOR'S SALE OF PERSONAL PROPERTY.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, in the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hahhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

McQUEEN—SQUIRES—At Bishop, December 14 h, Dr. John S. McQueen and Miss Helen C. Squires.

Bar silver, 69¾.

Delightful weather again this morning.

Al. Staulinger spent several days in town this week.

D. Stubblefield is improving daily and will soon be around again.

A. Cohn was down from Bishop early in the week on land business.

A party of strolling players gave a performance at Mairs' Hall last evening.

Regular stated meeting of Inyo Lodge No. 221, F. & A. M., to-morrow evening.

A force of men and teams will soon be put to work on the Lone Pine Canal extension.

L. Wood has just received a fine lot of breakfast bacon from C. A. Walter. Sample it.

If you want the particulars of the show last night, ask Frank Shaw or Charley Wonacott.

A social will be given by the Odd Fellows on the last Thursday evening in this month.

Miss Ray Bell arrived home on Wednesday's train from an extended visit with relatives in Virginia.

Remember the basket and egg party at the residence of A. N. Bell at Camp Independence this evening.

"For ways that are dark and tricks that are vain the Heathen Chinee are peculiar, which same we are free to maintain."

D. H. Irland returned yesterday morning from his trip to Los Angeles. He expects to push active operations on the big canal as rapidly as possible.

Billy Mitchell says if the fellow who stole his spur off the saddle in town the other night will bring it back he will shake the dice to see who shall own the pair.

Wonder if there will be any kind of a celebration at Independence during the holidays? It is about time somebody was coming to the front if anything is to be done.

This office acknowledges the receipt of cards and cake from Mr. and Mrs. J. S. McQueen, of Bishop. We tender the happy couple our most sincere congratulations and good wishes.

L. F. J. Wrinkle of Keeler spent a part of last week and all of this week at Independence. He is busily engaged on the work of making an extensive and valuable map of Inyo county to be used at the Midwinter Fair.

A south wind on Wednesday brought on a storm. Some snow fell on the Sierras and Inyos during the night, with a little rain in the valley. The indications are favorable for a heavy fall of snow on the high Sierras, thus ensuring a good water season.

Reports are still current of the wonderful richness of the new gold find at Redrock canyon. It is said there are about 500 men already on the ground and more coming. Recently a ledge has been found that is rich in gold and is supposed to be the supply of the placer diggings. The placer ground is wonderfully rich, and with water would yield fabulous returns. As it is, the earth is carried in sacks to water and yields enormous returns. There is a big excitement in that region over the find.

Correspondence.

EDITOR INDEPENDENT:—It appears that the Midwinter Fair is a strictly business and commercial enterprise. An exhibitor of fine glass ware, carpet, furniture, etc., does not pay for space and exhibit out of good will to San Francisco, or the State of California, but because he expects to himself profit by making such exhibit. What San Francisco has done, or has failed to do, cuts no figure with him, provided he sees his way clear to advertise his wares and sell what he has to offer. The different counties of California are in like case; although the exhibits from the counties will be interesting features and thus of incidental advantage to the Midwinter Fair, the counties will reap the bulk of the benefits to be derived from this advertising themselves. What has Inyo county to advertise? At present it has little to export and sell, nevertheles Inyo county has a large quantity of well watered, healthy, fertile lands to sell, also many valuable mineral deposits. We cannot put such lands on exhibition, but we can represent such lands and mineral deposits as follows:

Prepare a map of Inyo county on scale of one inch to one mile. Such a map would be about 20 feet long by 15 feet high. Every quarter section of land would appear half an inch square on such a map. Let every trail to points of interest in the mountains, to mines and wood ranches, every road, the railroad as completed, and as projected to Mojave, the new projected transcontinental railroad through Walker's Pass appear upon such map. Especially let every irrigating canal completed, partly completed, or projected be put on the map. Let all the lands under such canals be colored bright green, as cultivable land, then let as much of said land as is already cultivated be shaded over with dark lines. Then one could see at a glance what a small part of the cultivable area of Inyo county is at this time in cultivation, probably not one-tenth part. Let every valuable mining claim, deposit of marble, soda, borax, lime salt, china clay, cement, fire-rock, building stone etc., be put in its its proper place on such map and colored bright red. Let the owners of such claims come immediately forward with true average samples of their mineral deposits. These samples would be numbered, or otherwise labelled, and constitute the contribution of Inyo county to the general mining exhibit at the Midwinter Fair, and for which free space is offered. Let the farmers of Inyo county be colored yellow, the mountains brown. A map of such size, 20x15 feet, would attract attention. Then let space be procured directly in front of such map, say 20 feet long by 10 feet wide, in which to place carefully selected samples of every agricultural product of Inyo county in order to illustrate what the lands delineated on the map can produce. Then let such an account of Inyo county, its history, products and future prospects, be prepared as can be printed on both sides of one newspaper page. Let several thousand of such be printed for distribution at the Fair. Such dodger would refer its readers to the owners of such lands and mines, by giving their names as far as possible, for further information.

The preparation of such a map as above indicated involves considerable work which would fall mainly upon the present and former County Surveyors and the Register of the U. S. Land Office, and under any ordinary circumstances would cost not less than $1,000; but those gentlemen have volunteered to as far as possible do a great part of the work free of expense, although naturally the people of Inyo county would not expect them to do it entirely for nothing. It is safe, therefore, to say that a correct, complete and effective map of Inyo county can be prepared for $300. The space indicated, namely 200 square feet, will cost the county $400 more. Printing would cost maybe $200 more, a total of $900. And if the county gives that much popular subscription might be relied upon for something more. Such a map is much needed for Inyo county anyway, and as enough has been said to indicate the lines on which a very creditable and profitable advertisement of Inyo county can be made at the Midwinter Fair, I will now close.

L. F. J. WRINKLE.

Grand Jury.

The grand jurors recently summoned to appear in the Superior Court yesterday were all on hand except James G. Birchim and Charles Anthony, who were excused on account of sickness. J. A. McKenzie, after due examination, was excused. Excuse of E. H. Edwards was refused. The following named persons were drawn and sworn to serve as grand jurors:

1. Willis H. Wells.
2. William Watterson.
3. William McLaren.
4. Guilford P. Bourland.
5. William Jenkins.
6. Samuel J. McMurry.
7. Edwin H. Edwards.
8. O. I. Mairs.
9. E. Robinson.
10. John H. Stoutenborough.
11. Allen Matlick.
12. Harrie J. Robinson.
13. William J. Lake.
14. John L. Bourland.
15. R. W. Ford.
16. John H. Pulpitt.
17. Augustus A. Cashbaugh.
18. Charles Wonacott.
19. John Shepherd.

John H. Stoutenborough was by order of the Court appointed foreman. Challenge of P. H. Mack, attorney for John Hughes, John Jones, Oscar Payne and James Islay, against Charles Wonacott and J. H. Bulpitt was allowed. Jurors Wonacott and Bulpitt were charged by the Court not to be present at any of the deliberations of any of the proceedings against the above named Hughes, Payne, Jones, or Islay.

Bee-Keepers Annual Meeting.

Mr. William Muth-Rasmussen has kindly furnished us with the following:

"The annual meeting of the Inyo county Bee-Keepers Association was held at Big Pine on December 6th. The following were elected officers for the ensuing year: President, H. Trickey; Vice-President, F. K. Andrews; Secretary and Treasurer, Wm. Muth-Rasmussen. The Association now numbers 18 members. The statistical table was revised and as near as could be ascertained there are at present about 80 bee owners and about 3800 hives of bees in the county. It was decided to affiliate for another year with the State Association providing the Secretary can find a delegate to represent us at the coming State Convention. H. Trickey stated that the "foul brood" disease at Bishop is now well under control, though not entirely eradicated. F. K. Andrews announced that he intended to order a car-load of bee-keeper's supplies and would keep them for sale at Bishop. He offered very reasonable and accomodating terms to those who would forward their orders immediately and pay for their goods when the carload arrives. It was decided to hold the next annual meeting at Independence, the time to be fixed by the Executive Committee."

The grand jury is in session. Owing to the fact tha a trial is in progression the Superior Court, Sheriff Gorman secured the Masonic Hall for them.

Of Great Value.

There is no question but that a pamphlet descriptive of Owens Valley would prove of great benefit to the county. In January 1886, a 32 page pamphlet written by C. Mulholland was published, the Carson and Colorado Railroad company paying the entire cost of printing, and Mr. Mulholland donating his services in writing the same. About 1500 copies were printed, and in a short time the edition was exhausted. In April, 1893, Mr. Mulholland compiled a much larger work, the expense of printing in this instance being borne by the Mt. Whitney Canal Co. The last named work was distributed almost entirely in England and but few copies remain on this coast. No better plan of advertising the county could be possibly devised than having a pamphlet printed, and the edition kept in the County Clerk's office, where copies could be obtained and mailed to those desiring it. The cost of printing such a work would be about $200, and would be money well spent. A copy of each of the pamphlets above mentioned can be seen at this office.

The Most Successful Remedy ever discovered as it is certain in its effects and does not blister. Read proof below.

KENDALL'S SPAVIN CURE.

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatises on the horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied upone fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

DR. B. J. KENDALL CO.,
Enosburgh Falls, Vermont.

SOLD BY ALL DRUGGISTS.

WE WANT YOU

to act as our agent. We furnish an expensive outfit and all you need free. It costs nothing to try the business. We will treat you well, and help you to earn ten times ordinary wages. Both sexes of all ages can live at home and work in spare time, or all the time. Any one any where can earn a great deal of money. Many have made Two Hundred Dollars a Month. No class of people in the world are making so much money without capital as those at work for us. Business pleasant, strictly honorable, and pays better than any other offered to agents. You have a clear field, with no competition. We equip you with everything, and supply printed directions for beginners which, if obeyed faithfully, will bring more money than will any other business. Improve your prospects! Why not? You can do so easily and surely at work for us. Reasonable industry only necessary for absolute success. Pamphlet circular giving every particular is sent free to all. Delay not in sending for it.

ABSOLUTELY PURE

She Found the Grave.

On the day of my father's funeral my mother sat with vacant eyes and fixed, pallid face—the picture comes back to me yet, it so impressed my childish imagination—following the funeral service, stage after stage, and suddenly with the words, "It is all over!" fell back fainting. She said afterward that she had followed the hearse, had attended the service, had walked behind the coffin to the grave.

Certain it is that a few weeks later she determined to go to the Kensal Green cemetery, where the body of her husband had been laid, and went thither with a relative. He failed to find the grave, and while another of the party went in search of an official to identify the spot my mother said, "If you will take me to the chapel where the first part of the sermon was read, I will find the grave." The idea seemed to her friend of course to be absurd, but he would not cross the newly made widow, so took her to the chapel. She looked round, left the chapel door and followed the path along which the corpse had been borne till she reached the grave, where she was quietly standing when the caretaker arrived to point it out. The grave is at some distance from the chapel and is not on one of the main roads. It had nothing on it to mark it save the wooden peg with the number, and this would be no help to identification at a distance, since all the graves are thus marked and at a little way off these pegs are not visible.

How she found the grave remained a mystery in the family, as no one believed her straightforward story that she had been present at the funeral. With my present knowledge the matter is simple enough, for I now know that the consciousness can leave the body, take part in events going on at a distance and returning impress on the physical brain what it has experienced. —Mrs. Annie Besant.

Influence of the American College.

It does not seem too much to say that the American college has profoundly influenced American life. It has not been the mother of great movements, like Oxford, but it has been the mother of great men, like Cambridge. It has not made great soldiers or sailors, great artists or inventors, but it has contributed vastly toward the worth of the more considerable elements of thought and character. It has not created poets, but it has enlarged the vision of the poet and sweetened his song. It has not created historians, but it has given to the writer of history a subject, taught him to investigate, to weigh evidence, to write with power. If its influence has not touched certain eminent preachers, it has added to the knowledge and disciplined the powers of thousands of clergymen. It has brought and is daily bringing a larger offering to the editorial desk, the lawyer's office, the medical clinic.

It is significant that we call the college not almus pater, but alma mater. She gives to us intellectual life and cradles that life in its first feebleness. It is almost as rare to find a son complaining of his college as it is to find him complaining of his first home. Happy the man who has two mothers whom he reverences! Old President Quincy of Harvard said that a man got a good deal out of college if he just rubbed his shoulders against the college buildings. But he certainly does not get much in this way in comparison with what he gets by rubbing his head against the cases in the library. For to the true man of alert intellect, pure heart and strong will the college represents a new birth and a new life.—Forum.

Medical Cures In Mediæval Times.

In mediæval times the poor people sought relief for their ills at the hands of the kind hearted monks and gentle nuns, but after the reformation the healing art was relegated to charitable women, who mastered the mysteries of simpling. Out of this grew up the profession of the herbalist, combining all the self assertion of the quack doctor with the dense ignorance of the ancient crone. It is no surprise that such persons became the dread of the neighborhood and the personification of wizards and witches.

One of the remarkable superstitions taught by these ignorant, designing herbalists was the notion that diseases could be transferred from human beings to trees. White, in his famous writings on natural history, records a case where ash trees when young had been split and held open by wedges while sick children were passed through under the absurd belief that restoration would follow. The laughable rule required that the child should be passed through head foremost and handed back to the left, each time going in the direction of the sun.

If the tree grew together after the wedges were removed, the child was more certain to recover. Persons suffering from the ague faithfully went to a lofty willow, made a gash in it, breathed three times into the crevice, closed it quickly and ran away without looking back. All this done to the letter, the ague left the person for a more faithless subject—whenever conditions did not favor its remaining longer.—Chautauquan.

Highest Priced Pew Rents.

The following are the annual revenues derived from pew rents in some of the most important places of worship in England: St. Peter's, Eaton square, London, £2,000 a year; Portman chapel, £1,700; Christ church, Paddington, £1,750; St. Paul's, Knightsbridge, £1,200; St. George's, Hanover square, over £1,000; St. Michael's church, Chester square, London, £1,200; Emmanuel church, Streatham, £1,210; Emmanuel church, Hove, £1,400; Christ church, Cheltenham, £1,000. Two of the London west end churches have higher pew rents than any other churches in this country—namely, All Saints', Norfolk square, W., and St. Paul's, Onslow square, S. W. In both cases the income of the incumbents is entirely dependent upon the pew rents received. In St. John's Wood synagogue many of the pews cost the seatholders from £12 to £15 per individual sitting, while in Great Portland Street synagogue the prices are said to range higher still.—London Tit-Bits.

Saving the Soap.

A firm of manufacturers in Bridgeport, Conn., are equipping hotels with powdered soap. It is contained in a small cylinder placed over each wash bowl, and when it is desired to use it a spring allows a small quantity of the powder to escape into the hand. The firm supply the soap and lend the nickel plated holder, the profit coming in selling the saponaceous compound. Hotel keepers are pleased with a device that keeps the washroom bowl in a tidy condition.—Hardware.

Nice tablecloths and napkins should not be allowed to become much soiled so that they will require vigorous rubbing with soap or in hot water.

Guests at Camp Nineteen.

By FRANKLIN FILE.

"I'm sorry for you, Will," he said, gripping the young man's shoulders with his brawny hands and scowling into his face, "but you can't do anything for the old man to-night. As for you, Sis," and he grasped her wrist with scarcely lessened force, "what you want to do is to go to sleep. Now, don't cry."

There was not the faintest suggestion of tears in her frightened eyes, and the suggestion that they would shut themselves in sleep was so absurd that she could almost smile at it.

"Can't I stay with dad?" she pleaded.

Aleck Wiams had been active and insistent in helping Alloway to establish a sure jail, and to Deuce's request he peremptorily said: "No, you can't. We don't propose to give him your sharp wits to help his own in some scheme to escape. You nor Will can't go near them till morning."

"Look here, Mr. Donald," the girl persisted, ignoring Wiams, "you're all making a mistake. My dad is a gambler, and he can't be called a circumspect gentleman; but he isn't a counterfeiter and he wouldn't cheat any man out of a nickel except in the way of cards. Besides, he hadn't any money, good or bad, when we got here. You know that," and she appealed to Will Brown.

"It is so," Will assented earnestly. "He had to get a dollar from me."

Wiams laughed viciously. He had not known before how small an amount it had been possible for him to win in the game, and he angrily exclaimed: "Your worthless parent—he hadn't a cent either, I suppose, but we find his pockets full of counterfeit money just the same. Where did it come from, I'd like to know?"

"He says he won it from you," said Will.

"Tell me how—in this game that never was played—how it was that he could start into it without a cent to play with?" Wiams excitedly argued.

"Better be off to bed, my boy," Boss Donald said; "you can't do anything to-night. Off with you!"

Will Brown obeyed the last emphatic command, so far at least as to slowly quit the spot. Deuce would have followed him, but the hand of Donald was still on her wrist. "Little girl," he said, with abated harshness, "you're going to get right into the hammock in my tent and stay there till daylight. I can't use my quarters to-night, anyhow, and you're welcome to them."

There was force enough in his one arm to conquer her hardest resistance, and so she made none by either word or motion, but let him lead her to a tent, which was high and square, for it served the boss as a daytime office as well as for sleeping quarters. It had no occupant until they entered. From one end pole to the other a hammock was strung. It was as high as the man's breast, and therefore about level with the girl's chin. Without a word he lifted her in his arms and laid her in the suspended couch.

"Now there's no use fretting," he said, with what was gentleness in such a man accustomed to giving gruff orders to gangs of laborers; "you go to sleep, do you hear?" and he set the hammock to swinging like a cradle. "Nothing shall happen to your father before morning—nor to you. Good night."

"Thank you," she responded faintly. "Good night."

She lay alone, gazing wide eyed and sleepless at the canvas roof, with her mind in an absolutely thoughtless condition. The blow had stunned her, and she only slowly regained her accustomed mental activity. The sky became filled with drifting black clouds, and it was at increasingly rare intervals that they let the moon shine through. At one of these times, following a few minutes of darkness, the illumination was so sudden and brilliant that the change roused her from a lethargy which might otherwise have lulled her to sleep. An instant of daze, of confusion as to where she was, and then she saw a man sharply shadowed on the side of the tent. It was a startlingly vivid silhouette. The figure's pantomime was that of cautious stealth, and it was her first alarmed belief that it was inside the tent. But it was noiseless and it disappeared as suddenly as it had come. She stared at the blank fabric. Then the clouds shut off the light again and she was left in a gloom that was almost black.

"Sisst!" came to her alert ears as she dimly saw that the entrance to the tent was being cautiously opened. "Don't be scared, and don't make any noise," was whispered.

She swung her feet over the edge of the hammock and sat up. Instantly the intruder was close to her, with his hands clasping hers to keep her still, and she saw that he was Will Brown.

"I've come to talk with you, Deuce," he said; "I don't know why, for I don't see that we can do a thing yet."

"I'm glad you've come," and she held hard to his hands, like a child not fully awakened from a nightmare. "I was lonesome and scared."

"But we can at least come to an understanding about this matter—this arrest. I am sure my father didn't know the money was counterfeit. He is a drunkard—as much of a sot by spells as circumstances permit, but I never knew him to do a dishonest act. Thirst for whisky would tempt him to indiscretions, but to nothing so methodical or calculating as to deal in bogus bills. It isn't in him, Deuce; he wouldn't be equal to it if he tried." He stopped with an indication that politeness prevented him from going on.

"But you're thinking that my father has brains and badness for it. What kind of an oath can I take, Will Brown, to make you take my word for the truth?"

"Whatever you tell me—now—here—I will believe you."

Their hands were yet clasped together, and as he stood before her, while she bent her head in her earnestness to see in the darkness whether he looked serious or mocking, their faces almost touched.

"Then I tell you that my father is innocent about this bad money. We hadn't so much as a dime between us when we got here. He had lost in an unlucky game all the money we had started with from Omeda. That's why we came along here no better than tramps. He surely—surely brought no counterfeit bills. I am not saying he's what he ought to be; and I'm afraid it's likely he's used a bad bill if he had it. But, no—no—don't think he is a criminal. We're very, very intimate—dad and I; and he's an honorable man in his sort of way. We're adventurers, but upon my soul we are not reprobates. My mother is watching us from up yonder, you know, and she would see it if dad was to take me to disgrace. He promised her he wouldn't, and he hasn't."

She was weeping now, and when she loosed one hand to wipe away the tears Will's disengaged arm encircled her protectingly. It was wholly a caress of sympathy and faith, as she somehow understood, and in a moment she was sobbing, with her face buried on his shoulder.

"There—there. Don't cry any more," he conjured her, and then went on with a good reason for continued weeping: "You can't help your father in his predicament, and"——

"Don't say that," she interrupted, slipping down from the hammock and standing with every fiber tense for action. "I must help him, whether I can or not."

"Then let us get at the mystery of the case if we can," Will admonished her, "so as to know what is best to attempt. We are convinced that the bogus money was won from Aleck Wiams, are we not? and therefore we must conclude that Wiams is the real criminal. The officer, Alloway, says the government got information of a quantity of counterfeit treasury notes being sent into this region. He was detailed to search them out. He found that they were being circulated along the route of this telegraphic expedition, but very sparingly. Then he hit on the ruse of pretending to be a son of the houdoo woman, and that is all he probably knows about it. He will take his prisoners back to Apahoque in the morning."

"That is a rough town, full of Oklahoma boomers. We came through it three days ago."

"And Alloway spoke of the chances that an Apahoque mob might lynch his captives, because some of the bogus bills have been passed there. He talked to Wiams about this danger, and Wiams offered to provide half a dozen men for a posse. Hush!"

The admonition was caused by Deuce's incautious cry of alarm. "Don't you see," she said, "that if Wiams has made two men scapegoats for himself he will get them lynched instead of saving them? They'll be murdered."

"We will muster a force to defend them."

"Better release them to-night."

"How?"

"Well, somehow—anyhow."

The girl was emboldened with her purpose, and her companion caught from her an ardor of spirit uncommon to his calmer temperament.

"Let me think," he meditated. "The guards can't be expecting an attack from the outside. They're only watching the wagon to see that its inmates don't break out. Mightn't I take one unawares when the others were not too close by, silence and down him by throwing a blanket over his head and so give you a chance to slit the canvas with a knife? If we had four horses ready we might get away before much of an alarm could be raised."

"Could you fight a stronger man than yourself? It would be better to let me help you."

"The fellow might be stronger than I, but probably not so quick or dexterous, for I am something of a wrestler. Besides, he would be caught at a disadvantage. And your part would require all your time and presence of mind."

They discussed the details of the plan freely yet rapidly. Then Will went out to get the horses ready. He found where the two mustangs were tethered. These and two other horses he saddled and left at a point a few rods along the road. Then he reconnoitered the prison wagon. The guards were drowsy and unalert. The rest of the camp seemed to be fast asleep. He returned to the tent. Deuce was pacing to and fro like a young tigress in a cage. A knife gleamed in her hand.

"I found it here," she said, "and it seems sharp enough to cut canvas quickly. Here's a strong and not very heavy blanket for you to muffle the man with. Can we do it right off?"

"Yes," Will replied.

They emerged cautiously into the darkness, which had become as heavy as rain laden clouds could make it, and passed a dozen tents and wagons in which no signs of wakefulness were given by the occupants. Suddenly Will, who was ahead, drew Deuce back behind a wheel. He had heard the approach of footsteps, and there was barely time to ensconce themselves before Aleck Wiams passed by so closely that they could have touched him. Will left Deuce where she was and stole after the man until he entered his own tent. It was a small one, exclusive to Wiams' own use, and situated near by the makeshift jail. A light soon glimmered within, and then the watcher saw him fasten the opening together, inclosing himself with remarkable care.

Will dropped on his hands and knees, crept slowly to the back side of the tent and lay flat on the ground. The canvas showed no hole through which he could look in. He crawled all the way around the tight structure without discovering a lesion in the cloth. He heard Wiams astir within, and the position of the lighted lamp was changed several times. At length, despairing of a less risky device, Will took out his penknife and made a tiny slit. With one eye at the aperture he looked in.

Aleck Wiams sat astride a trunk, on which stood the lamp, while in his hands he held a package of treasury notes of the same fraudulent manufacture that had been taken from his two scapegoats. He was irresolutely fingering them, as though making up his mind with difficulty what to do with them. When a determination was reached he had to summon all his resolution to carry it out. He held a handful of the notes over the glass funnel of the lamp, but before the heat ignited the paper he drew it away.

Wiams was compelling himself to reluctantly burn the remainder of his stock of spurious money for fear that it might be discovered. He had obtained it to mix with cash to pay to his employes. A little had been used in that way, and Detective Alloway had followed the trail by means of these cautious outputs. It seemed the part of common sense to make his safety sure by destroying all the evidence of guilt rather than keep it at his peril. Again he held the package over the lamp and a charring corner broke into a flame.

"Stop, you scoundrel!" Will Brown yelled impulsively.

Wiams' action was equally inconsiderate and instinctive. He dashed the lamp to the ground. But instead of putting out the light he created a vastly greater one. The glass broke with an explosion, and the oil was thrown over the man's clothes. The tent and its occupant were instantly ablaze.

A screech of fright and agony resounded through the camp. The tent flamed high, and was gone like a flash of fireworks, leaving Wiams burning like a great torch. The oil had saturated his garments and he was enveloped in fire.

The four temporary jailers ran hastily to the spot. Deuce Low was next. She saw the burning man, and believed that some mischance of the intended rescue had delivered her father from durance into this awful disaster. She had brought the blanket from where Will had dropped it on leaving her. She desperately wrapped the woolen cloth around the fiery object. Then other hands helped and the flames were smothered, but they saw that the man was dead, and Deuce as well as they recognized him as Aleck Wiams. Her father hugged her, for the abandonment of his jail had left him free to join the excited throng.

"Oh, dad!" she cried, kissing him hysterically, "I thought 'twas you."

"Well, you were saving your father just the same," exclaimed Will Brown, "for you kept this evidence of his innocence from being burned," and he took from the scorched hand of the dead criminal the half burned bunch of counterfeit notes.

There was no more imprisonment for Jack High and Old Jugg Brown. A few days later they were discussing the singularity of their escape and the commendable parts played in that event by their children.

"It occurs to me," said Jack, without quite hiding his idea that such a thing would be condescension, "that nothing would delight me more than to marry my girl to your boy."

"An' I've been a t-h-inking," responded Jugg, with still less concealment of his belief that the bestowal of honor would be his, "that I'd like to have my boy marry your gal."

"Of course my daughter would not go into an engagement without first getting my consent."

"An' my son wouldn't pop the question without my knowin' of it beforehand."

At that moment the youngsters joined them.

"Father," said Will Brown, "this young lady is Miss Laura Wallace, and she has consented to become my wife, and in telling you of it I am going to say something to you—straight and plain. You must sign a total abstinence pledge and keep it or we will disown you. The escape you have had should be a life warning to never taste whisky again."

Old Jugg Brown was silent and solemn a moment before grasping his son's hand, and said: "So help me God, I will never taste the stuff again. An' I wish you g-o-y."

"Dad," said Miss Wallace, "it is true that I have engaged myself to Will, and you are the only reason why I shouldn't be his wife. But if you will swear to let that game of poker be your last hand of cards I will name the wedding day and put you on probation."

"I solemnly swear that I will never gamble again," he slowly answered. "God bless you!" and he kissed a scar which the fire had left on her hand.

The fathers subsequently signed their names to a certain marriage certificate as "Robert H. Wallace and Henry A. Brown, witnesses." The nicknames of Jack High and Old Jugg were silenced along with that of Deuce Low when she became Mrs. Brown, and it seems improbable that they will ever be revived.

THE END.

To produce a gradual and lasting reduction in size, diet is of the greatest importance, and with this and mild aperients an unhealthy increase of adipose tissue may be prevented.

Some men are honest by way of self interest, just as a matter of policy, and generous as part of a strategic plan for attaining success.

Mr. Chauncey Depew is credited with having said recently, "A man forms few friendships after the age of 40 and none at all after 50."

TRAVELING RISKS.

With the increased facilities for travel and the great number of travelers, there has been naturally a great increase in the risk of accidents.

Everyone, who for any reason is compelled to incur these risks, should keep by him a supply of ALLCOCK'S POROUS PLASTERS, for they are a wonderful specific in strains of the back or limbs, such as are almost inevitable in case of accident.

Any one starting on a long journey should have one as a part of his equipment. Commuters on suburban trains should keep them both at home and in the office.

ALLCOCK'S POROUS PLASTERS have repeatedly proved their great value in time of need.

BRANDRETH'S PILLS remove all impurities.

"Are you fond of water?" "Exceedingly. At the mere thought of sailing over the bounding waves I can scarcely contain myself." "Yes, that's the way it effects me, too."

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON, *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

F. J CHENEY & CO., Toledo, O.

Sold by druggists, 75c.

"A soft answer turneth away wrath." Yes, but it is absurd to expect somebody else to do all the soft answering.

CALIFORNIA NOT TO BE OUTDONE AT THE WORLD'S FAIR.

One very noticeable exhibit at the World's Fair was that of the Hercules Gas and Gasoline Engines, manufactured by the Palmer & Rey Type Foundry in San Francisco, Cal. Send for catalogue.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

In striving to gain wealth
We're apt to lose our health;
Then to regain our health
We're apt to lose our wealth.

FAR AND WIDE.

Not on this broad continent alone, but in malarial breeding tropical regions, in Guatemala, Mexico, South America, the Isthmus of Panama, and elsewhere, Hostetter's Stomach Bitters affords to inhabitants and sojourners protection against malaria. The miner, the freshly arrived immigrant, the tiller of the virgin soil newly robbed of its forests by the axe of the pioneer, find in the superb antifebrile specific a preserver against the poisonous miasma which in vast districts rich in natural resources, is yet fertile in disease. It annihilates disorders of the stomach, liver and bowels, fortifies those who use it against rheumatic ailments breed and fostered by outdoor exposure; infuses genial warmth into a frame chilled by a rigorous temperature, and robs of their power to harm morning and evening mists and vapors ladden with hurtfulness; strengthens the weak and conquers incipient kidney trouble.

Governor Flower has resolved to stop prize fighting, and the "mills" won't work, of course, without Flower.

FOR SALE.

An engine that in simplicity is a marvel and is supplanting all other engines of its character. The manufacturers of the Hercules Gas and Gasoline Engines can show results which are an assurance that their engines are the best. Inform yourself and send for catalogue to Palmer & Rey Type Foundry, San Francisco, Cal.

DOCTOR Pardee's Remedy, THE GREAT CURE —FOR— INDIGESTION *and Constipation.*

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism, Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

MACK & CO.,
9 and 11 Front St., San Francisco.

HERCULES GAS OR GASOLINE

STATIONARY AND MARINE ENGINES.

Can be used in City or Country

Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

I said it in the meadow path,
I say it on the mountain stairs—
The best things any mortal hath
Are those which every mortal shares.

The air we breathe, the sky, the breeze,
The light without us and within—
Life, with its unlocked treasuries,
God's riches—are for us to win.

The grass is softer to my tread,
For rest it yields unnumbered feet;
Sweeter to me the wild rose red,
Because she makes the whole world sweet.

Into your heavenly loneliness
Ye welcomed me, O solemn peaks!
And me in every guest you bless
Who reverently your mystery seeks.

And up the radiant peopled way
That opens into worlds unknown,
It will be life's delight to say,
"Heaven is not heaven for me alone."

Rich through my brethren's poverty—
Such wealth were hideous! I am blest
Only in what they share with me,
In what I share with all the rest.
—Lucy Larcom.

MET HALF WAY.

He was the man who came last to ship as seaman aboard the Warrior, as she lay in the harbor. A fine two masted schooner was the vessel, and Captain Scudder was properly proud of her as she lay alongside the wharf receiving cargo and passengers. She was to sail with twenty souls upon her—seventeen men, two women and a lady's maid. At the last moment the captain decided to augment his crew by one man more. Ere he made a move to engage one, he heard a man's voice saying:

"Please tell me where the captain is?"

He turned and faced the speaker, who was a tall, gaunt fellow of thirty years or thereabout, with such diffidence of manner as required some courage in him to look the captain squarely in the face, when the latter gruffly said:

"I'm the captain."

The man stood still in an awkward attitude under the captain's stern gaze as if unable to find speech before so fierce a glance. He dropped his dull gray eyes to the deck and doffed his now shapeless hat, and spoke, after a gulp, in a low voice that slightly trembled:

"If you please, may I work my passage out?"

The captain was moved by this speech to a faint facial demonstration of amusement. A pretty sailor this big, shamefaced man would make! The captain studied the applicant's appearance in detail. A homely fellow he was, with an unhealthy brown hue to his skin, a forehead into which some lines of sorrow had been wrought, roving eyes that met one's glance with a slightly startled look, a haggard face without whiskers, a receding chin, bent shoulders and a graceless way of wearing his faded and frayed attire. Red hands and long wrists protruded from the two short sleeves of his wornout blouse.

"What do you know about sailing?" asked the captain in a tone of ridicule.

"Not much, sir. I've worked with fishermen, and I know a little about handling a smack."

"I reckon we don't need you. Ever been on a schooner before at all."

"Often as a passenger, sir. I know I'm not a seaman, but I'll do anything. I want to get back to my people."

"You look strong enough; but why do you hang your head like that? One would think you were a coward."

"I am," said the man, in a low voice.

"What! and you admit it?"

"Yes. Why not? I've fought hard against it, but I can't help it. I make up my mind to be brave enough, but when the time comes for it I'm afraid."

The captain had never met such a character as this before, and he was interested. A few other loungers on the wharf stopped to overhear the conversation, their attention first being attracted by the great height of the man.

"Afraid of what?" asked the captain.

"I don't know. Of death, I suppose. This is how it is: I came from home with a comrade; I go back alone. One day when we were out in a little sloop a storm came up, and in a sudden lurch of the boat my partner was knocked overboard by the boom. In half a minute the boat was several fathoms away from him. He couldn't swim."

"Why didn't you throw him a line?" asked a bystander.

"Because I was afraid for my own coward's life! I didn't dare to let go the tiller for a moment. I stood there stupid with fear, afraid to leave the tiller for an instant, afraid of death. I felt like a man paralyzed. As the boat rose and fell on the waves I watched my friend struggle in the sea. I saw him throw up his arms; I saw his face white with terror; I heard him cry out 'Save me!' and then he must have read what was in my scared face, for he shouted 'Coward!' and sent me a look of hate as the waters covered him up. I don't know how I made land, but I got in safe after six hours of tossing, when the gale fell. I'd give my life, if I only could, to know that I wasn't a coward, but when the time comes to show it I haven't the power. You don't know the shame of it, sir, but you would if you could see that look on my comrade's face, and if his last cry rang in your ears day and night. Cowardice is upon me like a curse. It's the blight of my life, sir."

Such evident shame and grief were upon the man's face that all who heard, including the captain, were moved to some pity of his state, and so much curiosity had he excited in the captain's mind that he was employed for the voyage.

When the Warrior hoisted sail an hour later she had twenty-one souls aboard. The captain classified them thus: Seventeen men, two ladies, a maid and a coward.

The Warrior had good winds at the start of her voyage. But one night a wind rose and at daylight there was a heavy gale. Whitecaps danced wildly upon the waters of the sound. The perturbation of the sea was becoming frightful. The vessel was driving straight on to a rocky coast. The passengers, pale with dread of the coming catastrophe, lashed themselves to the deck or clung to the rigging. Captain Scudder shouted the warning of the doom of the Warrior above the sound of the sea.

"Nothing under heaven can change her course!"

Yet he and his crew strove nevertheless to the last. Every one on board knew that the vessel was drifting rapidly, that soon she must strike and be dashed to pieces.

The sea swept her deck and broke over her masts. Seven men hung to the rigging for life. They looked ashore. Only 150 yards away stood a group of islanders, as helpless to succor those in peril as the latter were to save themselves.

Now the position of the vessel was this: Where Sandy point drops beneath the sea it does not end, but it is prolonged under the water, making thus a perilous sandbar. Out upon this bar was the Warrior. The island tide from the east and from the west meet here. There is no more terrible place in a gale than that where two seas collide.

The storm grew. Such was the work of wind and sea that times were when the sandbar from the shore to the vessel was swept naked. But its nudity was speedily buried under heavier seas.

Passengers and crew, fatigued with labor and loss of sleep, assailed by a biting wind, at last succumbed to chill and numbness, and made no more effort.

Then arose one of their number, a tall, gaunt fellow, whom the captain had called a coward in harbor, and he proceeded to belabor them and to keep them active, that they might not perish from the cold.

"There's hope yet!" he cried. 'Keep alive, men!"

And one after another did he awaken by rude shaking and warm by his rough chafings.

Some caught his spirit, and by the labors of their weary muscles they set their frozen blood in quicker motion.

"But what use?" cried one. "The end must come."

"Aye, but there's one chance," shouted the coward, who now loomed up large and resolute. "Look! the sea has rolled back and left the bar uncovered. A man could run ashore on that, maybe while the sea held back."

Two men laughed madly.

"Aye, maybe! Look now!" said one, with savage sarcasm.

The coward looked. The sea had swelled up and hidden the bar far beneath its foaming waters.

"Yet one may try!" cried the coward.

"Try you then!" shouted the other.

Now it is hard to meet death half way. It is against man's nature to walk to destruction. Even though he knows it be coming he has the hope or the cowardice to shrink from it to the last. Therefore no sailor of them would leap into that sea or dare the deed suggested by the coward.

"If I succeed, will you follow at the next fall of the sea?" he asked.

"What one man can do another can,' was the reply.

The coward looked ashore. Sullenly the waters rolled apart. The sand bar was naked. The man jumped from the gunwale and ran.

The people on the vessel watched him with waking hope and cessation of breath. The hundreds of islanders on shore stood silent, thrilled, eager. No word was said; only the sea spoke.

The man ran shoreward, with shoulders and head bent forward and eyes set. The sea rose on both sides of him. The huge waves walled his roadway.

The roadway began to narrow. A turbulent high sea moved in pursuit of him. He lengthened and quickened his steps. It was a race between so small a thing as a man and so great a thing as the storm impelled ocean.

The ocean won. With a great roar it came down upon the man. But he would not be taken in flank, with his back to his enemy. He turned and faced the sea. He leaped into it head foremost. Afterward his body was cast upon the beach. The ocean had toyed with it, and had then thrown it back to its own kind.

Those on the island saw that when the man turned to meet death a smile was on his face. He had discovered he was not afraid to die.—True Flag.

A Riddle Making Epoch.

There have been epochs at which riddle making has been more especially in vogue, and such epochs would appear to occur at seasons of fresh intellectual awakening. Such an epoch there was at the first glimmering of new intellectual light in the second half of the Seventh century. This was the age of Aldhelm, bishop of Sherborne, the first in the roll of Anglo-Latin poets. He left a considerable number of enigmas in Latin hexameters, and they have been repeatedly printed.

Aldhelm died in 709. Before his time there was a collection of Latin riddles that bore the name of Symphosius. Of this work the date is unknown; we only know that Aldhelm used it, and we may infer that it was then a recent product. The riddles of Symphosius were uniform in shape, consisting each of three hexameter lines.—Cornhill Magazine.

Girls Will Be Girls.

At a boarding school girls will do anything to see and speak with a representative of the sterner sex, especially if it is forbidden to do so. A novel way of becoming acquainted with the boys, as practiced in the school mentioned, is to have some girl who is acquainted with the boys make an appointment with them at a certain place "out of bounds," or, in other words, on forbidden grounds. Then the crowds of schoolgirls will march down to the place where the academy boys are and be formally introduced to the young men. When the prim young ladies return home their mammas cannot object to their acquaintance, as they were formally introduced at college.—Buffalo Times.

Wire as Fine as Hair.

Wires as fine as a human hair—.003 inch in diameter—and even finer, can be ganged by instruments termed "micrometers." These instruments are beautiful pieces of workmanship.—Mechanical News.

SUNDAY SPORT.

Church Congregations in Mexico Entertained With Cock Fights.

A PRIEST'S LOVE FOR GAME BIRDS.

The Sabbath Afternoon Devoted to "Harmless" Contests Between Bellegerant Roosters.

"It was in a Mexican village," said the explorer. "Great had been our surprise the evening before when a little after 5 o'clock we rode into the public square up to the door of the convent and observed a long line of game cocks guarding one side of the great church. Well, that was our first impression. Closer inspection made things plainer. In the convent, residence of only the priest and his relations, we hung our hammocks, rested awhile, refreshed the inner man with tortillas and black beans, then went forth to investigate the feathered regiment. The large church was built out into the square, so that its rear wall was on a line with the convent and other structures forming that side of the square.

"Along the wall that stood at right angles with the front of the convent small wooden stakes had been driven in the ground. To each a plumed warrior was securely attached at a safe distance from his valiant compeers. Who could have dared to utilize for such a purpose the shade afforded by the wall of the sacred edifice? Another instant and we should have voiced this thought. It is generally a mistake to speak in a hurry. The good old priest had followed us and was now at our side. Pointing a lean brown finger at a very proud looking rooster, he said: 'That is the prince of this lot, though they will all prove themselves splendid fighters, I know! I have not studied the creatures 40 years for nothing!' So! They were his own property! Yes, another five minutes' talk made it plain that the pet hobby of this holy man was cock fighting! We will call him Father F. because it is not necessary to give the name of our kind host. Fairly launched on his favorite topic, he talked away for a full hour and was utterly amazed, not to say somewhat incredulous, when informed that we had never seen a professional tussle between those birds so dear to his heart and purse, and which he loved to see fighting in the ring. 'But you must come with me tomorrow afternoon,' said he; 'the people here all like it, and we enjoy the harmless sport every Sunday afternoon.' He intended no sarcasm.

"Nolens volens, when Sunday afternoon came, our host, having laid aside his sacerdotal robes after celebrating high mass, piloted us to the scene of action. The pit was in the interior courtyard of a private house. A circular fence of slender sticks surrounded the carefully leveled ground dedicated to the carnage. Chairs surrounded it, and a shed, thatched with palm leaves, sheltered the spot from the scorching rays of the sun. In gay attire the most respected matrons and maidens of the place were there, the performance being countenanced and partly provided by the priest. A lively conversation was kept up, all present being acquainted. The roosters had been shorn of their feathers, save those of the wings and tail. Each bird was weighed; then curved steel spurs were secured to the stumps of those provided by nature, but which had been cut off. Quite suddenly conversation ceases. Two birds are in the ring. The struggle commences. Heads lowered, eyes glaring, quivering with rage, the heroes fly at each other.

"Calculating that his opponent has jumped too high, the other one crouches, avoids the blow and turns upon his foe, who stands firm. Both rise in the air, breast striking against breast, each striving to deal his adversary a mortal blow. One is stabbed—he staggers. Profiting by this weakness, his adversary follows up the attack, but the wounded one keeps an eye on his enemy, and not being ready for him dodges, regains his position and inflicts a wound. Both now have difficulty in keeping on their feet, though neither will yield. More wounds are dealt. Both fall exhausted. One recovers, sees his foe prostrate, so does not attack, but shakes his lowered head and claws the ground in his fury. Impatiently he thirsts for the life of his opponent, who, no less savage, regains his feet, and with glaring eyes watches every move of his adversary.

"The enthusiasm of their owners and backers increases as the wounds become more numerous—the excitement is intense, and bets run high. The creatures engaged in deadly strife keep cooler than the audience. A moment arrives when all the backers talk at once. 'Five dollars more on the white!' 'Ten on the canelo' (cinnamon color). The stakes do not exceed $50. At last one warrior falls. Dead silence follows, so great is the suspense. Will he rise once more? Victor examines victim very distrustfully, makes sure he is dead, then mounting on the prostrate form draws himself up with an exultant cry of victory, just like some gladiator of olden times.

"All through the long summer afternoon one battle succeeded another. The birds that survived were taken home to be carefully tended until restored enough to fight again. Even those that had lost one or both eyes would fight if an opportunity was given to them, for these birds are so ferociously brave that unless wanted to fight they have to be kept out of each other's reach.

"At the 5 o'clock dinner in the convent our reverend host talked of nothing but his triumphant roosters and called on us to bear witness that the very one he had pointed out had proved itself that day the greatest hero of them all."—New York Tribune.

Explorers have recently visited the wild Olympic mountains in western Washington. They report that the timber line disappears at about 6,000 feet, and at the base of the higher peak, on the 5,000 and 6,000 feet level, is a system of meadows and lakes, where grass and flowers grow in great luxuriance.

CHICAGO'S TRIUMPH.

Her Courage, Faith and Self Reliance Made the Fair a Success.

The closing of the gates upon a show such as the world never saw before, and probably will never see again in the rolling ages, makes proper a few remarks, retrospective and otherwise, concerning the great Chicago fair.

The World's Columbian exposition it is in the documents, but the great Chicago fair it is for history and for the admiration of mankind. Chicago did it. She did it alone, with some help from the federal government, and the honor is all Chicago's.

On a scale never before contemplated by the audacity of the human imagination this western town conceived and carried her enterprise through to splendid success—absolute success artistically and ceremoniously, relative success financially. She went in on cheek. She came out in glory.

The qualities displayed by Chicago and her representatives in the earlier stages of the undertaking were of that sort which the way of the world admires or condemns according to the outcome. She started in for a local boom. There was a suspicion of the hotel counter, the boarding house, the street railway and the real estate office in her professions and pledges. Her negotiations with the government were distinguished by unblushing assurance. She boldly promised everything. She would have given bonds to bring down the moon and Alpha Lyræ and set them up in Jackson park if that had been necessary to enable her to get the fair. She got it, and The Sun is now glad she did.

There is a point where unblushing assurance becomes sublime confidence, where irresponsible recklessness dignifies itself into indomitable resolution. Just where in the chronology of fair promotion Chicago reached and passed that point it is not profitable to inquire. Certain it is that her management of the enterprise underwent the transition. It ceased to be cheeky and became sublime. It ceased to be irresponsible and became unconquerable. The petty schemes of the mercenaries dropped out of sight. The little tricks and chicaneries of the beginning were forgotten in the gradual development and manifestation of the true spirit of Chicago, amazing the world by its power, its reach, its resources, its devoted civic loyalty, its intelligence, its masterfulness and its success.

The cloth had been cut too large, according to all of the lessons of experience. Chicago did not repattern, but proceeded to grow to it. The chances were a thousand to one against victory. With cheerful optimism and magnificent nerve Chicago kept right on and succeeded.

It is likewise proper to record here the fact that the prime factor in the illustrious success of the Chicago enterprise was a quality rating higher in the scale of civilization's forces than mere business energy or the willingness to spend money without limit. Somewhere among the magnates of the exposition's management and backing there was from the start a profound appreciation of the truth that to be truly great the fair must be not merely big, but beautiful.

Beautiful beyond all precedent they made it; not merely according to the æsthetic standards of Chicago, or of the west, or of the United States, but judged by the world's measure of the grandest art. Such a creation as that by the lakeside, soon now to be demolished, is not the result of accident, good luck, enthusiasm or haphazard design, and while all the credit goes to Chicago the chief credit should go to the individual or individuals in Chicago who had the wit to perceive from the first the architectural ideal that was finally realized, the intelligence to select the makers best qualified to realize it, and the enlightened liberality to insist that the genius enlisted in the creation of the White City should be supported by dollars without stint.

Chicago has fitly celebrated the Columbian achievement by paralleling it. She has done what Christopher Columbus did 400 years ago. In a spirit like to his in the magnificence of its courage, steadfastness and unwavering faith and self reliance, she embarked on borrowed capital and sailed right out into the unknown. Wisdom doubted, and sound judgment called her back, and the winds howled around her, but she sailed on unterrified, through good weather and bad, steering straight for her mark, and she kept on, like Columbus, till she got there.

Hats off and up in the air for Chicago, our little sister, the Columbian city!—New York Sun.

Launching a Stranded Steamer.

A large force has been engaged in preparing the way for the removal of the steamer Crescent City from her position on the Bay Shell road, where she was driven by the recent storm.

The plan adopted to remove the boat is a novel one here, and the progress of the work is the subject of much consideration from shipmen and others. A basin 6 feet in depth has been cut beneath and around the boat sufficiently large to permit her to be turned and pointed out toward the deep water. Connecting with this basin is a canal made in three divisions and 5 feet deep.

It is proposed to pump the first basin full of water with a steam fire engine, and when this is done the boat will be floated, and turning it half way round will be an easy task. When the boat has been turned in the direction of the deep water, the dam leading into the first section of the canal will be opened and by the natural gravitation the boat will be floated into the first section of the canal, and after this the second and the third dams will be cut away, and thus the boat will be carried out to where the water of the bay will be deep enough to float her.

The situation of the Crescent City, 10 feet or more above the water, will allow a good fall of the water.—Mobile Register.

The Editor's Fuel.

The best abused class in England are editors, and they are not the most fortunate in other respects. A friend of mine was calling on one the other day and for purposes of his own condoling with him. "Yes," replied the other, "we have much to bear, and the times are just now exceptionally hard because of the general slackness in advertising." "Moreover," said my friend, "there is the high price of fuel. For my part, I tell my people, 'Whatever you put on the fire, pray don't put coal.'" "We never do," said the editor. "That is the one advantage of my profession—it is independent of the fuel famine. We have ceased to return rejected contributions."—London Illustrated News.

Cooking by Electricity.

Some of the London electrical supply firms are taking very sensible and practical steps to enable the public to readily enjoy the advantages of electric heating. They are not only lending out electric cooking stoves to customers, but are prepared to supply a separate meter and charge half rates for cooking. Besides these ovens there are breakfast cookers, in which eggs and bacon may be cooked on the breakfast table.—Pittsburg Dispatch.

OCEAN'S DEPTHS.

Strange Denizens of Neptune's Domain Brought to Light.

RESULT OF DEEP SEA EXPLORATIONS

Animal Life That Falls to Pieces When the Pressure of the Water No Longer Holds it Together.

The new submarine world now explored and mapped out presents a very different picture from that painted for us by the poets. But a short time has elapsed since the bottom of the ocean was supposed to be the counterpart of the face of the earth above water—with hills and valleys, with precipitous mountains lifting toward the surface and profound gorges sinking to unfathomable depths. The ocean floor is far less diversified than the land.

Here and there, to be sure, islands in midocean are the summits of enormous mountains, rising more or less abruptly from a generally level surface, and the sea lying over a narrow, depressed region in the northwestern Pacific reaches its greatest depth. But this is exceptional. In its general character the ocean bottom consists of vast flat or slightly undulating plains. An extraordinary circumstance that has been noticed with interest and that always creates surprise when first learned is the entire absence of foreign matter in the deeper part of the ocean's floor.

Of all the vessels lost in midocean; of all the human beings that have been drowned; of all the marine animals that have perished; of all the clay, sand and gravel let fall by dissolving icebergs; of all the various substances drifted from every shore by shifting currents, not a trace remains, but in their place water from 1,000 to 2,500 fathoms in depth covers the uniform deposit of thick, bluish, tenacious slime called globigerina ooze. A bit of this under a powerful lens is a revelation of beauty not readily forgotten. The ooze is composed almost entirely of the daintiest, most delicately beautiful shells imaginable.

At depths greater than 2,500 fathoms the bottom of the sea consists mainly of products arising from exposure, for almost incalculable periods, to the chemical action of sea water, of pumice and other volcanic matters. This finally results in the formation of the red clay deposits that are considered characteristic of the profoundest depths of the ocean. Carbonate of lime, which in the form of the shells of foraminifera, makes up so large a part of the globigerina ooze, is here almost entirely absent.

Sea water is very nearly a universal solvent, and before any shell, large or small, reaches the bottom of these tremendous abysms it is chemically eaten up, literally dissolved—a result which the enormous pressure of the water must materially hasten. At 1,000 fathoms the weight of the water pressing on all sides of an object immersed to that depth is very nearly one ton to the square inch, or more than 100 times that sustained at the sea level, and at the greatest depths the pressure is so increased that it would seem nothing could withstand it. In fact, heavy metal cylinders let down with the sounding apparatus are sometimes, being drawn up again to the surface, found bent and collapsed; strongly made glass vessels which the metal enclosed are shattered into fragments.

In the profoundest abysms of the sea are strange forms of life that never, save when brought up by the trawl, see the upper light. The work carried on by means of the United States fish commission vessel, the Albatross, has established the fact that forms of sea life inhabiting upper waters may descend to about 1,200 feet from the surface, but that below this, to a depth of 300 or 360 fathoms, a barren zone intervenes where marine life seems absent. But still deeper, strange to say, has been discovered an abundant and varied fauna, new to science, living under conditions of tremendous pressure and paucity of the life sustaining element of oxygen that induced an eminent zoologist to say quite recently, "What we know of the greatest ocean depths forbids us to expect to find them inhabited by living organisms." Here indeed survive forms of life the like of which no inhabitant of the upper world, not even the sun himself, has looked upon before the dredges of the Challenger, the Albatross, the Blake and similarly equipped vessels dragged up marine creatures from congenial cold and dark.

It might reasonably be supposed that these denizens of great sea depths would be built more firmly and strongly than surface animals to resist the pressure of the element in which they live, but it is just the contrary. The most universal characteristic of these creatures is the looseness and flabbiness of texture they exhibit. Indeed they seem to need the excessive pressure of the water about them to keep their parts together, for when they are brought to the surface they are ready to fall to pieces. It is a problem, so strangely are some of them formed, how they can move from place to place. Were they not entirely below the disturbing element of wave action, they would, to all appearances, be helpless.

Inhabiting these abyssmal spaces, as completely cut off from communication with the upper waters as we are from the inhabitants of other planets, we can only vaguely speculate on their habits and judge their manners of life from their somewhat remote analogies to the surface species nearest akin to them. Plant life is entirely absent from their place of abode, and although they doubtless prey upon each other some original sources of food supply must of course be conjectured to exist.—Cosmopolitan.

The human mind usually reaches a degree of maturity before it grasps the general idea of space, but a little 3-year-old Philadelphia girl is more precocious.

A few days ago in the midst of her play she became thoughtful, and after a few moments broke out:

"Mamma, what is it that things are in?"—Youth's Companion.

A Novel Mesmeric Trial.

Once more the Wolverhampton magistrates have adjourned the hearing of the case against Harry Moores, alias "Dr." Vint, the mesmerist. Moores gave an exhibition in that town of his alleged powers of hypnotizing, but, according to the charge of the town clerk, who is conducting the prosecution, the whole business was a fraud concocted between the accused and certain confederates. One of the hypnotist's subjects deposed that he went every night and received payment for his performances. A journalist who was present deposed that he saw hypnotized persons lying on the floor who "winked at each other," and a police constable stated that when he proposed to stick a pin into one of these supposed unconscious persons "to see if he was really in a mesmeric sleep," the operator threatened "to have him locked up."

On the other hand, Dr. Vint's legal adviser proposed, by way of a practical test of his client's powers, to give an exhibition in court with one who had been mesmerized before. When this was declined he offered then and there to mesmerize the magistrate's clerk—a proposal which, though it caused laughter, appears to have been deemed equally unacceptable. The case is exciting much interest in the town on account of its novelty. The town clerk himself has observed that he did not know whether there had ever been a similar case in a court of justice, but Wolverhampton, he added, is noted for legal precedents.—London News.

Fell Seventy-five Feet and Lived.

When the Owl train on the West Penn railroad left Blairsville Monday evening Conductor Jim McNulty had among his passengers one Alfred Anderson, who lives near Social Hall bridge, about two and a half miles west of town. When nearing the flag station at the bridge Mr. Anderson arose from his seat, went to the platform of the car and stepped off before the train had come to a stop. The rear car had not fully cleared the bridge, and when Anderson landed from the moving train he could not recover from the impetus given him and went over into the Conemaugh river below, dropping fully seventy-five feet.

Fortunately for him the river at this point is deep, there being about fifteen feet of water. The trainmen and passengers were horrified. Conductor McNulty and Brakemen Kelley and Beatty went back to look for him. Brakeman Charley Beatty held his lantern aloft and called into the darkness below, not expecting to receive an answer. To the surprise of everybody present, Anderson answered that he would be all right just as soon as he could swim out. He reached the shore and scrambled up the bank, none the worse except for a slight scratch on one of his wrists.—Indiana Gazette.

The Ice Men.

The wholesale dealers in ice are again worried, as they have been off and on for the past ten years. Their experience of two years ago has taught them that if ice does not make in the Hudson by the 1st of January it is not likely to make at all during the season. The agents of these companies are scouring the entire country to the far north of New York and New England and have contracted for ice privileges on Saratoga, Lake Champlain and Lake George, and have been compelled to pay pretty stiff prices therefor.

Meanwhile the making of artificial ice flourishes, and at the great hotels and offices of the railroad companies, which are beginning to use it, it is giving greater satisfaction than natural ice, partly because there is less wastage, partly because is comes in blocks of ascertained weight and partly because it is made of distilled water. Some of the natural ice dealers are of the opinion that it will ultimately supplant natural ice harvesting, and it is sure to do so if the climatic change toward mildness of season is to be regarded as permanent.—New York Cor. Philadelphia Press.

Methods of London Thieves.

At the next assizes in London the trial of a new kind of thieves promises to be interesting. Their method was to visit unoccupied houses in the outskirts of the city in the daytime. They drove up in an elegant carriage, and when they found nobody at home the house was marked. In the night they came in a wagon, broke into the house and carted off their booty. When it turned out that they were mistaken and that parties were in the house they simply offered to sell photographs and albums. One of the members rode a bicycle and took his notes of the houses that were good for robbing. Mr. and Mrs. Clarke were the leaders of the gang. They lived in one of the suburbs, were highly respected by all their neighbors and were extensively invited to tea parties, dinners, etc.—London Letter.

Texans Who Wear Big Hats.

Speaking of the dress of congressmen brings the reflection that the hats of the Texas delegation are two sizes bigger and broader than they were last session. Grouped together they would cover a good sized lawn. The biggest hat of the lot belongs to Mr. Bailey, a young giant 6 feet 2 inches tall, whose jim swinger coat reaches near to the top of his No. 11 gaiters.—Cor. Columbus (Ga.) Enquirer.

Cure for Frost Bite.

If the feet becomes frost bitten, soak them for one-half hour in a strong solution of alum water, and if one application is not enough two will be a cure.—New York Journal.

One of the most interesting exhibits at the World's fair will be the models now being made by the Smithsonian institution showing the various phases in seal and walrus catching and killing in Alaskan waters.

Rubinstein lives in shabbily furnished apartments in Dresden, but owns a magnificent residence, which is entirely given up to his wife and sons. He is nearly blind from cataract.

BLACK BART LOST.

A Plucky Schoolma'ams Encounter with the Famous Highwayman.

PLAYED POKER FOR ODD STAKES.

She Wagered a Kiss Against the Robber's Plunder and Won.—A Gallant Knight of the Road.

Black Bart, the notorious highwayman of California, once during his career came across an American woman who turned the tables on him very cleverly. Bart was eccentric, and while holding up the coaches in the Sierras he did the most unusual things.

It happened in the spring of 1872. Northeast of Sacramento, about 25 miles, in the Sierra Nevada mountains, is a deep canyon, at the head of which is a beautiful fall of water known as "The Maiden's Tears." The Nevada City trail wound through the canyon. Near the falls the trail lay across a flat, open space, with the stream on one side and piles of huge bowlders on the other.

A coach was crossing the open space. The guard, on the seat by the side of the driver, was dozing in the heat of the sun, and the driver was struggling to keep his eyes open. Inside the coach were seven passengers, among whom was a young woman bound for Nevada to teach school. She was good looking and plucky. She had been a teacher four years in the mining districts of the west, and she was thoroughly acquainted with the customs of the rough element in the midst of which she lived.

The coach had reached the center of the open space when the noose of a lasso flung from among the bowlders overhead settled over the shoulders and arms of the drowsy guard, and in the twinkling of an eye he was hauled to the ground. At the same time a deep voice, calling from among the rocks, ordered the driver to stop the horses and hold up his hands. The driver obeyed without a protest. The passengers stuck their heads through the coach doors just in time to receive an invitation from the voice among the rocks to step down and line up with their hands over their heads. The order was promptly obeyed. When they were in line, Black Bart, holding a revolver in one hand and the lasso in the other, stepped out from among the bowlders and came down to where the coach stood.

After binding the guard securely, he proceeded to relieve the passengers of their money and valuables, tossing the plunder into a big sombrero that he had sat crown down by the side of the road. In the pockets of one of the passengers he found a pack of playing cards. He threw them with the rest of his plunder into his hat. When he had finished searching the passengers, he said:

"You can put your hands down now, gentlemen. It must be kinder awkward standin in that position. I'm sorry to put you to so much trouble; but, you see, I had to have money, and I thought that this would be a pretty good crowd to strike. I'm kinder ashamed of myself to put so pretty a woman as this lady is to so much trouble."

The highwayman smiled apologetically on the young schoolteacher, who astonished her fellow passengers by smiling back at the robber and saying:

"Don't worry yourself, Bart. It was no inconvenience at all."

"You know me?" said Bart inquiringly.

"I've heard you described so often that I feel pretty well acquainted with you," replied the schoolteacher.

The highwayman appeared to feel flattered. "I admire your spunk," he said. "Most women faint when they see me."

"I never saw a man yet that I'd faint for," replied the woman, to the horror of her fellow passengers, who were afraid she would anger Bart and drive him to some desperate end. A second or two later they were stricken dumb with amazement when she said:

"Bart, I'll bet you that I can beat you one deal at stud poker. If I don't, you may kiss me. If I do, you must let this coach and its passengers go on with their property without further trouble. Will you do it?"

"Waal, miss, you beat any woman I ever came across before. I never kiss a woman unless she's willin, but if you want to take them chances I'll play you, but I reckon you've givin me the best of the bargain."

The woman promptly intimated that she was really anxious to play for those stakes, and preparations were made for the game. It was agreed that the driver should deal the cards, and Bart insisted that the half dozen passengers should stand up in a row 20 paces away, so that he might detect any attempt at treachery. The teacher seated herself on a mail pouch that Bart had dragged out for that purpose, and with his rifle resting across his lap he settled himself on one knee a short distance from her.

Word was given to start the game, and the driver threw the first card to Bart face down. The next card fell at the feet of the schoolteacher. Each player was now entitled to four cards, to be dealt face up, and Bart caught the ace of clubs, while to the teacher fell the seven spot of diamonds. The highwayman next caught the five spot of hearts, and his face flushed and he smiled confidently, for the first card dealt to him was a five spot, and he now held a pair. The teacher drew the deuce of diamonds. Bart showed his elation when the next card that fell before him proved to be the five spot of clubs. He now had three fives, and he was sure the game was his. To the teacher fell the four spot of spades. Her luck was indeed wretched, but she didn't seem to be the least disconcerted as she looked over at Bart's pair of fives and then down at her seven spot high. The last turn came, and the queen of clubs fell in front of Bart, and the seven spot of spades was the teacher's draw. She had a pair of seven spots in sight.

Bart smiled. "Your luck came late," he said. "I'm afraid you'll lose the kiss, for here's another five." He turned up the first card, and it gave him three fives.

"You did well, sir," said the teacher, "but I've got another seven spot here, and I believe three of these are better than your fives." She turned up the "roll" card, and sure enough it was a seven spot.

Bart was set back for an instant, but when he realized that he had been fairly beaten he smiled, and helping the teacher to her feet said: "Gentlemen, I've lost a mighty big stake. Come up here, one at a time, and get what belongs to you out of that hat."

The passengers joyfully obeyed the order. Bart retained their firearms. In a few moments the passengers were in the coach and were going up the trail with a dash.

When the story of the schoolteacher's pluck was told at Nevada City, the citizens presented her with a handsome gold watch, and the express company gave her a check for $1,000. The brave woman still lives in a prosperous Nevada town, where she became the wife of a prominent lawyer.—St. Louis Globe-Democrat.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 22 1893

GRAND JURY REPORT.

To the Hon. Geo, M. Gill, Judge of the Superior Court of the County of Inyo, State of California.

We, the Grand Jury impanelled in the said Superior Court on the 14th day of December, 1893, hereby report to the Court that we have fully examined into two (2) criminal cases and have found two (2) true bills.

We have examined the Court House and find that it needs painting very much. The vault adjoining we find not fire-proof. The window on the west side of vault is loose, with opening or space around it that renders it very deficient as a fire-proof window. The Clerk's office we find in reasonably good and pleasant condition. The Treasurer's office cannot be used when fire is used in other portions of the building only when the wind is blowing in a certain direction. We find the Sheriff and Treasurer occupying the same office for reasons above stated. We also find the Treasurer greatly inconvenienced from the fact of the location of the safe in the vault.

The jail we find insecure. The chimney running through the ceiling from the jail should be lined with iron and the ceiling also should be lined with iron.

We find four prisoners confined the jail. They state that they are well fed and as comfortable as they well can be inside of a jail with no more conveniences than the the jail has, it having no closets in it. We also have learned through evidence brought before us that the branch jail at Bishop is not properly ventilated so as to keep prisoners no beds nor heating stove or pipes in the cell, and should be put in proper condition for the health and security of prisoners.

We have inspected the building and rooms at the County Hospital and find everything kept in a neat and cleanly manner and the patients there furnished with good and sufficient food, medical care and attention.

We find that upon examination of the books of the County Officers that they are correct, and further we commend the various officers for the neat and business-like manner in which we find each department

We would recommend that all saloon keepers have notices posted about their saloons to the exclusion of all young men under the age of twenty-one years.

We learn that there is a petition in circulation to be presented to the Board of Supervisors for the reduction of the liquor license, and we recommend that should such petition be presented that it be not granted.

We find that there is an inmate of the County Hospital named John Barns who is drawing a pension from the U. S. Government and we recommend to the Board of Supervisors that said pension be applied to defray his expenses while in the County Hospital.

It has been brought to the notice of the Grand Jury that a large number of the citizens of Inyo county are desirous of making an exhibit at the Mid-winter Fair to be held at San Francisco January the first, 1894. And we earnestly recommend that the Board of Supervisors of this county make a large and as liberal an appropriation for said purpose as the law will warrant.

Foreman.

Correspondence.

A few days ago I received a letter accusing me of slander, the writer using language which a stout, lusty young man perhaps feels safe in using toward a man of nearly eighty years. That there is gossip in regard to the matter I regret, but the facts are as follows: About three weeks ago a young man, whom I shall not name at present, came to my drug-store and asked for 25 cts. worth of laudanum, saying that he was suffering from insomnia. I gave him a ½ oz. vial of laudanum diluted with alcohol, told him that a teaspoonful every two hours was a dose, and warned him that it was poison and not to exceed the dose prescribed. In about half an hour Walter Ober and Chas. Collins brought me the bottle empty, said that the party had drunk all the contents and asked me what to do. I told them not to be alarmed and directed them to let him alone, as there was not enough laudanum in the bottle to cause death. I make it a practice not to sell enough laudanum or any poison to cause death. The young man suffered no ill effects from his overdose, and was around next day. If he desires any more publicity, I am willing to go into the matter to the fullest extent.

J. D. BLAIR M. D.

No more envelopes will be printed by the Government. If you want printed envelopes you will have to patronize a printing office.

Notice To Tax-Payers.

NOTICE IS HEREBY GIVEN THAT I have received from the Auditor of the County of Inyo, State of California, the Assessment Roll for the year A. D. 1893, that the taxes on all personal property secured by real property, and one-half the taxes on all real property, will be due and payable on the first Monday in October, and will be delinquent on the last Monday in November next thereafter, at six o'clock p. m., and that unless paid prior thereto fifteen per cent will be added to the amount thereof; and that if said one-half be not paid before the last Monday in April next at six o'clock p. m. an additional five per cent. will be added thereto; that the remaining one-half of the taxes on all real property will be payable on and after the first Monday in January next and will be delinquent on the last Monday in April next thereafter at six o'clock p. m., and that unless paid prior thereto five per cent. will be added to the amount thereof; that all taxes may be paid at the time the first installment as herein provided is due and payable.

J. S. GORMAN.
Tax Collector.

COLORADO OR CALIFORNIA.

The Miners of This State Challenged to an Exhibit.

A DANGEROUS COMPETITOR.

Unless the Golden State Makes the Very Best Possible Mineral Showing at the Midwinter Fair Her Glory Will Be Eclipsed.

California is not to be permitted to gather all the laurels of a mining exhibit at the Midwinter Fair, unless the miners of the state push themselves to the mightiest efforts. Colorado is to be a vigorous and dangerous competitor for the honors and emoluments which will naturally come to the region making the most effective display.

Colorado is particularly supposed to be a silver producing state, and silver is just now somewhat in eclipse. But the "Battle Born State" has a deal of reserved energy, and it will bring to California an exhibit of its gold mining resources to challenge comparison with the exhibit of the Golden State.

Colorado has arranged to show the actual operations of gold quartz mining, and will expend energy, time and money in making that exhibit one of the great attractions of the big Fair. Those in charge of the exhibit will be persistent and energetic in advertising their state's possibilities and operations. They have issued a bold challenge and are going about their work as if they intended to win the contest.

This challenge should stir all California miners to renewed endeavors, to complete harmony of purpose, and to the greatest generosity in the matter of contributions. The active committee having in charge this state's display have called for $25,000 in money to make that display what it should be. In order to successfully cope with Colorado in the contest for supremacy they will need every cent of that amount.

The importance of this contest cannot be too seriously considered by those engaged in mining in California. There will be hundreds and perhaps thousands of capitalists and their representatives visit the Midwinter Fair for the sole purpose of obtaining information which will lead to investment in mining properties. If Colorado is permitted to make the more impressive display the money of these capitalists will be directed toward that state. If California shows her mineral resources at her best, the money will be invested here.

So the question is presented: Will the miners of California show sufficient liberality and energy to outshine and eclipse Colorado? The answer is with the miners themselves. On this subject the San Francisco Examiner has published the following editorial:

A CHALLENGE FROM COLORADO.

Colorado is coming to California to make a mining exhibit at the Midwinter Fair. The "Battle Born State" will beard the lion in his den and make a display illustrative of its gold mining and gold production. This very fact should stir the mining men of California to renewed endeavors to make their exhibit such a one that strangers casting about for points as to the mining industry shall not get it into their heads that Colorado is the great gold producing state of the Union. The fact that California is far in the lead in this particular must be made so plain that "the wayfaring man, though a fool, need not err therein."

Mining in California is now in a better condition that it has been for many years. The slump in the price of silver and the closing down of so many silver mines have directed a great deal of capital toward the gold bearing ledges and gravel channels of this state. New mines are being opened up in all directions, and work on the older properties is being prosecuted with renewed vigor. This year's output of gold bids fair to rival that of the years before hydraulicking was stopped.

But now one little slip may check all this progress, and that slip may be made by having an inadequate and unimpressive mining exhibit at the Fair. It is evident that Colorado intends to do her best to win the palm from California right on the latter's own territory. If she should succeed in making a more attractive display than California foreign capitalists looking for investments, and naturally seeking a directory of such things in the Midwinter Fair, will surely take their money to Colorado in preference to investing it here. Thus the movement which now promises such tremendous results to California will be retarded and a tide of in-flowing capital turned away.

Colorado will spend money and energy in making her show a success. She made a much better display at Chicago than California in the matter of minerals and mining. If she is permitted to do the same right here in San Francisco, it will be nothing short of disgraceful.

What is needed is money and energy. The energy is being expended, by the committee having the state's mining exhibit in charge. The committee is made up of men selected by the Miners' association. They are familiar with the state's mineral resources. They are full of ideas for showing these resources to the best advantage. But their energy will not be effective if the mining men of California do not earnestly second their efforts and place sufficient money in their hands to enable them to carry out their ideas.

This is not a time for stinting, but for liberality. It is a time for pushing forward, not hanging back. If the miners of California neglect their present opportunity they will not deserve prosperity.

The following contributions have recently be received by the committee having the California mining exhibit in charge: Alvinza Hayward and the Utica Mining Co., $1,000; Kennedy Mining Co, $500; W. W. Stow, $250; Miller, Sloss & Scott, $100; Roebling & Son, $50; Washburn & Co., $50; Hallidie & Co., $50; Sierra Buttes Mining Co., $100; D. M. Burns, $100; Thomas Flint, Jr., $50; Huntington, Hopkins & Co., $100; Bank of California, $250; S. J. Hendy, $100; John Taylor & Co., $100; Miners in Savannah mine, Grub Gulch, $22; John and Edward Coleman, $350; Cash, $25.

Many mine owners are agreeing to send ore to the quartz mill which is to be in operation and to donate to the committee the net proceeds resulting from the milling of the ore.

The committee is meeting almost daily and arranging new projects for making the exhibit a success.

CALIFORNIA MIDWINTER INTERNATIONAL EXPOSITION.—DEPARTMENT OF MINES AND MINING.

The great mining exhibit for the Midwinter Fair is rapidly taking shape. The executive committee holds three protracted meetings every week, and more if necessary. Ideas for making the display are taking form and given full discussion before being adopted. An energetic canvass is being made to secure the $25,000 deemed necessary to make the exhibit all that the state's tremendous mining and mineral resources warrant. Circulars are being sent out by cart loads, interviews had by hundreds, thousands of letters written, and altogether the rooms of the executive committee present as busy a scene as can be found in the big Mills building in which the Fair headquarters are located.

The mining counties are getting aroused to the great importance to them and to the state generally, of making the exhibit a success. There is a general disposition to group all the mining and mineralogical displays in the one great exhibit, rather than distribute them among different county buildings. Each county display will be separate in the main exhibit, but will go to make up a great, harmonious whole, and thus impress visitors with the magnitude and variety of the mining interests.

Everything should be made as imposing as possible, in order to catch and retain interest. Proceeding on this theory the committee is mapping out several great mineral displays. The facade at the entrance to the exhibit will be one of the most attractive features of the entire exposition. This is the same facade which caused so much comment at Chicago, and was California's most effective feature there. It is constructed of polished marble and onyx, and is 20 feet high, with a base line of 37 feet. Two great arches are flanked by onyx pillars and typical grizzlies surmount the entablature at either extreme.

This immense facade is now being packed at Chicago for shipment to California. When landed it will be added to and improved. The 673 additional lineal feet inclosing the mineral exhibit has been offered to the firms engaged in quarrying building stone and in manufacturing such decorative materials as terra cotta, fancy brick and tiling, and they are expected to arrange a low enclosing wall which will serve to show their products and at the same time lend attractiveness to the general exhibit.

One of the problems on which the committee is now engaged is the securing of the most suitable design for a representation of the output of the gold in California since Marshall's discovery. This output is figured at something like $1,300,000,000, and when shown in bulk will give all visitors an impressive idea of the magnitude of the gold mining industry. For instance, one design shows a column 77 feet in height, with a base of 10 feet. Another is in the form of an ingot, which has dimensions that far outshine Montezuma's famous roomful of gold given to Cortez.

Whatever design is determined upon will be constructed with the idea of giving the impression of solidity. It will be coated with gold paint, and different representations of $1,000,000 will be made to permit of instaneous comparisons. The output of different years may also be cubically represented, and also comparative constructions made to show the decrease incident to the stopping of hydraulicking.

A quartz mill, with all modern equipments, will be in daily operation as an object lesson in mining. It was proposed to sink a shaft and show the methods of quartz mining, but the Golden Gate Park commissioners objected on the plea that caves might result and injure the park. The project has not been altogether abandoned, however, and private parties are thinking of securing a site just outside the park grounds and sinking the shaft on a ledge. From the tens of thousands of people who flocked to the spot where it was supposed a cinnabar deposit had been opened in San Francisco, it is argued that nothing like an actual representation of mining operations would so quicken a general interest in the mining industry.

Another great general attraction which is slowly taking shape is the proposition to hold a general competition in drilling to be opened to all the miners of California, and possibly to all those of the Pacific Coast. It is proposed to secure valuable prizes for different methods of hand drilling—by one, two and three men—to hold preliminary contests, and then to bring the different champions together in one grand contest.

These are only a few attractions being prepared by the energetic committee to make the exhibit entirely worthy of the miners of the state. All that is now needed are a hearty co-operation and generous contributions.

NOTICE TO CREDITORS.

Estate of E. L. Smith, deceased.

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of E. L. SMITH, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at the office of P. W. Forbes, Esq., in the Court House, at the town of Independence, the same being the place for the transaction of the business of the said estate in the County of Inyo, State of California.

ALIAS SUMMONS.

IN THE JUSTICE'S COURT OF SECOND Township in the County of Inyo, State of California.

JED COLLINS Plaintiff, vs. JAMES WRIGHT, Defendant.

The people of the State of California send greeting to James Wright, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Justice's Court of Second Township, County of Inyo State of California, and to answer before the Justice at his office in said Township, the complaint filed therein within five days (exclusive of the day of service), after the service on you of this Summons—if served within the Township in which this action is brought; or, if served out of said Township, but within said County, within ten days; or, within twenty days if served elsewhere.

The said action is brought to recover on the sum of Sixteen Dollars alleged to be due from you to Plaintiff, for money loaned you by Plaintiff, and goods, wares and merchandise furnished you by Plaintiff, at the town of Big Pine, between the Sixth day of August, 1893, and the Tenth day of September, 1893, which more fully appears from complaint on file in said action.

And you are hereby notified that if you fail to so appear and answer said complaint, as above required, said plaintiff will take judgment against you for the sum of Sixteen Dollars, together with costs of suit.

Make legal service and due return hereof.

Given under my hand this 31 day of October, 1893.

A. C. McDONALD,
Justice of the Peace of said Township.
E. SPENCER, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1894, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the South-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor upon the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

COURT NOTES.

Geo. M. Gill, Superior Judge.

WEDNESDAY Dec. 20, 1893.

Jos. Espitallier vs. J. S. Gorman—Filed demurrer.

THURSDAY, Dec. 21, 1893.

Estate of John A. Hannah, deceased—Filed account of W. L. Hunter, executor.

BORN.

COOLEY—Near Bishop, Dec 9, 1893, to Mr. and Mrs. N. J. Cooley, a daughter.

JONES—At Round Valley, Dec. 9, 1893, to Mr. and Mrs. John E. Jones, Jr., a son.

MARRIED.

MCKEEN—MERONEY—At Bishop Dec. 12, 1893, by Rev. C. L. Logan, Mr. E. E. McKeen and Miss Lulu Meroney.

Bar silver, 69¾.

Who's going to Goler?

The Grand Jury report will be found on another page.

Social dance at Mairs' Hall next Thursday evening.

H. P. Cartier is building a dwelling at Inyo for Al. Standinger.

It looks as though the holidays would pass without observation.

Rain began falling this morning about daylight and still continues.

Jas. Jones and Jake Miller are working for the Mt. Whitney Canal Co.

Louis Munzinger came down from Bishop on Wednesday, returning yesterday.

Keeler has been made a money order office with John Barnes as Postmaster.

Several parties are talking of starting for the gold mines at Red Rock Canyon.

A Christmas tree will be given at Lone Pine. A thoroughly good time is sure to be had.

Frank Mock and family passed through town during the week en route for the lower country.

About 5,000 tons of apples have been shipped from Honey Lake Valley to New York this season.

John Barnes came up from Keeler on Tuesday. He has nothing unusual to report from that section.

Hughes, Isley, Jones and Payne, now confined in the county jail on the charge of robbery, and who were indicted by the late Grand Jury will be arraigned before Judge Gill to-morrow. They have retained P. H. Mack Esq. to defend them.

The Meads Bros. arrived at Independence last evening on the way to Mojave with their big team. They have thoroughly refitted their wagons, putting in new axles, etc. and the outfit is now in first class condition. They are loaded with back freight for Mojave.

Charley Collins is making a camp preparatory to starting in work on the big canal. He expects to work forty teams or more. The Company has sent another order for a lot of Fresno scrapers in addition to the large amount of tools and appliances already on hand.

At a regular stated meeting of Inyo Lodge No. 221, F. and A. M., the following named officers were elected to serve for the ensuing Masonic year: Irv. H. Mulholland, W. M; H. P. Cartier, S. W.; J. A. McKenzie, J. W.; O. I. Mairs, Treasurer, Bertrand Rhine, Secretary.

The counsel in the case of J. Brown vs. W. L. Hunter, Executor of the Hannah estate, concluded their arguments on Wednesday and the case was given to the jury. After being out a short time a verdict for the plaintiff was arrived at, the sum of $1,680 being the amount agreed upon as justly due said plaintiff. The trial occupied eight days.

Hon. P. Reddy and his secretary, F. H. Drew, started for San Francisco yesterday morning, after having been at Independence since November 6th. During all of that time Mr. Reddy has been constantly engaged on cases in the Superior Court, the most important being the Baxter-Gilbert water suit and the case of J. Brown vs. Hannah estate. P. H. Mack Esq. was associate counsel in both cases.

GOLD GALORE.

REDROCK CANYON RESEMBLES THE DAYS OF '49.

Every additional report confirms the fact of finding immensely rich placer ground in Redrock cañon. A correspondent of the Los Angeles *Herald* writing from Goler, Dec. 12th says:

"Arriving at Mojave we secured a team from J. W. Rice and drove to the first camp at Redrock cañon 28 miles distant. Here we found something like 50 tents in various localities on either side of the main gulch, and all seemingly very active.

The claims of Messrs. Bell, Morse & Co. from San Bernardino, are by far the richest in this cañon. They have made an average of $8 per day to the man for the last seven weeks. The process is with dry washer entirely, and hence the gold is all coarse, no care being taken to save the fine. In fact, the washers used will not save fine gold.

From this camp we went to Coyote Holes or Raymond's station, on the stage route to Keeler, distant 20 miles north. No work has been done along this route, and the prospector has apparently left this valuable district out of his bailiwick. Lying east and north, distant 25 miles is the famous slate range where are located the fine mines of the Wilson brothers of Mojave. These mines are probably among the finest in this famous range, and the ledge is rich from the surface down in gold which has thus far averaged $46 to the ton.

Water is here abundant, and the five-stamp mill is run by a gasoline engine of 10-horse power. Messrs. Mills & Stiles are putting in a five-stamp mill on their mine a few miles north of Wilson Bros. and as they declined naming any price on their mine, it is no doubt a bonanza to its fortunate possessors.

The Goler continues to yield its coarse gold and in paying quantities, and has in the various ravines and side gulches about 50 miners at work.

We next visited the Last Chance gulch, 31 miles northeasterly from Mojave and 3 miles from Kane's springs. This cañon has the best supply of water and best natural advantages for placer mining of all places visited; a natural dam site and as rich placers as any found. Much coarse gold, which brings $19 per ounce at the San Francisco mint, has been coyoted out of this gulch, and as yet no use made of the water. We took a pan here and from the hillsides on every side gulch we found fine gold in every pan. John N. Young of San Diego, one of the best mining experts of the State, made an examination of this gulch and reported it one of the finest he ever found on the coast. It is owned by poor men who lack concert of action, and who have thus far worked on the dry washer plan, thus losing much in the fine gold so abundant even on the hill tops.

Kane Springs is situated 26 miles from Mojave on the old borax mine road, and is the property of Mr. Charles Cohen, who has supplies of groceries, hay and grain, and who has not the gall, so common among settlers on the desert to charge travelers for water.

Altogether, we consider this the greatest find in mining in California for a quarter of a century past."

From the same paper of the 13th we take the following.

"Mr. Charles Mulholland of Independence, who is in the city, yesterday gave a *Herald* reporter the following facts about the camp:

The gold fields at Goler and Redrock are easily reached from Mojave. The way is over the stage road to Inyo county. It is also the road over which the teams haul borax from Searles works to Mojave. At a point about 22 miles north from Mojave the road divides; one road bearing east of north, the other turning west.

"From the point where the road forks a small lake is seen about three miles east and out on the plain. Beyond this lake is a chain of low rolling hills. Toward the north end of that chain of hills, and eight to twelve miles beyond the little lake is the Goler district. Going toward Inyo county from the forks of the road, and about two miles from that point the road enters a narrow cañon. About three quarters of a mile up the cañon is another opening to the north. It is up that ravine one to two miles that the rich gold diggings are found.

"Up the main cañon about one mile beyond the ravine is a station of the Mojave and Keeler stage line. In the main cañon a stream of water flows at all seasons of the year, in the summer very small, but in the winter sometimes becomes a torrent of large size.

"Mr. Mulholland gives the following facts of his own knowledge about the new diggings:

"Last Wednesday four men took out 15 ounces with a dry washer. The gold is worth $18 per ounce. It is all coarse, little being found finer than wheat grains. Many pieces are found from $2 to $6 or $8 each piece. One piece of quartz and gold was found as big as a hen's egg. Half the mass is gold. There is but a thin layer of earth and sand covering the bedrock on which the gold is found.

"On Thursday a prospector found a fine looking quartz ledge a short distance above the placer ground. This may prove to be the mother ledge from which all the placer gold comes.

"A large number of miners are now working at the new camp, and more are hastening there every day. It is the old story over again, where miners find money easily they spend it lavishly, and the camps at Redrock begin to show some features of extravagance that were very familiar in old times. At Goler the placer claims are turning out a good deal of gold also. Redrock is about 25 miles north from Mojave, on the road to Owens Valley. Goler is a few miles farther distant and about 10 mines east. Near the old Cerro Gordo mines, east from Owens lake, an extraordinary rich ledge was struck a few weeks ago. The ore carries about 40 per cent lead, 60 or 70 ounces silver and a great deal of gold. Many assays show over $7,000 per ton. Solid pieces of gold worth from $5 upward to $10 $20 or even more are found. One hundred dollars was offered and refused for one of the pieces a few days ago. The lucky prospectors are opening up the ledge and appearances justify the belief that they have a fortune before them.

The following letter was received on Tuesday:

MOJAVE, Dec. 14, 1893.

ED. INDEPENDENT:—I have just returned from the newly discovered placer mines at Redrock, Goler, and the last discovery seven miles east of the old El Paso quartz mines and I saw more gold placer than I ever expected to see at this late day. At the new discovery two men took out two and half pounds in four days. Excitement runs high. Night and day the road was lined with men and teams. I have not seen such a rush since the days of White Pine. I think they have a fine camp at Redrock. Martin Standard & Co. are taking out from eight to fifteen ounces per day and ground enough ahead to last for two years. The roads to the mines are lined with people, some with wagons, some with jacks and others packing their blankets. Men from Los Angeles, from Arizona, and even from South America. The railroad men are quitting their positions and are going to the mines. Men talk of nothing but the mines and nuggets. In short the excitement reminds one of the early days of California. Yours truly,

W. K. MILLER.

There is a postoffice and two stores at the camp.

INYO WILL EXHIBIT.

As the resultof an energetic effort on the part of L. F. J. Wrinkle of Keeler, Inyo County is in line for representation at the Mid-winter Fair. Mr. Wrinkle succeeded in interesting the Grand Jury in the matter, and a public meeting was held in the Court-house last Friday evening. After effecting an organization, Hon. P. Reddy was introduced and said:

"As to the policy of such a move, we have the common sense of mankind for our guide who have said from mountain, valley and plain and across the great oceans to the people of America that they wish to show their products and to exhibit to the people of the earth what they have to sell and what they have to interest the world in their homes. This they did in our great World's Fair in Chicago. In the various States of the Union measures were taken to accomplish the end. You are fully aware of the efforts made by this State to be represented at that great Fair and Exhibition. The verdict of all mankind—civilized and uncivilized—has been rendered, and there can be no question as to the policy and wisdom of such steps.

The same question presents itself to us to-night as to the policy and wisdom of exhibiting at the Midwinter Fair in San Francisco what we have to sell, what our products are and what the inducements are for people to settle in Inyo County. We now have an opportunity to make one great effort to elevate Inyo County and place her on the plane where she belongs. It now remains for you gentlemen to say whether we will respond to that great demand in our own interest. Inyo County must realize that to many people in our State this county is almost unknown. Her great advantages in soil and climate and in everything that goes to make up a great agricultural and mineral country is known to us all, but it is not known to all the world. It is not known to those people who are searching in every direction for fertile lands and places in which to make homes. We must enlighten them on our vast resources, our agricultural lands, our mines and everything that we can boast of, and the way to do it is to adopt the plan suggested by the leading citizens of this county, namely to advertise, what we have to offer. This we must do in order to gain the advantages which population and capital will give; and I know of no better way of doing this than by having a suitable exhibit at our Midwinter Fair. In order to do this I understand some coin is necessary, and I feel confident that Inyo will not be backward in this. Let a map of the lands of the county be spread out before the world and let our products be there to show what can be produced. Let us picture the streams, let us describe the climate and let us show our mines and their products, and the result cannot be otherwise than beneficial to our county."

Mr. Reddy further stated that it would be necessary to raise the sum of $400 to secure space for the exhibit, and of this amount he subscribed $100. He expressed the hope that he would have the pleasure of personally entertaining old Inyo friends.

L. F. J. Wrinkle was called upon and explained the features of the proposed exhibit including the large map described in our last issue. He was followed by other speakers, who all joined in expressing the hope that this county would be becomingly represented at the big Fair.

Upon motion of P. H. Mack Esq. an executive committee of five was authorized with full authority to act in the matter of securing funds and making an exhibit of Inyo County products at the Midwinter Fair. Said committee was appointed and organized as follows: P. H. Mack, Chairman; Bertrand Rhine, Secretary; A. W. Eibeshutz, Treasurer; John L. Bourland of Bishop and E. H. Edwards of Lone Pine. It was understood that said executive committee is to have full control of the Inyo exhibit as well as devising ways and means for the carrying of such plans as they may decide upon to a successful end.

The executive committee appointed the following sub-committees to act in their respective localities:

Round Valley—W. H. Wells, John E. Jones, Jr.

Bishop—J. H. Stoutenborough, John Black, F. K. Andrews.

Laws—John Symond, J. W. Clark.

Big Pine—Edward Trudo, R. W. Thomas W. H. Uhlmeyer.

Fish Springs—A. L. Conklin.

Georges Creek—John Shepherd, W. L. Hunter.

Citrus—F. McIver.

Lone Pine—J. J. Stewart, J. A. McKenzie.

Keeler—Thos. C. Boland, John Barnes.

Darwin—E. A. Reddy, Chas. Anthony.

Olancha, W. H Walker.

Cerro Gordo—Pat Clinton.

Modock—J. J. Gunn F. Fitzgerald.

The sum of $399 75 has been subscribed toward paying the expenses of the exhibit. The executive committee requests that all articles intended for exhibit should be delivered to the committee as soon as possible.

AS THE HOLIDAY TIME APPROACHES

The question of all is, what gift to buy for relatives and friends? A glance through our catalogue will give you wide range for selection. **Send for Samples and Catalogue, which we mail FREE on application.**

SOME BRIEF HINTS:

Dolls undressed, either kid or jointed bodies—15 cts. to $3.50

Dolls ready dressed in great varieties, 20 cts. to $12.50

A fine line of doll perambulators (or buggies)—40 cts. to $6.00

Doll cradles according to size—50 cts. to $1.25

Doll beds according to size—$1.00 to $1.40

Doll bureaus according to size—$1.25 to $2.25

Doll trunks according to size—50 cts. to $2.00

Toilet cases according to size and fittings, $1.00 to $25.00

Ladies' and gents' manicure sets—$1.00 to $6.50

Children's manicure sets—25 cts. to $1.00

Ladies' work boxes, plush and leather covered—$2.00 to $6.50

Children's work boxes, plush covered—25 cts. to $2.00

Gents' shaving cases without razor—75 cts. to $1.50

Gents' shaving cases with razor—$1.50 to $6.50

Autograph albums, ornamented covers 20 cts. to $1.00

Photograph albums, plush and leather covered—65 cts. to $10.00

For full list of games, toys and Christmas goods, see catalogue, pages 22 to 42

Order while the stock is fresh and complete and quick delivery certain.

The stock of goods we are showing for the wet weather wear is large and varied, at prices as low as the lowest.

Reforming a Man.

I believe that each one of us is connected with divinity by a spark of light within. In some it is a mere speck of light; in others it is a steady flame; in others a burning fire, and the physical nature is a mere grate which contains this fire. Perhaps the man within whom the spark is very small and feeble may conceive a mad infatuation for some woman who believes she can reform him through this love. But if he is merely infatuated with a woman in whom the divine principle is feeble his reformation is liable to be on an unstable foundation.

The man who has felt the divine within the woman appealing to his better nature, who has felt the holy spark within his soul fanned into a larger flame by her influence, who has felt her spiritual influence above her physical charms, that man may be reformed and stay reformed although his past may have been worse than that of the prodigal son. And yet I think that the spiritual nature which enabled him to respond to this woman's love could have saved him by its own upreaching force perhaps. The woman was merely a mouthpiece for the divine to call to the divinity within him and enable it to gain the ascendency.—Ella Wheeler Wilcox in Ladies' Home Journal.

The Art of Garnishing.

The scientific branch of cookery comprises the devising of dishes and sauces. The artistic branch constitutes the art of garnishing, and this plays a most important part in the outcome of the kitchen, as by means of it dishes please the eye before they please the palate. First impressions go a great way, and when one sense is captivated by an agreeable and inviting appearance the dish must be bad indeed which fails to stand the more searching ordeal of taste. Besides, people who suffer from jaded appetites have a better chance of eating their dinner when the dishes which are put before them are pleasant to the sight.

Art, however, is not a thing to be taught. You may show a man how to mix colors, but you cannot teach him how to use them. I will only explain that what in cookery is meant by garnishing is not the traditional parsley of the cook. The one and great thing to avoid as much as possible is the using for purposes of garnishing things which are not eatable.—Philadelphia Press.

Comfort For the Unsuccessful.

If we are money makers, it is to the exclusion of something else; if we have gentleness and refinement, those qualities unfit us for becoming money makers. The late Daniel Dougherty met at Narragansett Pier a very charming young man one evening, and afterward asked me if he was poor or if he had inherited a fortune. "Why do you not ask me if he has made one?" I rejoined. "Because I know he hasn't," replied Mr. Dougherty, who, as every one knows, was a very keen observer of human nature. "He is poor, or, if he is not, his money was inherited," insisted Mr. Dougherty, and when I pressed him for a reason for his assertion he said. "He is too refined, too cultured, too altogether charming ever to have made by his own exertions a fortune or even a competency beyond a mere living," which was a perfect diagnosis of the young man's position in life.—Boston Home Journal.

Reviewing Her Conduct.

When a quite youthful and much petted damsel named Ruth goes away from home without her mother, she is sometimes unmanageable, and always on her return is interviewed as to her deportment while absent. On a recent occasion, after a round of visits she had made with a certain doting and indulgent relative, Ruth was asked the customary question as to whether she had been a good girl.

"Well," she replied deliberately, as if carefully balancing the evidence, "I was pretty good, I think—only kicked at my grandmother twice."

A Very Old Family.

Bannister used to tell a story of his having been introduced, with Mrs. Bannister, to an elderly lady of exceedingly "high notions." After the presentation had taken place, the lady asked a wit of the day who was present:

"Who are the Bannisters? Are they of good family?"

"Yes," said the wit, "they are closely allied to the Stairs."

"Oh," said Lady Lucretia, "a very ancient family from Ayrshire, dates back to 1640. I am delighted to see your friends."—London Tit-Bits.

Not Traveling Incognito.

"Miss Smiley is going to travel under an assumed name."

"You surprise me!"

"Yes, she is going to be married next week and start on her honeymoon."—Exchange.

A SAFE DEPOSIT.

CHAPTER I.

Antony Blake left the office of Rumrill & Co. a good deal disappointed. He was himself a shrewd and intelligent fellow. He had secured the patents on his new invention, and was ready to proceed with the manufacture. He had carried the papers, the drawings, his model machine to Rumrill & Co., and they had them in consideration. They now offered him $800 for the whole thing if he would turn it all over to them. He had proposed one and another scheme by which he should go into business as a partner with them. These had been referred by the managing partner to the Mr. Jorkins behind the scene, who was an imaginary person created for the purpose of saying no when the managing partner was ashamed to. Practically all these schemes had been refused, and Antony was now to take the $800 or nothing.

This was not his first experience in such business. He knew by this time that the people who bring things before the public, be they inventions, be they books or be they ideas, generally expect to be well paid for doing so, and he knew that the system of co-operation, which people are hoping for and praying for, was by no means yet established. With some bitterness of feeling, it must be confessed, though he was a good natured fellow enough, he walked down the street of Tamworth considering whether he would take the $800 and be done with it, or whether he would go to Pittsburg and see if there were better chances there.

Antony Blake did not believe in debt, and he knew how to live on a very little money, but for all that he had very little money in store, and he certainly did not have the $10,000 which would be necessary for him if he were to equip a little machine shop of his own and make his own automatic car coupler. But, as it happened, he was a person well esteemed in the whole community of Tamworth, as he deserved to be.

I should like to know, however, how much of this esteem he owed to one queer circumstance. While he had to start in life with absolutely no property it happened that he did hold as trustee for his mother some bonds which he considered worthless in the second issue of the Cattaraugus and Opelousas railroad. These bonds had long since been taken off all lists known to brokers, and it was long since any coupons had been paid. Still the Cattaraugus and Opelousas existed, and there were sanguine people, among whom his mother was one, who supposed that at some time payment would be resumed. Antony, being her trustee, had to keep these bonds somewhere, and he had been notified by legal advisers that he must keep them in one of the security vaults which are now established in all the considerable cities. He had hired a modest safe at the Amicable of Tamworth, and at the Amicable you have the facilities of a charming reading room, where are all the new magazines, where you can wash your hands if you need, you can make an appointment with a friend, you can write a note on the Amicable's paper.

These facilities are thrown open to you because you have hired, perhaps for only $10 a year, a safe in that bank. Antony had found that here was by far the best club room in Tamworth. In that city they have what is known as the "Strangers' Rest" well developed; you can go in and pay ten cents an hour for all the comforts of a club room, and then go out again. But Antony found that, in the long run, $10 a year was cheaper for him than the Strangers' Rest at ten cents an hour, and what I should like to know is whether his standing in that community had not materially risen since the old dons and widows and railroad trustees and other such persons who had their safes there found that he was one of the habitues of the reading room of the Amicable.

He suspected himself that it gave him these advantages, and he was careful not to presume on them. He took care not to sit there writing letters in times when a business man would be at his counting room; he only looked in there at the hours when the most prominent of the dons were there; he took care not to appear to regard it as the only loafing place which he had. In proportion as he was cautious in these regards the dons began to respect him as one of themselves; that is to say, as a person who did not have to work very hard for his money, and who had in the chamber adjacent the secrets by which a quarterly revenue comes to the initiated without much cracking of their finger nails or griming of their hands.

On this particular morning Antony was obliged to break his rule. It was just the hour when he should not ordinarily have gone to the Amicable. It was seldom indeed that he had any occasion to look at his mother's bonds in his safe, for they were as worthless one month as they were another. But to preserve the respectabilities of the place it had been his habit to have his safe opened for him once a quarter—about the 1st of May, August and the corresponding quarters—which he observed to be "coupon quarters" for some very distinguished dons.

He would retire into one of the little cells provided for the occasion, open his box and then carry it back that it might be deposited in his safe again. The last time that he had done this Antony had placed two fifty dollar bills in his little tin box to guard himself from spending them. He knew that he should have enough money for his current expenses besides, and he had not cared to make a permanent investment of this sum. But if he were to go to Pittsburg he must have these two fifties in his pocket, and he walked down to the Amicable, gave the number of his safe and his box was given to him.

CHAPTER II.

He lifted the bonds out one after another.

It is possible that there are one or two of the humbler readers of this little story who are not acquainted with the careful machinery of a security safe company, and as the story hinges on that machinery it may be well to explain it. You see you are to have the double combination, patent, absolute security that is given to the largest corporation in the world—say the Bank of England—and at the same time you who are as poor as Antony Blake was are to have your own little separate cell in which your own property is kept, and nobody else in the world may interfere with it. All this is arranged by a very ingenious system of policemen, attentive clerks, doorkeepers, gilt pickets of iron, iron floors below and above, so that fire cannot burn your securities nor water drown them, nor thieves break in nor rust corrupt them.

The most honorable and virtuous warders are selected by the most ingenious and highly approved competitive examinations. You present yourself at the gate and you are personally known to the warder, who speaks to you cordially and opens the gate to you, as he would not do if you were one of those unknown loafers who have no safe in the security vault.

You pass through this prison gate joyfully, for you know it is no prison to you. You tell him that the day is fine, or that it is rainy, as it may happen, and pass on till you come to another gate and another warder. You tell him that it is fine, or that it is rainy, as before. He also calls you by name, and says that you are looking well, and you enter a second passage. This passage is provided with little catacombs or columbaria, precisely like those under or near the city of Rome, except that these are much smaller, and that those catacombs have now no doors, but in the security vaults each catacomb has a little iron door, and these doors are numbered.

You remember by mnemonic processes known to yourself what is the number of yours; the number of Antony's was 4,927. You meet in this passage a smiling, gentlemanly friend, who also calls you by name, expresses his hope that you are well, and tells you what the weather is. You also tell him. These are not passwords, but they are the civilities of the occasion. You then mention to him, in a whisper if you please, the number of your box. He affects to remember—does remember, perhaps—and with his key adjusts the lock of your catacomb. But please to observe he cannot open the catacomb, because he has not your key. Your key has been given to you long since when you hired your catacomb. You then open the catacomb with your key, which you cannot do till he has first turned his key in the lock. In the catacomb you find a long, narrow tin box, unless you should be a very great don. In that case you have a large catacomb and you have a large tin box. But Antony was a very little don, as the reader knows, and he had therefore a box long enough for any coupon bond, but not large enough to contain many.

He drew out his box, thanked the courteous attendant, passed warder No. 2 again, who asked him if all was right, and then in the passage between Nos. 1 and 2 selected a little room, like that in which you eat oysters in restaurants of some cities, when it is supposed that you are ashamed to eat oysters and wish to have a separate cell assigned for the purpose. You go into this cell, which you find lighted. There is a little table for you, with a pen and ink and blotting paper and a pair of large scissors. These scissors are there that you may cut off the coupons from your bonds.

Observe with admiration that both the requirements which have been referred to are fulfilled. You are here as lonely as Robinson Crusoe was before Friday came. All your wealth is in your hands; you can do with it what you choose. A minute before this wealth was in a safe which nobody excepting you could open, and a minute hence it will be in that safe again.

On this occasion Antony Blake found some difficulty in opening his box. His key seemed to be out of order, but being an ingenious person it happened that he had a little skeleton key with him, and with this he threw open the lock of the box. He saw in a moment that it was not his box. The securities in it were those of the C., K. and W., C., B. and Q., B., C. and D.—securities, many of them, absolutely "gilt edged" in the market of the moment. There were one or two United States bonds, and, in short, if a good fairy had touched his mother's bonds and changed them into bonds of the very best she could not have done better for him than had been done here.

Antony Blake was amazed and dazed. He lifted the bonds out one after another to see by what process of evolution the Cattaraugus and Opelousas had been thus changed, and with a vague feeling that he should find his two fifty dollar notes at the bottom. The fifty dollar notes were not there, but there was a little parcel of five or six manuscript notes tied up with a white ribbon. Antony had no disposition to get at other people's secrets, but he did want to know how these things came into his box, and he looked at their addresses, as he could do without opening them. Three were to Evelyn Haddam. Three were to Fergus MacIntire. Antony had never heard of either of these people. The letters were numbered and the date of each was written on the envelope. Antony observed that the last two were written on the same day, May 29. "It is a romance, I think," said he, and he thought so because of the ribbon. But clearly the most curious thing in the romance was that the letters were in his box.

(TO BE CONTINUED.)

ODDS AND ENDS.

Statistics show that 28,407 articles were left in cabs in Paris last year.

The Chinese have an academy of manners that prescribes etiquette for the whole empire.

West Virginia coke is being sent to Mexico in direct competition with the English product.

Politeness is the husk, kindness the kernel. You can't tell how much meat the nut has until you crack it.

A Canadian has made a collection of the buttons of officers of every regiment and department of the British army.

The greatest whirlpool is the maelstrom off the Norway coast. When the current is one way and the wind another, no ship can withstand its fury.

Michael Angelo's "Last Judgment," executed in the Sistine chapel in 1541, produced a host of imitations, most of which were mere caricatures.

A European mathematician of worldwide celebrity claims that from a single potato a careful cultivator could raise 10,000,000,000 tubers within a period of 10 years.

The largest nugget of gold found in Mexico within the memory of white men was picked up by a Mexican at Planchas placers, Sonoro, in the spring of 1892. It weighed 14¾ pounds.

The Eskimo Bulletin, published at Cape Prince of Wales, Alaska, is the only arctic circle newspaper. It is all written out and copied from a gelatin pad. It is issued once a year, mails not being more frequent than that.

Statisticians claim that the earth will not support to exceed 5,994,000,000 people. The present population is estimated at 1,467,000,000, the increase being 8 per cent each decade. At that rate the utmost limit will be reached in the year 2,072.

A Bit of Fine Writing.

About 40 years ago a specimen of microscopic penmanship was exhibited in America. It consisted of the following inscription written upon glass in a circle much smaller than the head of an ordinary pin—1-625 part of an inch in diameter—"Lowell and Scuter, Watchmakers, 64 Exchange St., Portland. Written by Fermat at Paris, 1852."

CALIFORNIA NOT TO BE OUTDONE AT THE WORLD'S FAIR.

One very noticeable exhibit at the World's Fair was that of the Hercules Gas and Gasoline Engines, manufactured by the Palmer & Rey Type Foundry in San Francisco, Cal. Send for catalogue.

Pathos, poverty, trouble and strife;
Hoe along, dig along, sich is life!

COLORADO

Is a splendid place for people with weak lungs, but thousands of people in that condition cannot possibly go to Colorado. There is not one, however, who cannot keep a supply of ALLCOCK'S POROUS PLASTERS. The moment any one feels that he has taken cold, one of these world-renowned PLASTERS should be put on the back between the shoulder blades, and another on the chest.

These will serve two purposes. They will protect the delicate lungs and will also relieve the congestion accasioned by the cold.

ALLCOCK'S POROUS PLASTERS keep the pores of the skin open and assist nature in her remedial work. They neither burn nor blister, and can be worn without the slightest inconvenience.

BRANDRETH'S PILLS cleanse the system.

Saidso—Mrs. Medders reminds me of the old hen who sat on ducks' eggs. Herdso—How? Saidso—Her children are all in the swim, and she isn't.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

SEAL. A. W. GLEASON, *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

F. J. CHENEY & CO., Toledo, O.

Sold by druggists, 75c.

The man who makes a speech to say he is out of politics is already primed for getting in again.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

They all Testify

To the Efficacy of the World-Renowned

Swift's Specific.

The old-time simple remedy from the Georgia swamps and fields has gone forth to the antipodes, astonishing the skeptical and confounding the theories of those who depend solely on the physician's skill. There is no blood taint which it does not immediately eradicate. Poisons outwardly absorbed or the result of vile diseases from within all yield to this potent but simple remedy. It is an unequaled tonic, builds up the old and feeble, cures all diseases arising from impure blood or weakened vitality. Send for a treatise. Examine the proof.

Books on "Blood and Skin Diseases" mailed free.

Druggists Sell It.

SWIFT SPECIFIC CO.,
Drawer 3, Atlanta, Ga.

BLOOD POISON A SPECIALTY. Primary, Secondary or Tertiary Syphilis permanently cured in 15 to 35 days. You can be treated at home for the same price and the same guarantees; with those who prefer to come here we will contract to cure them or refund money and pay expense of coming, railroad fare and hotel bills, if we fail to cure. If you have taken mercury, iodide potash, and still have aches and pains, Mucous Patches in mouth, Sore Throat, Pimples, Copper-Colored Spots, Ulcers on any part of the body, Hair or Eyebrows falling out, it is this Syphilitic BLOOD POISON that we guarantee to cure. We solicit the most obstinate cases and challenge the world for a case we cannot cure. This disease has always baffled the skill of the most eminent physicians. $500,000 capital behind our unconditional guarantee. Absolute proofs sent sealed on application. Address COOK REMEDY CO., 1325 to 1331 Masonic Temple, Chicago, Ill.

As if crinolines don't make it
For lover's tough enough,
The girls must go to wearing
The Elizabethan ruff.

FAR AND WIDE.

Not on this broad continent alone, but in malarial breeding tropical regions, in Guatemala, Mexico, South America, the Isthmus of Panama, and elsewhere, Hostetter's Stomach Bitters affords to inhabitants and sojourners protection against malaria. The miner, the freshly arrived immigrant, the tiller of the virgin soil newly robbed of its forests by the axe of the pioneer, find in the superb antifebrile specific a preserver against the poisonous miasma which in vast districts rich in natural resources, is yet fertile in disease. It annihilates disorders of the stomach, liver and bowels, fortifies those who use it against rheumatic ailments breed and fostered by outdoor exposure; infuses genial warmth into a frame chilled by a rigorous temperature, and robs of their power to harm morning and evening mists and vapors ladden with hurtfulness; strengthens the weak and conquers incipient kidney trouble.

People say that when a stranger first comes to America that in New York he is asked: "How much money have you got?" in Philadelphia, "Who are you?" and in Boston, "What do you know?"

FOR SALE.

An engine that in simplicity is a marvel and is supplanting all other engines of its character. The manufacturers of the Hercules Gas and Gasoline Engines can show results which are an assurance that their engines are the best. Inform yourself and send for catalogue to Palmer & Rey Type Foundry, San Francisco, Cal.

Try Germ for Breakfast.

Use Enameline Stove Polish; no dust, no smell

A FULL STOMACH ought to cause you no discomfort whatever. If it does, though—if there's any trouble after eating—take Dr. Pierce's Pleasant Pellets. They're a perfect and convenient vest-pocket remedy. One of these tiny, sugar-coated, anti-bilious granules at a dose regulates and corrects the entire system. Sick or Bilious Headaches, Constipation, Indigestion, Bilious Attacks, and all derangements of the liver, stomach, and bowels are prevented, relieved, and permanently cured.

They're the smallest, easiest to take, cheapest, and best. They're *guaranteed* to give satisfaction, or money is returned.

RIDGE'S is perfectly, permanently, positively cured by Doctor Sage's Catarrh Remedy. The proprietors of this medicine prove that by their offer. It's $500 cash for a case of Catarrh which they cannot cure. By all druggists, 50 cents.

CURE THAT COUGH WITH SHILOH'S CURE

25cts., 50cts., and $1.00 per Bottle. One cent a dose.

DOCTOR

Pardee's Remedy,

THE GREAT CURE —FOR— **INDIGESTION** *and Constipation.*

A Regulator of the Liver and Kidneys

A SPECIFIC FOR

Scrofula, Rheumatism, Salt Rheum, Neuralgia,

And all other Blood and Skin Diseases.

It is a positive cure for all those Painful, Delicate Complaints and complicated troubles and Weaknesses common among our Wives, Mothers and Daughters.

The effect is immediate and lasting. Two or three doses of DR. PARDEE'S REMEDY taken daily keeps the blood cool, the liver and kidneys active, and will entirely eradicate from the system all traces of Scrofula, Salt Rheum, or any other form of blood disease.

No medicine ever introduced in this country has met with such ready sale, nor given such universal satisfaction whenever used as that of DR. PARDEE'S REMEDY.

This remedy has been used in the hospitals throughout the old world for the past twenty-five years, as a specific for the above diseases, and it has and will cure when all other so-called remedies fail.

Send for pamphlet of testimonials from those who have been cured by its use. Druggists sell it at $1.00 per bottle. Try it and be convinced. For sale by

Yours in gratitude MRS. N. V. STEELE.

SOLD BY YOUR DRUGGIST.

HERCULES GAS OR GASOLINE

STATIONARY AND MARINE **ENGINES.**

Can be used in City or Country Independent of Gas Works or Gas Machines.

RELIABLE, ECONOMICAL, SIMPLE.

NO DELICATE PARTS TO GET OUT OF ORDER.

For simplicity and success they beat the world! Clean, no ashes, smell or dirt. No engineer is necessary; they are easily managed. Their economy for intermittent power is beyond question. No battery or electric spark to care for. No double or false explosion, so frequent with the unreliable spark. The workmanship is the very best. Our ignition tubes are a success; they explode every charge of gas which enters the cylinder. Just light the burner, turn the wheel, and it runs all day. For pumping outfits for irrigating purposes they run all day without an engineer. For hoisting outfits in mines they have met with the highest approval. We give estimates on the entire plant.

THE AFTER TIME.

There cometh time for laughter
And joy for the days and years,
But ever there cometh after
A time and a place for tears.
Weary of revel and riot,
Sick of the worldly strife,
Cometh the peace—the quiet—
That quickens the fount of life.

And the spirit is disenchanted
With joys that are bitter sweet,
And the soul which for rest had panted
Falls down at the Master's feet.
The world and its ways seem lonely,
And love at the best seems loss—
What help is there then but only
To cling to the crimson cross?

To cling to the cross that blossoms
With blood for the erring shed;
On the tenderest of tender bosoms
To pillow the weary head;
To feel the love that is glowing
From the heart that is quick to beat
With even the harsh nails going
In the beautiful scarred white feet.

O bird, by the storm winds driven
Where never a sweet bird sings,
From the wild and angry heaven
Fly homeward with weary wings,
And ye that are worn and weary,
Who faint by the way and fall,
Fly fast from the darkness dreary
To the Rock that was cleft for all!
—Atlanta Constitution.

Women In Siam.

To a European eye the good looks, if they anywhere exist, of both men and women in Siam are irremedially destroyed by the universal use of the betel, which blackens and corrodes the teeth and causes them to protrude, which renders the spittoon an indispensable article of furniture and is responsible for the great splashes of red saliva that may be seen everywhere adorning the ground as they have been ejected from the mouths of passersby.

Like their fellows in Anam, the Siamese women enjoy great freedom and influence. Being of a most mercantile and managing temperament, they become the self constituted stewardesses, treasurers and hucksters of the home or shop or store. They may be seen by the hundred going to market, each seated alone in her own canoe, with her wares spread out before her.

The last king kept a bodyguard of amazons, with red coats and trousers and small carbines, but the present sovereign has converted them into a species of interior palace police. The national character is docile, indolent, light hearted, gay.—Fortnightly Review.

Why the Guests Abstained.

Bishop Utterton's mother was a remarkable woman and inherited much of the vivacity of her father. When she and her husband were at Gibraltar during the peninsular war, the latter was known to be particular about his shaving water. From his friend, the Spanish governor of Algeciras, he received the sympathetic present of some dozens of rainwater in bottles, which the butler, thinking it to be wine, duly took charge of.

Some time afterward the colonel gave a dinner party, but at the last moment was called off by official duty, and a brother officer was asked to take his place at the table. In due course the hock was handed round, but it was observed that the guests were singularly abstemious in regard to it. The explanation was discovered when they had departed. The well stored and savory shaving water had been supplied for hock!—Notes and Queries.

Origin of the Red Cap of Liberty.

The red cap of liberty had a very prosaic origin. Instead of being the "Phyrgian bonnet" it is just the galley slave's headgear. The Swiss of the Chateauroux regiment sent to the galleys for their share in the Nancy riots were released and came into Paris with the red caps still on their heads. "They are the victims of despotism," said the people, forgetting the circumstances of the riot, and so the red cap became the favorite with the extreme party.—Washington Star.

A Proud Ex-Minstrel.

I saw Andy Leavitt, the ex-minstrel, the other day. The old man is chatty as ever. He loves to think and talk about his patriotic ancestry.

"My great-grandfather," said he, "was one of the men who fought the redcoats at the battle of Bunker Hill. Further than that I can't trace him, but he made a good beginning, and I am proud to know that my blood flowed in the veins of one of the soldiers at Bunker Hill."—Boston Globe.

Married Over Sixty Years.

John Ewing and wife of Warwick, Chester county, have been wedded 65 years; William W. Rhoads and wife of Pottstown were married Nov. 29, 1829, nearly 64 years ago, and David Wells and wife of North Coventry, Chester county, were married March 30, 1830, over 63 years since.—Cor. Philadelphia Ledger.

Short.

The Bud—Why does Mr. Spatts wear such short trousers?

Brother—Because they fit him. I asked him for a small loan, and he said he was so short his corns made his head ache.—Truth.

In Austria servants and people of menial rank of every kind are accustomed to kiss the hand of their employers, a somewhat oriental fashion to which it takes some time to get accustomed.

On the little tideland island opposite Skamokawa, Wash., the cranes have built their nests in the big cottonwood trees, and the cries of the young birds may be heard for quite a distance.

What is reputed to be the largest diamond in the world is in the possession of Jagersfontein, a Mexican. He claims that the stone weighs 972 carats.

Ladies may be interested to learn that 4,000,000 pins are used up daily in the United States alone, most of which come from Redditch, England.

The Jerusalem artichoke has no connection whatever with the holy city of the Jews. It is a species of sunflower.

ITALIAN MACARONI IN ITALY.

How It Is Served There, For It May Be Made In Your Own Kitchen.

In one of the largest American cities there is an Italian restaurant with real Italian service that has among its chief patrons many who have lived half a dozen years in Italy, more or less, and are judges of purely Italian viands. In this particular restaurant they find their favorite dishes cooked and served in the genuine Italian manner.

There is macaroni, for instance. Now, macaroni here in Italy and macaroni in America are two very different articles. It was only recently that I heard a pretty New York girl say: "It is so strange that at home I can't bear macaroni, and here I can hardly get enough of it. Do you know the reason?"

I did, and I told her, and I will tell you, so that with your perfect dish of macaroni you may put palms or great clusters of small pink roses or yellow orchids on your table, bottles here and there and pretty side dishes filled with pats of unsalted, creamy butter stamped with flights of doves and clusters of flowers, or even the legendary wolf, and quite imagine you are again in Italy. Such macaroni is not made at a tremendous factory, nor with coarse flour and water, but in one's own kitchen and thus:

Heap a little more than half a kilo—about 2 pounds—of best flour on your marble pastry slab or your hard wood molding board, make a hole in the center of the flour somewhat like the crater of a volcano, and into this break 7 or 8 eggs. Stir these eggs (whites and yolks together) slowly and steadily with the flour until a perfectly smooth but very hard mass is made. Then divide it into perhaps six pieces, proceeding with one after the other as follows:

First roll the dough as thin as it possibly can be rolled, then fold it over and over in folds about 3 inches wide until the piece is entirely folded. Then cut it through crosswise in pieces about one-half or one-third of an inch wide, or they may be cut in fancy shapes. Shake the least little dust of flour over it and then lift the little piles of strips, letting them fall so they will separate but not break. Put them on a sieve or almost anywhere not too near the stove nor in the sun, to dry thoroughly, and when they are dried your macaroni is done. It is very simple, isn't it?

There is a very necessary point in preparing macaroni dishes—that is, that the macaroni must be boiled just long enough, as it is as easily spoiled by too much or too little boiling as green corn or eggs.

Another thing to be remembered is that there must be plenty of water in the kettle in which it boils and that the water must be all the time boiling thoroughly, but not too violently. A little salt is to be added to the water too. Capolina—that very fine macaroni, scarcely the size of a small steel knitting needle, made especially for soups—should never be put in longer than 20 minutes before it is served on the table.—Rome Cor. Boston Globe.

The Decline of Outward Mourning.

The decline of mourning has been gradual for several centuries and seems to keep pace with the growth of civilization. Men no longer insist on having all the women folk of their family slain at their obsequies as did our forefathers in pre-Christian times, nor yet do we cut off the tails of our horses and rend our garments as tokens of grief. Even the church is with us in the matter, and by order of the pontiff at Rome several pastorals have been issued in Italy and other foreign countries protesting against and condemning the luxurious character of funerals, and especially against the abuse as regards the amount and value of the flowers. These pastorals have likewise been taken as a text by several leaders of the Anglican church in Great Britain and the Lutheran church in Germany, with the result that far greater simplicity is being observed just now in matters pertaining to funerals.—New York Tribune.

Little Is Known of the History of the Cane.

The fashion or habit of carrying a walking stick or some article of the same nature seems to have existed from the remotest antiquity. The spear of the warrior, the shepherd's staff, the club, baton, rod or wand of office are all developments of the same idea. It has been used not only as a support to the body, but to lend dignity and grace to the individual and as a means of defense. In modern times the use of walking sticks has increased enormously, and today the manufacture and use of these articles are cultivated almost to the extent of a fine art. But, though popular and well known as an article of every day use, very little is known about the walking stick as an article of commerce—where it comes from, who makes it and how it is made.—Chambers' Journal.

Two Examples of Fine Writing.

In answer to a prize offered by a French paper for the best example of microscopic writing a correspondent sent in the whole history of Christopher Columbus written on an egg. Another wrote on the back of a cabinet photograph Francois Coppee's novel of "Henriette," of 19,000 words,—Philadelphia Ledger.

PIG STICKING.

A Hunter Who Says it is the Finest Sport in the World.

A DANGEROUS FORM OF AMUSEMENT

How the Wild Boars of the Jungles of India and Africa are Hunted by Enthusiastic Sportsmen.

As an ardent pig sticker I may be forgiven for advancing the opinion that it is the finest sport in the world. By "pig sticking" I of course mean pig sticking as it is practiced in India and in northern Africa and perhaps in some other English colonies—viz, riding down the pig on horseback and dispatching him with spears.

The Indian wild pig varies naturally according to his home. The biggest I have ever seen were in the Vindhya mountains, where I used to shoot them as food for my beaters. Sometimes they were of vast size, bigger, I think, than even their Ganges cousins.

A peculiarity of the wild pig is the straightness of his tail as compared with the curled appendage of his domestic brother. From the top of his low forehead to the end of his snout is almost a perfectly straight line, and he has a far longer snout and jaw than the English market pig. His skin is a kind of bluish gray and his bristles gray or black, though sometimes an almost brown pig is found. The wild pig will never live far from water. He is happiest in the long grass, often 12 feet high, that grows along the banks of the big Indian rivers, and above all rejoices in "jao," a kind of evergreen brushwood that is as common as the grass. He only eats at night, and about 10 p. m. he sallies forth from cover and will go many miles to find the succulent sugar cane or other luxury, returning as a rule about an hour before the first streaks of dawn.

Pig sticking begins usually about Christmas week, when the giant vegetation of the rains has died down sufficiently to get at piggy, and the marshy ground where he lives is firm enough for horses, but it is not till the end of February that really good pig sticking begins, and it improves as the weather gets dryer and hotter till the June rains come, and pig sticking instantly ceases.

At about 6 a. m., after a light breakfast, the sportsmen set out—usually in "tumtums"—to the meet, having sent their spears and horses on ahead over night, together with the all important mess tiffin basket, in which a huge block of ice and innumerable soda water bottles and beer bottles figure largely. It is rare to gather together more than 12 men. It may have been different in olden times, but polo is a formidable rival to pig sticking nowadays, and the ordinary British subaltern can rarely afford time and money for both. Indeed, from my own experience, I should say the average field was not above five, and personally, I much prefer, except from the social point of view, very few companions.

The officer in command divides the party, if large enough, into little sections of three, and each section separates from the other and keeps together all day, either at one end of the line or in the middle. The coolies are usually about 50 in number and form line, covering about 200 yards of ground. Each is armed, or should be, with a big stick, and the end men carry flags, which can be seen above the long grass and help to keep the coolies in line. Behind them marches on each wing one of the shikari's satellites, and in the center is the shikari himself on horseback, and these officers, like sergeants, keep the line straight, and exhort, often in language more forcible than polite, the apathetic coolies to strenuous exertions. The sportsmen generally ride a few yards in advance of the line, unless, from the nature of the covert, the pig is likely to break back.

A pig lies usually in a kind of form like a hare and will sometimes let a man or horse almost tread on him before moving, and being often covered with mud or dust is very difficult to see in the grass and weeds. When, however, he does jump up, he slips along at an incredible speed for the first 30 or 40 yards and then settles down to a very fast gallop. I have known boars at once on being put up make straight for the first man or horse they see before they have been wounded or touched, and, as all know, the tusk of the wild boar cuts like a razor, though luckily the wound is usually a healthy, clean cut—very different from a mauling by the fetid claws of a tiger or leopard or the thrust of a stag's horn.

Wherever a pig gets up one of the sections go after it, and there are various little rules as to how the pig should be attacked and in what order. The most important rule is never to drop your spear, still less throw it at the pig, as some beginners have been known to do. Spears are weighted with lead at the handle, and when dropped from the hand in the long grass, the sharp end, being the lighter, naturally sticks up, so that the next horseman or beater may be wounded. I know of several horrible accidents that have happened in this way.

The man who first draws blood gets "the first spear" and is entitled to the carcass. The body is given to the coolies to eat, and the head is taken home by the triumphant sportsman to adorn his bungalow hall, or the tushes are taken out and made into some knickknack. Of course he is in honor bound to help fairly kill as well as prick his foe, but it is the second horseman, riding perhaps four lengths behind him, who has the most dangerous part to play. A pig when wounded rarely pursues his former course, and the leader often loses touch with him, while his follower has to bear the full brunt of a terrific charge. It is fatal to receive a boar's charge at a walk or trot. One cannot go too fast—not straight at the pig, but at a slight angle to him as he charges.

At a recent election about 7,000 votes were given to Mrs. Ada M. Bittenbender for the office of supreme judge of Nebraska.

Modern Witchcraft in Salem.

During a recent rainstorm in Salem, Mass., electricity played some queer pranks at Porter's market. On the roof of the building is a clothesline. During the storm a towel blew from this line and lodged upon an electric lighting wire below. Being wet it wound around the wire and the electricity passed through it and shot down into the ground, where it came in contact with the water pipes leading into the building.

It ran along the pipes, and the first thing it encountered in the basement was a pot of hot lard, which was boiling on the stove. The lard was illuminated and the young man in charge thought it must be burning. He started to remove it from the stove and received a shock that sent him against the basement walls.

Pale with fright he rushed up stairs, where a fellow workman, noting his pallor, reached for the water faucet to get a glass of water. No sooner had he touched the faucet than he had occasion to pick himself up from a far corner of the room.

For a few moments everything seemed turned into an electric battery. The nails in the wall became red, electricity flew from the water pipes and flashed around the bands on the water pails.

At length some one found the cause of the trouble and the towel was removed.—Portland Transcript.

Misdirected Enterprise.

The constant improvement of burglars' tools is hardly an uglier adjunct of modern civilization than the rapid progress in the variety and ingenuity of food adulterations. Eggs and apples, almost alone, are still above suspicion. Cloves, tea, ground coffee, vanilla, lemon juice and mustards are nearly as frequently imitated as dairy butter. Cheese is filled with lard, and lard with cornmeal. The abolition of sugar duties has failed to stop the traffic in glucose. Candy factories use terra alba by tons. With an admixture of an extract from hickory buds and ginger common treacle can be made to resemble maple syrup sufficiently close to fool nine out of ten nonspecialists.

"Flavoring extracts" are made from such things as wood vinegar and coal tar, but the meanest tricks are those practised by the venders of honey. A vile compound of glucose and stearic acid is poured into factory made combs and sold in dainty wooden frames, which in one case were found to consist of ligneous pasteboard—a triple combination of frauds paralleled only in a certain sample of "mustard," which an analyst found to be a compound of four different ingredients, two of which had, so to express it, been subadulterated.—Philadelphia Times.

A Danish Medium in Paris.

M. Aveling, the young Danish medium, is now occupying the attention of that faction of Paris which amuses or interests itself in the phenomena of spiritualism. M. Aveling does not speak a word of French, yet when the fit is upon him he writes answers to mental questions in French, and in the very handwriting of deceased authors, composers and great historical celebrities. The latest sensation is the caligraphy of Balzac, reproduced by the Danish gentleman innocent of French, and some very clever opinions of modern novelists, including Zola, by the defunct philosopher of romance.

But the joke is that Balzac asserts that he has spectrally superintended the adaptation of his own "Pere Goriot" at the Theater Libre, and that he was in the middle of the balcony stalls at its first representation. The fact is that the center stall is occupied by M. Francisque Sarcey, and that Balzac jocularly added that he had sat on that distinguished critic's lap.—Religio Philosophical Journal.

An Old Man in Brazil.

A South American newspaper tells of a man living in Sao Paulo, Brazil, who is considerably over 100 years old and who is growing young again. He has recently grown a new set of teeth and his hair, which had turned gray, is almost black again. He is in active business as a horse trader and occasionally he rides over ten leagues in a day. He has been married three times, is now a widower and is quite wealthy. The paper casually remarks in the course of its story that the old man suffered greatly at one time with a tumor, "but this was cured by being gored by an ox."

An Artificial Crow.

An Englishman has invented a new aerial machine. The machine is divided and constructed in imitation of the arrangement of every feather in the wing of a crow, the bird selected as a model. The dimensions are thirty feet from tip to tip of the large wings. The whole weight is about 650 pounds. The machine is to be operated by a light engine.—English Mechanic.

The Jews in New York City.

The foolish writer who laughs at the Jews and ridicules their pretensions to influence would do well to study facts. There are more than 300,000 Jews in this city, holding something like $180,000,000 of real estate, with about 150 Jewish congregations, and capitalized investments representing the colossal figure of at least $250,000,000.—New York Recorder.

In the scholastic year 1890-1 St. Petersburg had 259 primary schools, with 12,760 pupils. Last year the number of schools was 267 and the number of attending pupils 13,042. This includes 120 female schools, with an attendance of 5,703.

The growth of trade at Puerto, Colombia, in South America, has necessitated the construction of a pier 4,000 feet long at that port. It will be built of iron and steel and will accommodate ten vessels at one time.

Between 12,000 and 15,000 barrels of herring were taken recently in a single night at Sound island, on the coast of Newfoundland.

NITROGLYCERIN.

How the Most Powerful Explosives in Use are Manufactured.

A VISIT TO A DANGEROUS PLACE.

Remarkable Facts About Dynamite and its Parent Nitroglycerin.—A Sensitive Mixture.

"Come up to the factory some day, and I'll show you how we make nitroglycerin," was the invitation I received one afternoon in the oil country from an extensive manufacturer of the terrible explosive.

The invitation was a very cordial one, but there were considerations which made me somewhat slow in accepting it. "We have about seven tons of dynamite in one magazine, and two tons of glycerin in another," said my would be host. These were among the considerations which deterred me.

"But," he added, "there's no particular danger in looking at the dynamite unless the building catches fire. You can play baseball with the cartridges, and they will never strike back, or you can pour the dynamite out on the ground and set fire to it without being injured. Unconfined the explosive will burn harmlessly, but I should not advise you to touch a match to a loaded cartridge. When the gases expand they do so in extreme haste, and if anything tries to restrain them it breaks, and some one gets hurt."

The nitroglycerin man laughed rather grimly. Then, apparently thinking that he had not made his invitation quite alluring enough he continued. "But it's different with nitroglycerin. Baseball and fireworks are strictly prohibited. Glycerin is easily offended, and when it resents an affront the world hears about it, but the object of its displeasure never does.

"Glycerin is as fickle and changeable, too, as the wind. One day a slight shock will explode it, and the next you may hit a can with a hammer and live to tell the story.

"The glycerin's readiness or reluctance to explode doubtless depends upon its quality. One run of stock may be well washed and clean, and another may be full of impurities. If a can is filled to the very corks, too, so that the substance within has no opportunity to wash against the sides, I do not think it will explode so easily as one which is three quarters or seven eighths full."

TONS OF DYNAMITE.

I found the dynamite and nitroglycerin factories at opposite ends of a picturesque little valley several miles from the town. Both structures were of very crude architecture and resembled ordinary sheds or barns. But from the moment we rode down into the narrow gulch the air seemed filled with whispers of death.

When we entered the dynamite factory and the glycerin man pointed out the big boxes full of loaded cartridges, explaining that the dynamite made here was merely wood pulp saturated with nitroglycerin, I hardly heard what he said, but watched him with hawklike vigilance.

He picked up a slender brown paper tube that looked like a Roman candle, and which he said was a dynamite cartridge. I held my breath until the tube was safely deposited upon the table again. He poured some of the dynamite, which closely resembled sawdust, into a shell and rammed it down with a round stick as one would load a musket.

Nothing of an alarming character happened, and I began to breathe with more regularity. I was more at ease as we left the seven tons of dynamite behind, but the same horrible feeling of suffocation and coldness came over me again as we approached the more dangerous nitroglycerin manufactory.

This building contained several huge wooden vats, a few pails and barrels, an engine and a great iron kettlelike receptacle.

The iron receptacle was called an "agitator," and, simply described, consisted of a small kettle within a large one. The space between the two was constantly filled with a stream of cold water from a tank on the hillside. The inner kettle was fitted with several paddles, which were turned by a crank.

About 1,500 pounds of acids, sulphuric and nitric mixed, were poured into the smaller kettle. A thin but continuous stream of glycerin slowly followed; the engine began to pant, the crank revolved, the paddles churned the glycerin and acids, and the manufacture of nitroglycerin was going on before my eyes.

MAKING THE DEADLY LIQUID.

My host controlled the flow of glycerin by means of a stopcock, and watched the agitator and the thermometer which registered the heat of the perilous mixture with unremitting vigilance.

"Nitroglycerin," my friend said, "is formed by the action of nitric and sulphuric acids upon glycerin. When those red fumes come up, the greatest caution must be observed. They indicate that the oil is on fire, and if the mixture gets warm enough an explosion will follow.

"Do you see that thermometer? The mercury registered 65 degs. centigrade a minute ago, but it is 70 degs. now and still climbing higher. We must stop this at once. Halloo! More steam there!"

He shut off the oil as he spoke, and a second later the paddles in the agitator were churning the mixture more rapidly. I began to edge toward the door, but the glycerin man called me back.

"I've got it under control now," he said. "The paddles have whipped the oil under the acids and extinguished the fire. The mercury is falling, and I can turn on the oil again now with safety. But if I had not shut it off at once, and if the paddles had not developed more speed, you and I would have enjoyed a foot race together down the valley. When the mercury gets up to about 90 degs. centigrade it is much safer to be somewhere else than in its vicinity. This stream of cold water constantly circulating about the base of the agitator keeps the mixture cool. When the weather becomes warmer we are obliged to use ice."

After 225 or 230 pounds of glycerin had been put in the agitator and stirred a long time, the mixture was emptied into the "drowning tank." Then it was transferred to the other tanks and carefully washed, and at the end of about four hours the milky, amber tinted nitroglycerin was poured into rectangular tin cans. These cans were deposited in a huge iron safe, and the explosive was ready.—Earle H. Eaton in Youth's Companion.

Parties out deer hunting ran across an old ruin on the top of the highest mountain nine miles north of Phœnix. It is of stone, and some of the walls are still standing ten feet high. The old building or buildings covered an area of about two acres of land. The large stones around the place are covered with hieroglyphics.—Phœnix (A. T.) Gazette.

Thirteen Daring Young Men.

If thirteen young men—lawyers and physicians—who have just organized a Thirteen club in this city, can find a haunted house to meet in they will be most happy. The organization is nearly complete, the bylaws and rule have been drawn up and adopted, and the only thing lacking is the haunted house. If this cannot be found it is proposed to use the dead house owned by the town. Among the rules are almost everything superstitious people avoid. The president is to sit under an open umbrella during all meetings and at the quarterly dinners. A ladder will be raised in the room, and every member entering will pass under it. A crosseyed janitor will be secured, and one of the members whose hair is fiery red will be obliged to enter the meeting room first every time it is opened.

A skeleton will be seated opposite the president at every feast, and two black cats will be purchased and kept in the clubroom. Each member takes a solemn obligation to look at the new moon over his left shoulder, pass on each side of a post when two are walking together, walk between any couples who may be seen talking together on the street, and do everything contrary to the accepted custom. The meetings will be held on Friday evenings, and if any member has to make a journey he will start on Friday or the 13th of the month.—New Haven Cor. New York Sun.

Curious Tomb of a Kentuckian.

Several weeks ago Mr. James Golden a well known lumber dealer of Hickman, Ky., died there and was buried with a strict conformity with the provisions of a remarkable will. He had while in health a strong fear of being buried alive, fostered probably by reading accounts of the few cases of this kind that are known to have occurred and he determined to take no chances in that line that could possibly be avoided. He caused a tomb to be erected, and in that tomb had an opening left on the east side large enough for a man to pass through. This was covered with glass.

In his will he stipulated that a strong hammer should be placed in the casket with him, and that the lid of the coffin should not be screwed down, so that if by chance he should be consigned to the tomb before his life was extinct he might, if he gained power to move, push off the lid and with the hammer break out the glass in the opening left for the purpose and thus escape a lingering horrible death. His instructions were faithfully obeyed. Friends took it upon themselves to watch the tomb and be near in case the gentleman's fears should prove well founded and render him assistance. But death came with an unerring shot, and he still slumbers peacefully in his casket.—Columbus (Ky.) Forum.

Two Queer Names.

When a petition for a new postoffice in the mountains of Virginia was received some weeks ago it was found that the name submitted was undesirable. The petitioners were so notified and requested to submit a list of names in order of preference. The new list contained no names acceptable, and the assistant postmaster general directed an under official to select a name himself. The clerk immediately walked to the map and, locating the office, discovered that there was a mountain hard by named Purgatory, and the new postoffice was given the name of Purgatory. When the establishing papers were forwarded to the petitioners, and they were requested to submit a name for postmaster they returned the name of George Godbethere. So that the new postoffice of Purgatory is presided over by George Godbethere.—Baltimore American.

A Jury with Hard Sense.

From a town almost near enough to Philadelphia to be called a suburb comes a story of unique dispensation of justice by a jury from around about the vicinity. The case was one in which the prosecution was brought by a young woman against a young man. Despite the eloquent pleading of the lawyer for the fair one, the jury rendered a verdict of acquittal, and then proceeded to assess the defendant a fourth of the costs, the prosecutrix a fourth, the constable who arrested the prisoner a fourth, and the justice of the peace who sent the case to court a fourth. The judge remarked that that wasn't much of a jury for law, but it was strong in the way of common sense.—Philadelphia Record.

The Phonograph and the Dumb.

Recent tests in the use of the phonograph in the deaf and dumb institute at Indianapolis show that it is useful in concentrating sound upon the drum of the ear, so that many pupils otherwise deaf can hear it. It is thought by the superintendent that he can by this means soon teach the use of their voices to many mutes whose inability to speak is due to the fact that they have never heard speech.—Exchange.

Dom Pedro's Garter.

Dom Pedro was a Knight of the Garter, having been invested by the queen during his visit to Europe in 1871. His death did not create a vacancy in the order, as, like other royal personages, he was an extra knight. It is probable that the Comte d'Eu will come to England in a few weeks in order that he may personally deliver up his father-in-law's insignia to the queen.—London World.

Boarding Lunatics Out.

An experiment is about to be tried in France where 100 lunatics will shortly be sent to the Department of the Cher and placed in the houses of farmers and other people who are willing to take care of them.—Galignani Messenger.

A whale recently captured in arctic waters was found to have imbedded in its side a harpoon that belonged to a whaling vessel that had been out of service nearly half a century.

The Russian government intends to construct a harbor solely for commerce at Poti, leaving Batoum as a strongly fortified point for military purposes only.

A MOTHER'S DUTY.

Essential Training of Children That is Too Often Neglected.

WOMEN AND SOCIAL PURITY.

The Period in the Life of Almost Every Child When Injurious Habits May be Formed.

The mother's first duty is not to feed and clothe the bodies of her children, but to see to it before God that those bodies are kept free from pollution—that the child is passed over into self keeping, after a full maturity of powers, without enfeeblement or false bias and unhealthy desires. The arrangements designed by nature are the best possible—home, mother, father and slow development of the child. What could be better planned? Yet we allow our parental care to be outflanked by all sorts of corrupting influences and home to be invaded. If our houses are fortresses against law, they certainly ought to be against lawlessness. It is, I am free to say, utterly inexcusable that our children shall be got at by debasing influences. We can prevent it, and with wills of the right sort we shall prevent it.

"What shall we do about it?" you say. "Shall we turn our houses into monasteries and shut our children up in cells?" Madam, your question is foolish and you do not even desire to give yourself to true child culture. You are, I suspect, trying to excuse your selfishness by asking nonsensical questions. I have seen children brought up with tenderest sympathy and fully guarded against corruption, and yet you would never have thought of calling those homes prisons, jails, or monasteries or nunneries. The only difference between them and other homes was that there the first influence and effort was to train and educate and save the children. It was not the second or third purpose, but the first purpose. To that everything else bent. The result was most lovely and lovable characters and happy homes and satisfied parentage.

INSTRUCTION FROM MOTHER.

I was recently in a house of a different sort—a home in which both parents truly longed for noble children; but the father cared for business first and children second, and the mother attended to a half dozen hospitals and homes first and children second. The result was two children out of six have come off unsoiled, and two are very badly scared, and two are physically enfeebled by premature and false knowledge picked up loosely. Half of their education was away from parental control. Excellent people every way, except home was not first in mind.

"What sort of policecraft do you suggest?" None at all for you, my dear woman; you have evidently made up your mind to a whole catalogue of lies, and argument would be lost on you. You would quote to me, "But the child must see the world, must he not?" And as soon as I had answered that there is every reason why he should not see some part of the world, you would begin again with, "Well, every child must sow his wild oats." Then I should say to you that he must also reap what he sows. But you would tell me at once that if I shut up my children they will break away as soon as possible, and go to the bad as soon as possible, and I should answer that I do not intend to act as jailer but as mother, and that the question between us was one of extent of love and guardianship, for you also believe in a certain degree and kind of discipline.

Then you would say, "But how shall a child ever know how to go into society if kept awkwardly shy when young?" And I would say, "That is nonsense, for no child need be kept shy or made awkward in a fine home, with noble friends and enough to do and think about, and as for professional society, if that is what you mean, God save my boys and girls from ever feeling a taste for such a sickly lie." Nor would you be satisfied yet, but would say, "But I cannot put up bars between my children and my neighbors." And I would answer, "There is only this need of bars, that you have the grit to sacrifice anything to the purity of your children."

WHERE MOTHERS ARE CARELESS.

Then you may very justly say, "But am I to consider my children better than other folks' children, and will they tolerate my conceit?" And I will say: "Madam, there is a vast amount of that conceit among parents who let their children run loose and are very free with them. It is this assumption that somehow your children are something wonderful that makes the mischief. If instead you frankly say they are not remarkable—only weak and liable to be spoiled, which you do not intend to permit—then you will see that your neighbors will not feel so bad about it." But you persist: "They must have society, and it is natural. It would be wrong to seclude them." I reply: "That is so exactly. Now do you see that they do have society, and enough of the very best; only that is not natural society which is out of your sight, or is artificial in dress and fashion."

But no need of further discussion. You and I are determined not to agree. You do not mean to adopt safeguards enough to make sure of your children; I do. But with some mothers I can agree, and our chief puzzle is first how to go to work to accomplish what we desire. For when we look about the woeful fact stares us in the face that nearly all the children are corrupted before school life is over. If we want sweet souls and clean minds how shall we get them?

SOME THINGS TO OBSERVE RIGIDLY.

On no account fail to study your boys and girls and see what one special thing they delight in; then let each one, from the first manifestation of a bias, have that to do. If the child is naturally an artist be sure he is furnished with art material and a studio. If he be a mechanic let him have tools and a shop. Don't dare to think you can afford a sealskin sacque and cannot afford all the tools he can use. If you have a book lover let him follow his bent with only rational restraint.

Be sure on no account to allow your child to sleep with his friends at their homes or to have companions to spend the night with him. Even day association may be almost wholly in or near your presence, if you will take the trouble to overlook such companionship generally.

Take special pains to train the oldest child to companionship and accustom him or her to a watchful co-operation in guarding with you the younger ones. The oldest child is a wonderful power for good or for evil.

Blessed be the father and the mother that have devoted themselves to their children, and have learned that no higher office exists in the universe.—Mary E. Spencer in St. Louis Globe-Democrat.

A fund is being raised by the Danish students of Chicago for the purpose of erecting a monument to Hans Christian Andersen in Lincoln park.

FOR THE MINERS.

What the Committee Is Doing to Make a Successful Exhibit.

A LAKE OF QUICKSILVER.

The Biggest Block of Asphalt in the World—Allotment of Space to the Different Counties—Bound to Outshine Colorado—Miners Contribute a Day's Pay.

The mining exhibit committee of the Midwinter Fair has set about in a determined spirit to make California's display far outshine that of Colorado, and if the miners will properly second their efforts this state will not have reason to feel ashamed of her exhibit as she did at Chicago. Still only about $5,000 of the $25,000 desired for the exhibit has yet been raised and many attractive features designed by the committee will of necessity be abandoned, if a more generous response to the request for contributions is not made.

The mining counties generally seem aroused to the importance of making their exhibits such as to attract the eye of the general visitor, as well as gain the attention of the expert and the capitalist looking for opportunities to place their money. The only mining county which seems at all sluggish is Trinity, which has not applied for space in the exhibit and seems to be doing nothing to secure a representation of her resources. Superintendent Benjamin says he drove nine miles in a storm to attend a widely advertised county meeting, and found only three persons in attendance. Several of the heaviest mining men in the neighborhood of Weaverville sat around the hotel stove and did not show sufficient interest in the meeting to cross the street. The Old Settlers association of Trinity, fearful lest their county should be greatly injured by the failure to make a proper showing of its resources, has now taken the matter in hand, however, and is vigorously attempting to gather an exhibit which will be complete and creditable.

The space assigned by the committee to the different counties is as follows:

Nevada	24x35	840	square feet
Amador	16x29	464	"
Calaveras	16x29	464	"
El Dorado	24x17½	410	"
Butte	21x17½	367½	"
Sierra	24x34½	828	"
Shasta	12x29	348	"
Plumas	29x10½	304½	"
Kern	12x17½	210	"
Tuolumne	16x18	288	"
Siskiyou	9x19	171	"
Contra Costa	8x22	176	"
Inyo	12x18	216	"
Mariposa	10x13	130	"
Merced	10x7½	75	"
Santa Cruz	10x9½	95	"
Santa Barbara	10x9½	95	"
San Diego	10x 9	90	"
Mono	10x18	180	"
Mendocino	8x7½	22½	"
Lake	6x9½	57	"

Near the entrance to the exhibit will be a lake of quicksilver, which promises to be an amusing and instructive attraction. The quicksilver will be supplied by J. B. Randol from the Lake county mines. Into the lake visitors will be permitted to throw sledge hammers and other iron weights for the pleasure of seeing them float about. Women will be cautioned not to dabble in the silvery pool, however, lest their rings should become amalgamated.

The company controlling the great asphalt deposits of Santa Barbara has quarried a great block of asphalt weighing seven and one-half tons, which will be part of that county's exhibit. At Chicago the manager of the Cuban asphalt deposit showed a block weighing 1,400 pounds, and advertised it widely as the largest piece of asphalt in the world. In order that there should be no possible doubt in the matter of the championship, the Santa Barbara company got out its seven and one-half ton block. Kern county is also to exhibit a big block of asphaltum, and a $1,000 nugget recently picked up onthe Mojave desert.

The movement among miners to contribute a day's wages each for the benefit of the mining exhibit is becoming general. Almost every day brings in contributions from some of the mines, and in this way the fund is swelling more than from contributions by the rich mine owners. Another source of revenue during the fair will be the crushing and working of gold bearing quartz sent to the committee to be worked in the mill which will be in operation during the entire fair.

Many designs are coming in to represent California's $1,300,000,000 output of gold. One shows a great globe of gold 19 feet and 2 inches in diameter, and surmounted by a golden bear. Another is in the form of a column of $20 pieces, a third is a golden oval; a fourth a cube suspended from the ceiling; a fifth an enormous ingot—and so on through almost every conceivable design. Estimates of the cost of construction are furnished with each design, and the committee is carefully considering all with a view of making a selection which will be most impressive.

The Southern Pacific has issued the following circular, relating to the shipment of ores to the mining exhibit:

This company will transport free of charge to Midwinter Station, specimens of ore, quartz or other minerals, when for exhibition only, and of no commrcial value, or if valuable, not for sale. Any consignments subsequently placed in the hands of smelters of otherwise disposed of commercially, or to be disposed of, are not entitled to this free transportation. Shipments thus transported free must originate at stations on the Southern Pacific company's system west of and including Portland, Ogden, El Paso, Deming and Mojave, and must be consigned to the MIDWINTER INTERNATIONAL FAIR, San Francisco, California, but will not apply or in any way be used on shipments originating at points off the line of the Southern Pacific company east of said points.

HIRIHIQUA.

"Viva el adelanto!" The shout of welcome homage echoed through the city of Santiago de Cuba (since known as Havana) when on the last Saturday in May, 1538, the gallant Hernando de Soto landed with his princely retinue. Great preparations had been made by the loyal inhabitants for an imposing reception, and the streets were filled with a curious crowd eager to behold their new ruler. At length the discharge of ordnance announced that the procession had left the waterside, nor was it long before the numerous retinue defiled before the applauding Cubans.

A band of pikemen led the way, wearing iron corselets and bearing long pikes with steel heads glittering in the sun. They were followed by a band of archers with well filled quivers, and then came a small band of the newly organized halberdiers, equipped in casque and plate armor. The trumpeters came next, wearing their gorgeous state uniforms and blowing fanfares upon their clarions, which were ornamented with silken bannerols. After the trumpeters came an esquire, bearing a banner on which was embroidered De Soto's arms and attended by 12 yeomen carrying maces. And now loud shouts announced the advent of the "adelanto."

The conqueror of Peru was then in the prime of life and rode with chivalrous bearing upon the richly caparisoned charger just presented to him. He wore a full suit of polished steel armor richly inlaid with gold, while about his neck was the gorgeous collar of the order of the Golden Fleece, a gift from his monarch. By his side mounted on an ambling mule was Donna Isabella, his noble bride, and following them came a train of esquires, pages and men at arms wearing the armorial bearing of the "adelanto." A long column of knights followed, their polished armor flashing in the sunlight, their pennons and plumes floating in the air, and their Andalusian chargers curveting along as if panting for the contest. Never had such a gallant body been seen in Santiago as this brilliant retinue which escorted Hernando de Soto to the cathedral, where a high mass was to be offered up for their safe arrival from old Spain.

"Holy mother, but it is a glorious sight," exclaimed a young girl, who had stood in a large window in the Calle de Ignacio, gazing through the ornamented iron work at the glittering host as it defiled past. Nor could she but feel flattered at the homage paid her by the chevaliers as they passed—many of them reining in their steeds to gaze at her charms. Nor was this to be wondered at, for her beauty was of that old Andalusian stamp, in which not even the gentleness of the fairer sex can quite conceal the latent fire of the soul. Masses of raven hair lay lightly upon her brow, like untwisted silk upon white velvet, and were gathered together by a large comb, which also secured a rich lace veil.

Her languid eyes were black as jet, her lips poutingly invited kisses, and in her rounded chin was a dimple wherein Cupid could have rested with delight. Her flexible form moved to and fro as if swayed by the south wind's breath, while a tiny foot occasionally peeped from beneath the ample skirts of her white muslin robe, beating time to the inspiring peals of the trumpets. Need we add that she carried a magnificent form, which she handled with exquisite grace?

"I am at your feet, senorita," said a gallant cavalier, approaching the window and courteously doffing his plumed hat. It was that worthy hidalgo, Don Vasco Porcallo de Figueroa, whose scarred cheek and grizzled hair bore evidence of his long services in the old world ere he crossed the Atlantic. Bringing the spoils of his valor, he had purchased a valuable estate near Trinidad, although during the gay season he resided at Havana. And of all his possessions, amusements or avocations, nothing gave him one tithe of the anxiety as the young girl whom we have described in the preceding paragraph, and who now answered his figurative salutation by exclaiming:

"Nay, dear guardian, rather come and stand by my side. Is it not a noble sight?"

"Yes, by my faith it is," replied Don Vasco. Then, entering the court, he soon occupied a place in the window. We have said that he had seen much service and that his hair was turning gray, yet he had not seen 50 harvest moons, nor was there a more graceful cavalier at the adelanto's balls. Tall, compactly built, with an electric black eye and a winning smile, he was the envy of many younger hidalgos, while his broad acres made him the more attractive to matchmaking donnas. As honorable as he was honest, and as faithful as he was brave, his dying comrade, Don Antonio Gonzales, had felt great joy when he entrusted his daughter into the hands of so true a gentleman. And Don Vasco, regarding the last wish of his friend as a solemn duty, had ever used every exertion to rear the Donna Inez as he would have brought up his own daughter.

"And do you not like it?" inquired the damsel as her guardian stepped upon the window platform. "Do you not like this flashing armor, these spirited horses, these waving banners, these bright suits of steel? Oh, yes, guardian, you must like it. I should think that the echoing notes of these trumpets would make your blood surge through your veins like a maelstrom."

"Yes, indeed. I have decided to join this expedition if De Soto will accept my poor sword."

"What!" exclaimed Donna Inez, with a look of uneasiness, "you go to the wars again! Oh, for the sake of the Blessed Virgin do not go."

"Nay, nay, my fair ward, were you not just admiring the scene?"

"Aye, but this is not the picture presented at the close of a hard fought battle, when brave knights lie suffering in agony or die in despair." Then after a short pause and an evident struggle in order to keep from bursting into tears she added, "It was there my father breathed his last."

"True, but this expedition is not similar to a European campaign. These hidalgos go in quest of adventure, I admit, but they expect to find great wealth and little if any opposition."

"But is the gold there, guardian? Will it not be like Ponce de Leon's voyage in quest of the 'Fountain of Youth?'"

"I should like to find that fountain."

"And what good would it do you?" asked Inez, the color mounting to her cheeks.

"Ah," replied the knight, with a deep sigh, "it might not avail me aught. Seriously, though, my fair ward, I feel that honor calls me to join the expedition. The lady of the brave De Soto will remain here, and I feel confident that she will far eclipse my poor services. So I now kiss your hand, as I must make the necessary arrangements for the management of my estates during my absence, and should I fall, Inez, remember that everything I possess will be your dower. Adios."

"My dower," exclaimed Inez, turning from the window and speaking hurriedly to herself. "I shall be a bride of the church, then, or earth will have no object that I can love." When she reached her chamber, she bolted the door; then, throwing herself upon her couch, wept long and bitterly.

For several weeks the city of Santiago was a scene of jubilee. In the daytime the cavaliers indulged in that national yet cruel amusement—bullfighting. Mounted on the choicest steeds and clad in brilliant armor, the gallant knights contested for prizes of gold or for choice embroidery presented by the fair ones, whose bright eyes graced their lists. At night there were balls and masquerades, where the future invaders of Florida mingled in the mazes of the dance.

De Soto, while he encouraged their diversions, which served to train his young cavaliers in the use of arms and horsemanship, was not a participant in the sports. Anxiously awaiting the return of a pilot whom he had sent to discover a safe harbor for disembarkation, he occupied himself in perfecting every arrangement, nor had he a more efficient ally than Don Vasco, whose martial spirit appeared rekindled with fiery zeal. Equipping a well armed retinue of men from the vicinity of his estate, he soon had them the pride of the whole expedition. The excellence of their armature and equipments, the superiority of breed and good grooming of their horses, and the confidence which they evidently possessed in their veteran leader, showed that every battle must find them victorious or slain.

But, to the great sorrow of Don Vasco Donna Inez was never on the plaza to witness his troops at their daily guard mounting, their floating plumes, polished armor and glossy chargers now extending into line, then at the sound of the trumpet closing into square. Their pennon was a scarf worked by the fair lady for her guardian, but she had retired to a convent in pursuance, she said, of a vow. Nay, she even refused to see Don Vasco when the expedition was ready to sail, although she sent through her confessor a most pathetic entreaty. This conduct, considering that she was in truth the cause of her guardian's return to military life, was rather saddening, but he consoled himself with the thought that perhaps she was praying for his safety.

The fact was, Don Vasco had fallen desperately in love with his ward, although he dared not urge his suit, lest she should think that he had attempted to take advantage of his position, and her high spirit should rebel. She persisted in refusing to see him, but on the eve of his departure his page brought in a package, "from the Donna Inez." Tearing it open, the delighted cavalier found a silken pennon, on which was elaborately embroidered his armorial bearings, with the Italian motto, "Che sara, sara," which may be interpreted, "Whatever will be, will be."

* * * * * * *

Florida! It was on the last day of May, 1539, that De Soto and his chivalric band landed at what is now called Tampa bay and hoisted the Spanish flag as they took possession of the country in the name of Charles V. The scene was one of surpassing loveliness. A luxurious mass of laurels covered the ground beyond the narrow sandy beach, while beyond them towered the mastlike palm, the stately live oak and the gorgeous magnolia. A long distance from the sea groves of lemon and orange trees gave to the landscape the appearance of a flowery wilderness, here and there divided by quiet lagoons. Huge vines clambered from tree to tree, and a profusion of wild flowers bloomed on every hand.

But the aboriginal inhabitants of this terrestial paradise were not disposed to yield it without a struggle, and at length a horde of them with deafening yells set upon a party of Spaniards. The Europeans, unused to such warfare, retreated to the boats, where Don Vasco had just landed. Hastily forming a section of his horsemen, he boldly attacked the Indians and soon drove them into the interior, shouting as he urged on his charger, "Che sara, sara!" When the enemy was routed, he returned to the boats jubilant over his success, but ere he dismounted his steed staggered, then fell dead. An arrow had passed through the saddle and buried itself deeply in the animal, inflicting a mortal wound.

"Never mind," exclaimed the don, "I have been the first to raise the lance against the infidels and have lost the first horse. 'Che sara, sara!'"

On reviewing his troops that afternoon Don Vasco was somewhat annoyed to find that one of his most trusty men at arms had brought a stripling son to share the perils of the expedition.

"May it please your grace," said the man, "I wish to train him to the pursuit of arms."

"But what can his slight arm do?" angrily inquired the cavalier.

"Little now, I admit. But he knows how to dress a wound and take care of a sick comrade, and he is as true as steel."

"Well, well," replied Don Vasco, who was pleased with the youth's appearance, "you are a worthy fellow, Pedro, and I will take the boy as my page."

The delighted youth uttered an exclamation of joy, and that day he occupied a tent used for baggage and near that of his master. It was noticed by some that Pedro accompanied his son to his new quarters and relieved him from all menial duties, but indulgent parents are too common to excite much attention. Never was such a page seen as Jose, and soon, for want of a better confidant, Don Vasco told him of his love, almost hopeless as it was, for his ward.

Meanwhile De Soto found himself opposed by a cacique, who remained implacably hostile, and he was about to send a captain with a troop to conquer him when the honor was claimed by Don Vasco. Mustering his band, he selected a picked detachment, and at the earnest entreaty of his page the youth was of the party. They left in great pomp, with trumpets sounding and the cherished banner waving in the breeze, while Don Vasco vauntingly declared that he would "bring Hirihiqua back either as a friend or as a captive. 'Che sara, sara!'"

As the Spaniards advanced messenger after messenger came from Hirihiqua, warning him not to proceed, but the hot headed Don Vasco judged that this was evidence of the cowardice of his foe. Spurring on he at last came to a tangled hammock, in which was a dismal looking morass shaded by cypresses. This his men knew it would be impossible to cross, laden as they were with heavy armor, but Don Vasco was not so easily daunted. Putting spurs to his horse he entered the morass, but his steed soon floundered and fell. It was impossible for him to extricate himself, and he was in danger of sinking into the quagmire.

But his page managed to go to the rescue by throwing pieces of bark before him that supported his light weight and thus enabled him to carry a rope to Don Vasco. Pulled out, all besmeared with mud, the crestfallen cavalier felt that the martial fire so suddenly rekindled was as suddenly extinct, and he ordered a retreat to the camp, humbled by the potent Hirihiqua, who had encountered him with friendly warnings and had imprisoned him in a mudhole to be rescued by a page.

Just as the troop was preparing to retire, a vicious horse reared, and striking out with his fore feet kicked the page with such force that he fell from the saddle. Then it was that Pedro disclosed his secret, and Don Vasco discovered that the page was his devoted ward, Donna Inez. Clasping her to his bosom, he vowed that henceforth no earthly power should separate them.

"Not even Hirihiqua?" inquired the senorita, with a smile despite her suffering.

"Hang Hirihiqua and all the other quas! If you will be mine, I will leave all this soldiering to younger hands, and we will return to Cuba. What say you, my ward?"

"Must I not follow my guardian's advice? Nay, if I had not loved you as a civilian, what would have made me follow you here when you put on your armor?" A kiss sealed the contract.

The next day as De Soto sat before his tent chatting with his confessor, a cavalcade approached. It was Don Vasco, with soiled attire, walking by the side of a litter, upon which lay his page, while his troop followed in picturesque disorder.

"I have a boon to ask," said the knight. "Let my lieutenant, Gomez, take command of my troops and retain all my munitions of war, but I only ask the blessing of this holy father upon my fair ward here in masquerade and leave to go home."

"You shall have all you ask," replied De Soto, "although I regret to lose you. But as love made you enlist love shall procure your discharge."

Theirs was a long and happy life, and among the ornaments of their palatial residence, yet standing in Havana, is a painting procured by a Spaniard, who, more fortunate than Don Vasco, was not enticed into a swamp.—Ben: Perley Poore.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 5th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 20, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North west quarter and the North east quarter of the North west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor upon the sale shall be made, balance on confirmation of sale by said Superior Court upon the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th, 1893.

COURT NOTES.

Geo. M. Gill, Superior Judge.

WEDNESDAY Dec. 27, 1893.

Estate of E. L. Smith, deceased—Filed order of sale of personal property.

THURSDAY, Dec. 28, 1893.

Estate of J. M. Hay, deceased—Filed account.

FRIDAY, Dec. 29, 1893.

Boland vs. Crapo—Filed execution.

Bar silver, 69¾.

C. B. Rawson is down from Bishop.

A. L. McGee spent a day or two in town this week.

O. I. Mairs left for Los Angeles last Monday.

The recent storm will delay work on the big canal.

Regular meeting of the Board of Supervisors next Tuesday.

F. Stock sailed from New York for London on on the 20th.

The *Register* reports a rich strike in the Georgia mine near Bishop.

Bertrand Rhine went to Bishop last Saturday, returning Wednesday.

Misses Annie and Margie Bell and Annie Schabbell have gone to Bishop.

Mr. and Mrs. Michael McSweeney arrived at Independence last Friday.

Webb H. Walker came up from Olancha yesterday and will spend a few days in town.

We are constantly in receipt of letters making inquiry of Owens Valley and its resources.

Angus McDonald and Wm. McDonald came down from Big Pine yesterday and will return to-morrow.

There was quite a fall of snow throughout the valley on Wednesday. Nearly 6 inches of snow fell at Independence.

Cora W. Craig arrived home last week from Oakland, where she is attending school. She will return next week.

Miss Leora Collins, accompanied by her cousin, Miss Grace Collins, has gone to Bishop to spend the holiday vacation.

It is reported that Mrs. Sallie M. Bell died at Niles on Tuesday. She had left Big Pine on Wednesday of last week for Niles.

Bert. Rhine has been re-oppointed as a director of the 18th District Agricultural Association. J. E. Shepherd has been appointed to succeed C. A. Walters.

It is reported that one of the grand officers of the Native Sons will visit Independence next week, and that a banquet will be given at the Norman House.

Wm. Horton, better known as "Uncle Billy", an old time pioneer of Owens Valley, died at Round Valley on Dec. 16th. He had reached the ripe age of 83 years.

Christmas in Independence was a tame one indeed. Except for a Christmas tree at Dr. Blair's, at which several of the families in town gathered, no festivities were indulged in.

While riding in the vicinity of Cottonwood recently, Henry Dyke ran across a half grown bear cub. He drove bruin several miles to the Lamar place, where he captured him in an outhouse.

The late snow storm was much more severe south of here. Snow fell at Mojave, and from Coyote Holes to Olancha the beautiful was plentiful. The greatest fall was in Hatwai Canon where it measured sixteen inches. It is reported that there was hardly any snow at Bishop.

The Odd Fellows gave another of their interesting entertainments at the Lodge room last evening. It consisted of literary exercises followed by a supper, after which a social dance followed at Mairs' Hall. Those present expressed themselves as having spent a most delightful evening.

While Mrs. Lubken and family were at the Christmas tree at Lone Pine last Monday evening a burglar attempted to effect an entrance into her dwelling. Mrs. Roeper, mother of Mrs. Lubken, was in the house at the time, and ran down town, meeting E. H. Edwards, who went to the place, but the miscreant had taken alarm and decamped.

GOOD GOLD AT GOLER.

Company Forming---Water Supply, Etc.

P. W. Campbell came in yesterday from the mining camp at Goler. All the original locators at the camp have consolidated their claims and are now farming an incorporation. Over 4000 acres of ground is included in the tract covered by the articles of incorporation. Most of this ground is already prospected enough to establish the fact that gold in paying quantities exists all over it. Mr. Campbell is now completing the legal forms necessary to incorporate under the State laws.

So far only the coarsest of the gold found in the ground is taken out. The scarcity of water compels working the dirt by the "dry washing" process, and this results in leaving behind much fine gold. Mr. Campbell brought in some samples of the gold, which he left with C. Mulholland, who showed it last evening at the *Herald* office. The pieces are in size from equal to kernels of wheat up to small-sized beans. The gold appears to be very pure, and the pieces are enough to infect most men with the mining fever.

A large supply of water would add immensely to the yield of gold. To secure this Mr. Campbell is now negotiating with the company who are building a canal from Owens river to Indian Wells valley, to give his company a constant supply of 3000 inches of water. The mining territory of Redrock is in the low hills that bound Indian Wells valley on the south and southeast.

From Redrock Mr. Campbell brings good reports; at Mojave he learned that the supply of gold coming in there from the camp is undiminished, and new pay dirt is discovered as fast as ground is prospected. All the way east from Goler to the south end of Death valley the country is being prospected. Mr. Campbell estimates that not less than 400 men are scattered over the region. About 30 years ago some prospecting was done and good prospects were found. But the craze that then prevailed of rushing off to new diggings caused the claims to be abandoned and no further effort was made to develop the mines until the recent depreciation of silver and closing down of silver mines drove miners to a new search for gold. Goler and Redrock are the best gold fields yet opened in Southern California by the new search for the yellow metal.—*Los Angeles Herald.*

IN INYO COUNTY.

Some Great Works of Progress Under Way.

M. B. Miller came in yesterday from Inyo county, where he has been for some weeks. Mr. Miller is interested in building the big canal from Owens River to Indian Wells valley. He says camps are formed along the line of the canal, and men, machines and animals are put to work as fast as the surveyors can set stakes along the first 20 miles of the canal. All of that stretch is over open ground that can be worked by plows and scrapers.

This canal is intended to carry a stream of water 10 feet deep, being the deepest irrigating canal yet projected in the United States. The Calloway canal in Kern county is the largest irrigating work yet constructed in California, and the depth of water there is six feet.

The canal from Owens River will irrigate several thousand acres of land between Owens lake and Indian Wells valley; this tract alone contains 400,000 acres.

This is another of the great enterprises now under way that will add much to the prosperity of Los Angeles within the next year or two.—*Herald.*

Independence School Report.

The following scholars obtained an average of 80 per cent. and upwards in the examinations held during the half-term, ending Dec. 22, 1893:

GRAMMAR GRADE.

Nettie Roeper, 80.7 per cent.; Effie Roeper, 89.56; Elsie Gill, 86.8; Charles Rose, 81.17; Clifford Baxter, 85.9; Ivan Bunney, 82.24; Arthur Robinson, 86.74.

INTERMEDIATE GRADE.

Birdie Levy, 80.7 per cent.; Jeannette Wood, 90.57; Blanche Bunney, 84.97; Estella Robinson, 87.63; John Moore, 92; Viva Gill, 90.27; Lizzie Mathack, 88.82; Amy Lawrence, 80.5; Val. Gorman, 86.36; Arthur Mairs, 83.33; Paul Mairs, 81.44; Jos. Levy, 83.51.

PRIMARY GRADE.

Howard Mairs, 91 per cent.; Eva Lawrence, 84.25; Jesse Lawrence, 93.5; Jesse Hession, 95.25; John Symons, 90.5; John Gorman, 96.25; Edw. Eibeshutz, 82.5; Hattie Moore, 90.25; Milton Levy, 93.75; Irma Webb, 86.25; Jno. Hession, 92; Mamie Hession, 89.75; Chas. Mulholland, 87; Bessie Parker, 81.75; Maggie Bunney, 90.

A. E. JANVIER, Principal.
JUNE C. SKINNER, Assistant.

Christmas at George's Creek.

The George's Creek School celebrated Christmas with an entertainment and Christmas tree, Tuesday evening, Dec. 26.

Notwithstanding the snow storm, a large number assembled at the school house to witness the entertainment. The program consisted of two parts. The first half was devoted to recitations, a dialogue, and a calisthenic drill given by the school children. The selections were interspersed with a number of songs rendered by kind visiting friends and local talent.

The laughable farce, "A Kiss in the Dark," was then rendered with spirit and skill by some of the young ladies and gentlemen of the neighborhood. When all did so well it would be difficult to discriminate in favor of any part of the program, but special mention may be made of the calisthenic drill, which was rendered by the children with a grace and precision of movement which made it one of the most enjoyable features of the evening.

A visit from Santa Claus, who distributed gifts from the tastefully decorated tree, concluded one of the most successful entertainments ever given at George's Creek.

A long article by C. Mulholland in the Los Angeles *Herald* describes a trip made last Summer to Mt. Williamson by W. L. Hunter, J. De La Cour Carroll, June Skinner and the writer, wherein he dwells upon the grandeur of the scenery, the perilous portions of the journey and the pluck displayed by Miss Skinner.

TO OUR SUBSCRIBERS.

The SPECIAL ANNOUNCEMENT which appeared in our columns some time since, announcing a special arrangement with Dr. B. J. Kendall Co., of Enosburgh Falls, Vt., publishers of "A Treatise on the Horse and his Diseases," whereby our subscribers were enabled to obtain a copy of that valuable work FREE by sending their address (and inclosing a two-cent stamp for mailing same) to Dr. B. J. Kendall Co., is renewed for a limited period. We trust all will avail themselves of the opportunity of obtaining this valuable work. To every lover of the horse it is indispensable, as it treats in a simple manner all the diseases which afflict this noble animal. Its phenomenal sale throughout the United States and Canada makes it standard authority. MENTION THIS PAPER WHEN SENDING FOR THE TREATISE.

MISCELLANEOUS.

Notice To Tax-Payers.

KENDALL'S SPAVIN CURE.

STOCKTON, CAL., Dec. 19th, '92.

DR. B. J. KENDALL CO.

Gentlemen:—Having read one of your Treatises on the Horse and seeing the Spavin Cure advertised, I thought I would try it. I had one horse with a prominent Spavin of 12 months standing. I removed it with ½ bottle. I tied upon one fore foot on same side the spavin was and compelling the horse to rest on lame leg while I took a surcingle and drew it across the hock or spavin until the hock or spavin got very warm with the friction, then putting on Spavin Cure. I had a mare that had a running from her nose for 12 or 14 months. I rubbed the Spavin Cure from her eyes down to nostrils, then from back of jaw bone down under the throat for a week. I have not seen any discharge for two months.

Yours truly, HUGH McDADE.

Price $1.00 per bottle.

ROYAL BAKING POWDER

SHOULD be used wherever yeast has served heretofore. Yeast acts by fermentation and the destruction of part of the gluten of the flour to produce the leavening gas. Royal Baking Powder, through the action of its ingredients upon each other in the loaf while baking, itself produces the necessary gas and leaves the wholesome properties of the flour unimpaired.

Absolutely Pure.

It is not possible with any other leavening agent to make such wholesome and delicious bread, biscuit, rolls, cake, pastry, griddle-cakes, doughnuts, etc.

ROYAL BAKING POWDER CO., 106 WALL ST., NEW-YORK.

A SAFE DEPOSIT.

By REV. E. EVERETT HALE, D. D.

CHAPTER III.

If young Blake had gone at once to the head center of the wonderful combination of warders, guardians, clerks and assistants who made up the hierarchy of the Amicable this story would never have been written, and the reader would at this moment be seeking other occupation than that he has in hand. "Before a story can be told," says Mr. Anthony Trollope, "there must be a story to tell." All that follows on these pages sprang from Mr. Blake's aversion to take the head center into his confidence, or, indeed, any other of the guardians in the hierarchy.

In the first place, he knew none of them personally, though, as has been seen, they all knew him professionally. That is to say, it was the professional business of each of them to know Antony Blake by sight and to see that he always had the box in No. 4,927 when he wanted it and that no one else ever had it, and also that he never had any other box than his own. But all of them had been imported from New York to carry on the Amicable, which was a new enterprise in Tamworth, so that he had not made their acquaintance other than officially. In the second place, as occurred to him now for the first time, he should have gone to the head center before if he meant to go at all. He should have gone when his little key did not open the bond box. He should not have picked the lock of a box which, as he now knew, was not his with his little skeleton key.

In the third place, he was not sure whether he should best advance the ends of justice by going to the head center. He could say that his $100 were not in his box. But here were securities of three or four hundred times as much worth; and, as he well knew, there was not any one outside an idiot asylum who would steal the Cattaraugus and Opelousas bonds. It might be that the head center and some of the others were engaged in a common fraud, of which he had in his hands a little clew. These considerations passed through his mind and determined him, wisely or not, to make no complaint to the head center till he had taken the advice of a lawyer friend.

Meanwhile his first business was to go to Pittsburg and to get the $100 which he needed for his journey. There was no money in the box, and of course Antony could not have taken it if there had been, seeing it was not his. "Greenbacks," says an eminent legal authority, "are the currency of thieves." But even had Antony been a thief he had no opportunity to steal.

There were the six letters tied up with the white ribbon. Antony did look at their addresses, as has been said.

But at the moment his only wish was that his despised Cattaraugus and Opelousas bonds were in his hands. He remembered, as he often had remembered before, the pathetic grief of Robinson Crusoe when the great current of the Orinoco was sweeping him to sea in his canoe. Then poor Robinson looked at his retreating island—the island which he had always called a prison—and wished that he might return to it, because it was home. So poor Antony, who had always despised the Cattaraugus and Opelousas, now wished that he had them in his hands. In point of fact, he put back the box into the cell from which he had taken it, and he went at once to his lawyer cousin. But the lawyer cousin was not in. Antony did not like to tell his queer story to a stranger; he therefore borrowed a hundred dollars from the lawyer cousin's clerk and went that night on the train to Pittsburg.

CHAPTER IV.

This is not one of those stories which torments the reader by refusing to tell him all that the writer knows.

Once for all, let the reader understand that the bonds and the letters which Antony Blake found in his box belonged to a very nice girl whose name was Edith Lane. How it happened that they were all in this box shall now be briefly told.

It was some six months before Antony Blake found them that Edith Lane's father called her into his own room. He then explained to her that she was so old that she must learn to take care of her own affairs.

"I do not mean," said he, "to turn over to you now the whole of your mother's property, but I do mean to turn over to you so much that you shall not have to come running to me when you want to buy a shoestring and a paper of pins. I have placed in this envelope a number of bonds; I am going to show you how to cut off the coupons from these bonds. You will have to do this twice a year; you will then have to carry these coupons to the Waverly bank, where I have opened an account for you. When you want money you will write a check on the Waverly bank, and you will go for the money yourself or send for it. You can do as you please about keeping an account of these things. If I were you I would keep a little cash book, but I shall ask no questions. If you come to me at any time for money I shall then ask questions. But it is a great deal better that you shall learn to take care of your own affairs before I die."

Poor Edith was distressed and pained to hear her father talk of dying. She said as much. She said that she knew nothing about business, and she had a great deal rather go on as they were. But he was flint. He told her that his precise object was to teach her to draw a check and to keep a bank account, and to teach her something of her interest in the community, not to say her duties in the community. He had begun with thirty or forty thousand dollars of her fortune, which he had put into these bonds.

Edith was frightened, and said she did not know where she would keep the bonds, and she was afraid they might be stolen.

"That," said her father, "is the second thing that you are to be taught. You will not keep these bonds; I do not keep mine. I have brought these this morning from my own safe to give them to you. I have ordered the carriage, and I am now going to take you down to what is known as the Amicable Safe company. I am going to hire a little safe there in your name, and you will keep your bonds in that safe. When you want to cut off the coupons you will go down to the Amicable, you will have the safe opened, and you will cut off what you need."

This frightened Edith more than ever. She almost cried, but in her distress she referred to an old joke of the family borrowed from the "Georgia Sketches." It is the story of a young man whose father was urging him to marry, and said to him, "Where would you be if I had not married?" The young fellow replied between his sobs, "Yes, dad, but you married mother, and I shall have to be put out to a strange gal." Edith said she did not want to be put out to any Amicable Safe company or any Waverly bank. She wanted her father to take care of her money and to give her what she wanted to spend.

But he was perfectly firm. The carriage came to the door, and Edith had to go up to put on her hat and sacque and gloves to go down for her first lesson. What she was taught the reader already knows. She was taken through the gates, she was introduced to the attentive warder, and she had assigned to her one of the smallest safes, exactly such a safe as Antony Blake had, and as it happened the number was next to his, No. 4,928. The reader now has a partial notion of what mistake had occurred.

In point of fact, about a month before Antony Blake had met this disappointment it had been so ordered by those minor powers who, under orders, overrule this world, that he and Edith Lane went nearly at the same time to the Amicable. Antony had gone simply to show himself, that he might keep up the reputation which he had acquired as a dandy among dons. Edith had gone, on her second visit, to cut off some coupons, which she had done successfully, and which she had carried to deposit at her bank. But it had so happened that when she brought back her little box to place it in her safe, Antony Blake was already in that corridor of the columbarium, and was opening his safe to put his box away. The lock made some little obstacle, and he had laid his box on the floor that he might have both hands in handling the key. Edith had to wait a moment for his operations to be finished, and, as it happened, she laid her box on the floor as she stood by him, in fact, if the reader is curious, putting on her gloves at the same moment. Antony touched his hat to her, stooped, picked up the box and put it into his own safe, without any thought that he had made a transfer. He passed out of the doors, saluted the wardens and was gone. Edith put the other box into her safe, and, as the reader sees, the change was completed without a thought from either party.

It was not till Antony Blake was well in Pittsburg, dealing with the various sons of Tubal Cain who make that city one of the richest and loveliest in the world, that Edith one day ordered the carriage, drove down to the Amicable, took out what she supposed to be her box, and found in it Antony's Cattaraugus and Opelousas bonds and his hundred dollars.

Of course Edith knew she had made a mistake, and she instantly supposed, as she usually did, that everything which was wrong was her own fault. This, then, was the first result of her father's training her to business—that she had lost all her own property, and had stolen some other property of vastly more value, for the girl knew nothing of the worthlessness of the Cattaraugus and Opelousas, and it was very easy for her to see that whereas she had left in her box only thirty or forty thousand dollars' worth of bonds, she had under her hands two hundred and fifty thousand dollars' worth of the second issue of that unfortunate road.

She did not do what Antony did, however. She took the whole parcel, hundred dollars and all, and put it into her little satchel. She put back the box into her safe, and as quickly as she could escape the eye of the warders, all of whom she thought looked on her with suspicion, as if she were a detected thief already, she rushed to her little coupe and bade William drive her directly home.

Her only thought was to tell her father all that had happened and to confess that she was a fool.

Of course this would have been the true thing for her to do, but there was unfortunately a delay. Her father was in Chicago for two days, and Satan had all that time to inspire her with other counsels. Now, although Satan might have done his worst before he could make Edith Jane do anything wrong, it was easily in his power to make her do something very foolish. For, as Henry Kingsley well says, when the devil cannot achieve his purposes by sending a knave he does the same by a much easier process and sends a fool. For the more she brooded over the matter the more the poor girl persuaded herself that she had better not, at first, speak to her father. Besides the feeling that she was a fool and had made a horrible mistake there was a little side trouble which increased and increased as she thought of it till it at last became a giant Afrite, destroying all her peace. It was the recollection that she had put in her box the six letters which had been intrusted to her by her cousin Evelyn.

Now this Cousin Evelyn had had a horrible love passage with Fergus MacIntire. I have no right to call it disgraceful, though I am very glad that none of my readers was ever so compromised. It was a very bad business, and Evelyn had been pulled out of it only with great tact and difficulty. All the compromising letters had been brought together and should have been burned up. Instead of burning them Evelyn Haddam, when she heard Edith had a safe of her own, had begged her to take care of them, and at her second visit to the safe Edith had put these letters with her bonds. The reader knows what had become of them.

Now this was the only secret which our poor Edith had ever had from her father. She did not want to have these letters brought to light by any investigation which should be made. The poor child instantly fancied herself before a police court as a thief; she fancied the discovery of her box opened by a judge and these letters of Evelyn's and Fergus' read aloud and printed in all the Sunday newspapers. She cried over it; she wrote a note to Evelyn which she destroyed; she wrote another note, which she destroyed also, and finally said to herself that she had rather lose all her own property which was in the safe than have any revelation made as to what was in the box. If she could only be sure that whoever had the bonds would burn those hateful letters it seemed to her that she should be perfectly happy.

In all this of course Edith Lane was quite wrong; but, as the reader will see, she was in a false position, which she had stumbled into really from no fault of her own.

Poor Antony Blake is the person who deserves the most consideration and sympathy from the reader. Antony Blake spent two or three days in Pittsburg. He was most hospitably received by old friends whom he had known at the Polytechnic institute. He saw all the marvels of gas distribution, of glass making, of ironfounding, and by Mr. Westinghouse's kindness he was taken through the wonderful machine works from which that exquisite apparatus is produced which preserves every year the lives of I dare not say how many thousand people in this world. He saw some of the Tubal Cains whom he had gone to see; he showed to them the plans of his machine, which were cordially commended. He had one and another suggestion made to him as to the ways for putting it upon the market. But it was clear to him, as it had been in Tamworth, that the destruction of the poor is their poverty, and that he was in no way to get any decent return for the very exquisite contrivance which everybody admitted he had in hand unless he himself could invest $10,000 or $15,000 in the complicated machinery which was necessary for produing it.

(TO BE CONTINUED.)

A German Clock.

Mr. Thomas D. Bullinger, of Govanstown, is the owner of an antique piece of mechanism. It is the result of years of labor of an old clockmaker of Nuremberg, Germany. It is a clock with a framework of walnut, and stands 11 feet high. At the top it is 3½ feet across, but tapers until at the center it is about 2 feet wide. It rests on a pedestal, which is the same width as at the top of the clock. The dial is 12 inches in diameter, of white enamel and black figures. In the dial is set a handsome oil painting of David performing on a harp and a pretty woman, with bowed head, listening attentively to the music.

When the clock strikes the hour two beautiful German airs are heard in succession, and on a platform above the dial twelve small figures of men and women, about 5 inches high, dance in couples. Musicians are seated in the rear of the figures performing on the cornet, drum and clarionet. A clown appears clapping his hands and moving his mouth. A figure appears on either side of the platform and makes a polite bow. The clock plays twenty-four different German tunes. The musical weight is of lead, and weighs 125 pounds. Over 130 various pipes are needed to play the tunes. The entire clock weighs nearly 600 pounds.

The machinery is extremely complicated. The clock is over 100 years old. —Baltimore American.

The Falsetto Voice.

Mr. E. Davidson Palmer, Mus. Bac. Oxon., calls the attention of scientific men to an apparently unknown fact in connection with voice production. This fact has to do with the so called "falsetto" voice. The general opinion about this kind of voice is that it is something altogether unnatural, and that it ought never to be used. According to modern scientific theories, however, it is one of two or more registers, and is supposed to be intended by nature to be used only at the upper extremity of the vocal compass. But it is quite possible to produce this kind of voice at a much lower pitch (at least an octave lower) than that at which singers are ever taught to use it.

Produced in this way, it may be so weak and feeble as to be practically useless. Still it is possible so to produce it, as men and singers well know. What they do not know and what scientific men appear to be totally unaware of, is that it may be developed at this low pitch, and not only developed, but completely transformed. When thus transformed it loses entirely its unnatural and effeminate character, and becomes a strong, manly voice, which is easily mistaken for what is commonly called "chest voice," but which, unlike that kind of voice, is capable of bearing throughout its whole compass any strain that may be put upon it.—English Mechanic.

A Woman Worth Over $90,000.

Sixty thousand dollars in cash and bank books representing $30,000 were found at Lyme, Conn., recently. They are the hidden wealth belonging to the late Mrs. Jane Kingsbury, who was supposed to be poor.

Attorney Cunningham and a Mr. Griswold came across several bankbooks concealed in a chest in a spare bedroom. They were found in bureau drawers which had not been used to the knowledge of the other persons in the house for years.

The books represented deposits amounting to about $30,000. The search was continued and $60,000 in money was found hidden in different places.

Of this sum $14,000 was in gold pieces in denominations ranging from one dollar to fifty dollars. The balance was in currency. It was all hidden in the bottoms of trunks, bureau drawers and beds.

How Mrs. Kingsbury hoarded this money is a mystery to every one familiar with her manner of living. What her income was no one knows, but it was always thought she lived up to it.

Years ago Mrs. Kingsbury, who was the wife of Major Kingsbury and mother-in-law of ex-Governor Buckner, of Kentucky, figured in a series of lawsuits in this state and Kentucky. They lasted for twelve years.—Cor. New York Sun.

Chess by Telephone.

A novel use of the telephone has been made in England on the occasion of a chess match between the British Chess club in London and the Liverpool Chess club. All the moves were made by telephone, the transmitter having a nickel plated mouthpiece and being of the granular type, which is specially fitted for long distance talk. Two games were played simultaneously, the first being lost by the London club, and the second which lasted more than seven hours, being a draw.

A very amusing incident happened when London, at 7 p. m., proposed an adjournment of the game over the dinner hour, and board No. 2 at the same time offered a draw. Both offers were declined by Liverpool with thanks, an answer which was received with shouts of laughter by the members of the London club, who had mustered in great force for the occasion.

"We heard you laugh," was the message sent at once by the Liverpool men, much to the amusement of the London audience. At the conclusion of the second game a return match was arranged for the following Saturday, with a time limit of twelve moves per hour, and a hearty cheer was given by London and responded to by Liverpool.—Pittsburg Dispatch.

A New Aluminium Alloy.

The Aluminum Brass and Bronze company announces a new metal which is exceedingly tough, very ductile, and when either hard or soft drawn into wire, possesses an extremely tensile strength, for ordinary size annealed it is 86,000 pounds per square inch, and for hard drawn 136,000 pounds per square inch. Its ductility is such that the annealed wire will stand 124 twists in six inches, and the hard drawn wire thirty twists.

It solders with facility with resin, chloride of zinc or any of the ordinary solders and fluxes. In electrical resistance, comparing this new metal, ordinary copper taken as one, German silver is thirteen and the new metal is thirty-five. It is this qualification that makes it valuable for resistance work in dynamo machinery and all electrical apparatus. Its specific gravity is about the same as copper, which it resembles as to finish.—Mechanical World.

Advertising on Letters.

The idea of advertising by means of what purports to be misdirected private post cards has apparently been improved upon (like many of our ideas) in the United States. A lady tells me that she recently received from her son in America a letter, on the envelope of which was written in writing closely resembling that of the address, "Read the last number of the —— Review." On inquiry it appeared that the son had not written this inscription, which had therefore been added (presumably) in the post-office. It is to be hoped that this Yankee notion will not "catch on" in this country; but I take it that most of our postoffice clerks have their time too well occupied to permit of their undertaking to inscribe advertisements on the letters which pass through their hands.

FOR SALE.

An engine that in simplicity is a marvel and is supplanting all other engines of its character. The manufacturers of the Hercules Gas and Gasoline Engines can show results which are an assurance that their engines are the best. Inform yourself and send for catalogue to Palmer & Rey Type Foundry, San Francisco, Cal.

Those that throw stones should not live in glass houses.

A HOUSEHOLD REMEDY.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

HOITT'S SCHOOL FOR BOYS,

Millbrae, San Mateo County, Cal., prepares boys for University or business. Graduates admitted to the State and Stanford Universities without examination. Next term begins Jan. 2d, 1894. Send for catalogue. Ira G. Hoitt, Ph.D., Master.

When a business house "settles" its proof of its having a firm foundation.

FAR AND WIDE.

Not on this broad continent alone, but in malarial breeding tropical regions, in Guatemala, Mexico, South America, the Isthmus of Panama, and elsewhere, Hostetter's Stomach Bitters affords to inhabitants and sojourners protection against malaria. The miner, the freshly arrived immigrant, the tiller of the virgin soil newly robbed of its forests by the axe of the pioneer, find in the superb antifebrile specific a preserver against the poisonous miasma which in vast districts rich in natural resources, is yet fertile in disease. It annihilates disorders of the stomach, liver and bowels, fortifies those who use it against rheumatic ailments breed and fostered by outdoor exposure; infuses genial warmth into a frame chilled by a rigorous temperature, and robs of their power to harm morning and evening mists and vapors ladden with hurtfulness; strengthens the week and conquers incipient kidney trouble.

Find a man who has no hobby and you find one who is not hadpy.

CALIFORNIA NOT TO BE OUTDONE AT THE WORLD'S FAIR.

One very noticeable exhibit at the World's Fair was that of the Hercules Gas and Gasoline Engines, manufactured by the Palmer & Rey Type Foundry in San Francisco, Cal. Send for catalogue.

DON'T BE FOOLED by the dealer who brings out something else, that pays him better, and says that it is "just as good." Doctor Pierce's Golden Medical Discovery is *guaranteed.* If it don't benefit or cure, in every case, you have your money back. No other medicine of its kind is so certain and effective that it can be sold so. Is any other likely to be "just as good"?

As a blood-cleanser, flesh-builder, and strength-restorer, nothing can equal the "Discovery." It's not like the sarsaparillas, or ordinary "spring medicines." At all seasons, and in all cases, it purifies, invigorates, and builds up the whole system. For every blood-taint and disorder, from a common blotch or eruption, to the worst scrofula, it is a perfect, permanent, *guaranteed* remedy.
